Mr. Clark states that the coot was the best runner on the ice, and that the canvasbacks were the poorest. The little ruddy duck proved a great scrapper. When he found he could not get away, he turned and charged Mr. Clark with open mouth, and most savagely.

Later the same day Mr. Clark visited another open pool, perhaps ten to twenty feet in diameter, which he found filled with coots and several species of ducks, among which were one wood duck, several mallards, one ruddy duck, several butterballs, one merganser, and three canvasbacks. On the ice near the pool were a great many ducks which arose and flew away upon his approach. Those in the pool were slower to leave, but as he came nearer, the butterballs rose first, then the coots got out upon the ice and scrambled away. The canvasbacks remained in the pool longest of any, and Mr. Clark is of the opinion that this species stands the poorest chance when the waters tighten up.

The next day (Jan. 3) Mr. Clark visited the larger pool again; and that he might get as close as possible to the coots and ducks without frightening them, he wrapped himself in a white sheet. Lying down upon the ice, he was able to crawl to within two feet of the water's edge without scaring the birds away. There were in the pool three canvasbacks, three little bluebills, one ruddy duck, and four coots, and Mr. Clark lay there on the ice during most of the afternoon watching them. Mr. Clark says, "The birds, especially the coots, were very busy diving and feeding. The ducks were not active. It was both amusing and instructive to watch them. They were not usually more than eight to twelve feet away, and I could plainly see the eyes of every one of them, and the little bluebill came so close I could see the pupil of his eye. I could see them close and open their eyes, which every one did frequently. The little bluebill was a very active and persistent diver. He seemed to be feeding upon shells, as he never brought up anything bulky and he would do a lot of vigorous chewing, and I could hear a crunching noise like shells being broken up when he chewed. The coots came so near I could see the black spots on their bills and their red eyes.

While lying at this pool, several other ducks, chiefly mallards and whistlers, came and either alighted in the pool or circled about and left. The whistlers dived very often, easily and rapidly, while the canvasbacks dived but rarely and very clumsily at that. One or more of the coots were down nearly all the time. They go down with a vim. Generally, when one dived, the other three stayed up and watched for his coming up. They were able to see him some time before he reappeared and, hurrying to the spot where they thought he would emerge, would be on hand ready to appropriate for themselves as much of the food brought up as they could get possession of. Not only would the coots thus rob each other, but the ducks also robbed them. Whenever a coot came up with an unusually great load, the little bluebills and even the canvasback drake would be on hand to help themselves. In this way the coots feed not only each other but various ducks as well; but it was observed that the ducks do very little robbing from each other."

Food.—Usually a considerable mass of vegeta-

tion was brought up each time. In this particular place the principal food seemed to be one or more species of *Potamogeton*, *P. pectinatus* probably predominating. They often came up with the long stems hanging over their backs. Quite often the plant brought up looks like *Chara*, but of this I could not be sure.

It is quite certain the plants they were getting here were not their favorite food, but such as they could utilize when necessary.

Depth.—Soundings taken in this pool show that the depth was nine to twelve feet. This open pool was not in the part of the lake which one would expect to remain open longest, and Mr. Clark suggests that the coots and ducks determine the location of the open pools. As the ice-sheet spreads out more and more from shore, it travels very rapidly, once the water has become thoroughly chilled and the air is cold and still. A number of birds feeding in any particular place, or merely resting on the water, would keep the water more or less disturbed, and the heat of their bodies would certainly raise the temperature of the water slightly, at least, and freezing at this place would be prevented. As the rest of the lake closed up, more fowls would come to this open place, and its freezing would be still longer delayed.

This theory seems entirely reasonable to me. Mr. Clark visited this open pool late at night, remaining until after 10 o'clock, to see how the birds behaved then. He found the open place literally packed full of birds, and a great many more sitting on the ice near the pool.

Mr. Clark reports seeing no coots after Jan. 10, and no ducks after Feb. 7.

The Coot as an Article of Food.—I have been very much interested in the coot as an article of food. The opinion of those who have put themselves on record in the books is almost unanimous that the coot is worthless as food. An inquiry among my ornithological friends in Washington resulted in my finding only two or three who had ever tasted coot. The majority of them seemed to regard eating coot very much as we regard eating crow—a thing not to be thought of!

But my friends, Dr. Fisher and William Palmer, admit that they have eaten coot and like it. They even say they regard coot as not at all inferior to the famous canvasback duck, and in this I agree with them fully. Coot, particularly young ones, skinned and fried, or even old ones parboiled, then baked, are quite as delicious as any duck I ever ate.

It is, however, doubtless true that the delicacy of flavor, not only of the coot, but also of the canvasback and all other ducks, is largely determined by the kinds of food they get. The wild celery (*Vallisneria spiralis*) is sufficently abundant in Lake Maxinkuckee to give to the coot frequenting that lake a delicate flavor which has received high praise from all who are familiar with it.

Summing up, then, my observations concerning the coot as seen at Lake Maxinkuckee, I would say that

1. It is quite as aquatic in its habits as any duck.

2. It is a splendid diver, and dives regularly and habitually when feeding.

3. It feeds preferably upon the winter stolons of the wild celery, but later upon other parts of that plant and upon various species of *Potamogeton*, for which it dives as deep as twenty-five feet.

4. As an article of food, the coot is superior to most species of ducks.

5. When feeding it is not the taciturn bird Nuttall would have us believe, but a very sociable, loquacious bird, constantly talking to its associates day and night.

6. It is nocturnal in its habits to some extent, but perhaps not any more so than the mallard, the bluebill and some other ducks.

Barton Warren Evermann.

The Wandering Woodcock.

In the State of Washington?

Kettle Falls, Wash., Feb. 5.—*Editor Forest and Stream:* The editorial comment in the Natural History department of Forest and Stream of the 21st of the present January, concerning the westernmost point of the woodcock's range, was a great surprise to me.

I moved to the Territory of Washington in the autumn of 1881, and on the first journey by wagon, when with my wife and family I was in search of a suitable place for the making of a home, we camped for noon near the State line of Washington, south of Walla Walla, and while the children gathered fuel for a camp-fire, I took my shotgun and started in search of something for dinner which might tempt the appetite of the ailing wife and mother.

Strolling along up the little stream on the bank of which we had camped, when but a short distance away from the wagon, I was overjoyed to find and kill two beautiful fat woodcock, which were seeking their own dinner in a swampy spring hole near the creek.

Hurrying back to camp I dressed and broiled them over the coals, and the only hindrance to the perfection of that October camp-fire dinner was the refusal of the invalid to appropriate them both.

That dinner has been recalled to memory scores of times since, both of us always insisting that the most delicious meat we had ever tasted was that of the fat woodcock broiled over the coals for that wayside meal. I happen to know what a woodcock is, too; not a rail, snipe, plover, dove, pigeon or sandhill crane. These were the first woodcock we found west of the Rockies.

In May, 1884, we made our home in the valley of the Colville River, and for seventeen years lived near the site of the present town of Valley, on the line of the Spokane and Northern R. R. As the years passed, while most of my hunting was with the rifle for large game, once in a while the old shotgun accounted for a stray woodcock. They are not at all plentiful here. Often years passed without a glimpse of one.

One summer day some twenty years ago the children of George E. Wright, who lived three miles north of Valley, found the nest of a woodcock in a thicket of willows in a swampy piece of ground near their home, and I went with Mr. Wright to the spot, flushed the woodcock from her nest and examined her clutch of eggs. Everything was precisely as the children had claimed.

In my early hunting days in Washington I sent an occasional ornithological specimen to a taxidermist in Nebraska, and had I known that there was any doubt concerning the occurrence of woodcock west of the Rockies, be assured the editor of Forest and Stream would have had a Pacific coast specimen years ago.

I have been away from the old "stampin' ground" for ten years, and the country is continually changing with the advance of civilization, yet I believe that were I again living on the old grounds where every foot of the land is familiar to me, before the coming summer has passed I could prove to the satisfaction of the experts that there are genuine wild woodcock living in the State of Washington.

Orin Belknap.

In California?

Pasadena, Cal., Feb. 4.—*Editor Forest and Stream:* You can safely set the line down marking the western limit of the woodcock as on or at least quite near the shores of the Pacific ocean.

The last part of the past month of August Ernest Ekdale, of this city, saw a woodcock on the Shadynook Gun Club grounds, which are situated some sixteen miles south from Los Angeles, and about six miles from the sea coast.

Mr. Ekdale is a good naturalist and thoroughly familiar with all of our game birds. He was born and reared in the Middle West near good woodcock grounds, where he shot for the market before he came to Southern California. He first flushed this bird, and then saw it on the ground and could not be mistaken in its identity.

The common blue-wing teal has been shot here this season, though not in large numbers.

N. P. Leach.

Zoological Society Bulletin.

The January issue of the Zoological Society Bulletin contains a number of illustrations of the new administration building in the Zoological Park, New York city. This building, which is for the use of members and officials of the society, will contain the library, and now houses the national collection of heads and horns, of which so much has been said.

The same number of the Bulletin contains an interesting article, very fully illustrated, by Paul J. Rainey, describing the capture of the large white bear brought back by the Rainey expedition and presented to the Zoological Society. It also contains a finely illustrated article on the crane collection of the Zoological Park, by Lee S. Crandall, acting curator of birds.

More Canadian Reserves and Parks.

The good work of constantly setting aside more forest reserves and parks which was long ago inaugurated by the Canadian Government, still goes on. On Feb. 2 the Dominion Forest Reserves and Parks act passed to its third reading at Ottawa and will become law.

The act sets aside as forest and park reserves 18,604 square miles in Alberta, 923 in Saskatchewan, 2,114 in British Columbia and 3,854 in Manitoba. A total of 25,225 square miles will thus be added to Canada's already splendid list of reservations, and this great area cannot be sold or settled on except by an Order in Council.

GAME BAG AND GUN

An October Morning.

It was the last week in October, 1873, in Iowa. A little before it was fairly daylight the man with a gun climbed to the top of a straw stack which stood on the top of a knoll in the middle of the vast prairie. He was full of the strength of young manhood and his mind had not yet been oppressed by the misfortunes that attend the progress of life, but was always ready to enjoy the good things the gods might send him. The possibility of future troubles seemed so far away that no thought was given them. By the man's side sat a beautiful pointer, with unusually large dark brown ears, smooth as the finest satin, and with large eyes expressive of her intelligence. For three years the man and the dog had been partners, and they understood each other perfectly. They had been comrades through hundreds of days spent afield.

The light of the coming day increased enough to show flocks of ducks high in the air, and a little later the sunlight could be seen flashing from their wings, although as yet the sun itself was not in sight.

There seemed no bounds to the prairie. It was limitless in every direction; a boundless plain of dead grass whitened by hoar frost. Only here and there a low knoll, and an occasional patch of corn or stubble broke the universal sameness. Surely it was the biggest place in the world. Half a mile away a flock of prairie chickens greeted the sun with their booming, and their curious squawks and coo-ings. Flora, the dog, heard them and became alert; then looked at the man and whined. He smiled and said, "Yes, Flora, old girl; I hear them, but we can't get them yet; lie down in the straw and get warm." She was shivering with the frosty chill of the morning. For some time they sat on the straw stack and waited. At last the chickens rose almost as one bird a hundred feet and then sailed a half mile to a patch of corn. "Now, Flora," said the man, "we will go to breakfast. That bunch of chickens will stay there for two hours; we will let them have their fill before disturbing them. It will be the last breakfast that some of them will ever need."

Man and dog went sliding down the side of the stack and took their way to the house, and breakfasted and then returned again to the stack to watch the chickens. They sat there for an hour, and then went after the birds. They had barely entered the corn when the birds rose and took wing across the prairie. They flew low, and the background of a low hill a half mile away made it hard to follow their flight. Two or three times they were lost sight of against the background, but presently the flash of a wing was seen and the flight could be followed. At last they seemed to be down, or would have seemed so to an unpracticed eye, but the man knew they were still on the wing and watched and strained his sight until on the side of the hill he saw the white flash of the under side of many wings as the birds dropped into the grass on the sunny hillside. Still the man kept his eyes on the spot where the birds went down. Presently he looked beyond the place and noted a little clump of weeds in line with the birds. Then he searched the intervening land for some mark in line with the birds. A little patch of lighter colored grass served the purpose. He looked again, carefully recording the marks in his memory, until he was sure he could remember them all. Then he turned and said, "Now, Flora, we will go to that little pond in the middle of the cornfield over yonder, and perhaps we will get some mallards. We will not disturb the chickens until about 10:30; by that time they will be somewhat scattered and you will have a lot of fun trailing them, and I will have a lot of sport shooting them as you find them."

As they walked through the grass, Flora was given liberty to hunt, and she ranged over the prairie at a flying gallop that showed how good she felt. Presently she flushed a chicken which rose fifty yards from her before she got a smell of it. She came slowly back to the man, showing in every motion an abject apology for flushing that bird, and expecting punishment for the fault. The man did not punish her; he merely told he to go more slowly and carefully, and she went to work again, not ranging so widely and going very cautiously. Finally she stopped, wagging her tail and looking back. The man knew she had found chicken trails and followed her. She went on carefully and slowly, and after trailing for a long distance, a chicken flushed forty yards ahead of the man and dog. It was rather a long shot and the man fired too quickly, but the second shot tipped a wing, and after long trailing, Flora found the bird and brought it in.

The approach to the pond in the cornfield was made very quietly and against the wind. Under cover of the corn stalks they came within a hundred yards of the pond; then as they drew nearer, they lay flat on the ground and dragged themselves along. It was back-breaking work, but there was no other way. When they got within gunshot and in plain sight of the pond, nothing was to be seen. During the summer the pond had been dry enough to grow a rank crop of smartweed and the tops of the weeds stood above the water. After waiting a little and seeing nothing, the man coughed. Instantly there appeared above the tops of the weeds what looked like hundreds of stumps of bushes that had been cut off. They were as still as if they were really stumps. They showed a few inches above the tops of the weeds and looked to be an inch or more in diameter. In the sunlight many of them appeared to be more or less covered with green moss. There seemed to be hundreds of them. In his days of inexperience the man had overlooked a few lots of stumps just like these, but he now knew these were the heads and necks of mallards. Selecting the place where they were thickest, he moved the gun very slowly for that spot and "let 'em have it," then fired the second barrel into the brown as they rose in flight. They were not more than three feet above the water when the second charge was fired, and had scarcely begun to scatter. What a splashing and spluttering there was in that little pond!

Flora went in and brought them out, one at a time, to the man, until he had nine. Then she went round the pound searching for cripples that might have tried to escape by leaving the pond, as a mallard will usually try to do. If crippled in the water, a mallard will almost invariably leave the water, or if crippled near the water, it will try to sneak into the water. Flora found three winged birds. The man said, "That was great, wasn't it, Flora? The greatest piece of luck we ever had. Twelve mallards; about thirty-six pounds of 'em. Guess we will take them to the house before we go after those chickens."

"When they reached the house they did not stop to rest, but got a drink of water and the man removed some of his clothing, for the sun was warm, and the ducks were heavy. They returned to the spot where they had stood when the chickens flew from them, so as to make sure to get them rightly located, for the general sameness of the prairie makes it very easy to miss a spot not carefully located at the start. The man again fixed the spot by his marks, and then started for it, keeping the marks constantly in range. Flora wanted to go at her usual rapid gait and wide range, but the man kept her in until it was about time for the birds to be found; then told her to hunt, but to keep in closely. "Careful, careful now," and man and dog slowly approached the place. Flora held her head high and the man held his gun at "ready," for now, at any moment, wild flushing birds might be expected.

They started—two or three dozen of them; but they rose fifty yards away and the man did not shoot. Then a single bird rose thirty yards distant, and was neatly dropped into the grass. Flora wanted to retrieve it, but was made to walk slowly just ahead of the man. As they neared the spot, another bird rose within range and was missed by both barrels because the shooter was under too much excitement.

Near the dead bird Flora found a trail, and following it slowly and carefully through the grass for a hundred yards, two chickens flushed, clucking as they went. They were easy shots. At the report of the gun a half-dozen more took wing while the man stood there with an empty gun. He paid no attention to the flight of these birds, for it would be useless he knew to try to mark any of them. They were gone for good, as were the first lot that flew.

Flora found other trails, and followed them to a finish. Sometimes the birds flushed wild and at others just at a nice distance. Most of the birds that rose within range were killed and a number of the wild ones shot at. Of the long shots a few were fine kills, while others were missed. When the whole ground had been carefully gone over and there seemed to

be no more trails to be found, the two partners sat down and counted heads. There were seven great big plump fellows. The man pressed his thumb nail against the backs of their heads to see how many of them were young ones. He could dent the back of a young one's skull, but the skulls of the old ones were too hard. He found four young ones.

The two partners took their leisurely way through the dead grass toward the house. There was no need for hurry, and the mellow October sunshine made the man a little lazy. Possibly he was a bit tired, too, for there had been five hours of rather strenuous life. Flora wanted to hunt all the way to the house in her usual dashing style. She did not really care much about finding game, for she knew the hunt was over. She just wanted to have one of her wild racing spells, and she was finally given permission to go. A twenty-mile-an-hour gallop was nothing for her. She could keep it up hour after hour and seemed never to tire. There is not a doubt but she enjoyed it just for the grand speed she was making. It was noon when the partners reached the house and a pair of young mallards was on the table.

What a great forenoon it had been! Never since has just such luck come in one October forenoon on that prairie. Had the day been cloudy and windy the probabilities are that not one prairie chicken would have been bagged, for in late October they are too wild to be approached at all in such weather, and the killing of a dozen mallards at two shots does not come more than once in a lifetime. Those great days have been over almost forty years. Flora's tireless body was laid in its final resting place many years ago, but the memory of the devoted love she gave her partner every day of her life is not forgotten by him. The man still hunts, but as the game is gone and his legs are worn out by his years of tramping, he does his hunting now with his heels cocked on the steam radiator, while the snow whirls past his window.

O. H. Hampton.

WAITING FOR THE FLIGHT.
From a photograph by Louis Hess.

Sportsmen and Shooting Fees.

So much has been said for and against the system now generally in vogue throughout the Union, requiring fees to hunt game, that the following statement is of interest. Many Legislatures are in session, numerous reforms are proposed, opinions are various, and more or less confusion prevails as to what is or is not wanted by the citizens of various States.

The summary that follows is based on information supplied us last year by the fish and game commissions of a majority of the States, who were asked whether in their opinion sportsmen were contented with existing arrangements as to appropriations for fish and game protection and propagation or the disbursing of shooting license fee funds. Based on their opinions, therefore, satisfaction seems to prevail in twenty-three States, dissatisfaction in at least six, while five others cannot, for different reasons, be placed in either column.

The summary follows:

Arizona collects only about $100 per annum from non-resident shooters, and appropriates nothing toward the expenses of the commissioner, who pays part of his expenses from the small license fund.

California's game fund is a separate one. When metal tags were carried by licensed gunners, the tags were loaned, cutting down the amount of the game fund, it is claimed, but after the paper tag, bearing the shooter's name was adopted, the total amount in the fund rose to $126,000 or more. That was for 1909.

Colorado license fees total about $16,000. The Legislature appropriates about $30,000 per annum for fish and game protection. Sportsmen are satisfied.

The Connecticut Fish and Game Commission handles the game fund, which is about $20,000 per annum. This arrangement has met with satisfaction.

In Idaho no appropriation is made for fish and game, but the license fees are placed in the game fund, which seems to give general satisfaction. Last year Chief Deputy B. T. Livingston expected that the game fund would amount to $50,000.

The Illinois game fund averages about $150,000 a year. The game commission dispenses this, and the Legislature appropriates no moneys for its work. The arrangement seems to be satisfactory.

The Indiana Legislature has not appropriated any money for the use of its Fish and Game Commission for the last seven years. The commission handles the game fund, which is about $60,000 per annum. General satisfaction seems to prevail.

Iowa has a game fund. In the year expired last April $108,000 was paid into this fund for licenses. Prior to the passage of the present license law the Legislature appropriated $7,500 per annum for the use of the State warden's office. The sportsmen approve the present method of disbursing their money.

Kansas shooting license fees are paid into the State Treasury, there to be held as a game fund subject to Legislature appropriation. At present this fund amounts to $64,750, and the Governor has asked the Legislature to turn it over to the game commission.

Louisiana appropriates nothing for game protection, but allows the game and fish commission to expend the moneys collected by it. The receipts from all sources in 1909 amounted to about $85,000.

There is a game fund in Maine. For the past two years the amount of fees, fines, etc., paid into it by shooters and guides averaged $43,000. Last year the Legislature appropriated $47,500 for fish protection and propagation. Resident sportsmen approve the system.

In Maryland the wildfowl shooting license fees paid by non-residents are retained by counties.

Shooting license fees in Massachusetts are paid into the general fund in the treasury. In 1909 the total was $28,000. During the past ten

years the Legislature has appropriated from $21,000 to $74,000 per annum for game and fish protection.

Commissioner Jesse A. Tolin last year estimated that the total amount paid into the game fund of Missouri would be about $150,000. For 1909 the total was $98,000. The last Legislature appropriated $200,000 for the commissioner's uses for 1909-10. Excellent progress has been made and the sportsmen are appreciative. We have already referred to the sportsmen's proposition to purchase a large tract of land in the Ozarks for a game and fish preserve. The payment, they claim, should be made from the game fund. A fortnight ago the Missouri State House was destroyed by fire. It was said at the time that there was about $30,000 in cash in the vaults in the treasurer's office, but we have not heard since then how much, if any, of this was recovered when the vaults were opened, or whether the game fund was affected. The central portion of the capitol was erected in 1838 during Governor Boggs' administration. This was of course not fireproof, but about twenty years ago two large wings were added, and the treasury was in one of these. The entire structure was of stone.

Montana has a game fund which is sufficient to cover the expenditures of Warden Henry Avare. In 1909 about $45,000 was collected from shooters. Non-residents paid about $5,000 in all for licenses and shipping permits, and guides paid about $400 for their licenses. Sportsmen are satisfied.

For constitutional reasons all of Nebraska's shooting license fees are turned into the school fund, and no part of this money is used for game and fish protection. In 1909 nearly $10,000 was paid for licenses, fines, etc. The Legislature appropriated approximately $29,000 for two years' current expenses of the commission. Chief Warden Dan Geilus informed us last year that the sportsmen were not satisfied with the present arrangement. He thought every resident should obtain a license. Under the law a resident may hunt in his home county without a license, but must pay $1 to hunt in other counties.

In New Hampshire the license fees are turned into the treasury as a special fund. For 1909 the fees amounted to about $27,000. The Legislature's appropriation for game and fish protection during that year was $8,600. An effort was made last year to secure for game and fish protection the moneys contributed by sportsmen, who were dissatisfied with its disposition.

New Jersey sportsmen are satisfied with the shooting license law. All sums collected from this source are turned over to the Fish and Game Commission. In 1909 the total was about $60,000.

New Mexico has a separate game fund. In 1909 the total was $7,886.20. In addition to this the Legislature appropriates $2,300 per annum for Warden Thomas P. Gable's salary and expenses. Shooters are satisfied.

In New York the constitution provides that all moneys collected shall be turned into the State's general fund. The shooting license fees, therefore, are not used for game protection. Instead, the Legislature appropriates money for this purpose. In 1909 the license fee fund totaled $130,000. For game and fish protection the Legislature appropriated $123,756.58.

In North Carolina the shooting license fees go to the game fund and are expended by the State Audubon Society. About $8,500 is realized from the sale of licenses.

North Dakota's game fund in 1909 was about $27,000, but as the then new arrangement met with general satisfaction, it is probable the total for last year was greatly augmented.

Non-residents alone pay license fees in Ohio, the fund being handled by the game commission. Attempts to require a resident license fee have so far met with successful opposition.

Oklahoma's Legislature last year appropriated $32,000 for fish and game propagation. The game fund totaled $73,000. General satisfaction seems to prevail.

Oregon appropriates $4,200 per annum for the Fish and Game Department. In 1909 Warden R. O. Stevenson collected over $43,000, mainly from gunners' licenses. His department expends such portions of the fund as are deemed necessary. General satisfaction with the plan seems to prevail.

In Pennsylvania the money collected from non-resident shooters is divided, the county retaining half, the balance going into the treasury. The game commission and the fish commission are separate bodies. The former disburses about $25,000 annually for game protection, and the latter a larger sum. For two years the game commission and sportsmen's associations have endeavored to secure the passage of a resident license law, the fees to be used for game protection.

South Carolina appropriates nothing for game protection, and the game fund averages about $3,000 only. Satisfaction seems to prevail.

In South Dakota half of the proceeds from gunners' licenses goes into the State treasury, while the balance goes to the county treasury. In 1909 about $35,000 in all was collected from sportsmen, who like the arrangement.

Tennessee has never appropriated any moneys for fish and game protection. Game, Fish and Forestry Warden Joseph H. Acklen has carried the financial burden on his own shoulders, and has tried to make accounts balance. In 1908 less than $8,000 was received from licenses

Texas collected $11,000 for shooting licenses in 1909, this going into the game fund. Deputy Commissioner Loranee tells us the sportsmen are satisfied with this arrangement.

Utah's game fund was about $30,000 in 1909, and probably much more last year. Commissioner F. W. Chambers collects all fishing and shooting license fees, and his disposition of the accruing fund meets with the satisfaction of the sportsmen. Last year 10,000,000 trout fry were planted by the commission.

Vermont supplies its Department of Fish and Game with $5,500 every year. All moneys collected by the Department are added to its fund. In 1909, $20,000 was collected. The arrangement is satisfactory to gunners.

In Washington each county treasury receives the fees paid to its officials by gunners, and may expend the fund as it may elect. The State auditor also issues shooting licenses, good in all counties, the proceeds going into the game protection fund, to be appropriated for paying the salary and traveling expenses of one deputy warden. This requires about $4,500 for two years, and the fees average a similar amount.

West Virginia has a game fund. In 1909 it amounted to about $22,000. This the gunners are satisfied with so long as it is expended mainly in game protection. Warden J. A. Viquesney is allowed about $8,500 for salaries and expenses of himself and two chief deputies. This the Legislature appropriates.

In Wisconsin the license fees go into the hunting license fund in the State treasury. In 1909 residents paid $97,631.85 in fees; non-residents $5,500 for deer permits and $3,750 for small game permits. These and the moneys received from various other permits, exclusive of commercial fishermen's net licenses, brought the total up to $116,892.47. George W. Rickeman, State warden, informs us that, in his opinion, the sportsmen are satisfied with the disposition of the fund.

Sportsmen paid into the general fund of the Wyoming State treasury in 1909, $17,603.80; for 1909-10 the Legislature appropriated for game and fish protection $31,000. Game Warden D. C. Nowlin believes the sportsmen are not satisfied with this arrangement, as they think all fees should be expended for protection, as may be done by legislative enactment, there being no bar against this in the State constitution.

New Jersey Game and Fish Legislation.

The board of fish and game commissioners of the State of New Jersey has just presented to Governor Wilson and the State Legislature an interesting report on game and fish legislation in New Jersey prepared by C. E. Brewster, of the Bureau of Biological Survey in Washington.

The report includes a history of game and fish legislation from 1675 to 1910. The first game act passed by the General Assembly held in Elizabethtown provides the bounty of fifteen shillings for each grown wolf killed within the Province of New Jersey. Three years later was passed an act giving to "the inhabitants of the Province of West Jersey liberty of fishing in the Delaware River or on the sea coast, and the liberty of hunting deer or other wild beasts, or wild fowl," except on certain lands. In 1679 the export of dressed deer skins from deer killed by Indians was forbidden.

The first act about fish appears to have been passed in 1765, "to regulate the method of taking fish in the River Delaware and to prevent obstructions in the navigation thereof and for other purposes."

Mr. Brewster discusses the duties of commissioners, wardens and deputy wardens, and writes at some length about spring shooting, pointing out its destructiveness until "the better class of sportsmen and other public spirited citizens rallied in a number of our States and the Provinces of Canada and fought a winning fight against selfishness and ignorance and saved the day in their respective States." He speaks of game farms, and the success that has been had in raising deer, ruffed grouse and quail; of the importance of bag limits; the proper protection of shore birds; the needed revisions of the law; the protection of fish, both game and commercial, and the hunting license law. He recommends the adoption of uniform laws.

Persons desiring to read this report should write about it to the board, whose members are B. C. Kuser, President, Trenton; William A. Logue, Treasurer, Bridgeton; Percival Chrystie, High Bridge, and Ernest Napier, East Orange.

The Flight of Wild Geese.

Editor Forest and Stream:

Because this is a subject of interest to all the lovers of nature, I will give my solution of the problem. Fifty years ago I studied the question until I got an answer, which I thought then, and still think, is the true reason why the wild geese adopted the wedge-shaped flight.

My observations were made far inland in Maine. Nearly all the flocks that passed over my home were arranged in a triangular form. I studied the flocks with a spy glass. My attention was called early to the fact that there were often one or more geese within the triangle. My idea at first was that these geese in some way had failed "to touch elbows," so to speak, but it was not long before I discovered a fact that gave me food for thought. It often happened that when a goose within the triangle went back into line, another goose dropped out of the line and took its place. That this falling out of line was not against the rules was evident. The honking did not change as would be the case if there had been any transgression of the law of flight. I noticed, too, that the number of geese within the triangle did not exceed four, and two was the usual number. It was up to me to find the cause that led the geese to leave the line and to return.

At that time I was deeply interested in natural history. I was aware that in nature's law there was no result without its cause. When a goose dropped out of line to fly within the triangle, it was surely a result. What was the cause? One thing was evident. The cause was not connected with the earth, then it must reside wholly in the air, and doubtless was linked with flight. These birds fly at the rate of about eighty miles an hour, and the resistance of the air certainly must weary the weaklings of the flock.

Did these weaklings seek rest within the triangle? I thought they did and still think so. While within the triangle they surely did not labor against the resistance of the air, and perhaps the air within the triangle is carried along with the flight. Railroad trains, at much less speed, carry air in the rear of the last car. If this reasoning is correct, then the wild geese invented the wedge-shaped flight to afford rest to the weaklings of the flock. Said weaklings, probably, being young birds not fully matured.

I have used the word "invented" advisedly, notwithstanding some writers claim that man is the only animal that invents. It is a law of nature that every thing on earth had its beginning. If we examine a steam engine we can but admire its intricate mechanism, its speed and power when in action, but if we think back we will find that this wonderful creation had its beginning in the lifting of a teakettle lid. A naturalist that goes afield with eyes to see and brains to think knows that animals are inventors. Catbirds about my cabin make their nests of string, strips of cloth and bits of paper. An invention beyond doubt. I saw a garden spider invent a way to make its web flat by putting on a stay line. I could fill a book with the inventions of animals that come to my cabin for food and nesting material.

Your correspondent writes in relation to the geese finding their way south:

"My theory is that instinct is but little relied upon, and that it is a pure matter of training by the old patriarch of the tribe." This true line of reasoning is somewhat weakened by a former statement.

"In the blackness of cloudy nights, in heavy fogs and blinding storms, you ask, how is it then the geese hold their way with such unerring certainty? We know that their sight, while keen, is not of such phenomenal character that they can see under such conditions, * * * and here is where those who claim that it is the instinct of the birds that carries them safely through have the best of the argument."

I do not believe with your correspondent that these people "have the best of the argument." I have two reasons for my disbelief. It cannot be true because there is no such thing as instinct in nature, and because there are logical reasons why the geese find their way without resorting to a miracle. Take fog, for instance. It is low-lying, and the geese could easily rise above it and see the high hills and mountains. My own experience leads me to believe that wild geese at the present day can follow the coast line on stormy nights by the sense of sight. During twenty-six years I have returned to my cabin on scores of stormy nights. As yet I have had no difficulty in finding the way, and certainly birds possess a sense of sight far keener than mine. When 'coon hunting, on dark nights, I have often started grouse from a tree. The bird always hurls itself through the thick growth without accident. Think how keen must be the sight that on dark nights would enable a bird as large as a grouse to avoid the network of limbs and branches in a low forest.

Here is another view. Rain clouds float usually under a mile in height. The geese could rise above and regulate their flight by the stars. We know the geese regulate their flight by landmarks. It is fully as logical to assume that they regulate their flight by the stars above them, as they do by the earth below them. HERMIT.

Mr. Tolerton's Work.

DONIPHAN, Mo., Jan. 20.—*Editor Forest and Stream:* At no time has the State of Missouri had such good game laws as at present, nor have they ever been better enforced. A two-years' test has been given the laws, and the results have been beyond expectation. Fortunately the department had at the head of it a man who believed in the game laws and their enforcement, and the State should be proud of its game and fish commissioner, Jesse A. Tolerton.

In certain sections the law has not met with the approval of the native element, and it followed that the officials in these parts that depend on votes from this class showed great hostility toward attempts of the deputies to enforce the law to the letter. The license fee of $1 was the chief point of contention. They argued that it was perfectly correct for residents of the cities to pay for licenses, but the native or resident of the county should be permitted to hunt without paying a fee. Again they became incensed because deputy wardens were sent into their territory informing everyone that the local officers were fully capable of taking care of the enforcement of the law, one official stating in print that he would not recognize in his court the authority of any game warden. It certainly was a humorous opinion, his claim being that they were imported by city sportsmen. Certainly he had little knowledge of what he was discussing, for every complaint that came to the State warden from that section was filed by resident farmers of good repute who simply could not stand the outrageous violations that occurred in some of the counties over which this judge presided.

They knew the futility of making complaint to the local officers and feared destruction of stock or other methods of revenge if it leaked that they had made a complaint. One county attorney stooped so low in his campaign for re-election that he publicly made the license law an issue, and some I am told he promised protection against arrest for hunting without license if they voted for him. The same official is reported to have hunted deer several days prior to the open season, and this has been affirmed by reliable witnesses. It amused me very much when this good judge came out with his opinion, for I had just come from a trip in the pineries in his district.

The deer at the time were obliged to go to small ponds on the ridges for water unless they made the long trip to either river. What a sight it was to see the trees close to these scarce water holes; they were full of men, looking like a host of buzzards watching for their carrion. Every one had a gun. I saw the same thing at the five water holes I visited. There was no secret about it; no local officer could help knowing that this was going on even if he had not been on the alert to secure necessary information on which to base a complaint.

An identical state of affairs existed at the licks during spring. Does carrying young were not spared, but shot down when they came within range of the violators' guns. One large female was shot at a lick, but got away and wandered with her death wound until, exhausted, she fell against a wire fence. A small girl returning from school found her and reported it to her father, who went with help to the scene. They brought the doe to their farm and gave it every attention possible, but she died next morning. This man had some skill as a taxidermist. When he went to mount the doe he found two female fawns that would have been dropped in a week.

The attitude of some office holders has so incensed some of the larger land holders that they state that if these officials serve another term, they will withdraw their lands from public hunting. But except in these few localities the fish and game commission has found the authorities willing to do their duty in every instance.

The work of the commissioner, especially toward the fishing interests, deserves praise. He has kept the streams well patrolled by wardens, so that dynamiting, seining fish, trapping and these means of existence have become dangerous and one can rest assured of good fishing in the future. Mr. Tolerton's administration has been not only one of enforcement of the law, but one of education. The farming class has learned the benefits to be derived, and now favors the law where a few years ago they were in the majority against it. Whatever change the present Legislature makes in the law, whether of material benefit or the contrary, it will remain strongly in the mind of the hunting public that no game laws can ever be enforced by using the local officers alone. They have too many other irons in the fire to make them efficient.

J. B. THOMPSON.

Latham's Duck Shooting.

Alhambra, Cal., Feb. 5.—*Editor Forest and Stream:* Your San Francisco correspondent's account of Mr. Latham's duck shooting at the Bolsa Chica Gun Club is very misleading. I was a close observer of the flight of the airship and of its effect on the waterfowl. Mr. Latham, who is a keen sportsman, was invited to the club the week previous, and from terra firma easily got his limit in two or three hours. At that time it was proposed to him to sail over the marshes and nearby ocean, more to determine the effect of an airship on the waterfowl than from the expectation of bagging any ducks.

Many stories of the dire results to bird life were in circulation in the vicinity of the aviation field. Someone had seen a lone spoony drop dead on seeing one of these horrible man-birds in flight. This was a sample of the stories that were heard as one passed around. Mr. Latham and the club members were curious to find out what the real results were, and for this purpose he was invited to make the test.

As the airship approached the lagoon just below the club house, about one hundred feet above the water, the waterfowl, including coots, shore birds and ducks, rose en masse, flying ahead of the machine for a short distance, then turned sharply at right angles and left it. Many of them returned to the rear and again settled on the lagoons. Some crossed to the ocean. Latham turned and followed them, and by a lucky downward shot knocked down a bluebill. He could not shoot in any other direction, as the wings of the airship were in the way. He shot a dozen times altogether, but without further results.

Over the ocean and the marshes he sailed for about three-quarters of an hour, jumping up thousands of birds. They flew from the monster, and then quietly settled down again. On the marsh which parallels the ocean, with sand dunes between, the ducks on shooting days rise in a body at the opening fusilade and go to the ocean, the majority remaining there during the day; but Latham did not cause them to do this to any great extent. The second day afterward, being a shooting day, the birds were apparently as plentiful, and the shooting as good as before.

The members of the Bolsa Chica Club are among the most law-abiding and representative men among our citizens, and have no intention of encouraging or inaugurating an airship hunting club even if this were a feasible thing. This experiment proved to everyone who observed it the utter impracticability of such a method. It showed also that the ducks are in much less danger from an airship than from an old-fashioned duck blind. H. L. S.

Season Closing.

New Orleans, La., Feb. 6.—*Editor Forest and Stream:* The hunting in the past ten days has been very poor on account of the hot weather. The hunting season has almost closed and very few ducks will be marketed from now on. The deer season has closed. A number of quail are being hunted. Wild turkeys have been abundant this year. The season as a whole has been successful.

The Boards of Trade of Morgan City and Berwick have adopted strong resolutions protesting against the rulings of the State Game Commission restricting fishing in waters near the two cities mentioned. The resolutions allege that Commissioner Miller could not legally prevent or restrict the fishing in these waters. The two boards of trade appointed Secretary Ditch to present the resolutions to the commission and to hold a conference with Mr. Miller on the subject. The fishermen in and near Morgan City and Berwick claim that they cannot make a living if the orders of the commission are carried out.

Members of the commission have gone to Morgan City with a view of adjusting the controversy, if possible. The fishermen and a number of citizens in Assumption parish protested against the seining in Verret Lake by fishermen engaged in selling fish. Objection was especially to seining in Lake Verret. The commercial interests in Morgan City and Berwick took up the question and alleged that they have a right to seine and fish in the waters of Lake Verret. President Miller gave orders prohibiting the seining in the lake. It seems probable the commission will decide in favor of Assumption parish people and prohibiting seining in Lake Verret. F. G. G.

New York Legislature.

Assemblyman Brereton, of Warren county, has introduced a bill relating to fishing in Lake George.

Senator Griffith and Assemblyman Wilson, of Ontario county, have introduced a bill increasing from ten to twenty-five cents clerks' fees for issuing hunters' licenses.

Assemblyman Shannon, of Steuben county, has introduced three bills of interest to anglers in Lake Keuka.

Assemblyman C. W. Phillips, of Monroe county, has introduced these bills: Providing that the open season for hares and rabbits shall be from Oct. 1 to Dec. 31, both inclusive. It also provides that no person shall take more than six hares or rabbits in any one day or transport more than six on a single trip. Hunting of rabbits or hares with ferrets is prohibited by the bill, and possession of ferrets is made presumptive evidence of their illegal use.

Substituting the month of November in place of October as the month during which male pheasants may be taken on Thursdays and Saturdays in Livingston, Monroe, Ontario, Wyoming and Wayne counties; pheasants to be taken or possessed in Fulton county from Nov. 1 to Dec. 21.

Assemblyman Levy, of New York, has introduced a bill prohibiting the sale or having in possession of any part of the plumage of any wild bird coming from without the State having plumage similar to that yielded by birds native in the State and protected by the section. At present selling or having in possession plumage of such birds is prohibited, provided they belong to the same family as the birds within the State protected by the section.

By Senator Bussey and Assemblyman Pierce changing the open season for hares and rabbits in Wyoming county from Sept. 16 to Dec. 31, inclusive. The bill also prohibits the hunting of hares and rabbits with ferrets in Wyoming county and makes the possession of ferrets within the county presumptive evidence of their illegal use.

The Fur Seals of Bering Sea.

The gratifying announcement from Washington that the State Department has reached a substantial agreement with Great Britain, Russia and Japan for the preservation of the fur seal herds of the Bering Sea lends special interest to a few words on this question from the pen of Dr. Chas. H. Townsend in the American Museum Journal. Dr. Townsend is one of the first living authorities on the fur seal and its habits, having spent a number of years on the islands in the Bering Sea, and during other seasons having been engaged following the long winter journeyings of the fur seals. It was he who gathered those data which finally enabled him to plot the course of the wandering herds. Dr. Townsend says:

"With the development of ocean or pelagic sealing, the killing of female seals began, and this naturally resulted in the rapid reduction of the breeding stock. Twenty-five years ago, with perhaps 4,000,000 seals in sight, it was possible to kill annually 100,000 male seals on the Pribilof Islands without injury to the herd. To-day with a herd of less than 175,000 seals remaining, the island catch of males is seldom more than 10,000.

"The annual ocean sealing catch, consisting chiefly of females, has in the meantime dwindled from an average of 80,000 a year to a paltry 10,000, while the sealing fleets, which once numbered 120 vessels, now consists of fewer than thirty vessels.

"The condition of the Asiatic seal herd is much worse, for both the land and sea catch have decreased to less than one-third of that derived from the American herd. The restoration of both herds to their former abundance and commercial importance can be brought about only by the complete suppression of ocean sealing.

"As a result of the long continued investigations of the sealing industry, the natural history of the fur seal has been worked out perhaps more thoroughly and critically than that of any other mammal. Science has profited if the sealing industry has not, and many important discoveries have been made respecting the anatomy, food, age, breeding habits and migrations of this important animal.

"Among the problems solved we may consider briefly some of those connected with the wonderful migrations of the fur seal. Late in the fall the seals leave their island homes in Bering Sea and enter the Pacific ocean. The American herd migrates southeastward to Southern California, a distance of over 3,000 miles, whence it moves northward along the coast during the winter to enter the Bering Sea the next summer. The Asiatic herd migrates southwestward to the coast of Japan, returning the following season by the same route. There is no commingling of the two herds either in Bering Sea or in the Pacific. Both herds remain afloat the entire winter, and neither herd is known to touch dry land anywhere except upon return to its native islands in Bering Sea. No other mammal follows with strict regularity so extensive a migration route."

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Appalachian Forest Bill.

Washington, D. C., Feb. 13.—*Editor Forest and Stream:* The bill introduced by Representative Weeks for the purpose of enabling the several States to form a compact for the purpose of conserving the forests and water supply of the country has been pending since last June, and unless the measure is passed during the present session, fear is expressed by the friends of the bill and the policy announced therein that it may never again acquire the same favorable status it now holds. The bill has been made the unfinished business of the Senate for the 15th with an agreement that a final vote shall be had upon the bill itself before adjournment upon that day, and every possible influence is being brought to bear to have the measure pass the Senate as it stands without loading it down with amendments which would operate to defeat the bill, inasmuch as the chances are great that it would not emerge from a conference owing to the enormous pressure of appropriation and other bills which would naturally be given preference, allowing the Weeks bill to die in conference.

A careful canvass has been made of the Senate with the result that the advocates of the measure are convinced that it will become a law. Appeals have been made to the senators not to amend the bill, which would kill all chances of its becoming a law, and its friends now believe that these appeals have very much lessened the danger of its defeat. Unless this bill passes during this session, there is thought to be small chance of establishing forest reserves in the East for years to come.

"One of the most important steps toward nationalizing conservation will be inaugurated the day when the Weeks' forest reserve bill passes the Senate, which we confidently expect will happen this week," declared Gifford Pinchot, late chief of the United States Bureau of Forestry. Last year sixteen senators voted against making the measure the unfinished business of the Senate, but this year unanimous consent was given to the request for a vote, which is an indication that less determined opposition will be extended to its passage, as many senators who last year opposed a vote are expected this time to favor the measure.

The Weeks bill involves spending $11,000,000 in five years, and it proposes to purchase from 2,000,000 to 3,000,000 acres of land, partly in the White Mountains and partly in the Southern Appalachians, for the purpose of establishing protection for the watersheds of navigable streams, the lands so acquired to be permanently reserved, held and administered as national forest lands. It is provided that the several States may co-operate with the National Government, and with each other in a system of forest fire protection. The enactment of the bill will mark the beginning of a new era in conservation of our national resources, for the provisions extending the benefits of the bill to the several States will weld them into a bond of friendship to each other and to the National Government on the policy of conservation. A National Forset Reservation Commission is provided in the bill to consist of the Secretary of War, the Secretary of the Interior, the Secretary of Agriculture, two Senators and two Representatives, who will have complete control and supervision of the lands purchased under the provisions of the proposed law.

It is about 600 years since Switzerland enacted laws for forest regulation like those which this bill provides for our Eastern reserves. To-day nearly one-fourth of the area of Switzerland is in forests, carefully supervised and controlled by the Government, and forms one of the greatest sources of national wealth. France, which was once almost covered with forests, has allowed them to be all but completely destroyed, and only lately has she adopted a policy of restoration which results in great benefits, in controlling floods and storms as well as affording a timber supply. Germany's great work in the same direction is well known, and one may ride for hours through State-owned pine forests over State-owned railroads. Her system of forest management and conservation is regarded as a model, and our students of forestry go to Darmstadt to study her forestry system.

The northern section of our Appalachian region is fast approaching the condition of forest denudation that existed in France and north Italy when they inaugurated restoration measures several years ago. In the South Appalachian section the conditions are not quite so bad, but are rapidly moving to a stage that will soon become bad, and the purpose of the Weeks bill is to remedy waste and begin restoration. It may be realized how important a policy of conservation of the forests may become when a country faces a forest famine, and may be judged from the recent action of the Japanese Emperor in seizing every forest area and placing it under the strictest Government control.

Raleigh Raines.

Atmospheric Influences on Fish.

It will readily be conceded, I suppose, that the susceptibilities of the *genus homo* are, in many ways, of a less subtle order than those possessed by what the lord of creation is pleased to call the lower animals.

They may be lower, but many of them possess faculties of exquisite fineness entirely beyond man's comprehension. We call it their instinct; that seems to satisfy us. Behind that term we are content to pile our colossal ignorance of their particular sensibilities. We use it as an acknowledgment that we are unable to explain the laws which govern the actions of created things. They are beyond our duller senses and unintelligible to our blunt understandings, and there is no short cut to a knowledge of endowments so subtle.

Take fish, for instance, for that is the subject creature in hand. Nearly all that the average man and most that the average angler knows about them is that they swim. As an ardent angler with half a century's experience behind me, I just know enough to assure myself that with all my years of observation, what I have learned, compared with what is to be known, is as a drop in the ocean. But there is always some hope for those who are convinced of their own ignorance.

Without any mock humility I consider myself quite a gross and coarsely constituted being by the side of a little minnow or samlet, say nothing of a shark. My senses are as nought compared to theirs, and as to my intuitions—why, the very keenest of them does not bring me as far as the rudiments of theirs.

In the element of uncertainty there is always charm. If we understood the laws which govern the ways of fish, angling would soon be reduced to a process — like digging potatoes — and we should get as many as there were about. But fortunately for our streams and the balance of nature, we do not.

"He that observeth the wind shall not sow." If the angler observes it, he will rarely angle. He makes deductions from its force, its direction, density, temperature and counts himself a scientist worthy of high regard; but how a trout of the lowest degree would laugh! The prognostications of, say a pike, one low down in his own social scale, might be purchased at a high price by persons high up in ours, and sold to a wise weather bureau at a good profit. Think of him, persistently sulking for days, before a hurricane. That has been pretty well authenticated by the comparison of records. It is open to every angler to verify it. Indeed, it should be a point of honor with every one of us to make careful observations and record them. Only so can we get data; only so can we hope to succeed in unraveling many problems.

What communicative force is it which impels certain fish to certain actions long before a change is evidenced to human intelligence? We can see the creatures of the jungle consent with one accord to prepare for rain at a remarkably regular interval before it comes, and we can see that the living things of the prairie are actuated all alike to prepare for the coming tornado, but we cannot see so well the prophetic ways of fishes, for they are not of our element, and we should not be comfortable watching them in theirs. Yet we know something, and patient observers learn more than enough to prove that

the influences in the atmosphere affect them strongly and cast their shadows long before.

Who does not know that eels feed ravenously when the air is over-charged with electricity. But few have watched them forty-eight hours before a thunderstorm with their noses just out of their mud holes, then protruding half their lengths, expectant, uneasy, almost till the first discharge of thunder, then sallying forth to devour.

"Feyther," said a Somersetshire lad, "get thee hay in an' stop theck mower." "Nay, lad," quoth the father, "the glass is high an' it ne'er looked more zettled vor vine." "I tell 'ee feyther 'tis gwain to rain; the eels down the brook be pokin' their 'eads out." And the yeoman lamented the next day because he had not listened to the boy who knew his eels.

"The glass is high." Tut! On Dartmoor last summer it became a fashion among the moormen to make them serve as targets for rifle practice. A reproach upon human intelligence will be removed when such a fashion has spread and spent itself so lavishly that not a glass is left except in centers where men are so huddled between walls that to observe nature is impossible.

If creatures have instincts wherewith to guide them, man at least may observe those instincts and make some endeavor to understand them. What strange force brings forth the eel, excites him and stimulates him to hunger? We say "it's marvelous" and leave it, but nature holds no marvels; all is immutable law and order in her workshop. Things only seem marvelous, because not understood. Something draws the eel, stirs his activities, stimulates his hunger. What is it? Palpably it is a form of magnetism. What does it affect in him? Probably his digestive organs. But what a provision that he should hear, so to speak, a first and second dinner gong and have notice of the banquet, for his prey are already abroad.

Fish, even as we know them, are full of portents. Certain actions due to certain coming events unsuspected by man are law with them. We could learn incredible things from them if we would only take the trouble to verify one another, but we will not waste time by observing. The most alert at sport are the greatest laggards at science, more's the pity. They are acquainted with facts, but it is too much bother to make deductions. They know, for instance, that a salmon will not rise to a fly when the sky is steely, and glibly say "bad light" or "too bright." If one says "too little electricity," one is scoffed at. Or, if he tremblingly suggests anything as to the state of a fish's liver, he has to listen to a highly trained guffaw and is told to tell it to the horse marines.

The fount of wisdom is dammed—I hardly knew which way to spell that word. You tell the same man a far more subtle truth—that the deer in his forest, for instance, know whether the guns are out intent on slaying them, or only the birds, and act with corresponding alarm, and he says, "Who doesn't know that?" How does he know it? By the unerring behavior of the herds, time after time by repeated experiences. Then why not let others tell of less wonderful things which repeated experiences have made so evident to them. It is easier for him to swallow his own camel than another man's gnat.

Is the effect of electricity upon piscine livers half so unintelligible a problem as that of the purpose of the hunter being capable of transmission to the intuitive perceptions of the hunted? It is not. The line of demarcation between mental and physical impulse may be very indefinable, but certainly the mind of the stag is an organism less open to explanation than the liver of the fish.

I particularize the liver because in fishes there is reason to believe that organ is extremely sensitive probably more the central seat of stimulus or depression than is the case in most other creatures, and almost as quickly influenced as the leaves of a tree in wind. That being so, and water being a full transmitter of aerial vibratory waves, we might understand why fish are particularly sensitive to every passing change and acutely aware of prospective ones.

We cannot doubt that fish, in their sudden disturbances and as sudden revivals, are responding to the variations of atmospheric conditions conveyed to them, possibly through the medium of their own element in an intensified form. What is far off to our senses may be very near to theirs. We cannot detect the death throes of a horse twenty miles distant like the vulture, nor like the horse can we scent water through two feet of sand. Let us allow attenuated powers to fish also, and to a degree to which we are utterly incapable of putting any limit.

J. Berryman.

[To be concluded.]

Minnesota Legislation.

Minneapolis, Minn., Feb. 8.—*Editor Forest and Stream:* We are now waiting for spring so that once more we may take down the rod and ereel and hie away to the streams for a tryout with the sly ones. There are the bass in the ripraps and the trout in the little brook that dashes among the rocks down from the hills. Still all have the same feeling, and we have the same notions as to what we are going to do when the time comes. At present we can fish through the ice.

Fishing was very poor last summer; in fact, it was about the poorest I have seen. Frogs were scarce; shipments were sent from other States, and Minnesota's reputation as a frog State suffered. Fishermen now on the ice are having great luck. The Minnetonkas are the center of the fishing activity and thence stream hundreds of men. The common way is to cut a hole in the ice at a likely place, and then use minnows, which are hard to be found. Previous winters we have been able to get them out on the swamps by cutting into a deserted muskrat house. There they gather and may readily be scooped out. From the way men board the cars with heavy sacks I can vouch for the fact that there is no observance of the limit. The average croppie caught runs to a good size.

It has been decided by the fish and game commission that the date for the opening of the bass season should be changed from May 29 to June 15. Bass and other fish are at that time still spawning, and in the Northern waters even to the first of July. Nine out of ten fish caught earlier than that date are fat with spawn. As it would be unwise to make different dates for the opening of the season in various parts of the State, hence it has been decided that the later date apply throughout the State. The commission's views are embodied in a bill introduced in the House by the committee on fish and game. Other bills prepared under the supervision of the fish and game commission purport to strengthen the present laws. One measure of note requires a non-resident fisherman to pay $1 for a general license. Another bill provides that the possession of green moose, deer and caribou hides out of season will be regarded as prima facie evidence that the animals were killed out of season. Still another bill provides that a shipper be allowed to send heads and deer and moose for mounting purposes outside the boundary of the State. A bill requiring that all fyke nets be lifted at least once every seven days has also been under discussion. The executive agent of the fish and game commission explained to the committee that large numbers of game fish are caught in the nets, and if these were raised only once in two or three weeks, the fish which are to be released are so weakened that they are unable to provide for themselves.

R. P. Lincoln.

The First Tarpon.

Punta Rassa, Fla., Feb. 10.—*Editor Forest and Stream:* The first tarpon taken on the West Coast was brought in at Shultz Hotel, on the San Carlos Bay. C. E. Rich, of New York, having strained his light rod, borrowed a 6½-ounce greenheart to go out on the Matlachee Sound for spotted squetcague. He had a nine-thread line on a light 100-yard reel and was using a strip of ladyfish on a 6/0 sproat hook with music wire snell. Mr. Rich saw three tarpon rolling and avoided them for fear of smashing the borrowed rod, but another tarpon caught him unaware, and the hook sunk well in a tough spot. The big shiner showed his size in the air the moment he felt the restraint and made leap after leap. Mr. Rich had an experienced guide who worked the boat with great skill to meet the rushes out and back, and it required just one and one-half hours to boat the fish, a gaff being handed to the guide by an angler in another boat who was attracted to the scene by the magnificent aerial flights of the fish.

The fish was weighed and measured at the hotel wharf by a self-constituted committee of anglers including Mr. Foster, of Long Branch; C. B. Jones, of Babylon, L. I.; H. C. McDougall, of Newark; Dr. Martin Shultz, of Punta Rassa; Morris and Livingston Rutherford, E. Vom Hofe, Dr. Binion, the Egyptologist, who pronounced it *Megalops thryssoides*, and Col. Brabson, of Memphis.

The measurement was six feet and eight inches and the weight 125½ pounds. Harrimac.

Right.

Irish Medical Student, explaining to a colleague how he was unfairly "ploughed" at a *viva-voce* examination on osteology:

"What's this, sorr?" says he.

"A bone, sorr," says I.

"What bone?" says he.

"The 'faymur,'" says I.

"The roight or left 'faymur?'" says he.

"Roight," says I.

"Wrong," says he.

"Left," says I.

"Roight!" says he.—Fishing Gazette.

Fish Men Protest.

NEW ORLEANS, La., Feb. 6.—*Editor Forest and Stream:* The New Orleans fish dealers held a meeting during the present week and protested against the recent laws regulating the catching and the sale of fish passed by the Louisiana Legislature. The fish dealers signing the protest represent a large majority of those engaged in the business in this city. They claim that the enforcement of the new laws will work a great hardship on those engaged in fishing for a livelihood and on the dealers and the general public. They assert also that the public will be deprived of purchasing fish from the salt waters of Louisiana, and they as dealers will be compelled to purchase fish from other waters, and they will consequently be several days old when they reach the public. It is also pointed out that between March 1 and June 1 it will be unlawful to ship, or have in their possession, or to sell any black bass, yellow bass, sac-a-lait, perch, sunfish and various other species of fish from salt waters. The fish dealers claim that the population of Louisiana is more than half Roman Catholic, and the observances of that church require the members to abstain from meats on Fridays and feast days and during the Lenten season. The fish men assert that this law will be particularly severe on all these people. The fish dealers also call attention to the severity of the law which requires all shipments of fish to be tagged and the contents of all shipments plainly marked, and if not tagged the shipment is subject to confiscation. The fish dealers also call attention to the close season for salt water fish from May 15 to Aug. 1. Heretofore salt water fish could be caught and shipped at any time and placed on the market. The fish dealers declare they are heavy losers.

Chairman F. M. Miller, of the game commission, and E. A. Tulian, superintendent of fish hatcheries, have returned from a tour of inspection, and it is announced that it is very probable Lagoon Catherine will be selected as the hatchery for black bass. Lagoon Catherine is within the city of New Orleans, only a few miles from Chef Menteur and twenty miles from the heart of New Orleans. The body of water is described as being ideal and to abound in both salt and fresh water fish. Mr. Miller and Mr. Tulian also inspected Cedar Bayous Nos. 1 and 2, and the lagoons leading from those waters abound in the alligator gar which thrive well there. It is the intention of these officials to wire off these waters and seine out the alligator gars. The alligator gar is very destructive to the game fish and of no value whatever. He advocates an ordinance by the city council protecting the alligator which is an enemy of the alligator gar. If the fish hatchery is located in Lagoon Catherine, the board will restrict the catch out of the waters to fifteen fish per day by each person.

The warm weather of the past two weeks has rather increased the number of fishermen at the various resorts. Some good catches have been reported, and it is thought that the sport will become more popular if the weather continues warm. Regular summer temperatures prevail, but the waters are yet rather too cool for effective fishing. Some red snappers, speckled trout, sheepshead, green trout and other fish have been landed.

F. G. G.

A SNOW SCENE IN PROSPECT PARK.
From a photograph by F. A. Aldridge.

THE TOP RAIL.

THERE is something wonderfully attractive about a brook in winter, when the trees are iced over and snow lies on the ground. Perhaps it is the sharp contrast between the pure white blanket, the silvery sheen of the shrubs, the almost black tones of their trunks and branches and the dark water. The footprints in the snow alongshore are not all made by anglers, as may be determined in an examination of their sizes and form. True, the brook is almost irresistibly attractive to anglers, but this, I fancy, is due to its total dissimilarity to the brook of May. To others its intrinsic beauty appeals strongly, and one of them is F. A. Aldridge, who has given me permission to present the picture which is reproduced on this page. The picture might almost be called an optical illusion, for it was made in Prospect Park, Brooklyn, and the "brook" was a wet asphalt walk from which the snow had been partially removed with a horse-drawn scraper. In the middle distance is a favorite bench on which old fellows are fond of sitting on a quiet Sunday morning, the while they read their papers, smoke their cigars and watch the gray squirrels scampering about. But before one notices the bench, the illusion

of ripples and little gravel bars in the "brook" is very strong.

* * *

The angler who gave the following story to an Oswego (N. Y.) Palladium reporter, sends it to me also, but in this case he vouches for its accuracy.

"Will Hegemann, who owns one of the shanties on the lake shore, about 300 feet inside the new pier, is enjoying a fine black bass dinner as a result of a recent storm.

"At the height of the storm, when the waves were dashing solid masses of water fifty to one hundred feet in the air, and then being dissipated in a spray by the gale, a fine three-pound black bass was carried up with the rushing water high into the air, and when the wind tore the mass of sea-green wave into fine mist, the struggling fish left seventy-five feet high in the air was swept by the gale 400 feet or so toward the land and fell into and down Mr. Hegemann's stovepipe. Alarmed at the sudden noise he opened his stove just in time to find the cause and save the fish before it was entirely broiled.

"Several times during the afternoon the air was filled with shoals of small fish which were caught under the same conditions."

Someone was unkind enough to hint that Mr. Hegemann violated the game laws. Technically this may be true, but of two evils he chose the lesser one, for had he left the fish in the stove the neighbors might have called on the board of health.

* * *

We were looking for rabbits, carrying guns and ammunition, chiefly as I remember it, for ballast. Here and there ranged a young dog, who fancied he was hunting—just what, after taking his peculiar actions into consideration, I was unable to determine. But he was not my dog, and such opinions as I held I deemed it best not to express, for dog owners are apt to be sensitive on certain subjects. Plodding along a sandy road, the dog skirting an open field of briers and scrub, we saw him burst into an open space plump into a brindle cow, grazing there. As if ashamed of himself, he vanished in the scrub. The cow turned tail, circled, plunged through the thicket and blundered almost into another gunner ranging that side with his dog. He in turn became panicky and ran, but seeing us, pulled up, and for a moment fumbled his gun, then thinking better of half-formed intentions, went his way.

* * *

On a Tuesday I made plans to go duck shooting on the following Saturday, for the day was mild and the ice was breaking up. Wednesday there was rain, Thursday and Friday were days of bitter winds, and on Saturday all the ponds and tidal creeks were closed. That night the wind went round into the south and Sunday was very warm with rain. Coming to town Monday morning the river was blanketed with a dense fog. Standing at the bow thinking of the adversities of fate or whatever it was that had spoiled my plans, I saw a wild duck rise from the water ten yards away, and wheeling pass closer still with head turned in my direction. Had it laughed at me it would not have hurt my feelings more. That duck was within rifle range of a score of the largest buildings in Manhattan and in the path of much of the harbor traffic. Perhaps it had become confused in the fog and had stopped to rest. Other passengers agreed with me that it was not a common thing for wildfowl to alight in that part of the harbor.

Grizzly King.

Book Exchange.

Among the readers of Forest and Stream there are many who are interested in old out-of-print and rare books on sport, travel, exploration and kindred subjects, and frequent letters are received at the office ordering such books.

In the very nature of the case, however, these cannot be supplied on order, and it often takes months of search to secure copies, by which time the person who ordered them may have forgotten all about the matter. Within a few weeks we have received from readers and from dealers a dozen orders for a supposed book called "A Boy in Indian Camps," which orders were called forth by an article printed not long ago in Forest and Stream, describing a book published in 1850 and long out of print. Such books as Dodge's "Plains of the Great West," "Hunting Grounds of the West," Elliott's "Carolina Sports," Palliser's little book on Western hunting and others are often sought for.

These volumes and others like them contain a world of vivid interesting description of life in the open, as it was from forty to sixty years ago, and furnish the most delightful reading. On the other hand, because they are scarce, they are costly by comparison with the ordinary outdoor book, which has just been published and stands in numbers on the shelves of the book seller.

No doubt there are many of our readers who possess these old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second hand books may ask for what they need, or offer what they have.

YACHTING

Some News and a Little Gossip.

Although the chief race for the Sonder class boats will this year be at Kiel, the promise of good sport in home waters is exceedingly good. The three boats that are to go to Kiel are Beaver, owned by George Dabney, designed by W. Starling Burgess; Bibelot, owned by Robert W. Emmons 2d, designed by Herreshoff, and Cima, owned by Guy Lowell, designed by C. D. Mower. These three will probably be shipped early in April, so that their owners may have time to get them in shape for the races in June. Just what the owners of these three will do after the Kiel races is not yet known, but it is very probable that they will be shipped home at once and take part in the racing here from July to the end of the season.

In home waters the chief race will be for the Quincy cup for which the Boston Y. C. has already challenged, and it is expected that in this series of races there will be representatives of the Eastern, Corinthian Manchester and Beverly clubs. Several Sonders are being built this winter, according to the Boston Globe, some for Buzzard's Bay and some for Massachusetts Bay, and it is hoped that some time during the summer representatives of these two pieces of water may be brought together. Since the close of last year's yacht racing there has been a feeling among some of the local yachtsmen that the Sonder class was doomed, but this does not appear to be the case if the number of new boats building is anything to judge by. In 1907, when the American Sonder boats were last sent to Germany, there were only four new boats built for the class, and the following season when no international match was sailed either in American or German waters, only the Bandit was new.

For 1911 at present it looks as if the Massachusetts Bay class would have a number of additions. The Badger, designed by W. Starling Burgess for C. H. W. Foster, is completed and has been launched. Burgess also has orders and has started work on three other boats for the class, two for the Loring family and the other for C. P. Curtis. This latter boat will be named the Ellen II. and under the ownership of Charles P. Curtis, Jr., has been designated as the challenger of the Boston Y. C. for the Quincy cup.

Herbert M. Sears has placed an order with Mower & Bowles for a Sonder boat from the designs of Charles D. Mower, who drew the lines of the Joyette and Cima, two very successful Sonder class racers.

Another Sonder class yachtsman of Marblehead whom it is said will have a new racer next summer is Frederick M. Hoyt, owner of the Gardner-designed Skeezix. Besides these there are two or three who have raced boats in the class who probably will build for the 1911 season.

The Buzzard's Bay class does not seem to have as good an outlook for new boats. While the German trials were on last season it was reported that George C. Thomas had commissioned Charles D. Mower to design a new racer for him. Since then nothing more has been reported on that boat and no mention of any other new boat for the class on Buzzard's Bay has been heard. Herreshoff was quite successful with his Sonder boats in the Buzzard's Bay class last season, and it was expected that a number of orders would be placed at Bristol for Sonder racers. Instead two boats for the Beverly Y. C.'s restricted, 21-foot class are to be built by Herreshoff.

The Philadelphia Y. C. held its annual meeting last week at the club house at Essington. The feature was the presentation of a silver punch bowl to Commodore John H. Bromley on his retirement after four years in office. The presentation speech was made by the incoming commodore, Samuel B. S. Barth. Commodore

Bromley responded, thanking the members and assuring them of his support in all future undertakings.

Other speakers were Vice-Commodore Philip H. Johnson, ex-Commodores A. L. English and William H. Bromley and Rear-Commodore George F. Schilling.

The gift to the retiring commodore consists of a handsome sterling silver punch bowl, ladle and plateau, with elaborate and graceful grapevine decorations. The following inscription appears on the bowl: "Presented to Commodore John H. Bromley by his fellow members of the Philadelphia Y. C. upon his retirement from the office of Commodore, Feb. 1, 1911."

The following officers were elected:

Commodore, Samuel B. S. Barth; Vice-Commodore, Philip H. Johnson; Rear-Commodore, George F. Schilling; Recording Secretary, Sylvester W. Bookhammer; Financial Secretary, C. Carroll Cook; Fleet Surgeon, Frederick J. Haerer; Harbor Master, Bernard Bloch; Measurer, Alexander G. Rea; Trustees—John H. Bromley, George W. Fite, Walter N. Stevenson, W. A. Christy, John H. Simon, Abraham L. English, R. J. Williams; Racing Committee—Enos D. Garrett, Thomas W. Boyd, John McAvoy; Nominating Committee—J. Anderson Ross, Charles H. Downing, Alexander G. Rea.

Prominent Philadelphia cottagers and well-known local yachtsmen are enrolled in the new Chelsea Y. C., which has been formed in that fashionable Atlantic City section. A club house to cost $30,000 will be built at once for the use of the club members, who will have nearly fifty power craft as a nucleus to the new fleet.

Joseph Swoyer has been elected Commodore. Other officers of the club are: Vice-Commodore, W. S. Piersol; Rear-Commodore, Charles P. Bancroft; Fleet Captain, L. T. Rubens; Treasurer, John R. Shields; Secretary J. B. Gettis; Surgeon, Dr. W. H. Schmidt; Quartermaster, Edward A. Smith; Trustees—John L. Borsch, L. F. Rubens, Joseph D. Swoyer, Samuel W. Whan, W. S. Piersol, C. P. Bancroft, Dr. E. J. Porteous, R. M. Jereissati and Leonard D. Algar. The commodore has named the following committees: Finance—W. S. Piersol, John L. Borsch, Joseph D. Swoyer. Real Estate—Samuel W. Whan, Dr. E. J. Porteous, L. F. Rubens. Building—R. M. Jereissatti, Leonard D. Algar, Samuel W. Whan.

The annual meeting of the Stamford Y. C. was held last week. The reports of the officers and committees showed that the club is in a flourishing condition and the plans for the coming season are such that it is hoped it will be the best in the club's history. The following officers and committees were elected: Commodore, Edward Y. Weber; Vice-Commodore, Edward Corning; Rear-Commodore, Walton Ferguson; Secretary, Herbert Lawton; Treasurer, Herbert Lawton; Directors—Richard H. Gillespie, James S. Jenkins, Bartholomew Jacob, George C. Blickensderfer, William H. Martin, Frederic G. Mather, John J. Radley, Herbert C. Reed, Frank Shea, Theodore R. Hoyt, Douglas L. Elliman, William W. Heroy; Fleet Surgeon, William T. Godfrey, M.D.; Measurer, Bartholomew Jacob; Chaplain, Rev. Frank H. Bigelow; Nominating Committee for 1912—Schuyler Merritt (Chairman), Alfred S. Pitt, Elbert S. Barlow, John B. Phillips, Oliver G. Fessenden.

The Royal Canadian Y. C. has accepted the challenge of the Rochester Y. C. for a race for the Fisher cup, and the committees of the two clubs are now arranging the rules for the races. These are to be sailed late in August off Toronto. Seneca will represent the challengers and will be sailed by Eric Moore or Loren Mabbett.

Lawley's new yard at Neponset is beginning to assume the appearance of a yacht building plant. Nearly all the sheds that were at the South Boston yard have been removed and the work of dredging out the basin is progressing well. For the storage of yachts there will be two large basins. The larger one for big vessels will cover about 125,000 square feet, and that for smaller yachts about 60,00 square feet. Between these two there will be three railways for hauling out vessels. After these basins have been finished the yachts stored at South Boston, which are temporarily at East Boston, will be taken to Neponset. They will be there in time to fit out this spring.

At the Neponset yard considerable new work is under way. In the wooden construction shed the first work at the new location has been started. This is a 53-foot cruising power launch for A. Laurence Berker, of New York. The keel for a 40-foot runabout for Thomas Cunningham, owner of the big power cruiser Bostonian, from designs of Arthur Binney, is out.

The first boat constructed in the new small boat shop was a 33-foot power tow-boat for use around the yard. This boat is equipped with a 40-horsepower engine. Planking on the 55-foot mahogany speed launch for W. Dodge from designs of Tams, Lemoine & Crane is nearly finished in this shop.

The keel and moulds of the Sonder boat from designs of E. A. Boardman for C. F. Wood, of the Corinthian Y. C., are out and work of setting up the boat will be started this week. This racer will be similar to Charles Francis Adams 2d's Harpoon.

Work has been started also on a 32-foot semi-speed launch for Richard D. Sears from designs of Arthur Binney, and a 30-foot semi-speed launch for A. Angier, of Boston. The latter is to be equipped with a 25-horsepower auto marine engine.

The annual meeting of the Mosquito Fleet Y. C. was held in South Boston last week and officers elected. Commodore Richard F. Quirk declined a renomination. The officers elected were: Thos. J. Kelley, Commodore; David Henwood Vice-Commodore; Richard Landers, Secretary; Cornelius J. Driscoll, Treasurer; Edward Landers, Measurer; Richard F. Quirk; James H. White and Sydney Higgins, Directors.

At the annual meeting of the Squantum Y. C. at Quincy the following officers were elected: Commodore, George W. Hinkley; Vice-Commodore, Eleazer F. Drew; Rear-Commodore, Walter E. Kimball; Treasurer, Richard R. Freeman; Secretary, A. F. Tobin; Measurer, Archie H. Briggs; Trustee for three years, Hamilton Flood; Regatta Committee—George H. Bean, James McCarthy, Perley C. Rogers, Harry Hinkley, S. W. Ferguson.

The Dorchester Y. C. has elected the following officers: Commodore, Hjalmer Lundberg; Vice-Commodore, Arthur Bowman; Rear-Commodore, Theodore King; Secretary, William Mace and Treasurer, Oliver Davenport.

California Yachting.

San Francisco, Cal., Jan. 23.—*Editor Forest and Stream:* Winter yachting on the coast received an impetus this month when the first annual mid-winter regatta of the Tacoma Y. C. was held at Tacoma, Wash., with marked success. In speaking of the big event, Commodore B. F. Jacobs, of the Tacoma Y. C., said at its close: "It was the best regatta ever held in Commencement Bay, and the fact that it came at a time of the year when lakes and rivers in most other parts of the country are frozen, makes it a more attractive feature. We have now demonstrated that mid-winter regattas can be held in the bay, and the Tacoma Y. C. intends to renew it annually, hoping to make it a bigger affair from year to year. Other yacht clubs were skeptical when we undertook the carnival this year, but the visitors from the other clubs were highly pleased to-day and promised us to help out more next year and succeeding years." The regatta embraced all forms of water sports from swimming to canoing, small boat and yacht races. In the yacht race to Brown's Point and return, Bonita, Henry Larsen, skipper, was the winner, with Baby second. These two were the only ones to finish within the time limit of two hours. A number of power boats were to have taken part in the power boat race, but when the time came to start, only Pirate, owned by Dr. Scott, was ready and the prize was won by default. In order to display the speed of his boat, Dr. Scott took the boat over the course at a speed of thirty miles an hour. At noon time an elaborate lunch was served at the club house of the Tacoma Y. C., and a great crowd was feasted and entertained there.

Dories that Won't Sink.

The new non-sinkable fishermen's dories now coming into use on the Newfoundland fishing banks have several ingenious features. Four watertight compartments, located under the bow, stern and cross seats, keep the staunch little craft afloat and provide receptacles for the storage of clothing, food and water.

Watertight portholes in the tops of the seats give access to the interior of the tanks. The bow and stern tanks alone are sufficient to keep the dory afloat, and at the same time, says Popular Mechanics, they provide receptacles for the storage of a limited supply of dry clothing, while one of the cross seat tanks is partially filled with food and the other with water.

Most important and ingenious, however, are the portholes which give access to the tanks through the bottom of the boat, should it be capsized. These are set in the flat bottom, and unless a sea is continually breaking over the little craft, the ports may be unscrewed, one at a time, and the food, water and clothing reached. The two false keels are provided with handholds as an aid to the men clinging to the bottom.

Old Timber Stronger than New.

Which is the stronger, a piece of sound old timber or a piece of new? We think it probable that the majority of engineers would say that the new timber was the stronger. In either case, however, the opinions would be mere guesswork, for there has been hitherto, so far as we recall, no authentic information on this point. This lack is now supplied in a paper by C. P. Buchanan, in which he shows as a result of careful tests, that sound timber a quarter of a century old is materially stronger than new stock.

Mr. Buchanan's tests were made on white pine, but there is no reason to suppose that oak, hard pine, or any other wood commonly used in building would behave differently. It is fair to conclude that all wood maintains its strength, except as decay weakens it or fire and mechanical abrasion destroy it.

Yacht Indra Sold.

The Hollis Burgess Yacht Agency has sold the auxiliary schooner yacht Indra, owned by I. L. Merrill, of Los Angeles, Cal., to a prominent New York yachtsman.

Indra is a very handsome schooner built by Lawley, and is 72 feet over all, 46 feet waterline, 15 feet beam and 10 feet draft. Flush deck. Equipped with a 20-horsepower Grant-Ferris engine. She will be used in Boston waters.

Waterway League Dinner.

The second annual dinner of the Waterway League, of Greater New York, will be held Saturday, Feb. 25, at Piel's Hall, corner of Liberty and Sheffield avenue, Brooklyn. Five hundred yachtsmen will sit down, including over one hundred commodores and vice-commodores representing all the yachting and boating organizations within one hundred miles of the city. Applications for tickets shou'd be sent at once to Fred Reid, 581 St. Mark's avenue, Brooklyn.

Color of the Sea.

Poets are fond of talking of the "deep, blue sea," says an observant traveler in Master, Mate and Pilot. Yet the sea which beats upon the British coasts is certainly not blue. On the east coast it is brown, with sand and mud churned up by the waves from the vast mud flats; on our southern shores, where there is no mud to stain it, it is a rich green.

But visit the Mediterranean or the Caribbean, and here you find the true birds. The Gulf Stream, which pours like a gigantic river out of the boiling pot of the Caribbean and drives its way northwestward in a volume a hundred times greater than the mighty Amazon, is blue as the sky and affords a most startling contrast to the green Atlantic, through which it flows. Its temperature is 74 deg., that of the ocean on either side not above 50 deg., and its edges are marked by long lines of flotsam and jetsam —driftwood, canes, palm leaves, all sorts of tropical debris.

As the Gulf stream runs on its way past Cape Hatteras, it widens from 37 to 78 miles, and grows much shallower. Before it reaches our latitudes it has become a mere shallow sheet, overlying the colder strata below, till, gaining the banks of Newfoundland, you can notice in calm weather stripes of green water invading the blue of the great tropical current.

Why is the Gulf Stream blue and the more northern ocean green? The answer is that it has been proved that the blueness of sea water is in constant ratio to its saltness. In the tropics the tremendous evaporation induced by the blazing sun causes the water to be much more salt than it is in higher latitudes. For about 30 deg. both north and south of the equator the waters of the world's oceans are of an exquisite azure. Beyond these latitudes the blue fades, and changes to green, and in the Arctic and Antarctic Oceans the greens are almost as vivid as the tropical blues.

The extraordinary blueness of the Mediterranean has two causes. One is that very few large rivers of fresh water run into this sea; the second, that the Mediterranean is practically landlocked, and, being exposed to a powerful sun, evaporation is great. By actual test the waters of the Mediterranean are heavier and more salt than those of the Atlantic.

But blue and green are not the only colors observed in the world's seas and oceans. In January, 1909, a river of yellow water, three miles wide, and of enormous length, was observed running parallel with the Gulf Stream. It stretched from Cape Florida to Cape Hatteras, and was undoubtedly caused by some tremendous upheaval, probably of a volcanic nature. It remained for several weeks.

Again, about nine years ago, the sea turned almost black off a large portion of the California coast. The whole of Santa Cruz Bay assumed this extraordinary inky hue, and fishing came abruptly to an end. In this case, the darkness seems to have been caused by millions of tiny animalculae known as whale food.

The dull-reddish tint which is occasionally seen in the Red Sea, and which has given that sea its name, has a similar cause. The water becomes full of miscroscopic algae—tiny seed.

China's Yellow Sea is usually supposed to owe its origin to the flood of muddy water which its great river pours into it. But here, again, modern science has proved that living organisms are responsible.

Occasionally, and for some cause as yet undiscovered, great areas of the ocean turn milk white. In March, 1904, the passengers and crew of a Japanese merchant vessel, steaming at night between Hongkong and Yokohama, ran into a snow-white sea. Not an opaque, phosphorescent surface, but an expanse of pure snow white, having a dazzling effect upon the eyes. The phenomenon lasted for six hours, and alarmed the passengers so greatly that not one slept at all that night.

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Motor Boating.

Motor Trophy Race Rules.

The representatives of the Royal Motor Y. C. as trustees, and the Motor Boat Club of America as holder of the British International trophy for motor boats have agreed on the conditions to govern all races for that trophy. The deed of trust was published last week in the Forest and Stream, and now the new rules are given in full. These are changed very materially from the old ones and give the challengers a much better chance of success. In future the series of races will be continued until one country by its representatives have won two races. Challenges can be made up to March 1, and the races must be held between June 1 and Oct. 1. The rules are as follows:

1. The races shall be run between June 1 and Oct. 1 in each year. There shall be at least two races, and as many more as may be necessary until one country has won two races. The races shall be held from day to day except Sundays, unless a postponement is ordered by the international commission under rule 15. The country which first wins two races shall be adjudged the winner of the trophy. Not more than one race shall be held on one day unless with the consent of all the contestants given after the finish of the first race. If such consent be given a second race may be held on the same day.

2. Any properly constituted motor yacht club, motor boat club, yacht club or automobile club shall be entitled to challenge for the trophy or enter a boat for its defense. All challengers and entries shall be forwarded to the recognized club of the country holding the trophy, and in the case of a challenge the challenging club shall at the same time give notice to the recognized club of its own country. If the recognized club of a country shall receive notice of more than three challengers or three entries it shall hold such races or trials as it may consider necessary in order to select a team of three boats to represent its own country in the race.

3. In the event of no challenge having been received by the recognized club of the country holding the trophy on or before March 1, no race shall take place during that year. In no case shall the races take place within five months of the receipt of the first challenge and no further challenges shall be accepted after May 1 in any year.

4. Not later than one month after the receipt of the first challenge the recognized club of the country holding the trophy shall give notice to all recognized clubs of the date and place of the races and not less than two months before the date of the races shall forward full particulars of the course to the recognized clubs of every country which has challenged for the trophy.

5. The races shall be over a suitable course in sheltered waters of the country holding the trophy, selected by the recognized club of that country, or failing that in similar waters in Great Britain or Ireland.

6. The length of the course shall not be less than twenty-five nor more than thirty-five nautical miles, and shall be arranged so as to avoid any angle in the course of less than 120 degrees, and there shall be a distance of at least 100 yards between any two marks. The length of each round shall not be less than five nor more than eight nautical miles.

7. The measurement and starting of the competing boats and the judging of the race shall be carried out by the international commission defined by condition 11 hereof, which shall also be the racing committee referred to in the racing rules of the A. I. Y. A. for the purpose of considering protests.

8. The trophy shall be handed to the club of the winning boat, except that where two boats belonging to different clubs of one country have each won one race the trophy shall be handed to the recognized club of that country, and the recognized club shall hold a further race to decide which club is entitled to the custody of the trophy. The trophy shall be held by such club for one year, or until the date of the next race, which ever shall be the shorter period, when it shall be returned to the recognized club of its country.

9. The club having possession of the trophy shall undertake the safe custody of it, and shall insure it for £250, and shall pay the necessary premium. Such insurance shall cover not only loss by fire or theft, but any other loss or damage whatsoever.

10. The only limitation of the size of the competing boats shall be the over-all length of the hull, which shall not exceed 40 feet.

11. There shall be no restriction on the number, size or horsepower of the engines or motors, except that each boat taking part in any race shall contain and be fitted with such mechanical power as will drive her astern at a rate of speed not less than four knots in still water.

12. Each boat shall carry a distinguishing flag, which may be of any material, and shall not be less than 12 inches hoist nor 15 inches fly, and shall be carried at a height of not less than two feet clear of the deck.

12a. Each boat entered as one of a team representing any country must start in every race before the winning boat completes the course and must finish the course within three hours of the finish of the winning boat. Any boat failing to do so in any race will be ineligible to start in any succeeding race.

13. In the event of any temporary accident to or derangement of any one of the competing boats during the race, no assistance shall be rendered to the boat other than by the hands carried by the said boat. If the accident or derangement is of such a nature that outside assistance shall be necessary, the distinguishing flag shall be hauled down and the boat shall take no further part in the races. Outside assistance may not be given or rendered or procured until the distinguishing flag has been hauled down, but after the same has been hauled down, assistance may be given, but the boat shall be immediately removed from the course and shall not interfere in any way with the other competitors.

14. In case of an accident to one of the competitors, the other competitors shall continue the race and finish the course. In the event of one competitor going to the assistance of another, the committee shall decide whether the race shall be run again.

15. If in the opinion of the international commission, constituted as provided in condition 10 of the deed of gift, a postponement of the race or an alteration of the course shall be desirable owing to unfavorable weather or any unforeseen cause, this commission shall have power to take such action as may be necessary, but in any case the course must conform to Nos. 5 and 6 of these rules.

16. Each boat competing for the trophy must carry at least two life buoys in a position ready for use.

Motor Boats at Copenhagen.

A letter from Count Moltke, Danish Minister at Washington to the Department of State, published in Daily Consular and Trade Reports, says: "An International Exhibition of Power Motors for the use of fishing boats will be open in Copenhagen for about fifty days of the months of July and August, 1912. The exhibition is organized by the executive committee of 'The Scandinavian Fishery Exhibition, the International Exhibition of Motors, and the Northern Fishery Congress in Copenhagen, 1912.'

"His Majesty the King is the patron of the exhibition, the Minister of Agriculture its president, the Lord Mayor of Copenhagen its vice-president. A government subsidy and guaranty aggregating 100,000 kroner ($26,800) has been granted the exhibitions.

"The object of this note is officially to notify the United States Government of the International Exhibition of Power Motors and other machinery for the use of fishing boats."

Maryland Motor Boat Club.

MOTOR boating is becoming very popular on the Chesapeake each year, and President Myer Rosenbush, of the Maryland Motor Boat Club, has written of the clubs who have made the sport so popular and of the plans for this season. He says:

"The remarkable growth of motor boating in Baltimore waters and vicinity in recent years is probably best exemplified by the Maryland Motor Boat Club, whose handsome club house is located at Ferry Bar.

"Until the fall of 1908, while it is true there were a great many motor boats in and about Baltimore Harbor, yet there was no boat club devoted exclusively to the wants and comforts of motor boat owners. During that fall a number of well known motor boat enthusiasts conceived the idea of having a separate organization of their own, and with that end in view a meeting was called at the Eutaw House and within an hour the Maryland Motor Boat Club was organized with about fifty members and was the first club of its kind organized in this State.

"That the idea met with the approval of the boating fraternity generally was almost immediately manifested by the large number of applications received for membership, and on or about Jan. 1, 1909, a building committee was appointed for the purpose of selecting a site for the club house and getting subscriptions to provide the necessary home for motor boat owners. This committee's work was so rapid and satisfactory that within a very short period a sum sufficient was subscribed to warrant the club in having plans and specifications for a club house prepared by a well known architect.

"Within another month the grounds at Ferry Bar were leased, the contract for the erection of the club house made, and on May 30, 1909, the magnificent home of the club, conceded to be the most unique and convenient of its kind in the State of Maryland, was dedicated under the most auspicious circumstances in the presence of about 3,000 people, among whom were the most prominent public officials of our city and State.

"The club house is unique in several particulars, the most striking and satisfactory being that it is built out from the shore line over the water about 200 feet, and probably the most popular feature is the magnificent veranda or covered porch seating approximately 250 persons, which is the most delightful spot imaginable on a hot summer's afternoon and from which an extended view down the Patapsco River is had.

"The club has recently held its annual meeting for the election of officers, at the Eutaw House, at which time the following named officers were unanimously elected to fill the respective positions: President, Myer Rosenbush; Vice-President, H. Wirt Steele; Commodore, William P. Bigelow; Vice-Commodore, W. W. Varney; Rear-Commodore, Albert H. Likes; Fleet Captain, Ambrose Vogt; Secretary, Charles C. Counselman; Treasurer, Edward A. Weller. The board of governors is composed of the officers and S. Edward Schwartz, Robert M. Levering and E. D. Loane, Jr.

"The standing committees to serve for the year of 1911 are as follows: Fleet Surgeon, Dr. B. W. Hazell; Racing Board, James C. Callis (chairman), R. W. Thompson, R. W. Harrison, G. W. Haegerich and Lee S. Meyer; House Committee, Nicholas C. Hucke (chairman), William Wiegman, E. H. Beasley, J. E. Stier, Philip E. Bowman, B. A. Peusch, George W. Marsheck, A. B. James; Entertainment Committee, Joseph A. Vaeth (chairman), W. S. Samuel, Thomas J. DeFalco, W. H. Wyckham, W. S. Bowman, H. M. Sandrock, J. Webb Thomas, C. T. W Julier; Auditing Committee, Albert H. Likes (chairman), S. Edward Schwartz, H. Wirt Steele.

"The financial condition of the club, as shown by the report of the treasurer, Edward A. Weller, at this meeting, indicates very clearly that the club is in a most satisfactory condition and can say what probably few social clubs in Baltimore are able to boast of, that is, it has absolutely no floating indebtedness whatsoever.

"Among the more prominent yachts in the club are the following: Old Glory, Albert H. Likes, Rear-Commodore; Ethel B., William P. Bigelow, Commodore; Signal, W. W. Varney, Vice-Commodore; Esther, Fleet Captain Ambrose Vogt, Treasurer; Edward A. Weller and Joseph A. Vaeth; Neptune, Myer Rosenbush, President; Aloha, H. Wirt Steele, Vice-President; Florence, Charles C. Counselman; Chihowee, W. H. Evans; Melvoir, Frederick T. Dorton and William C. Smith; Princess, J. Cookman Boyd; Rosebud, H. J. Shephard and E. J. Fluharty; Marguerite, George F. Wiessner; Emma W., William Wiegman; Iolanthe, J. Webb Thomas; Virginia, E. H. Beazley; Madeline, James C. Callis; Florence H., R. W. Harrison; Triton, Percy C. Hains; Heron, Nicholas C. Hucke; Maxine M., Jacob Mayer; Valiant, Lee S. Meyer; Florence, H. A. Potteiger; Virginia, R. W. Thompson; Wazzle, George W. Marsheck; Maryland, Joseph C. O'Brien; Rena H., Henry R. Jandorf; Kingfisher, A. B. James; Vietoria, John H. Boland; Seven Park, Oscar L. Hatton; Nannie, Benjamin H. Franklin; Wanderer, George S. Dickey; Delta, G. T. Sawkins; Alert, G. W. and C. P. Haegerich; Anroli, George W. Myers; May, Thomas C. Lerch; Vixen, Gustav F. Krug; Cayuga, O. L. Molter; Regis, Charles H. Pfeiffer; Challenge, William H. Wyckham; Challenge III., Harry E. Sherf; Mattie B., B. A. Peusch; Convertible, Joseph H. Miller; Swatiska, G. H. Durm; Tuckahoe, Howard Bryant; Gladys L., Thomas C. League; Margaret, J. Fred and George P. Knobloch; Starhawk, J. E. Stier and W. H. Hawkins; Scroogie, H. B. Little; Coronet, W. S. Samuel; Swatiska, Chester B. Levis."

Greenport Works Busy.

A 60-FOOT motor yacht is being built at the Greenport Basin & Construction Company's works at Greenport for William S. Creevey, of Westhampton Beach. This yacht is already planked, and nearly all the joiner work is finished. This yacht will go in commission on March 15. The 30-foot auxiliary yawl building for Francis Barklie, of Newark, is progressing well. A 30-foot auxiliary yawl is also being built for H. W. Greene, of Springfield. Small speed boats which this company is introducing under the name of Cameo Hydro speeders are in course of construction. These craft are 20 feet long with motive power between 11 and 25 horsepower. A speed of from 16 to 22 miles an hour is guaranteed. The 56-foot lighter for the E. W. Bliss Company is taking shape. The feature of this boat will be a well 22 feet long and 2 feet 6 inches wide from which a Bliss-Leavitt torpedo may be fired. The motor in this boat will be a 50 horsepower Wolverine. This boat is to be delivered on March 1.

The Scripps Annual Cruise.

MUCH interest is being shown in power boat circles on the Lakes in the Scripps cruise. It appears that suggestions as to course are in order while committees are being formed, and one Buffalo booster has suggested the following: Aug. 27, leave Detroit; Aug. 28, arrive at Toledo; Aug. 29, arrive at Cedar Point; Aug. 30, arrive at Rocky River; Aug. 31, arrive at Fairport, Ohio; Sept. 1, arrive at Erie, Pa.; Sept. 2, arrive at Port Maitland; Sept. 3, Port Maitland to Motor Island, Niagara River; Sept. 4, Labor Day, carnival and races, Buffalo Launch Club.

Century of Steam on Mississippi.

ARRANGEMENTS are being perfected to celebrate the centennial of steam navigation on the Ohio and Mississippi Rivers next September. The river pageant will leave Pittsburg and proceed down to New Orleans, being joined at each important river town by additional vessels, which will take part in the ceremony. The Ohio Valley Historical Association has the celebration in charge. Yachtsmen are to participate in this celebration and in the fleet will be many motor boats.

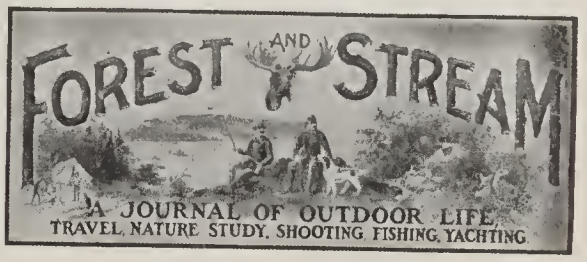
Canoe Handling and Sailing.
The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. Bowyer Vaux ("Dot"). Illustrated. Cloth, 163 pages. Price, $1.00. New and revised edition, with additional matter.
A complete manual for the management of the canoe. Everything is made intelligible to the veriest novice, and Mr. Vaux proves himself one of those successful instructors who communicate their own enthusiasm to their pupils.
FOREST AND STREAM PUBLISHING CO.



CORRESPONDENCE.
The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.
Subscriptions may begin at any time. Terms: For single copies, $3.00 per year; $1.50 for six months. Rates for clubs of annual subscribers:
Three Copies, $7.50. Five Copies, $12.
Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Canadian subscriptions, $4.00 a year, $2.00 for six months.
Foreign Subscriptions and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's. Foreign terms: $4.50 per year; $2.25 for six months.

ADVERTISEMENTS.
Inside pages, 16 cents per agate line. Special rates for three, six and twelve months. Eight words to the line, fourteen lines to one inch. Advertisements should be received by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices, seventy-five cents per line. Only advertisements of an approved character inserted.
Display Classified Advertising.
Hotels, Summer and Winter Resorts, Instruction, Schools, Colleges, etc. Railroad and Steamship Time Tables. Real Estate For Sale and To Let. Seeds and Shrubs, Taxidermists. The Kennel. Dogs, etc. Wants and Exchanges. Per agate line, per insertion, 13 cents. Three months and over, 10 cents per line.
Solid Classified Advertising.
For Sale. Kennel. Property For Sale. Real Estate For Sale or To Let. Wants and Exchanges. Per agate line, 10 cents. Absolutely no display. No advertisement of less than three lines accepted. Cash must in every case accompany order.

Annual Motor Boat Show.

The annual exhibition of the National Association of Engine and Boat Manufacturers will open in the Madison Square Garden next Tuesday. This will be the beginning of the season, as many of those who contemplate doing some yachting during the coming summer, especially in motor boats, have been waiting to see what the manufacturers have to offer. According to the management of this show, there are to be more than 300 exhibitors, and there will be boats ranging from the small open boat to a fair sized cabin cruiser. There will be boats suitable for afternoon outings, runabouts, fast craft for racing and cabin boats of the hunting and raised deck types. There will be cheap boats for those who have not much money to spend and costly boats for those who want style and luxury.

Since last season many improvements have been made in models, in engines, in sparking devices and in other accessories and everything pertaining to the motor boat will be found in the Garden. As usual on such occasions, motor boat enthusiasts will gather here from all parts of the country, and during the ten days that the show will occupy attention, there will be meetings of different organizations, and that of the American Power Boat Association is to be held in the Waldorf-Astoria on Feb. 28. At that meeting officers will be elected and matters of importance discussed.

Particular attention has been paid in developing types of boats suitable as family boats and capable of withstanding considerable rough weather. There will be boats of this type which western concerns are turning out for from $250 up. Of course the cheaper ones have small motors and the cost increases according to the power wanted.

Motor boating has long passed the experimental stage, but each year witnesses remarkable improvements in everything pertaining to motor boating. Motors themselves have been wonderfully improved. Small motors have been wanted to use in small sailing craft, and so make them auxiliaries, and at this show there will be several fitted for this purpose. In contrast to these engines there will be some powerful enough to equip vessels from 75 to 100 feet in length.

The dory type of motor boat has grown much in popularity because this model is a good safe one, and its cost is not excessive. The Atlantic Company from Amesbury will show a 25-foot dory with 6 feet 6 inches beam and fitted with an 8-horsepower motor. The Toppan Boat Company will show some 18-foot dories equipped with 2-horsepower motors ready for use in salt water and fitted with reverse gears. In one of these dories is a two-cylinder motor weighing 500 pounds, which will drive the boat 19 miles an hour, it is said.

For more luxurious craft the Elco works at Bayonne, the Gas Engine & Power Company, the Racine Boat Company, and the Reliance Motor Company will have fine exhibits. The Elco Company will show a 48-foot cruising boat of their well known De Luxe model fitted with a 60-horsepower Standard motor. The cabin is finished in African mahogany and a dynamo driven by the motor furnishes light and heat for cooking.

The Reliance Company will show two 45-foot boats, one a seagoing cruiser of the raised deck type and the other a runabout. The Gas Engine Company will, as usual, show all types for which this company is noted and will have some very handsome boats.

In addition to motor boats, engines and accessories, there is to be an exhibition of aeroplanes in the concert hall, and lectures are to be delivered each afternoon and evening. Glen H. Curtiss will show his latest aeroplane. The Thousand Islands Y. C. is to have an exhibit of motor boats and models and the boys of the public schools are to shoot for championships in the rifle ranges in the basement.

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Beaufort Cut to be Deepened.

What is known as the Beaufort cut, which forms a canal from Pamlico Sound to Beaufort, has been completed with a depth of ten feet but will be deepened to twelve feet. This waterway cannot be fully utilized, however, until the canals leading to the Elizabeth River at Norfolk have been enlarged. That is, it is not available for vessels that cannot pass through the Dismal Swamp or the Chesapeake and Albemarle canals. But even in its present state it affords a passage for small vessels, so that they can avoid the dangers of passing outside of Hatteras.

Cruiser for N. W. Browne.

Norman W. Browne, of this city, is having a 40-foot raised deck auxiliary cruiser built from designs by Gerald T. White. The design shows exceptional seaworthiness, the hull being double framed and reinforced with bilge and shear clamps of yellow pine. The cabin accommodation is large. This craft will be driven by a 25-horsepower Holliday motor. The vessel is being built by J. W. Ketcham, of Greenport, and will be ready for launching in May. Mr. Browne will use the yacht cruising along the coast during the summer season. The model is what is known as the Montauk fisherman design and is well suited to rough water and easily handled under sail or power.

Shipbuilding in Nova Scotia.

Consul Alfred J. Fleming, of Yarmouth, reports that the five shipyards in his district—four at Shelbourne and one at Yarmouth—do practically all the shipbuilding for the southern half of Nova Scotia. They give steady employment to 400 people. The last two years have been very busy ones for the yards and, as they have at least six months' work on hand, 1911 promises to be even busier than either of the past two years.

New Motor Boat Prize.

The New England Boat and Engine Association has offered a $250 bronze trophy as a challenge prize for the coming season. The prize will be raced for by boats of the open Class A in the association races off City Point, Boston, on July 4. It will become the property of the owner winning in two successive years. This class is for speed boats 32 to 40 feet length with unlimited power. The course for this class will be twice around a triangle 14½ miles in length starting off City Point.

Yacht Sales.

These transfers have been made through Cox & Stevens office:

Cruising motor yacht Reomar sold for R. E. Olds, of Lansing, Mich., to N. L. Carpenter, of New York. Her name has been changed to Natchez.

Raised deck cruiser Talisman, sold for Mrs. M. M. Mills, of New York, to Clarence Sill, of Philadelphia, for cruising on Delaware River and Chesapeake Bay.

Cup Donated by Mackay Edgar.

Mackay Edgar, one of the most enthusiastic supporters of motor boat racing in the Royal Motor Y. C., has offered to present a cup to the club every year for the next ten years, the only condition being (and it is one which clearly shows the extremely generous spirit in which the offer is made) that the cup is to be given for a race in which the donor's boat is not eligible to compete.

Canoeing.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Spencer G. Lane, 395 Washington avenue, Brooklyn, N. Y., by F. S. Thorn and Payne L. Kretzner; Elmer J. Lloyd, 818 Carteret avenue, Trenton, N. J., by Wm. C. Kuhn; Carl R. Lucke, 1 West 104th street, New York city, by Arthur Lucke.

Eastern Division.—John C. Kendrick, 5 Richfield avenue, Cranston, R. I., by Wm. A. Heath; Walter B. Gorton, 49 Ring street, Providence, R. I., by Horace C. Orphin; George A. Smith, 52 Hillwood street, Olneyville, R. I., by Fred C. Rexford.

Western Division.—Christian G. Ewertsen, 1465 Carmen avenue, Chicago, Ill., by William Zellweger.

NEW MEMBERS ELECTED.

Atlantic Division.—6137, Geo. A. Diblin, Philadelphia; 6138, J. H. Burwell, 2038 Grand Central Terminal, N. Y. city; 6140, D. Cummings, 73 S. Clinton street, East Orange, N. J.; 6145, George G. Richards, Sixth and Chestnut streets, Philadelphia, Pa.; Daniel J. Finn, 2174 Amsterdam avenue, New York, N. Y.; 6147, Henry R. Berning, Jr., Marble Hill Kingsbridge, N. Y.; 6148, Alexander Wright, Jr., 3404 Barker avenue, Williamsbridge, N. Y.; 6149, Peter H. Morgan, 1263 Washington avenue, New York, N. Y.; 6150, Wm. A. Rogers, 1317 H street, Washington, D. C.; 6152, Charles M. Swart, 2026 Ruscomb street, Germantown, Philadelphia, Pa.; 6153, Albert E. Svenson, 2637 West Lehigh avenue, Philadelphia, Pa.; 6154, Edward S. Duffey, 4619 Germantown avenue, Philadelphia, Pa.; 6155, Victor D. Abel, 608 North Thirteenth street, Philadelphia, Pa.; 6156, Forrest E. Altemus, 117 Rochelle avenue, Wissahickon, Philadelphia, Pa.; 6157, H. Le Roy Walker, 1704 Tioga street, Philadelphia, Pa.

Central Division.—6136, Frank J. Minkel, 503 Ellicott Square, Buffalo, N. Y.; 6139, W. Edward Davis, 5635 Rippey street, Pittsburg, Pa.; 6151, F. H. La Baume, 922 Commerce street, Roanoke, Va.

Western Division.—6141, Bruce Rutherford, Peoria, Ill.; 6142, Albert W. Mackley, 1020 Fourth avenue, Peoria, Ill.; 6143, Clair Horstman, Peoria, Ill.; 6144, Chauncey A. Cole, 1211 Perry avenue, Peoria, Ill.

Irondequoit C. C. Meeting.

The annual meeting of Irondequoit C. C. was held last week at the University Club, Rochester. The annual report was read by the Purser, D. M. Rose, showing the past year to have been the most successful in the club's history. Officers were elected for the ensuing year as follows: John H. Pierce, Commodore; Edgar Shantz, Vice-Commodore; Delos M. Rose, Purser; John S. Wright, Samuel M. Havens, Directors. Luncheon was provided by Arthur E. Kelly, the retiring commodore.

FREE ADMISSION OF TOURISTS' CAMERAS.

Used cameras imported into France by tourists are to be admitted free of duty. Under exceptional circumstances a tourist may be allowed to import free of duty two cameras of different makes and sizes, provided there is no doubt as to the good faith of the importer. Twelve plate holders are allowed to be imported with each camera. Lenses attached to the cameras, but not extra lenses, are admitted free of duty. Amateur photographers bringing in two cameras of the same kind or more than two cameras of different kinds, as well as professional photographers (regardless of the number of cameras), must make a deposit, which will be refunded on proof of re-exportation.

What the Consistent Victories of REMINGTON-UMC in Competition Prove

An occasional win proves little or nothing. A slight advantage in conditions—more than an even break in "luck"—and the weaker competitor in any single competition, whatever its nature, may come out on top.

But, it's different when victory after victory is won with absolute consistency. The law of average makes conditions and luck of no account. True worth alone is responsible.

Constant and repeated wins in competition with all other makes of arms and ammunition prove the progressiveness of REMINGTON-UMC —prove that the "Perfect Shooting Combination" is built up to a standard of quality that has never been equalled or even approached.

Sept. 21.—Braddock, Pa.—Western Pennsylvania Trapshooters' Association. Louis Lautenslager, Pres.
Oct. 4-5.—Columbus (O.) G. C. L. Fisher, Sec'y.

DRIVERS AND TWISTERS.

The fifth annual championship of metropolitan clubs will be held on the grounds of the Montclair Gun Club on Wednesday, April 5

Secretary-Treasurer Shaner advises us that the dates of the Pacific Indians' tournament, scheduled for Eugene, Ore., from June 20-23, have been changed to June 13-15.

The Interstate Association's sixth Western Handicap tournament will be given at Omaha, Neb., Aug. 8-10, under the auspices of the Omaha Gun Club. There will be $1000 added money.

Secretary Chas. W. Gardiner, of the Holland Gun Club, writes: "The ninth annual tournament of the Holland Gun Club, and contest for the western New York championship will be held at Batavia, N. Y., Wednesday, Aug. 16. Our shoot has been registered by the Interstate Association. We will have a special program, of which announcement will be made later."

Secretary Brickner, of the Newton (N. J.) Gun Club, says of the 50-target team race to be shot to-day between Great Meadows and Newton gun clubs: "There will be something doing in this match. Great Meadows having won the series from the strong Belvidere and Oxford clubs, is after more honors. The battle-scarred veteran of many hard-fought contests, Capt. Moak Vreeland, will bring his strongest team, while Newton will have some youngsters in line that have all the earmarks of comers, and if Great Meadows can repeat, they will have to go some." The club has installed an Ideal Leggett trap, and a brisk competition will no doubt be had in the various events.

The Alert Gun Club's first annual tournament will be held at Phillipsburg, N. J., Saturday, Feb. 25. Eight events (six at 15, two at 25 targets; entrance 75c. and $1.25). Sweeps optional. Targets, 1 cent each. Program starts at 1:30 Two Leggett traps will be used. Last two events will consist of 50 targets, and in these events the Alert team of five men, and the Crescent team of White House, N. J., will shoot the first race of a series of races to be shot by the two clubs. Shells in suitable trap loads will be on sale on the grounds. You can shoot through entire program and get home the same night, as trains leave for all points every hour of the day. For further information, write E. F. Markley, Easton, Pa.

The East Millstone (N. J.) Gun Club will hold its sixth annual Washington's Birthday shoot on Feb. 22. The Somerset county championship will be contested for. There are eight 25-target events, $1.50 entrance each. In events 5 and 6 the entrance fee for shooting for the championship of Somerset county, for residents only, is $2. Shooters may enter for the $1.50 sweepstakes as well. The winner of the county championship will hold the Fleischmann solid gold medal permanently. Money will be divided Rose system, 5, 3, 2, 1. High amateur guns, $5, $3, $2. Shells in all standard loads will be on sale at the grounds. Any one may shoot for targets only. Shooting starts at 10 A. M., rain or shine. Train leaves Pennsylvania R. R. station at 8:12 A. M.

J. Lewis, Secretary, sends notice that "The monthly shoot of the Jersey City Gun Club will take place on Feb. 22, commencing at 10 o'clock sharp. The shoot will consist of two 100-target distance handicap events, for which the club offers four gold prizes in each, to be divided high gun as follows: First prize, $20; second, 15; third, $10; fourth, $5. Messrs. Geo. H. Piercy, C. W. Billings, and L. W. Colquitt will act as the handicap committee The entrance fee for each event will be $3.50. Take Plank Road trolley from Pennsylvania Ferry, Jersey City, and Broad and Market streets, Newark, direct to the grounds. Guns and ammunition shipped express prepaid to John Weippert, 1123 Communipaw avenue, Jersey City, will be delivered on the grounds free of charge. All standard loads for sale. Professionals may shoot for targets only, at 2 cents each." Programs are in preparation for tournaments to be held by the club on March 17 and April 20.

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

New York Athletic Club.

Travers Island, N. Y., Feb. 11.—The Mercury Foot gunners had a number of closely contested matches at the Travers Island traps to-day. Excellent scores were rolled up by Dr. Brown, Dr. De Wolf, F. A. Schauffler, B. M. Higginson, and E. A. Abbott. George Lyon, the professional, who shot along, was among the leaders. Scores:

Haslin cup, handican event, 25 targets:

B M Higginson	2	24	A E Ranney	2	20
E A Abbott	3	23	Dr De Wolf	2	20
George Lyon	0	21	T A Schauffler	0	19
G J Corbett	1	21	J McLenore	0	19
G F Pell	2	21	W B Ogden	2	18
E M Huggins	5	21	Dr Brown	1	17
J G Batterson	2	20	J M Hamilton	0	16
E A Wilson	2	20			

Club special, trial shoot, scratch, 10 targets:

G Lyon	10	J G Batterson	7
B M Higginson	10	J M Hamilton	6
G F Pell	10	G J Corbett	6
F A Schauffler	10	E A Abbott	6
E M Huggins	9	W B Ogden	5
J McLenore	8	E A Wilson	5
Dr De Wolfe	8	Dr Brown	
A E Ranney	8		

Westley Richards trophy, scratch, 10 pairs targets:

G Lyon	15	Dr De Wolfe	12
G F Pell	14	A E Ranney	7
F A Schauffler	13		

February cup, handicap, 25 targets:

E A Abbott	3	25	J G Battison	3	22
G Lyon	0	24	B M Higginson	1	21
W B Ogden	2	24	G F Pell	3	21
F A Schauffler	0	23	Dr Brown	1	20
E A Wilson	2	23	A E Ranney	2	18
E M Huggins	5	23	J McLenore	0	17
G J Corbett	1	22	J M Hamilton	0	16
Dr De Wolfe	2	22			

Club special, scratch, 15 targets:

B M Higginson	14	E A Abbott	10
G J Corbett	14	J M Hamilton	10
F A Schauffler	13	Dr Brown	9
W B Ogden	13	Dr De Wolfe	8
G Lyon	13	A G Battison	7
G F Pell	12	E A Wilson	7
A E Ranney	12	E M Huggins	7
J McLenore	11		

Tournament cup, handicap, 25 targets:

Dr Brown	1	24	J M Hamilton	0	19
B M Higginson	1	24	E A Wilson	2	19
G Lyon	0	22	G F Pell	2	19
F A Schauffler	0	22	G J Corbett	0	18
Dr De Wolfe	2	22	J McLenore	0	18
E A Abbott	2	22	W B Ogden	2	18
J G Batterson	3	20	A E Ranney	2	17
E M Huggins	5	20			

In the tie between Dr. Brown and B. M. Higginson, Dr. Brown won with 21 targets to his opponent's 20. In the challenge match for a leg on the trophy, Dr. De Wolfe, the holder, defeated Dr. Brown, the challenger, 23 to 17.

Travers Island trophy, handicap, 25 targets:

F A Schauffler	0	24	B M Higginson	1	20
G Lyon	0	24	G F Pell	2	20
E A Abbott	2	24	W B Ogden	2	20
Dr De Wolfe	2	22	A E Ranney	2	19
E A Wilson	2	21	J G Batterson	3	19
J McLenore	0	20	J M Hamilton	0	18
Dr Brown	0	20	E M Huggins	2	17
G J Corbett	1	20			

Tie for first place between F. A. Schauffler and E. A. Abbott won on shoot-off by Schauffler, 21 to 19.

Distance handicap, special trophy, 25 targets:

Dr De Wolfe	19	21	F A Schauffler	21	18
E A Abbott	19	20	E M Huggins	16	18
G F Pell	19	20	B M Higginson	20	16
G Lyon	21	20	G J Corbett	20	16
A E Ranney	19	19	W B Ogden	19	15
Dr Brown	21	19	J M Hamilton	21	14
J G Batterson	18	18	J McLenore	21	10
E A Wilson	19	18			

Feb. 14. Competition for the club trophies was attended by the largest gathering of shooters yesterday, numbering some fifty gunners, who made things lively until dark. Scores:

Holiday special trophy, handicap, 100 targets:

G L Bready	14	97	Dr Moller	12	77
W S Colfax	7	89	E Eckhart	14	90
T J Jones	6	84	G Scoole	12	82

E Eckhart	16	82			

Shoot-off:

T Lenane	3	25	E A Abbott	3	21

Visitors' special trophy was won by M. Hoyt, score 23; second, G. L. Spotts, 21.

Haslin cup, handicap, 25 targets, was won by T. Lenane (3) 25.

February cup, handicap, 25 targets: Won by E. A. Wilson (0) 25.

Tournament cup, bandicap, 25 targets: Won by Dr. Held (2) 20.

Travers Island trophy, 25 targets: Won by B. M. Higginson (0) 25.

Hyde Park Gun Club.

The crowd at the grounds on Feb. 11 was the largest which has attended a shoot since last summer. Fifteen shooters may look small to some clubs, but it is sure some crowd in this section. The G. A. H. is stiring the boys up a bit, and if they can only all get back into form before next June, there will be a special train from Cincinnati to carry them to Columbus. The day was gloomy, heavy clouds hid the sun most of the time, a gusty wind made the flight of the targets rather uncertain, but these conditions did not bother Charlie young, apparently, as he broke 95 in the 100-target event; 47 in the last 50, and missed but one target in the last event, which was shot from 20yds. Haladay made a very fair showing, but not up to his mark, as he was shooting a new gun. Uncle John Dea gave him a pretty close race for second place, finishing only two targets behind. De Mar shot in three events and ran a little behind his usual gait, getting 87 per cent. Sam Leever, the well-known pitcher of the Pittsburgs, can point a gun with the same skill that he delivers a ball over the plate, but showed some lack of practice to-day, getting only 87 per cent, which is hardly his mark. Dull and Malloy both belong to the Goshen (O.) club, which has sent a team here several times, and made things lively for the home club. Hope they'll come again in spring and stir things up.

Dr. Leighner stopped long enough for one event, but was too hurried to do his best. Welch seems to have got the fever again, after ten years' rest, and is doing pretty well. Jones shot in one event and used a variety of shells and loads, shot ranging from No. 5 to 10—that is why he didn't do better. Winterburn is a sticker, and is going to make something more than an ordinary shooter. The scores:

One hundred target shoot:

Young	19	18	29	19	19	95
Haladay	14	17	17	15	20	83
Dea	19	18	13	17	14	81
Irwin	17	15	13	17	..	62
Dull	16	16	17	..	..	49

Events:	1	2	3	4	5	
Targets:	25	25	20	25	20	Total.
*Young	23	24	..	..	..	47

Leighner	..	..	16	..	..	16

*Shot from 20yds. in second event.

The Palefaces.

Boston, Mass., Feb. 8.—Just an even ten shooters mustered up the necessary courage to face the Paleface traps to-day, and one of the prettiest shoots of the year was held. It sure looked good to see friend Rule, of Lowell, again with us, but lack of form was certainly in evidence if the score was any criterion. However, this is not the last chance of the season, and the next trip will tell a much different story we all think. Walter Clarke, of the home bunch, was the one bright light starting in like a winner and only slowing up when he was sure of the average prize, Frank, his nearest competitor, being 3 targets to the bad. Chas. Morse, of the 1910 Harvard team, was the winner, but not as easy as might be, with Frank having an 8-target handicap. Frank's last event played false to him, and he had to be content with another second place. Scores:

Events:	1	2	3	4	5	6	B.	H.	T.
Morse	14	12	14	11	10	18	79	16	95
Frank	12	14	18	13	12	17	86	8	94
Clarke	14	15	18	12	11	19	89	4	83
Charles	9	11	15	12	13	14	74	16	90
Sibley	14	13	15	9	11	20	82	8	90

Osborne	14	12	16	12	10	17	81	4	85
Dartone	12	14	16	13	11	17	83	0	83
Rule	12	14	16	11	9	15	77	4	81
Hassam	12	11	13	11	10	12	69	8	77

Hudson Gun Club.

JERSEY CITY, Feb. 12.—There was only one straight score recorded at the Hudson Gun Club's regular bi-monthly shoot this morning. D. D. Engle was the man behind the gun this time to turn the trick, and enable him to tie the genial Jack Fanning for high average for the shoot.

The morning was pleasant, and forty-one gunners faced the traps; the ground was covered with snow, which we all know to be very trying to the eyes, and at times enough wind to keep the targets going like bullets and dipping and ducking, was the conditions that we had to contend with, and not very propitious to good scores. Event No. 3 was the third of the handicap prize series, and the shooters that were lucky enough to score 6 points, and win a leg on one of the numerous prizes that are being contested for, were Engle, Von Lengerke, Putney, Williams, Lane and Thoben, Sr. We also had the pleasure of meeting a number of out-of-town shooters at our grounds this morning; they are welcome and cannot call too often.

Our next shoot will be held on Sunday, Feb. 26. There are shells for sale here and lots of targets to shoot them at, and if you are shy a gun, look up the secretary, he always has one that is not working. If you feel like having something to eat, just follow the crowd.

G. W. CHESLEY

Another and Wonderful World's Record

— *Made with* —

WINCHESTER

Rifles and Cartridges

The World's Record of 988 made by members of the Winchester Rod and Gun Club, New Haven, Conn., on January 24th in the Inter-Club Matches, was on January 31st surprisingly surpassed by them. Note the remarkable scores given below:

G. W. Chesley	50	50	50	50=200
W. H. Richard	50	50	49	50=199
H. J. Gussman	50	50	50	49=199
A. F. Laudensack	48	50	50	50=198
J. W. Landon	50	49	50	48=197
Total				993

This record is so high that it is hardly probable it will be even equalled in some time. Mr. Chesley's score of a possible 200 is especially noteworthy. Every man in this squad again used a Winchester Single Shot Rifle, .22 Long Rifle caliber, and Winchester Cartridges, again emphasizing the generally accurate and uniform shooting qualities of Winchester goods.

Winchester Rifles and Cartridges Shoot Where You Hold. :: :: ::

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., Feb. 8.—Sixteen squads faced the firing line yesterday at the club's regular weekly shoot. High wind and snow made hard conditions; 1575 targets were thrown from the traps.

John Geiger was the high average gunner of the day with 19 kills to his credit out of each 25 clay targets shot at; and B. M. Shanley, Jr., was a very close second with an average of 18 8-11, only 3-11 behind Geiger. J. W. Hessian, the military representative, a professional, was third with an average of 18 1-4, and Phil Coffin was fourth with an average of 16 10-13.

B. M. Shanley, Jr., shot exceedingly well, considering the had light, and he had the distinction of being the only shooter out of two squads of six men each on the 20yd. mark to powder 22 saucers out of a possible 25 shot at. It was certainly a splendid exhibition, as it would take the best shooter all his time on such a ady to do the same trick from the 16yd. mark. John Geiger came second to Shanley with 19 from the 20yd. mark.

W. C. Shanley was a visitor at the club, and he shot well, considering the bad day, strange traps and strange gun. He broke 14 out of a possible 25. The following were the scores:

B M Shanley, Jr.	22	17	18	20	20	18	16	18	19	16	22	..	..	..						
J W Hessian	15	14	16	19	20	18	22	23	17	14	19	20	16	20						
Phil Coffin	20	21	22	21	17	19	18	15	15	11	18	15	16	..						
John Geiger	22	21	18	18	20	19	19	16	19	21	17	18	..	..						
J A Quinn	13	15	10	11	13	14	17	..	..	..	..	..	..	..	..	..	..	..	..	..

SMOKELESS.

Frontier Rod and Gun Club.

THE Marine and Field Club started a special 300-target monthly cup shoot at their Bath Beach traps on the 11th. The gunners were allowed to shoot the gross number of targets as they pleased, provided that they were thrown in strings of 25. C. B. Sayre shot at 200 and broke 155 of the little clay pigeons. The scores:

Events:	1	2	3	4	5	6	7	8	
Targets:	25	25	25	25	25	25	25	25	Total.
C B Sayre	21	14	18	21	22	15	21	23	155
P R Towne	19	22	24	20	17	19	..	..	123
J M Knox	19	16	19	16	..	..	..	..	70
E G Rich	12	11	10	14	..	..	..	..	47
W S Pardonner	15	15	18	..	..	..	..	..	48

Columbus Gun Club.

Columbus, Ohio, Feb. 4.—One dozen shooters faced the traps Saturday afternoon. Scores will tell the weather was very windy. Bert Call was a welcome visitor, so were Ross and Fuller.

Looks like there will be some shooting from now on. The targets will be thrown about 50yds. instead of 40yds. as heretofore; so you will find harder shooting from now on, so as to be ready for the two big tournaments in June.

The midwinter promises to be a good one, 150 targets each day on the Squier money-back system, also two extra events at 25 targets each, will liven up things.

The State shoot will call for 150 targets each day on the money-back plan, with 50 extra targets each day. The Interstate Association adds $300 as average money this year. Non-residents can shoot for the purses only. Average money and trophies are for Ohio shooters only. All other events are open to all. Scores:

	Shot at.	Broke		Shot at.	Broke
Call	100	84	Dugin	115	75
Ross	75	46	Jones	80	75
Woodcock	125	92	Joyce	80	65
Penn	85	68	Fuller	75	55
Carson	85	58	Shore	65	45
Hall	80	52	Camp	60	46

Dupont trophy:

*Call	41	Hall	32
Woodcock	40	Dugin	12
Penn	31	*Jones	47
Carson	37	Joyce	42

*Not shooting for trophy.

At each Saturday shoot a prize will be given for every 25 straight made by amateurs.

Feb. 11.—W. R. Chamberlain was high man at the traps this afternoon with an even 90 per cent. Capt. Carson won a point on the Dupont trophy by breaking a straight with his handicap allowance.

Every week sees some new faces at the club, which shows new interest being taken. The writer is receiving congratulations every day for landing the Grand American Handicap, and they are pledging themselves and others to attend. There ought to be a record for attendance of Ohio shooters, also from the East, to say nothing about the Middle West. To-day's scores:

Practice:

	Shot at.	Broke		Shot at.	Broke
Chamberlain	100	90	Spencer	35	15
H E Smith	125	111	Carson	80	68
G Smith	120	89	Joyce	105	76
Shilling	105	87	Fisher	60	53
Weinman	85	54	Ford	25	18
Hopkins	50	31	Weatherholt	45	26

Dupont trophy, 50 targets:

H E Smith	47	Weinman	38
G Smith	37	Carson	40
Shilling	42	Joyce	35

The handicap on this trophy is extra birds to shoot at. Carson won with an allowance of 13.

Secretary.

Chicago Gun Club.

Chicago, Ill., Feb. 4.—While this was a fairly pleasant day, the air was rather crisp, and a "choppy" wind from the northwest was the cause of quite a few lost targets, which would dip down when least expected. Stannard took first honors in the handicap event, breaking 47 from 16yds; Young getting 46 from 20yds., while Mathews made the same score from 16yds.

In event No. 2, at doubles, J. R. Graham was high with 33 breaks, Young being next with 31, and MacLachlan third with 26.

Besides the above events, quite a few frames of 25 were shot, Graham having the best of it most of the way, as he scored 23, 24, 25 and 25, with a total of 97 out of 100, losing only one out of the last 75 singles, also getting one 24.

Young had two 24s to his credit, while MacLachlan had one of the same score.

Events:	1	2	3	4	5	6	7	8
Targets:	50	40	25	25	25	25	25	10
J R Graham, 20	43	33	23	24	25	25	17	10
J S Young, 20	46	31	17	23	..	24	19	..
W S Cutler, 19	40	15	18	20	16	20	15	..

E Lynn, 16	14	..	13	15	..	..	..	..
E J Gorman, 16	11	..	10	10	..	..	..	..

Feb. 5.—Although the weather to-day was not of the most inviting sort, it being dark and cloudy, with a strong wind blowing from the east, which not only caused most of the targets to soar skyward, but blew the powder smoke back into the eyes of the shooters.

We had just got fairly started, when it started to snow, and a genuine blizzard was raging in a short time, the cold wind driving the snow into the faces of the shooters.

McGary took first place in the handicap event, he scoring 39 from the 16yd. mark. Geo. Eck came in for second place with 37 from 19yds.. Walsh getting third honors with 36 from 16yds., while Peck broke 35 from 19yds.

In the event at 20 pairs doubles, Peck showed the way by breaking 25, Geo. Eck landing second with 24, while Shaw brought down 23.

In event No. 3, at 25 singles, all 16yds., Miss Anna Rieker and Seelig tied for first place, each breaking 20, Peck and Taggart each scoring 19, while Crocker and McGary each returned a score of 17.

Cutler and Walsh each landed a score of 23 in a frame of 25.

Peck, the "live wire" from Kenmare, N. D., was with us to-day, and incidentally returned the best score in a single frame for the afternoon, when he broke 24 out of 25.

Miss Rieker, of Lancaster, Pa., was with us again to-day, and she assured us that she will visit our park whenever she comes to Chicago.

Dr. Griffith did most of his shooting with a 28-gauge and tried one frame from 18 and 20yds.

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	50	40	25	25	25	25	25	25	25	25

Wm. F. Merkle, Supt.

Atlantic City Gun Club.

Atlantic City, N. J.—Deemer again captured high honors in the week-end shoot of the Atlantic City Gun Club, on the 3d inst., for the club prize, getting 3 points. Gladney and Harrison Cook came next with 2 points; Smith, Mathis and Sheppard 1 point each. Deemer now leads with 6 points.

In the challenge, Powers defeated Harrison Cook, 47 to 45. Powers shooting scratch.

Hank Stevens and Lloyd Lewis were with us, and they both landed a straight, and the targets were exceedingly hard. Scores:

Hank Stevens	19	21	24	22	21	22	130
Lloyd Lewis	19	25	20	20	18	20	122
W T Smith	17	20	19	15	15	22	108

Indianapolis Gun Club.

Indianapolis, Feb. 11.—In the practice events to-day Barr showed the way with 78 out of 80, the last three strings of 20 each being broken straight. H. Heikes scored 103 out of 110, getting one straight of 25. Van Nest, another professional, was out of form. In the trophy race, Hymer posted the high score of 47 out of 50, beating Dixon by one bird.

Next week will be started a handicap of targets for a cup offered by the Dupont Powder Co. Thereafter and until it or the President's cup is taken out of the competition they will he shot for on alternate Saturdays.

Practice:

	Shot at.	Brk.		Shot at.	Brk.
Moller	80	69	Britton	60	45
*Barr	80	78	Clark	60	49
*Van Nest	110	68	Stitle	65	48
Denny	65	57	Hymer	60	48
Lewis	80	73	Moore	60	39
*H Heikes	110	103	Neighboro	60	41
Dixon	65	57			

President's cup at 50 targets:

Moller, 18	45	Britton, 16	37
*Barr, 18	45	Neighhoro, 16	38
Lewis, 18	45	Hymer, 16	47
Dixon, 18	46	Moore, 16	44
Clark, 16	42		

R. R.

Northern Kentucky Gun Club.

Ten shooters took part in the live-bird events on Feb. 9, given as preliminary practice for the shoot to be held at the Cincinnati grounds on the 16th. Supt. Taggert was not able to supply enough birds to give all the shooters as much sport as they wanted, but those which he trapped were by far the best lot which the club has had this winter. The day was pleasant, with a fresh breeze blowing. George Walker, accounted one of the best wing shots in this section, was decidedly off to-day, as he missed 13 birds out of 20. Schreck and Payne tied in the first event, the latter winning the shoot-off and taking the trophy, a sterling silver berry spoon.

In the second event Irwin and Payne tied on 8. In the shoot-off Irwin won the trophy. He is new at this kind of shooting, having taken part but once previous to to-day's events. A miss-and-out event ended the day's sport, and was won by Payne in a shoot-off.

Before the live-bird events started, a few targets were thrown, D. Pohlar getting 20 and H. Pohlar 17 out of 25. Koch and Schreck got 2 and 3 respectively out of 5. The club will begin its monthly money-back tournaments in May. These will be on the same line as last year, ten 15-target events. The scores:

Event No. 1, 10 birds, $3 entrance, trophy to winner:

Schreck, 32	2220121222— 9
Payne, 31	2211121210— 9
Koch, 30	2221020202— 7
D Pohlar, 29	0100220221— 6
Gould, 31	0012102020— 5
Walker, 28	0020012002— 4
G Walker, 32	2200100000— 3

Shoot-off of tie, miss-and-out, was won by Payne.

Event No. 2, 10 birds, $3 entrance, trophy to winner:

Payne, 31	0211121102— 8
Irwin, 29	1110120211— 8
Koch, 30	1201102110— 7
D Pohlar, 29	1202220210— 7
H Pohlar, 29	1102221020— 7
Schreck, 31	1211011010— 7
Gould, 30	1020120020— 5
Walker, 29	1201001200— 5
G Walker, 30	00100211*0— 4
Bauer, 29	0000002120— 3

Shoot-off of tie, miss-and-and-out, was won by Irwin.

There was a very good attendance at the shoot of the club on Feb. 12, eight men taking part in the events. C. A. Young was high man with 114 out of 125. Payne did his best work in the first two events, breaking 88 per cent. and finishing in second place with 102. Holaday, Jr., is still without his own gun, and his work shows the effect of using a strange gun. Dea shot up near his old mark in the first two events, but dropped behind in the third. In the team match, Holaday, Sr., and Schreck defeated Payne and Holaday, Jr., by 6 targets. This makes the third time that the former team has proven to be the better. Schreck did fine work in the match, breaking 92 per cent, while Payne went an 88 per cent. gait. Shooting at twelve pairs of doubles, the following scores were made: Young 21, Payne 17, Holaday, Jr. 14, Irwin 13.

The club will be well represented at the live-bird shoot on the Cincinnati Gun Club grounds on the 16th, and on that day a very interesting match is scheduled as an extra attraction, viz., Max Fleischman and Dr. Heyl against J. Schreck and J. A. Payne, at 50 birds per man.

Events:	1	2	3	4	5	Total.
*Young	23	20	22	25	24	114
*Holaday, Jr.	17	21	20	19	19	96
*Payne	23	21	30	20	18	102
Dea	22	22	18	..	..	62
Schreck	24	22	21	..	..	67
Holaday, Sr.	21	21	..	..	..	42
H Dramer	10	14	..	..	..	24
*Irwin	22	20	..	16	..	58

*At 20yds. in fourth event.

Team match, 50 targets per man:

Schreck	24 22—46	Payne	23 21—44
Holaday, Sr.	21 21—42—88	Holaday Jr.	17 21—38—82

Montclair Gun Club.

Montclair, N. J., Feb. 11.—In events 1 and 2 to-day Thos. Dukes was high man, winning out with 24 breaks in each event.

In the team race to-day with Orange, ten men on a team, 50 targets per man, at the end of the first string Orange was ahead by 11 points, but in the second half Montclair did a little better, while Orange fell down, Montelair winning out by 6 points.

E. Winslow, Sec'y.

Crescent Athletic Club.

BAY RIDGE, N. Y., Feb. 11.—The club's weekly shoot to-day was held under favorable conditions except for the glare of the sun on the surrounding snow fields. Some 2500 targets were broken by the twelve gunners in attendance. Nine events were run off in quick succession, only two straights being recorded, viz., by Frank B. Stephenson, who won first in the J. F. James trophy shoot, and C. H. Pulis, who won the leg for the C. R. James prize, shooting from below the elbow. The record of the scores is given below:

February cup, 50 targets, handicap:

C H Pulis	6	46	L C Hopkins	10	41
F B Stephenson	0	44	D T Leahy	0	39
J H Vanderveer	2	44	C R James	2	37
G Felix, Jr	1	43	J F James	2	37
A G Southworth	2	43	A E Hendrickson	4	37
F S Hyatt	0	41			

State trophy, 25 targets, handicap:

F B Stephenson	0	24	J H Vanderveer	1	20
C R James	1	23	C H Pulis	3	20
F S Hyatt	0	23	A G Southworth	1	20
L C Hopkins	4	23	D T Leahy	0	20
G Felix, Jr	1	23	J F James	1	19
H M Brigham	0	22	A E Hendrickson	2	17

J. F. James trophy, 25 targets, handicap:

C H Pulis	3	24	J H Vanderveer	1	18
F B Stephenson	0	25	L C Hopkins	4	18
D T Leahy	0	23	A G Southworth	1	19
C R James	1	22	H M Brigham	0	20
Geo Felix	1	22	A E Hendrickson	2	20
F S Hyatt	0	18	J F James	0	15

Lockwood trophy, 25 targets, handicap:

C R James	1	24	C H Pulis	3	22
Geo Felix, Jr	1	23	A G Southworth	1	21
D T Leahy	0	23	J F James	1	20
H M Brigham	0	22	J H Vanderveer	1	20
F B Stephenson	0	22	A E Hendrickson	2	20
F S Hyatt	0	22	L C Hopkins	4	19

C. R. James trophy, 25 targets, handicap:

C H Pulis	3	25	L C Hopkins	4	19
Geo Felix, Jr	1	23	A G Southworth	1	16
A E Hendrickson	2	23	F S Hyatt	0	15
F B Stephenson	0	21	J F James	1	15
D T Leahy	0	20			

S. S. Lawson trophy, 25 targets, handicap:

A G Southworth	1	23	F S Hyatt	0	20
J H Vanderveer	1	22	J F James	1	20
L C Hopkins	4	22	Geo Felix, Jr	1	20
C H Pulis	3	22	D T Leahy	1	19
H M Brigham	0	21	A E Hendrickson	2	19
F B Stephenson	0	21	C R James	1	20

Sweepstakes, 25 targets, handicap:

Geo Felix, Jr	1	24	F S Hyatt	0	22
D T Leahy	0	24	C H Pulis	3	21
J F James	1	23	L C Hopkins	4	20
F B Stephenson	0	23	H M Brigham	0	19
J H Vanderveer	1	23	A E Hendrickson	2	18
C R James	1	24	A G Southworth	1	17

C. R. James, Felix and Leahy divide.

Ten pair doubles, Westley Richards gun:

Geo Felix	14	F B Stephenson	11
C H Pulis	13	A E Hendrickson	11
H M Brigham	12	C R James	9
D T Leahy	12		

Feb. 14.—Although the conditions yesterday were not of the best, the holiday shoot of the Crescent Athletic Club had a creditable number of attendants at the Bay Ridge traps. Eight events were shot, Frank B. Stephenson again making the best record. Scores:

Lincoln Day cup, 50 targets, handicap:

A Blake	4	48	H M Brigham	2	44
G G Stephenson	6	47	Charles Blake	2	43
A E Hendrickson	4	47	C H Pulis	6	43
F B Stephenson	0	45	F S Hyatt	2	41
L C Hopkins	8	45	J F James	2	35
C R James	2	44			

Stake trophy, 25 targets, handicap:

C R James	1	24	Geo Felix, Jr	1	21
A E Hendrickson	2	23	C A Sykes	4	21
F B Stephenson	0	22	A Blake	2	20
L C Hopkins	4	22	Charles Blake	1	20
H M Brigham	1	21	J F James	1	19
F S Hyatt	1	21	G G Stephenson	3	17
C H Pulis	3	21			

C. R. James trophy, 25 targets, handicap:

C H Pulis	3	24	F B Stephenson	0	18
A E Hendrickson	2	23	C R James	1	18
Charles Blake	1	21	A Blake	2	18
George Felix	1	20	J F James	1	15
F S Hyatt	1	19	G G Stephenson	3	11
L C Hopkins	4	19	Dr Atkinson	5	8

J. S. Lawson trophy, 25 targets, handicap:

Trap at Larchmont.

THE regular club events were run off at the Larchmont Yacht Club on the 12th, and the attendance was unusually large. Conditions were most favorable and scores high. S. Samson pulled out with 116 out of 125.

Five members of the Manhasset Bay Yacht Club were matched for an interclub team shoot with an equal number of representative gunners of the Larchmont Club, and a most interesting contest took place, the visiting team being taken into camp by the Larchmont men, who won by 469 to 414; each marksman shot at 125 targets. The summaries are appended:

Baudouine cup, 25 targets, handicap:

J G Batterson	3	25	G H Abbott	3	24
W J Elias	3	25	E A Wilson	2	24
K R Hooker	3	25	S Samson	1	24
W E Bemis	4	25	G J Corbett	1	21
O G Burnett	2	25	B M Higginson	1	22

DuPont Gun Club.

WILMINGTON, Del., Feb. 11.—One hundred and thirty marksmen took part in the weekly shoot of the Du Pont Gun Club to-day. They included: H. L. Worthington, Rising Sun, Md.; F. M. Faurote, Shreveport, La.; Will R. Allen, Dallas, Texas; Harry Sloan, Philadelphia; William M. Foord, of this city, State champion; Alden B. Richardson, Dover, ex-State champion, and other prominent shooters. There were a large number of spectators.

Champion Foord and A. H. Lobb, of this city, again tied for Class A trophy, offered by the gun club, for the fourth successive Saturday. On Jan. 21 they both made a score of 25. They again tied Jan. 28. On Feb. 4, still another tie resulted. Yesterday each man broke 24 out of 25 targets. Next Saturday they will shoot until sunset if necessary, in order to determine who is the better shot.

In a team shoot, team No. 2, composed of Messrs. Richardson, Skelley, Victor Du Pont, Allen and Sloan, defeated team No. 1. The score was 431 to 396. The defeated team comprised Messrs. Worthington, McKelvey, Faurote, Foord and Coyne.

The individual scores in the team shoot were: Team No. 2—Skelley 94, Du Pont 88, Allen 66, Sloan 92, Richardson 91; total, 431. Team No. 1—Worthington 94, McKelvey 90, Faurote 61, Foord 95, Coyne 56; total, 396.

In Class A, for the T. Coleman Du Pont merchandise event, A. B. Richardson and Victor Du Pont, third, tied at 24.

Next Saturday J. S. Fanning and Tom Keller, of New York, and H. H. Stevens, of Roselle Park, N. J., will compete at the club grounds.

The scores were:

Coleman Du Pont merchandise event, Class A—Victor Du Pont, third, A. B. Richardson, tied at 24.

Class B, 18—R. L. Comer, W. S. Bickley, W. E. Husbands, H. C. McClane, Alexis I. Du Pont, E. M. Hogge, Eugene E. Du Pont.

Class C, 15—William Coyne, R. R. Choate, E. L. Petze, D. Lindsay, S. G. David.

Class D, 12—H. S. Farrow, N. K. Smith, W. E. Ross, T. C. Wilkinson, E. E. Handy, Arthur F. Du Pont.

Rifle, 50yds., qualification scores (.22 caliber)—C. W. Pierce 64, W. E. Cravin 14.

Revolver and pistol, 50yds., qualification scores—F. B. Harkins 92, 83, 79, 76; Irenee Du Pont, 89, 84; E. G. Ackart, 86, 80, 79; Lammot Du Pont, 85, 82; K. K. V. Casey, 83, 79, 78, 75, 70, 78; John Bancroft, Jr., 68, 63.

Rifle, 50yds., practice scores (.22 caliber)—D. Appleby, 77, 77, 74; C. W. Pierce, 73; J. T. Birch, 64; R. F. Donovan, 61, 54; F. J. Gibney, 53, 43, 20, 18; J. R. Owens, 58, 43, 42; Wm. P. O'Connor, 57, 46; H. G. Ely, 50, 40; George Forrest, 45; J. A. MacMullen, 45, 38; C. R. Kenworthy, 44; G. E. Lambert, 44; J. C. Beatty, 40, 27; F. Whitehead, 40; L. C. Weldin, 39, 37; W. H. Eckman, 37; M. J. Thornton, 32; H. R. Sheppard, 30; W. A. McElwee, 29, 42; J. H. Gooding, 27; W. J. Gibbons, 25.

Revolver and pistol, 50yds., scores—Gammot Du Pont, 81; I. Du Pont, 70; G. E. Lambert, 56, 26; D. Appleby, 52, 47; E. H. Lambert, 48, 35; W. F. Jensen, 40; J. MacMullen, 39, 21; Wm. P. O'Connor, 38, 35; C. W. Pierce, 21; Wm. A. McElwee, 15.

In ties for spoons the previous week the following wins resulted: Class B, Dr. Louis Rumford; Class C, W. S. Bickley; Class D, S. H. Pierson.

The scores in detail:

H. W. Bush, 19 out of 25, I. Turner 19, J. M. Turner 14, F. Matthewson 19, H. S. Farrow 12, C. T. Martin 16, H P. Carlin 17, R. L. Conner 18, T. B. Rogers 19, H. H. Sloan 21, J. C. Husbands 21, W. S. Bergen Beach Gun Club.

BERGEN BEACH, L. I., Feb. 14.—The gunners of the Bergen Beach Gun Club had a most enjoyable time yesterday afternoon in celebration of Lincoln's Birthday. The program was the first of a series of three shoots for merchandise prizes. The field shot in three classes in a 50-bird match. As the high gun in three shoots wins the prize, no shoot-off was necessary yesterday, although gunners were tied in all three of the classes. The scores:

Class A.

W Schortey	19	46	G S K Remsen	18	43
J S Simonsou	18	46	F R Long	18	41

97.28%

1910 High Amateur Average

Won by MR. J. S. DAY, of Midland, Texas, using

97.28%

Peters Factory Loaded Shells

Mr. Day shot at **4280** targets in Registered Tournaments, breaking **4164**, an average of **97 28%**, exceeding by over **2%** the highest official amateur average of any previous year. During the season Mr. Day made many long runs, among which are the following:

Gorman, Texas, and Walnut Springs, Texas, August 15-17—**245** Straight
Walnut Springs, Texas, - - - - - " 17-18—**266** "
Midland, Texas, - - - - - - - " 8-9 **133** "
121 "
Big Springs, Texas, - - - - - " 10-11 **175** "
152 "
Cisco, Texas, and Gorman, Texas, - - " 12-15—**190** "

PARTICULAR ATTENTION

is directed to the fact that all of Mr. Day's shooting was done with PETERS REGULAR FACTORY LOADS, purchased from dealers where the various tournaments were held. His shells were not special in any sense, but were regular stock goods such as can be procured from any PETERS dealer. YOU can get this SUPERIOR AMMUNITION as easily as ordinary loads. You may not always score 97.28% but you will average better than with any other make.

Shoot the shells that have established another World's Record—97.28%—the kind that do not have to be used in any special make of gun to give best results.

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

New York: 98 Chambers St. T. H. KELLER, Manager
New Orleans: 321 Magazine St. P. R. LITZKE, Manager
San Francisco: 608-612 Howard Street. J. S. FRENCH, Manager

Passaic County Gun Club.

The Passaic County Gun Club held its weekly shoot on Feb. 4, at Clifton. Despite the fact that a stiff gale blew across the grounds, some good scores were made. First honors went to Dr. Smith, who has shown good form during the past three or four shoots. Bowes, Carless and Hudson, also came in for prizes.

The weekly shoots of the Passaic County Gun Club are becoming very popular, and always draw a large number of spectators.

Secretary W. Dutcher, of the Passaic County Club, is arranging for a monster shoot to be held Washington's Birthday, Feb. 22. A long list of prizes will be awarded the winners of the different targets, and a few specials will be added for the members. The shoot for the president's fob proved to be such a success that arrangements are now under way for another such event: All gunners are invited to participate in their shoots. Scores:

Targets:	10	15	10	15	10	15	20
Dr Smith	7	12	8	11	9	13	16
Hudson	4	9	6	6	6	11	9

McKenzie	..	..	1	8	4	5	..
Robbler	..	..	..	8	5	7	14
Plog	..	..	..	4	5	9	..

Feb. 11.—At the Passaic County Gun Club regular weekly shoot at the Clifton shooting grounds, ten members and about an equal number of visitors were out to-day. Several left early and motored over to Montclair Gun Club to take part in the team match between Orange and Montclair. Every arrangement is being completed for our shoot on Washington's Birthday, and if the weather is favorable, we expect a great crowd. The management is going to leave the conditions under which the program is to be shot to the wish of the majority of shooters present. Prizes will be provided, and if they desire sweepstake, or both, the club will be pleased to accommodate them, or shooters can shoot for the price of targets only.

The following are the scores of yesterday's shoot:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	25	10	15	10	15

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Essex County Country Club.

At Orange, N. J., on Saturday last the Essex County Country Club held a series of trap shooting events. The Taylor cup, a 25-target handicap, was won by Austin Colgate with 23. A. O. Headley won the Hart trophy, ten pairs of doubles from scratch, with 10. C. H. Daly won the Daly trophy, 25-target handicap, from scratch with 23; also a 25-target sweep from scratch with 20.

Rifle Range and Gallery.

Fixtures.

March 11-18.—Fifteenth annual championship under auspices of Zettler Rifle Club, 159 W. 23d St., New York.
June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

Ohio and Kentucky Revolver League.

The Cincinnati Revolver Club and First Regiment (O. N. G.) teams shot their match in the League series on Feb. 10, at the armory range. Some very good individual work was done during the evening. The rapid fire round still remains a hoodoo for all the contestants, although they are improving in this style of shooting.

Elmer Hake and Sergt. Miller, of the regiment, led in this round with 39 and 32 respectively, while Elliot Pugh made high score for the citizens with 30. Dr. E. H. Thompson, of the Revolver Club, carried off the individual honors of the match, getting 168 in the four slow fire rounds, putting 14 shots in the black, best 5-shot score in his second round; two 9s and three 10s, total 48, and high total of 197. Capt. Myer, of the soldiers, was second with 186; he also made second high score at slow fire of 158.

The League rule limiting the revolver used to one of .32cal., with 6½in. barrel, has been changed to comply with that of the National Revolver Association, and it is thought that this will result in more teams joining the League. The Cincinnati Revolver Club has joined the National Association, and many of the members will enter such of the competitions as are still open for this season. The next League match will be shot on Feb. 24, between the teams of the Cincinnati Police and the First Regiment. Scores:

Team match, 20 shots slow fire and 5 shots rapid fire (20 seconds), possible 250; 20yds., standard American target, .32cal. revolvers, full service ammunition:

First Regiment (O. N. G.) Team.

	Slow Fire	Rapid Fire.	Total.
Capt Meyer	33 42 40 43—158	28	186
Elmer Hake	39 31 36 35—141	39	180
Sergt Miller	35 36 36 40—147	32	179
Col Hake	28 37 46 39—150	26	176
Maj Ward	39 41 38 33—151	19	170
Sergt Gloss	40 35 37 36—148	21	169

Team total 1060. Average 176.66.

Cincinnati Revolver Club Team.

Paul Frese	43 41 42 40 39—205—1068

Secretary.

High Scores by Seventh Regiment Shooters.

THE regimental range in the armory at Sixty-sixth street and Park avenue, on Friday night, 10th inst., was the scene of the last competition for the trophies in the third class cup rifle match of the season, as well as of revolver contests. It was counted to be one of the most successful occasions in the long existence of the regimental rifle club. The attendance was unusually large, and the closely contested matches held the interest of the onlookers to the highest degree, several of the events being in doubt until the last shots were fired.

High honors of the evening went to Private J. K. Boles, of Company I. He shot a perfect score of 70, which won for him the expert class cup and the rifle club gold bar, and gave him the best aggregate score for deliberate fire and rapid fire, with the rifle, that has been made at the Seventh Regiment in more than thirty years. His rapid fire score of 46, made several weeks ago, added to his 70, gave him 116. This exceeds by one point the record held by Private A. Scholz, of Company A, who established it last year. Should no one better Private Boles' total before the end of the season, he will be the regimental rifle champion. This is his first year in the Seventh, but he made his mark in the militia of the State of Arkansas, which he represented in national competition.

Winners in class cup match No. 3, expert class:

	200yds.	500yds.	Total.
Pvt J K Boles, Co. I	70	68	138

Neeessary for qualification as a sharpshooter, at least 65.

West Chester Rifle Association.

WEST CHESTER, Pa., Feb. 8.—At the regular meeting of the West Chester (Pa.) Rifle Association, held at their meeting rooms, at the range, No. 20 North Walnut street, West Chester, Pa., the prizes in the recent 500-shot handicap match, on the 25yd. indoor range, were awarded as follows: First prize, silver loving cup, won by P. H. McDermond, score 2468. Second prize, gold medal, won by Jas. E. Pyle, score 2462. Third price, gold fountain pen, won by Wilmer Woodward, score 2457. Aggregate prize, silver cup, won by L. D. Schroth, score 2440—800 shots.

The West Chester team is now shooting a match with the Myles Standish team, of Portland, Me.—West Chester shooting at 75ft., using telescope sights, and the Portland team shooting 60ft., with military equipment. We would like very much to follow this match with a series of matches with some other team, and would be glad to hear from some team using telescope sights, or we would shoot under the same conditions as we are shooting the Myles Standish team, if any club would like to shoot the military style. P. H. MCDERMOND, Sec'y.

302-304 Broadway - - - - - - New York City

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

ANGLING MEMORIES

Seasonable Books for the Sportsman's Library

MEN I HAVE FISHED WITH MY ANGLING FRIENDS

Both by FRED MATHER

These two volumes are a source of endless delight to the fisherman. They deal with every phase of the gentle sport from bent pins and willow poles to salmon flies and special rods—with every kind of fish as well.

They are full of a quaint philosophy, written with a rare appreciation of human nature, and comprising sketches of angling "characters" as well as well-known men who were Mr. Mather's brethren of the angle. Much of other sport and adventure beside fishing will be found between the covers of these books. These two large, splendidly bound, splendidly printed, and richly illustrated volumes of 400 pages each regularly sell for $2 each. While they last we offer

Both together, postpaid, for $3.00

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

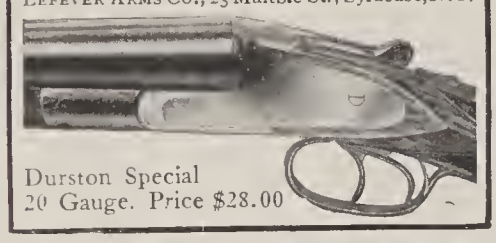
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

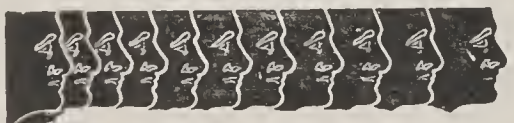
But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise. Lefever Arms Co., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00



SAVE 208 SHAVES

$20.80 a year. Also save the razor, your face, time and temper by using "3 in One" on the blade.

3 in One

keeps the blade keen and clean, by preventing surface rusting which is caused by moisture from the lather. Write for free sample and special "razor saver" circular. Why not know the truth?

There can't be **"one shell wrong"** when they're loaded with Dead Shot. A mountain of powder comes through the mill chemically tested in each stage of its manufacture.

Dead Shot Smokeless

Trade Mark Reg. In U. S. Pat. Off.

Stability Guaranteed.

After the powder is finished, the tests continue in the shooting range. It must have a light recoil, low bursting pressure and uniform sound.

The powder in one shell must be like that in any other.

If your dealer hasn't it, we will refer you to one who has.

AMERICAN POWDER MILLS
Chicago St. Louis Boston

The Pistol and Revolver.

By A. L. A. Himmelwright, President U. S. Revolver Association, Director New York State Rifle Association.

A handy pocket-size volume of 157 pages of practical information, covering the entire subject of Pistol and Revolver Shooting. This work is strictly up-to-date, including the latest development in smokeless powder; the 1908 Revolver Regulations and Practice of the United States Army, the United States Navy, and the National Guard; the Annual Championship matches and Revised Rules and Regulations of the United States Revolver Association, etc. Besides being a useful, practical handbook for the experienced marksman, the work will also prove particularly valuable for beginners.

Contents: Historical: Arms—Military, Target, Pocket Ammunition; Sights; Position; Target Shooting; Revolver Practice for the Police; Pistol Shooting for Ladies; Clubs and Ranges; Hints to Beginners; Selection of Arms; Manipulation; Position and Aiming; Target Practice; Cleaning and Care of Arms; Reloading Ammunition—primers, shells, bullets, powders, reloading. Appendix—Annual Championship Matches of the U. S. Revolver Association; Rules Governing Matches, etc. Records of the U. S. Revolver Association.

In three styles: Paper, 60 cents. Cloth, $1.00. Full morocco, $1.50. A liberal discount to military organizations and shooting clubs on orders of ten or more copies.

FOREST AND STREAM PUBLISHING CO.

A Problem's Solution

LOG CABINS & COTTAGES; How to Build and Furnish Them.

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing and withal a most beautiful work.

Cloth, profusely illustrated, $1.50 postpaid.

FOREST AND STREAM PUBLISHING CO.

My Friend The Partridge.

S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated, 150 pages. Postpaid, $1.00.

PUBLISHERS' DEPARTMENT.

At the recent annual tournament of the International Indoor Twenty-two Caliber League, held in Brooklyn, N. Y., the expert match was won by William Keim (amateur), who scored 49 out of 50 points, and was equipped with a Stevens rifle. In the Continuous Prize Match, Mr. J. Williams tied for first and was equipped with Stevens rifle and Stevens telescope. First prize in the Remington match was won by Jesse Smith, who used a Stevens rifle. Twelve out of thirty telescopes used by the national sharpshooters who contested were of Stevens make.

DUNKIN'S DIRIGIBLE.

Young Dunkin was in love with Sir Anthony Rasper's daughter, and Sir Anthony Rasper's daughter was in love with young Dunkin; but Sir Anthony wasn't. Sir Anthony was all for sport, and he always spelled "sport," "s-h-o-o-t-i-n-g"—seemed to have a notion, he had, that man's chief end and aim in being born into the world was to shoot game, and then, if he'd any odd moments of time left over, he might devote 'em to work, or politics, or chemical manures, or any other similar forms of unnecessary but harmless amusement. That was where he and young Dunkin didn't hit it. Shooting always gave young Dunkin headache, and listening to Sir Anthony's everlasting gun twaddle always gave him earache. And then, again, Sir Anthony was rich and he was poor; but he was determined to rise in the world, and he thought at that time he could mebbe do it best on a dirigible. So he had a dirigible balloon built to his own plans and theories, and then industriously started in to let the world see that they wouldn't work. Consequently, when he called at the Hall and applied to Sir Anthony for the situation of son-in-law in that sporting baronet's family, Sir Anthony first gasped at his impudence and then let fly at him with both barrels, so to speak. He said a lot, did Sir Anthony, but the gist of it was that he'd never accept a son-in-law who hadn't been born with a silver spoon and double-barreled gun in his mouth, and hadn't been weaned on No. 6 and smokeless. What he wanted for a

son-in-law, he said—and he said it in such a way that you couldn't possibly mistake it for a temperance address or a Tariff Reform speech if you tried—the son-in-law for him, he said, would have to be a man as could support his daughter in a position as high as, if not higher than she'd been accustomed to. And, more than that, he'd have to be a good performer among game; he'd have to be able to drop as many birds as he—Sir Anthony—could, and if he could not only show himself his equal in that respect, but could fairly wipe his eye—fairly make rings round him, Sir Anthony—why, then, he'd be respected all the more.

When Sir Anthony had got through with young Dunkin and had dropped what was left of him off the front-door step, he hunted up his daughter and repeated to her as much of what she'd heard through the keyhole as he thought would be good for her. Then she reminded him that she'd always been a kind and indulgent daughter to him, and, much as it hurt her to refuse to gratify any of his little fancies, he was going a trifle too far this time, and if he'd fully made up his mind to have a son-in-law that hadn't an idea beyond the end of a gun barrel, then she washed her hands of the whole affair, and he'd have to procure the—er—article without any assistance from her. After that she said she'd just put her night-dress into a bag and go over to stay with her Aunt Miranda at Pugsby-by-the-Pond for a week or two while he thought it over. So she packed her night-dress into two trunks and a kit-bag and a hat-box and a portmanteau and went to her Aunt Miranda's; and when she'd gone Sir Anthony was madder than ever, because he remembered that young Dunkin lived within a mile and a half of Pugsby-by-the-Pond, and it was at his sister Miranda's that the girl had first met the young man. But he couldn't do anything, in consekens of it being the twelfth in a couple of days, and all his time was taken up in preparations for the moor.

You see, Sir Anthony Rasper's grouse-moor was next to Colonel Snapper's, and the two owners hated each other worse than brothers. Nat'rally, there was the keenest rivalry atween 'em as to which made the biggest bag on the twelfth. For the last three years the Colonel had come out top dog with eleven, seventeen and nineteen brace more than Sir Anthony, and Sir Anthony had been sore. However, that year it was reported that some original experiments in fancy burning were beginning to show a disastrous effect on old Snapper's moor, while Sir Anthony's was simply crowded with young healthy birds, and he wasn't going to miss the chance of knocking feathers off old Snapper for the want of a little attention. So while he was making the most of his opportunity, the young folk were making the most of theirs also over at Pugsby, with the result that young Dunkin persuaded Sir Anthony's daughter to take a trip with him in the dirigible. Accordingly, on the morning of the twelfth, Sir Anthony's daughter casually explained to her Aunt Miranda that she was going for a little fresh air, and met young Dunkin by appointment in the vicinity of the shed where he kept the dirigible chained up when he could persuade her to come home. It didn't take long to work the machine out, inflated as she was, help the girl into the car, and fly with her.

The first sensation of skimming through the air was so delightful that she said she'd like to go on flying like that until lunch, and young Dunkin, of course, promptly said that in that case he wished lunch was laid at the other end of eternity. Then she wanted to know where they were going to, and young Dunkin tried to tell her, but it wasn't a success. They didn't know where they were going, but they went. By and by the girl sort of began to think the country they were scooting over had a kind of familiar look. Then they scooted some more, and skimmed up over the hills, and at last the girl gave a gasp, and said: "Look, George, it's pa's grouse-moor."

And George looked, and it was.

Sir Anthony Rasper said he hadn't known a finer twelfth for twenty years, and, what with the birds that they had on the moor simply

The "Old Reliable" PARKER GUN

Wins for the **EIGHTH** Time

The Grand American Handicap

Score of 100 Straight from 19 Yards.

At Chicago, Ill., June 23, 1910.

Mr. Riley Thompson, of Cainsville, Mo., made this record, which has never before been equaled in this classic event.

The **Parker Gun,** in the hands of Mr. Guy V. Dering, also won the Amateur Championship at Chicago, June 24, scoring 189 ex 200, shooting at 160 singles and 20 doubles.

The Prize Winners and Champions shoot **The PARKER GUN!**

New York Salesrooms: 32 Warren St. **Meriden, Conn.**

New Model 27 **Marlin** *Repeating Rifle*

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working *"pump" action;* the wear-resisting *Special Smokeless Steel* barrel; the modern *solid-top* and *side ejector* for rapid, accurate firing, increased safety and convenience. It has *take down* construction and *Ivory Bead* front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full *Marlin* line. Sent for three stamps postage. Write for it.

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

asking to be shot, they were just bound to wipe old Snapper's eye and make him madder than a wasp. He'd eight guns in the butts, had Sir Anthony, for the first drive, and the drivers were working in round the shoulder of the hill, and already you could see the birds rising in clouds and pitching again in the heather in the distance, and Sir Anthony licked his lips as he thought of the treat he was going to have. In a few minutes more he and his friends would be blazing and banging away like a Coronation celebration, and the birds would be tumbling about the butts like Niagara translated into feathers, when the dirigible came up—and the birds went down. They simply couldn't face the awful apparition whizzing above 'em. They dropped plumb into the heather and squatted there that terrified they'd ha' let the drivers kick 'em into pillow stuffing afore they'd ha' got up a foot.

Nat rally, as soon as young Dunkin recognized where he was he was in such a fluster he lost his head for a moment and jerked the rudder so hard to starboard that it jammed and he couldn't move it, and he gave such a tug—the wrong way—at the control lever that it wrenched off the magneto switch and the petrol stopcock, and the dirigible started on a circular tour with a radius that brought it nicely over the line of butts once during every revolution. The thing just became an extra-special satellite of the earth, with a reg'lar orbit that took the best of Sir Anthony's moor and killed every chance of sport.

At first young Dunkin was in a bit of a fluster, then he suddenly saw the situation in the correct light and chuckled like a wheelbarrow as wants greasing. The girl didn't seem to be thoroughly enjoying herself, and she crouched in the bottom of the car and felt as happy as you do in a wet crowd when the next fellow's umbrella is shooting off a stream of cold water down your neck.

"Oh, George," she says, "this is too awful!"

"Awful?" says he. "Why it's simply ripping! I've got your father on toast this time."

"Yes," says the girl, "I suppose he will be quite as hot as that—and as crusty!"

And then the dirigible came sailing over the butts again, and Sir Anthony roars: "Here, you blamed idiot, take your beastly bag-o'-tricks off my moor!"

"Can't—rudder's jammed—boundto go round and round just as we are doing," yells back young Dunkin, as the thing commenced another lap of the course.

"Then stop the confounded machinery! Shut it off at the main! Cut it off at the meter! Choke it! Throttle it!"

"Can't! Bount to go on as long as the petrol lasts!"

"And how long will that be?" shrieked Sir Anthony the next time the dirigible came round.

"About eight hours!" shouted back young Dunkin, cheerfully, and circled away.

"Oh, stop the measley old thing, or I'll put both barrels of No. 5½ through it!" screams the Baronet the next time young Dunkin comes round.

"If you do, Sir Anthony, you'll jolly well pepper your own daughter, for she's in the car with me!" chirps young Dunkin, and the girl peeped over the edge of the car.

"Come out of that! Come down at once, Amelia! You're breaking my heart!" roars Sir Anthony.

"If she did she'd break her neck, and that's worth a dozen of your hard old heart!" snaps out young Dunkin in passing. "Say, Sir Anthony," he says, pleasantly, as he skims round once more, "do you remember our interview of the other day?"

"Every word of it, and I stand by what I said," thundered the Baronet in a rage.

"I'm making rings round you," says young Dunkin sweetly at the next circuit.

"I guess I'm dropping more birds than you, Sir Anthony, for I've dropped every blessed grouse your drivers have put up!" he sings out the next time, while on the very next circuit he was standing up in the car, and the girl was standing up, too, and young Dunkin had his

arm round her—pretty tight—and you couldn't have put a sheet of tissue-paper atween her head and his shoulder.

"I'm supporting your daughter, Sir Anthony," says he, "in a position a good deal higher than ever she's been accustomed to—fifty or sixty feet higher, in fact!"

And Sir Anthony groans, with his face as red as a turkey-cock: "Oh, hang it, man, take your blighted epidemic off my moor! Switch the plague on to old Snapper's moor, and give me a chance to get even with him, and you may go on supporting her till the week but one after Doomsday!"

With that, young Dunkin tugged and pulled at the steering gear in the delirium of his triumph till it fetched loose, and the rudder swung round so violently that it jammed firmer than ever at the other side, so that the dirigible circled in the opposite direction in a new orbit over old Snapper's moor. It kept all old Snapper's birds down for eight hours until the petrol was exhausted—old Snapper had been exhausted with swearing long before that—while, after a time, the birds on Sir Anthony's moor began to get up a bit, and he finished up the day sixty brace ahead, which so pleased him that he gave the young folk his blessing on the spot. They were married last week, and young Mrs. Dunkin says young Dunkin hasn't any further use for the dirigible.—W. Carter Platts, in The Shooting Times.

FRENCH PARTRIDGES.

Probably there is no game birds in the whole universe which has had more unkind things said about it than the red-legged or French partridge, which, of course, is quite a different bird in almost all its ways from the indigenous species—the "little brown bird" for which every sportsman has a true affection, although nothing delights him better than killing it!

The whole of the trouble that the "red leg" has got himself into began with the fact that he is a most tiresome bird to flush, especially in thick cover, and a long period of residence on British soil, generally in close company with the gray bird of more seemly habits, has failed to teach the red leg proper manners.

The latter still much prefers to seek safety by running, to using its wings, especially when dogs are employed to find it. For that reason it was never so popular with gunners as the gray partridge, and time was when determined efforts were made on not a few manors to exterminate the Frenchmen, whose habits were not conducive to steadiness in the behavior of Ponto and Shotover. When both French and English birds were found in the same field the peripatetic tactics of the former led to the disturbance of the latter, so that in the end the gunner frequently found it impossible to get within shot of either species.

By many the red leg has been accused of having brought about the practical abandonment of the once popular custom of shooting birds over dogs. But it is at least open to question as to whether this serious charge can properly be laid at the Frenchman's door. Other things, at least, have tended to the disuse of pointer and setter for partridge shooting, among them the comparatively modern method of sowing turnips and other farm crops in straight well-ordered "drills," or rows, instead of "broadcast," in the older manner. It is obvious that birds will not lie so well in a drilled crop as in one that is sown in broadcast fashion, hence the greater impossibility of getting near them by "walking up" either with dogs or without.

Again, the old-fashioned sickle, which used to leave a great deal more of stubble in the cornfields—at any rate in the days when straw was less valuable than it is to-day—has been replaced by the close-shearing reaping machine, which cuts off the crop so close to the soil that not enough cover to shelter a field mouse is left behind. Even if the red leg had never been brought to England, shooting over dogs would probably have gone out of fashion simply on account of the changed methods of sowing and harvesting.

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

PLANNING A HOUSEBOAT

Will be a leisure-hour occupation in many a family this winter. Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

HOUSEBOATS AND HOUSEBOATING

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, $3.34

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

Postpaid, $1.50

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

WOODCRAFT

By "Nessmuk." Cloth, 160 pages. Illustrated. Price, $1.00.

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English.

The Rendezvous, Homosassa, Fla.

Nursing vs Dosing.

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given especial attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth -may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness. Out-of Sorts Dam. Puppies. Diet. Other Foods. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin. Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

FOREST AND STREAM PUBLISHING CO.

Gas Engines and Launches.

Their Principles, Types and Management. By Francis K. Grain.

The most practical book for the man or boy who owns or plans to own a small power boat. It is motor launch and engine information boiled down and simplified for busy people, and every line of it is valuable. Cloth, 122 pages. Postpaid, $1.25.

FOREST AND STREAM PUBLISHING CO.

The Indians of To-day.

By George Bird Grinnell. Demi-quarto, 185 pages, buckram. Price, $5.00.

It describes the old-time Indian and the Indian of to-day, and contrasts the primitive conditions and ways of living with those of the present. It contains over fifty full-page portraits of living Indians from photographs.

Contents: The North American Indians. Indian Character. Beliefs and Stories. The Young Dogs' Dance. The Buffalo Wife. A Blackfoot Sun and Moon Myth. Former Distribution of the Indians. The Reservation. Life on the Reservation. The Agent's Rule. Education. Some Difficulties. The Red Man and the White.

Sam Lovel's Boy.

By Rowland E. Robinson. Price, $1.25.

Sam Lovel's Boy is the fifth of the series of Danvis books. No one has pictured the New Englander with so much insight as has Mr. Robinson. Sam Lovel and Huldah are two of the characters of the earlier books in the series, and the boy is young Sam, their son, who grows up under the tuition of the coterie of friends that we know so well, becomes a man just at the time of the Civil War, and carries a musket in defense of what he believes to be the right.

FOREST AND STREAM PUBLISHING CO.

Williams' Shaving Stick

"The kind that won't smart or dry on the face"

A thick, rich lather, a quick shave, that fresh, clean, well-shaved feeling all day—all these go with Williams' Shaving Stick.

Bear Hunting on Kadiak Island; II. Bear Hunting on the Alaska Peninsula; III. My Big Bear of Shuyak; IV. The White Sheep of Kenai Peninsula; V. Hunting the Giant Moose, James H. Kidder; The Kadiak Bear and His Home, W. Lord Smith; The Mountain Sheep and Its Range, George Bird Grinnell; Preservation of the Wild Animals of North America, Henry Fairfield Osborn; Distribution of the Moose, Madison Grant; the Creating of Game Refuges, Alden Sampson; Temiskaming Moose, Paul J. Dashiel; Two Trophies from India, John H. Prentice; Big Game Refuges, Forest Reserves of North America, Forest Reserves as Game Preserves, E. W. Nelson, etc., etc.

FOREST AND STREAM PUBLISHING CO.

The present popularity of driving has done more for the welfare of the red-legged partridge than anything else ever did in this country. Instead of being regarded as a nuisance, the bird is now encouraged, for the old idea as to its being bad friends with the Englishman is quite exploded. As a driven bird, the Frenchman would be hard to beat. He flies at a tremendous pace; is not so much given to swerving as the gray partridge when arriving in sight of the guns, and instead of coming "all in a bunch," as English birds so frequently do, French partridges are apt to spread and string, but as they fly toward the guns, thereby providing a chance of shooting for several of the party, and enabling one to get in two, or perhaps three, barrels before the covey is out of sight.

It is only the last act, when it comes to the question of the pot that the French bird is found to be inferior to the English. On the table there is no comparison between the pair, and a really old cock Frenchman requires very deft handling in the kitchen if he is to become even eatable.

According to that eminent authority, the Rev. W. B. Daniels, author of "Rural Sports," the red-legged partridge was introduced to this country so far back as the time of Charles II., when "several pairs were turned out about Windsor to obtain a stock." But the experiment appears to have failed, for the birds, although they were seen at intervals during the next three or four years, ultimately disappeared. No further attempt to naturalize the "red leg" seems to have been made until about the middle of the eighteenth century, when the then Duke of Northumberland is stated to have "preserved many in hopes of their increasing upon their manors."

This experiment also seems to have been a failure, for no more was heard of the bird until some years later the Earl of Rochford and the Marquis of Hertford decided to make an exhaustive trial of the red leg as a sporting bird. Some say that Lord Rendlesham also had a share in this undertaking, but at any rate the experiment was conducted in the most suitable of places — Suffolk — and certainly met with good success. Large quantities of "red legs" were brought over from France and the Channel Islands and turned down, but whether these birds were actually responsible for the establishment of the British race of French partridges is doubtful.—London Globe.

CHANGE IN DUTY ON GUNS AND PARTS.

The general rates of duty on guns and parts thereof, included under tariff No. 236 of Tariff Series No. 15, and under tariff Nos. 304 and 305 of the new official edition of the Italian tariff, have been modified as follows by the law of Dec. 24, 1910:

Tariff No.	Articles.	Gen. rates of duty. Old. Lire.	New. Lire.
304	Guns:		
	(*a*) Compressed air, spring and other, for shooting galleries, each	8.00	8.00
	(*b*) Other kinds:		
	1. Muzzleloading, each	15.00	15.00
	2. Breechloading (except repeating or automatic guns:		
	A. Single barreled, each	15.00	15.00
	B. Double barreled, ea.	15.000	24.00
	3. Repeating or automatic guns, each	15.00	24.00
305	Parts of guns of all kinds:		
	(*a*) Of wrought iron, steel or cast iron, stamped or cast, rough, kilo	3.00	3.00
	(*b*) Other	6.00	8.00

BARREN CHINA.

This level country is entirely denuded of timber, and is as bare of trees as the American prairies. Enormous areas of the mountain country in North China have had all timber removed, with very unfortunate results upon the climate.—Consul-General Samuel S. Knabenshue, Tientsin.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener "Unique" Ejecting mechanism is but one of the many unique points for which the Greener Gun is famous. Weight for Weight, the "Unique" Ejector is the Strongest gun that exists.

It has all the extra weight necessary to a fore-end ejector put into the barrels.

It is the simplest and most scientifically constructed, the most perfectly balanced, the easiest and most reliable gun to use.

It has a thoroughly sound hinge joint, not cut to a mere skeleton by cocking levers and ejecting connections.

There is no thrust to force the fore-end away from the joint.

The action frame, though light, has the metal so disposed as to offer the greatest resistance where the strain comes.

It is the most compact form and is the handsomest of all guns.

It is made in the best quality only, and your new gun should certainly be made on this system!

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

Catalog, illustrating and describing 38 grades. :: Mailed free.

American Duck Shooting

By GEORGE BIRD GRINNELL

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Price, library edition, $3.50.

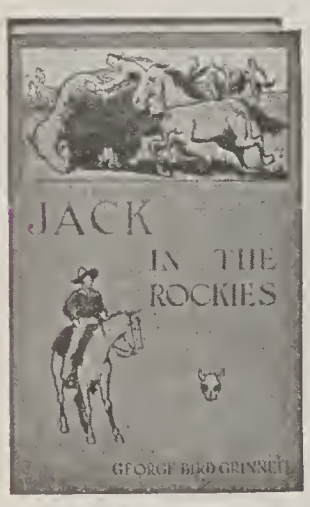
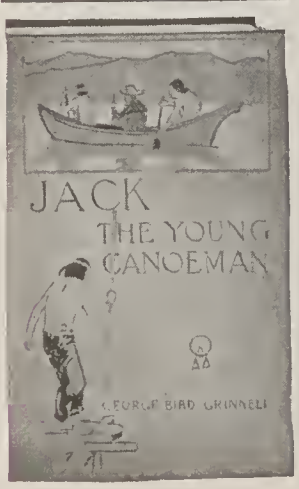
THE JACK SERIES

Best Books For Boys

By GEORGE BIRD GRINNELL





THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

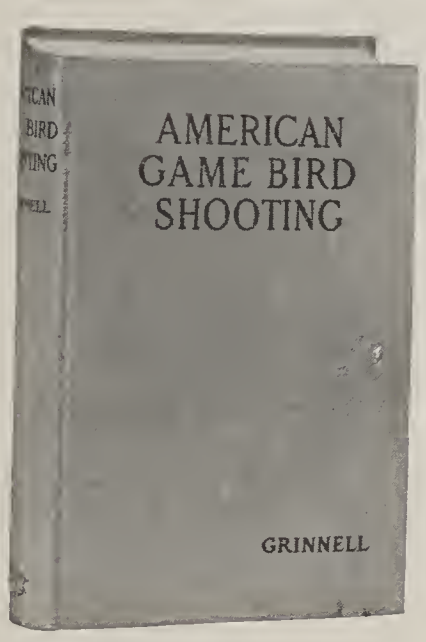
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

Book Catalogue Free on Application.

Hunting in Many Lands.

Contents: Hunting in East Africa, W. A. Chanler. To the Gulf of Cortez, George H. Gould. A Canadian Moose Hunt, Madison Grant. A Hunting Trip in India, Elliott Roosevelt. Dog Sledging in the North, D. M. Barringer. Wolf Hunting in Russia, Henry T. Allen. A Bear Hunt in the Sierras, Alden Sampson. The Ascent of Chief Mountain, Henry L. Stimson. The Cougar, Casper W. Whitney. Big Game of Mongolia and Tibet, W. M. Rockhill. Hunting in the Cattle Country, Theodore Roosevelt. Wolf Coursing, Roger D. Williams. Game Laws, Charles E. Whitehead. Protection of the Yellowstone National Park, George S. Anderson. The Yellowstone National Park Protection Act. Head Measurements of the Trophies at the Madison Square Garden Sportsmen's Exposition. National Park Protective Act. Price, $2.50.

Modern Sporting Gunnery.

Written by the well-known English gun expert, Mr. Henry Sharp, and contains 525 pages and many illustrations. It tells of the various makes of guns and rifles, beginning with the early days of the art up to the present time. It deals with the subject of mechanism, boring, effect of different loads, and gives the results of scientific experiments. It tells "why" in entertaining and easily understood language, and is a book every lover of gun or rifle should have in his library. Cloth bound. Postpaid, $1.70.

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. This is a collection of papers on different themes contributed to Forest and Stream and other publications, and now for the first time brought together. Price, $2.00.

My Friend the Partridge.

S. T. Hammond. An inimitable study of the noblest of our game birds,following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game. Cloth, 150 pages. Postpaid, $1.00.

Inter-Ocean Hunting Tales.

Edgar F. Randolph. A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint and dealing with every kind of game that falls to the rifle of the American sportsman. Cloth, 200 pages. Postpaid, $100.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. W. Hamilton Gibson. Containing hints on camp shelter and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. Illustrated. Cloth, 360 pages. Price, $1.00.

Jack, the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, $1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, $1.25.

Jack in the Rockies;

Or a Boy's Adventure With a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, $1.25.

Jack the Young Canoeman.

George Bird Grinnell. Illustrated. Cloth, 286 pages. Price, $1.25.

Jack the Young Trapper.

George Bird Grinnell. Illustrated. 278 pages. Price, $1.25.

Manual of Taxidermy for Amateurs.

C. J. Maynard. A complete guide in collecting and preserving birds and animals. Illustrated. New edition. Price, $1.00.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

W. T. (Bill) Hamilton. The author was the last survivor of the old race of free trappers. Bill Hamilton was born in 1825, and was on the plains in 1842, trapper, Indian fighter, sign talker, trader, scout and guide so long as the old West survived. This book is the simple unaffected story of his adventurous life, more thrilling and full of personal interest than any romance. Cloth. Illustrated, 223 pages. Postpaid, $1.50.

Nursing vs. Dosing.

S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents: Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Earl, Mange, Nervous System, Colic, Worms. Cloth. Illustrated, 161 pages. Postpaid, $1.00.

Rhymes of the Stream and Forest.

Frank Merton Buckland. A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, $1.25.

The Still-Hunter.

Theo. S. Van Dyke. A practical Treatise on Deer-Stalking. Extra cloth, beveled, 350 pages. Price, $1.75.

Log Cabins and Cottages.

William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated, 44 full page plates and numerous text illustrations. Postpaid, $1.50.

The Angler's Workshop. Rod Making for Beginners.

Perry D. Frazer. A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, $1.

The Book of the Black Bass.

James A. Henshall. The standard work on the black bass, comprising a complete scientific and life history of the black bass, together with a practical treatise on angling and fly-fishing, a full description of tackle and implements, and general observations. Cloth. Illustrated. 470 pages. Postpaid, $3.00.

Men I have Fished With.

Fred Mather. Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. Illustrated. Price, $1.50.

My Angling Friends.

Fred Mather. A Second Series of "Men I Have Fished With." Cloth, 369 pages, with 13 illustrations. Price, $1.50.

Training vs. Breaking.

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1.00.

How to Build a Skipjack.

Complete plans and instructions for building a light draft sloop. Plans and directions easily followed. Cloth. Illustrated. Postpaid, $1.00.

How to Build a Knockabout.

A wholesome boat for all-around cruising and racing; 32ft. O. W., 10ft. beam, 26in. draft. Full working plans and drawings, with instructions for building. Cloth. Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUB. CO., 127 Franklin St., New York

No. 6 KEEPING POSTED

1. As you read Forest and Stream through each week, you are frequently reminded of one thing or another that you desire to purchase. Such and such must be supplied to make your Shooting, Fishing, Camping or Cruising outfit complete.
2. Possibly you need waterproof shoes, or waterproof clothing. Or a new tent? It is your intention to take a much longer trip this time, than usual. And you may be located where you do not have access to sporting goods houses where all of your wants can be filled. In fact, even the best of us are often in doubt when it comes to knowing **where** to get the **thing** we want at the **right** price. You wish you had a friend at your elbow to suggest.
3. **Our** experts are right at your elbow. It does not cost you a penny (except your postage) to take advantage of their knowledge. They know **where** to **buy** and **how.** It is their business —and your advantage.
4. Glance carefully over our advertising columns. If you don't see what you want, write in to our Information Department. You will receive a full detailed reply—post haste—we're always on the job.

Isn't this worth while, if for no other reason than to get the **right** information on **how** to reach your destination by the quickest and surest routes—what railroads or steamship lines to take?

Don't put this off. Co-operate with us by telling your relatives and friends, what we can do for them.

Keep posted. Write to

Life and Sport in Labrador

NAPOLEON A. COMEAU.

In "Life and Sport on the North Shore of the Lower St. Lawrence and Gulf," Mr. Comeau has made a valuable addition to the literature of rod and rifle—and more. It is a book of engrossing personal interest to the sportsman or general reader, and of rare value to the student of wild life.

The author describes the events and experiences of fifty years, spent in the cause of humanity and science in one of the most interesting and least known sections of Canada. He writes as one sportsman to his fellows, detailing his experiences with the wild things of wood, shore and sea, with plenty of stirring experiences with big game and gamy fish.

Illustrated, 450 pages. Paper. Postpaid, $2.50.

FOREST AND STREAM PUBLISHING CO.

JAMAICA ALLIGATORS.

THE log in the boarding house fireplace flared up, then died down, leaving only a faint red flicker among the coals. A cat that had been dozing in the warmth uncurled itself and withdrew further into the darkness. Its eyes glowed green and phosphorescent.

"Well, now," remarked the man from the tropics, smiling whimsically, "do you know what that reminds me of? I never see a cat's eyes in the dark without thinking of alligators."

"Why?" he was asked. "A homely old tabby in a New York parlor doesn't bear much resemblance to an alligator."

"You wouldn't put it that way if you'd ever been in a West Indian swamp at night with scores of alligators round you. Their eyes shine exactly like a cat's. Just call up the picture to your mind—twenty or more pairs of round green globes staring at you out of the darkness and all advertising the proximity of jaws armed with two inch spikes for teeth. Ugh! I can actually smell the musky alligator odor when a cat looks at me like that.

"There are numerous ways of going after this sort of game, but the hunting party in search of real sport will plan a night expedition. About seven miles from Kingston, Jamaica, there is a swamp choked with mangroves, reeds and wild water hyacinths. A sluggish river provides a means of penetrating it, and it is probable that more alligators are shot in this locality than anywhere else in the world.

"I recall organizing an expedition for the benefit of five Americans. The party numbered twelve in all. Three boats were secured and two white men assigned to each boat together with two negro oarsmen. The weapons were twelve-bore Winchesters. Each sportsman was provided with a bullseye lantern.

"At the last moment one of the negroes dragged a yellow mongrel cur on board. My young friend from New York opened his eyes and started to quiz me.

"'What is he, a setter?' he asked.

"'Bait,' I told him; and as though catching on to my meaning the cur yelped lamentably.

"After a laborious row we reached a spot where the mangroves hung down over the water, forming a partly covered lane between the banks and their drooping boughs. There was no sign of life, except the hoarse booming of a bullfrog.

"Suddenly the yellow cur in the bottom of the boat began to whimper. The New Yorker turned his lantern upon it and we saw that the dog's hair was standing straight on end. It sniffed anxiously, its limbs shook and presently it threw its nose into the air and broke into a prolonged howl.

"The negroes understood the signal and all three boats were at once brought to a stop. There was a swishing sound among the mangrove roots and a strong musky smell reached our nostrils. The dog howled in a new access of terror.

"When the eye became accustomed to the gloom the banks were seen to be dotted with globes of phosphorescent fire. Set in pairs about three inches apart they wavered against the impenerable darkness behind. The lure of the dog had drawn the alligators.

"It was difficult to miss, and nearly every shot we fired was accurately placed. The sport, however, was over in less than ten minutes. The stricken alligators thrashed furiously on the banks, and the survivors plunged into the river or scurried back to the swamp. A second and third volley were sent among them, and when the concerted light of the lanterns was turned first on one bank and then on the other it was found that seven saurians had been killed. That particular stretch of the river having been exhausted, we rowed some two miles further up and repeated the performance.

"The dog proved to be a never failing lure. You see there is no meat that an alligator prefers to dog meat, and there is no terror like the terror a dog entertains for his natural enemy. The two things work beautifully together.

"The dog perceives the presence of alligators long before a human being could, and he in his turn draws them to him as a magnet draws steel. No experienced portsman starts on such an expedition without the right kind of living bait, though he will not use a valuable dog for the purpose, as the animal occasionally breaks loose and jumps into the river in an insane attempt to escape.

"In the early hours of the morning we returned to Kingston. We had killed in all twelve alligators, and the following day sent the negroes back to skin the bodies. Each alligator hide is worth about seven dollars undressed, and the sport has therefore its profitable side."—The Sun.

Club Cocktails

A BOTTLED DELIGHT

Simply strain through cracked ice, and serve.

The original bottled cocktail. Accept no substitute.

CAPTURED AN ALBATROSS.

CAPT. JAMES JARVIS, of the bark Low Hill, reached New York the other day after a cruise around the world, says the New York Fishing Gazette. He brought an albatross, which was caught in the vicinity of Cape Horn. During the process of capturing the bird a thoughtless sailor struck at it and might have killed it had not the captain intercepted the blow. He was familiar with "The Rime of the Ancient Mariner," and was determined that no ill luck should follow his ship.

The capture of the albatross was followed by a big surprise. The bird was stretched on deck, and when the second mate turned up the wings he saw, written in indelible ink on the white feathers, "I am queen of the air."

Capt. Jarvis read the words with amazement, for he remembered on a previous cruise, somewhere in 1905 or 1906, when he rounded the Horn, a young albatross had been caught, and the words "I am queen of the air" were written under the wings by himself.

"When I saw the writing on that bird's wing," he said, "I can't tell you how I felt. It was a big surprise and a happy one. If that gook of a sailor had killed it when it was coming aboard I hate to say what would have happened to him. But we're lucky. It's been a lucky voyage all the time we were away from New York."

It's an old superstition among seafaring men that to kill an albatross brings the worst kind of luck.

BIG GAME IN AFRICA

No other part of the world rivals the East Coast of Africa in its abundance and variety of game, or in its extent of unsettled country.

The Palatial Steamers of the

Union-Castle Line

Enable the Tourist to

Circumnavigate Africa

in Either Direction

Via West Coast—weekly sailings of Royal Mail Steamers from Southampton for Madeira, Cape Town, Port Elizabeth, East London, Natal. Intermediate ships leave London and Southampton weekly for Cape Town, Port Elizabeth, East London, calling fortnightly at Teneriffe, Las Palmas and Mossel Bay and monthly at Ascension and St. Helena. Fortnightly service to Delagoa Bay (Lourenco Marques), and monthly to Beira and Mauritius.

Via East Coast—Sailings from London and Southampton every four weeks, via Suez Canal, calling at Marseilles, Naples, Port Said, Port Sudan, Aden, Mombasa, Zanzibar, Mozambique, Chinde, Beira, Delagoa Bay (Lourenco Marques) and Durban.

THE DELIGHTS OF AN AFRICAN TOUR

are hundred-fold. The **Victoria Falls**, that greatest of all cataracts, with a sheer drop of 420 feet, may be reached by either West Coast or East Coast service by rail from Cape Town, Port Elizabeth, East London, Natal or Beira.

The Biblical Ruins of Sheba—supposed to be the ruins of Solomon's temple, are only a few miles from Victoria.

AMERICAN BIG-GAME HUNTING
BOONE AND CROCKETT CLUB SERIES
Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for referenc. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

—FOREST AND STREAM, Aug. 14, 1873.

THE APPALACHIAN BILL.

THE so-called Appalachian Reserve Bill passed the United States Senate Feb. 15 by a vote of 57 to 9. It passed the House of Representatives last summer and now requires only the signature of the President to become law.

While commonly called the Appalachian Bill and generally regarded as authorizing the creation of a White Mountain and Appalachian Forest Reserve, neither the Appalachians nor the White Mountains are mentioned in it. It carries the power for the Government to acquire lands in States, and the specific purpose of those who have so long labored for the bill was to make forest reserves in these two regions.

The subject has been a familiar one to FOREST AND STREAM readers for the last fifteen years. The deforesting of the White Mountains and the dwindling of the streams which flow from them, and also from the Appalachian Mountains, have long excited uneasiness in the minds of farseeing persons, and a number of bills have been introduced in Congress in the effort to remedy the threatened evil. In the early days of these efforts it seemed impossible to awaken any interest in this subject, and a long campaign of education was required to bring about action by Congress. The bill now passed is very different in its terms from those earlier introduced and promises long delay before anything is actually accomplished.

The value of the reservations that may be established—whether considered as forest preserves or as protections to the watersheds of navigable streams—can hardly be over-estimated. They have another value, however, which is very important. They will make admirable refuges for Virginia deer, wapiti, and possibly for other species of game, large and small, and since the civil and criminal jurisdiction over persons within any lands acquired for these reservations is to be retained in the States in which the lands are located, there is every probability that it will be possible effectively to protect wild creatures found in these reservations.

The legislation is properly regarded as one of the most important conservation enactments that has ever been set on the Federal statute books.

TO STOCK NATIONAL RESERVATIONS.

IN the effort to protect and to increase some of North America's most interesting mammals, fine displays of public spirit have been exhibited within a few years by various associations. Some years ago the New York Zoological Society presented to the National Government a herd of bison for the Wichita Game Preserve, and more recently the American Bison Society made a similar gift for the Montana Buffalo Preserve, while this winter the Boone and Crockett Club performed a like service for these preserves by sending to each a herd of antelope.

It has been pointed out that in the Yellowstone Park the Government possesses considerable herds of native animals which are rigidly protected, and are in most cases increasing in numbers. From this stock other national reservations ought to be supplied with animals, which under rigid protection would in those reservations increase in a like manner.

At present this cannot be done, for the reason that no funds are available for the capture and transfer of animals from one national reservation to another. This lack should be remedied, and Congress should make an appropriation for this purpose. An amendment to the agricultural appropriation bill has been offered in committee and favorably reported to the Senate to provide a fund of five thousand dollars for the purchase, capture and transfer of animals from national reservations. This amendment should receive the support of Congress.

Over much of North America the large game animals have been exterminated, and certain unique species like the bison and the prong-horned antelope have seemed on the point of extinction. Some accident or some epidemic disease might readily enough sweep away all the animals in the Yellowstone Park, as in other quarters of the globe diseases have swept away other species of animals. It would be a wise insurance against such a possible misfortune to establish a number of separate herds on different reservations, so that a loss of this kind in one region might be confined to that region alone, and the threatened species be preserved elsewhere.

So many accounts of successful hunting trips are published that one of another sort, which we are printing in this issue, may be welcomed by readers. This is the story of two sportsmen who, through a combination of circumstances, returned from a long journey in the woods of Canada, where moose are usually abundant, without trophies. Failing to secure a guide, they went into the woods without one, and their experiences would have proved serious to less seasoned sportsmen. In recent years numerous long journeys of this sort have been made by young men, equipped with maps and compass, and without guides, but generally in the warm season. In the search for big game it is more satisfactory to employ a guide, but the pioneer spirit inherited by not a few sportsmen impels them to go alone, and in their own good time they return to civilization well pleased with their novel experiences.

A MEETING of the fish and game committee of the Connecticut Legislature was held at Hartford last week before which a number of proposed changes in the game laws were brought up. There seems to be strong disposition by many gunners to urge the opening of the season for the shooting of ducks up to April 1, but this is opposed by a great number of men. There is a proposal also to establish a close season on quail for a period of five years, and another to shorten the shooting season by cutting off October, so as to make the open season include only the month of November. It is proposed also to extend the close season on deer for three years. It is understood that later—perhaps some time in the month of March—the committee will give a hearing to all persons interested in the game laws.

CAMP cookery is to be taught in the household arts department of Columbia University. To be able to prepare wholesome meals is an accomplishment worth while. The actual cooking, under backwoods conditions, is a very different proposition, requiring fortitude and patience as well as skill, yet we would not advise the novice to neglect such an opportunity as that offered by this New York college. The natural love for woods life possessed by some beginners is often soured by first attempts to prepare meals.

THE Senate Committee on Commerce directed last Friday a favorable report on the bill authorizing the building by a power company of a dam across the St. Lawrence River at Long Sault Island, New York. Postponement of action on this bill was requested by Governor Dix until the matter could be investigated by the New York Legislature, and in a special message to the Legislature he protested against the Long Sault project, but without avail.

A COPY of the first edition of Walton's "Compleat Angler" was sold by the New York Auction Company last week for $2,900. "Der Volkommene Angler," said to be a copy of the only translation into a foreign language of Walton's book, brought only $38.

ALL amendments to the fish and game laws pending before the Legislature will be given a public hearing before the Senate fish and game committee on March 1.

THE SPORTSMAN TOURIST

In Wooden Nutmeg Land

II.—October Shooting in Connecticut—A Memory of Good Men and Good Dogs

By L. DAWSON

WHEN Joe called us next morning it required a tremendous effort of the will to get up. We should hardly have done so, but for the fact that we were well acquainted with Joe's ways, and we knew that there was no peace or quiet in store for us unless we promptly obeyed his call. It was scarcely yet plain daylight. The room we occupied was not luxuriously furnished, but it had a most excellent bed, two wooden chairs, and a washstand. There was no carpet on the floor and nothing on the walls except a huge map of the Hawaiian Islands. Whenever I slept at Harley's I knew that when my eyes opened in the morning they would rest on that ancient map with its pink islands outlined in black and showing one or two black splotches which were labeled volcanoes. With many grunts and groans we began to dress, but before long were thoroughly awake and ready for the day's work. Down in the kitchen breakfast was ready, and it rejoiced my heart to see the table spread with doughnuts, pie and huge green cucumber pickles. Besides this, potatoes, good bread and fried pork were the main eatables. I used to feel that the doughnuts, pickles and pies were made to look at, though I confess that on one or two occasions I fell before the pie and enjoyed it hugely.

"Now, boys," said Joe, as we were about to rise from the table, "I think if we take Harley's wet pasture and work down that for a mile or two, we'll get two or three woodcock and maybe a snipe or two, and we ought to find one or two partridges.

"There was quite a little frost last night, and I believe the woodcock are moving along. Those that were here yesterday have very likely gone on a few miles and their places are taken by others."

When we went out to the barn to loosen the dogs, we found the puppy on his feet pulling against his collar anxious to be set free, but the older dogs seemed no more eager to get out of their beds than we had felt half an hour earlier. True would not look at us and the other dogs merely rapped the hay with their tails to indicate that their hearts were good toward us. When we had unsnapped the chains from their collars and turned to go out of the barn, they all rose from their nests and followed us very slowly, stretching and yawning and apparently quite willing to spend the rest of the day in sleep. When they got out of doors, however, and saw us pick up the guns, they brightened up a little and hopped around in mild excitement, but soon again fell in to heel as we walked down the gravelly road which crossed the wet meadow. Spreading out here we followed down the pasture lot between high hills. The ground was moist and springy and through the meadow flowed one of those tiny brown trout brooks that every New England boy has known so well. Such brooks do not look as if they could hold any fish longer than two or three inches, yet as we all know well, sometimes from deep little holes under the bank fish may be taken which will measure eight or ten inches, and what fish they are for the table! The best in the world, I think.

I was meandering along, thinking not at all of shooting, but rather of the possibilities of this particular locality for a trout hatchery and ponds, when suddenly from under my feet up jumped a lusty snipe, and twisting along low over the grass, flew straight toward my brother who was on my right. To shoot was impossible. I could only call "Mark," and presently, as the bird rose to pass over and behind him, he pitched up his gun and the bird fell, to be retrieved presently by old Rex. As we went on down the meadow, three or four more snipe rose, most of them rather wild, but one in twisting about and trying to go back up the valley made the fatal mistake of passing too close to Joe and was promptly gathered in.

Meanwhile we had all been engaged in beating out little clumps of brush that were scattered along, sometimes in the level valley and sometimes just at its edge, but though on one or two occasions the dogs had made game; they had always seemed uncertain and nothing had been started. Presently, however, the brook entered a little swamp which extended all the way across the valley. The pasture seemed to end here. Joe came down to the stream and declared that he and his dogs would go down through the middle of the swamp, while my brother should take one side and I the other, and keeping ahead of Joe, should try to cut off anything which he might start that tried to get to the hills on either side.

The swamp where I entered was dry under foot, but the undergrowth was very thick, and, as many leaves were still clinging to trees and shrubs, I could not see far. Before entering the brush I had tied a little sleighbell to True's collar, and its tinkling told me quite accurately where he was. I could hear him working ahead of me, though so far ahead that the sound of the bell was faint, when suddenly it stopped and I pushed on feeling sure either that he was on point or that he had come on the trail of a partridge and was waiting for me to overtake him. A few moments later I came to a place where the brush was not so thick, and a little beyond could see the form of the dog pointing, and I felt quite sure pointing a woodcock. I went slowly toward him, trying to look for open places through which I might shoot at the bird when it rose, and had almost reached the dog when to my right sounded the roar of a partridge getting up, and the crack of Joe's gun. I watched the sky to see if anything should appear; and in a very few seconds a partridge showed among the branches of the trees flying across me and a little ahead. He was so high up that he gave me quite an open shot, and I was lucky enough to drop him. He fell only a little way beyond the dog, and as he struck the ground a woodcock rose, twisting among the stems and branches, and when he reached an open spot above the brush, darting off ahead. I was obliged to shoot quickly to catch him before he disappeared behind a tangle of branches and literally snapped at him, and rather to my surprise he turned over and fell not very far from where the partridge had struck the ground. I felt rather like patting myself on the back for having had two such pieces of luck in less than a minute.

"Here," shouted Joe, "what are you doing over there? You can't have fired twice at that old partridge?"

"No," I called back, "I got the partridge and the partridge started the woodcock. What did you do?"

"Oh, I got one of the partridges that rose in front of me, but I could not twist round quick enough to get the other. Say," he went on, "we're getting all the shooting over here, aren't we?"

Hardly had the words come to me when from beyond Joe a gun sounded, and then after a moment another barrel, and Joe called out, "I take it all back."

Sending True forward, he presently came to a point, and I was not sure which one of the dead birds he was standing, though I thought it was the partridge. At the word he stepped forward and picked it up, brought it to me, and then turning trotted back, and going a little further brought the woodcock; then we went on.

Somewhat later I heard Joe grumbling to himself and then a tremendous crashing of dry

sticks, caused, I felt sure, by his throwing his ponderous weight against some barrier that he could not wriggle through. It was not like him to make a noise in the cover when he could help it; for he knew far better than the rest of us how ready the ruffed grouse is to take alarm, and when once startled by a noise to run for a considerable distance and then to rise. A little later, while trying to thread my way noiselessly through a very thick clump of brush, I became so effectually tied up in some green catbrier vines, that for a little while I absolutely could not move my feet. While I was trying to break loose I wholly lost the sound of True's bell, and by the time I had freed myself and started on, I met the dog returning and looking at me with reproachful eyes. I have always believed that he had been standing on a woodcock somewhere, and that the bird had risen while I was getting out of my difficulties.

Before we got to the edge of the swamp, Joe shot once more and my brother fired again, and when we came out of the bushes and turned to the right to climb the hill and take the ridge where we were going to look for partridges, we all came together, and sat down under a stone wall to smoke a pipe and talk it over. It then appeared that my brother had killed two partridges and a woodcock; Joe one partridge, while I had got the partridge and woodcock just spoken of. It was now nearly noon, but certainly four partridges, two woodcock and two snipe made a pretty fair bag for the morning. The labor of wallowing through the swamp had been more or less severe, and we were all glad to sit here for a half hour and rest. The day was not nearly so pleasant as the one before had been; the sky was overcast and in the breeze there was a raw, cold feeling, which at length made us rise and start again on our way. The going under foot was smooth and easy, but it was a long slow climb to the top of the hill where we purposed to work out some corn lots, and passing through some cedar pastures to take the high wood where we expected to find the partridges.

The corn lots yielded nothing, though from the way in which the dogs acted, we all thought that birds had been there early in the morning. Just after crossing into the cedar lot, however, the puppy pointed a bevy of quail, which flushed off to one side, almost at the instant when he stopped. No one got a shot, and we watched them carefully to see where they would go down. It was a good bevy of a dozen or fifteen big birds, and they seemed to drop in the long bent grass at the further edge of the cedar lot.

"Now," said Joe, "unless I'm much mistaken we are going to have some good shooting out of that bunch of birds. I don't know as we'll see anything as pretty as we saw yesterday, and I don't know *as* we will. Anyhow, we can go up there with the dogs, and if they don't find the birds it looks as if we ought to be able to walk them up ourselves."

Keeping the dogs in pretty close, we walked forward and soon were very near where the birds had seemed to go down. I suggested to Joe that perhaps it would be better if we kept back three of the dogs, sending in only one to look for the birds, but he sniffed contemptuously at the suggestion.

"Why not send them all in," he said. "It's more fun to see something like what we saw yesterday afternoon than it would be to kill a dozen birds. Let them all go and see what they make out of it."

And truly it was a pretty sight to see these differently colored dogs crossing back and forth through the feathery yellow grass among the dark green cedars. But we had not long to consider it. Suddenly Rex stiffened on a point and was backed by the two old dogs; the puppy, which did not see them, continuing his gay career until a sharp whistle from Joe made him look around, when he, too, backed a long way off.

WAITING FOR THE RISE.

"Step forward and take him," said Joe, addressing me, and I advanced, but just after I had passed a little cedar I heard two birds get up behind me and a moment later a single shot rang out. Going on to Rex I flushed the bird, which flew sharp to the right, and as my right barrel sounded, another bird rose just behind me, and flying back was killed by my brother.

We spent fully an hour working on this piece of open land, and in that time killed in all seven quail. A number of the young males, though full grown and apparently as heavy as the adults, still had the buff throat and cheek patches, though the black feathers of the heads were strongly marked. No doubt a more careful and patient search would have given us half a dozen more birds, but it hardly seemed worth while to take any more from this bevy. When we determined to stop, we walked over toward the edge of the woods, and sitting down in a sheltered place, hungrily devoured the lunch that Mrs. Warner had prepared for us that morning.

The dogs, pretty well tired out, went promptly to sleep, but were easily awakened to eat the crumbs that fell from our table.

It was about the middle of the afternoon when we went into the woods, which were high and dry, though interrupted now and then with little swamps, and which led directly back to the road opposite Harley Warner's house. As we went along, Joe was on the extreme right of the line, I was in the middle, and my brother on the left. The woods were open and from my position I could see both my companions and usually their dogs. I happened to be looking toward my brother and saw him walking carelessly along, his gun over his arm, while Rex was but a little ahead of him. Presently the old dog trotted up a rocky knoll just ahead, and as he reached the top he instantly sat down, while from two or three yards in front of him a great cock partridge sprang up and flew off along the line we were taking. My brother being behind the knoll could not see the bird, but I saw it and was amused by the hungry look that old Rex cast after it. The bird flew far beyond my sight, and I could only take the line that he was following.

A little further on True made game, and as he followed up the bird's trail I could see that it had been alarmed and was running. The dog followed it at a quick walk, pausing cautiously from time to time, and then without any warning left the trail, ran off to the right and galloped away out of sight ahead of us. I had seen him perform this same act before and did not interfere with him, understanding very well what he was trying to do. He had left the trail and was starting off on another line in order to try to pass the bird and get ahead of it and stop its running. I followed along on the line that I had taken, keeping midway between my companions and looking out sharply ahead for the dog.

Presently, without any warning, a partridge rose with a roar between Joe and myself and a little behind us both, and flying low went back, without being shot at, to the ground which we had just hunted over, and a moment later I heard my brother talking to his dog, which was evidently working on a trail, and presently the bird got up, and after apparently being caught two or three times in the bushes and falling back, escaped from this entanglement and also went off low, my brother shooting at it without effect. Here were three partridges that we had seen in this piece of woods and none of them brought to bag.

A little later Joe called out to me to be on the lookout, for his old dog was following a trail. A moment after I saw the white dog stop and the puppy back him, and then came the roar of a partridge, a shot from Joe and the triumphant exclamation, "Got you that time, old fellow." I hoped that this had broken the luck. By this time I was carefully looking out either for True or for the bird that he had stopped, and a few minutes later I could see the dog fifty yards away standing apparently on a point, his head directed toward me. I went forward slowly and carefully, but before I had gone half the distance, the grouse rose from the foot of a great red maple, twisted around the trunk and flew straight over to Joe. I shouted, "Mark" with all my lungs, and watched the bird, and in a few seconds saw him slant down to the ground and the sound of Joe's shot reached my ears. Until he was full seventy-five yards away, this partridge had kept the tree trunk between himself and me, and though I stepped to one side to get a view of him, the movement was in vain.

Many men who have owned good ruffed grouse dogs have seen them perform the maneuver that True used on this occasion. It is done as a rule only by dogs that have had much experience, and that are earnestly and honestly hunting to the gun. Men who have traveled in the North and have seen the forest Indians of Hudson's Bay and the Western Canadian Provinces hunt moose and sometimes grizzly bears in a tracking snow, know that the successful hunter of these animals often acts on this same principle. The moose or bear makes it a rule, after he has finished feeding or traveling, to circle out from the line of advance that he has been following and to lie down somewhere in such a position that he can look over his back trail. Also he is likely to go to the leeward of this trail. Thus he is quite sure to see or to scent any enemy that may be following it. Understanding this habit, the Indian hunter does not follow the animal's trail, but makes a series of loops from it, returning to the trail from time to time to see whether or no he has passed beyond the resting place of the game. As he travels he keeps himself as much concealed as possible and carefully scans the snow-covered ground in the hope of seeing the game. As the trail becomes fresher he goes more slowly and carefully, and in one of his loops is very likely to detect the animal which lies there, not looking for enemies anywhere save on its trail, upon which its attention is concentrated. Now, a few of the best ruffed grouse dogs, having discovered that it is a common habit of the grouse to run ahead of the dog until some point favorable for a hidden flight is reached, have devised the scheme of going out to one side, getting ahead of the bird and thus after a fashion surrounding it. A bird cut off in this way is very likely to crouch, and finally to be walked up by the following gunner.

So far, Joe seemed to be getting all the shooting, but a little later a partridge—perhaps the one that had given old Rex his surprise earlier in the day—rose near the edge of the cover, and though flying low under a wall, exposed himself at one point, and was killed by my brother by a remarkably good shot. Presently also True suddenly stopped on the side of a little knoll on which grew a dozen hickory trees, whose yellow leaves strewed the ground, and almost as he paused, a great red woodcock whirled up into the air and was turned over just as he was about to steady himself in flight.

It seemed a long way back to Warner's and I think we were all feeling rather lazy, but there were three or four small covers to be worked out on the way where we might hope to pick up several woodcock and a partridge or two. Joe hurried us along, and after a short walk we reached a low hillside of second growth timber, interspersed with many springy spots, and faithfully passing through this at last reached the road from which we could see the cheerful lights of the farmhouse shining out. We had done a good afternoon's work, killing five woodcock and four partridges, and I know that one of the party was so weary he could hardly drag one leg after another, while the dogs followed at heel with lowered heads and drooping tail, all except True, who performed his usual and quite peculiar feat of running ahead a hundred yards and lying down in a ball where he remained until we had left him long behind when he started on again and passed us to take another prolonged rest. All the afternoon it had been drizzling and by this time a steady rain was falling. We were glad to get to the house, to dry our things and to sit down to the meal. After it was over, while my brother and I sleepily smoked our pipes, Joe went to the door to look out at the weather. As he stood there we could hear a dog barking in the distance and presently Joe asked Harley what dog that was.

"That's Nate Tomlinson's dog," was the reply. "He's probably got a 'coon up a tree over there by the pasture. He is a great 'coon dog." By this time my brother and I had gone to the door and were listening, and presently Joe said, "Come on, boys, let's go and get that 'coon."

When he said this, the laziness which had enveloped us as a garment fell away, and we were eager to start out on the 'coon hunt. In a few minutes we had put on our rubber boots, and Joe carrying his gun, and I a lantern, we started across the fields toward the barking dog. The rain had stopped and the air was cool, fresh and full of moisture. In the pasture lot the foot sunk into the soft soil, and I recall even now the pleasure of the walk over the lots, across the fences and up the hill. As we approached the dog his barking became more excited. The tree by which he stood was an oak of considerable size standing in a field by itself, and with a number of branches starting from the trunk only twelve or fifteen feet above the ground.

When the dog saw us near him he withdrew for a short distance, for he did not recognize us, but a little talk and coaxing brought him back. He made friends and then renewed his former occupation of looking up into the tree.

For some little time we walked about the tree, holding up the lantern in the hope that we might "shine the eyes" of the 'coon, but as we could see nothing of him, I volunteered to climb the tree if someone would give me a back up. Once among the branches it was easy getting about, though the bark was soft and mushy with the wet.

Carefully scrutinizing each branch I climbed higher and higher, until at last on one of them I detected a dark form, and calling Joe's attention to the spot, he worked around for a little while, and at last got a reflection from the eyes of the 'coon and fired at it, when it fell to the ground to be worried and killed by the excited dog.

Although Harley Warner had not been interested enough to go with us after the 'coon, he was in a high state of excitement when we brought the animal back to the house, and it was 10 o'clock or after—a late hour for that country—before we separated for bed, and the dreamless sleep that seized us as our heads touched the pillow.

The next day we drove back to Joe's, and separating went our several ways. Late that night on my way to my city home I wondered, as I walked along the streets of New York carrying on my shoulder a gunny sack, which held forty-six birds and a 'coon, whether or no I should be taken for a returning burglar and be stopped by a policeman, and what that policeman would say when he investigated the contents of my sack.

NATURAL HISTORY

The Cottontail.

ATLANTIC, Iowa, Feb. 16.—*Editor Forest and Stream:* The rabbits, including both cottontails and jacks, are among the most numerous representatives of the mammals in North America. Timid, defenseless and with innumerable enemies constantly pursuing them, it is surprising that they hold their own. Except in the vicinity of the large cities, in most localities they are apparently increasing in numbers. With so many enemies they would be shortly exterminated were it not for the remarkable rate of increase.

Although so abundant, rabbits are among the last of American mammals to be carefully studied, and much yet remains to be learned concerning them. When Dr. J. A. Allen published his monograph of the rabbits, in "North American Rodentia," in 1877, only eighteen species were recognized, while Nelson in his "Rabbits of North America," published in 1909, described ninety-seven species and sub-species.

Although jack rabbits are nowhere common in Iowa, three species are probably represented within the State: the Minnesota varying hare, the white-tailed jack rabbit or prairie hare, and the great plains jack rabbit. Of the cottontails, the one shown in the picture, Mearn's cottontail (*Sylvilagus floridanus mearnsi*) is most common. There are two and possibly three other species likely to be met with here.

Cottontails are very abundant in this part of the State, and in winter cause serious damage to young fruit trees. Several washes have been recommended by various fruit growers to prevent injury, but they are of little value, except as a temporary expedient. I have found fresh blood to be more effective than any other wash. The best protection, however, is a wrapper of wire screen or tin placed around the body of the tree. Not only do rabbits girdle young apple and pear trees, but one winter they girdled almost every blackberry cane in my garden. Three hunters killed sixty cottontails in one favorable afternoon on 100 acres of land about my home, and continued the slaughter intermittently for weeks, getting as high as thirty in a day, on other occasions. Even then there was no apparent diminution in the number of the little animals about. Although not always as abundant as the winter above mentioned, they are always very numerous and the guns and dogs do not seem to check them as effectively as the disappearing predaceous birds and mammals have done in the past. Although I find no joy in hunting with a gun, there are plenty who do, and bunny is hunted mercilessly.

The mother makes a warm nest in a small depression in the surface of the ground, where she places her young. In the main it seems to be composed of fur from her own body, and is hidden very skilfully. Even when the location is known, one must look carefully to find it. Although some naturalists have stated that the young of these rabbits are born with their eyes open, they are unquestionably mistaken. The young are helpless and blind when born and remain in the nest for some time. Soon after the eyes are open they are likely to leave the nest, especially if disturbed, but continue to receive the care of the mother. I have caught the young ones in the grass and have been surprised at the response of the mother to their cry. She came instantly, but her timidity overcame her anxiety, so that she ran away again.

Although extremely timid, and offering no defense to an attack by other animals, they fight desperately among themselves, at least in captivity. At present we have a number of adults confined in wire pens that were captured in box traps. Now and then an individual is very ugly

A RABBIT TRAP.
MEARNS COTTONTAIL.

with its fellows, and insists on tearing their fur and chewing their ears. A number have been killed in these scrimmages and one with both ears chewed off still lives. A short time ago we caught in a box trap a specimen of the Nebraska cottontail (*S. f. similis*) with holes in both ears. While this indicated a similar fight in the open, it is of course possible that these may have resulted from other causes than rabbits' teeth.

These animals readily enter traps in cold weather, apparently in search of shelter. I have often noticed that in mild weather there will be few if any rabbits caught, while when the mornings are crisp and frosty, many will be taken. They apparently enter traps without bait as readily as those that are baited. Traps that have been successfully used, however, are more likely to make a catch than those which never have had rabbits in. Some trappers make a practice of confining a live rabbit in each new trap for a few minutes before it is set. The accompanying photo shows a box trap easily made and which is in common use. The picture shows the construction in detail. It is made from inch boards six inches wide and about two feet long. A hole large enough to admit the notched trigger is bored about four inches from the back end. The rabbit crowding into the trap releases the trigger and the weight of the door closes the entrance. Any normal boy greatly enjoys trapping rabbits. A good many mornings this winter our eldest son, not yet seven years of age, has dressed and trudged off to the woods as soon as it was getting light, to see his rabbit traps. In many localities in the West there is a ready market for rabbits for shipment to the cities, St. Louis especially. Many a boy gets his winter pocket money from trapping rabbits. In winters, when snow lies deep, they commonly make burrows in the snow for protection. Excepting in extreme weather they seem to seek no shelter other than that afforded by a bunch of grass, unless hard pressed by dogs or other enemies. Occasionally a small spotted skunk is caught in the same trap with a rabbit, apparently following bunny into his retreat, both being caught together. Twice has that happened with us this winter. Those confined in the yards seldom take to the burrow provided by burying a nail keg, excepting when persons or animals come near.

That the rabbit is an intelligent animal will not be doubted by any hunter who has seen his clever tricks in throwing dogs off his track. The Cherokee Indians, who lived in close contact with animal life, recognized the cleverness of the rabbit, and the animal figures in very many of their myths, always as a trickster or deceiver. Many of those myths, of which the following is a sample, have been gathered by James Mooney and preserved in the publications of the Bureau of American Ethnology.

"Some wolves once caught the rabbit and were going to eat him when he asked leave to show them a new dance he was practicing. They knew that the rabbit was a great song leader, and they wanted to learn the latest dance, so they agreed and made a ring about him while he got ready. He patted his feet and began to dance around in a circle, singing:

On the edge of the field I dance about—
Ha nia lil lil! Ha nia lil lil!

"Now," said the rabbit, "when I sing 'on the edge of the field,' I dance that way"—and he danced over in that direction—"and when I sing 'lil lil,' you must all stamp your feet hard." The wolves thought it fine. He began another round singing the same song, and danced a little nearer to the field, while the wolves all stamped their feet. He sang louder and louder and danced nearer and nearer to the field, until at the fourth song, when the wolves were stamping as hard as they could and thinking only of the song, he made one jump and was off through the long grass. They were after him at once, but he ran for a hollow stump and climbed up on the inside. When the wolves got there, one of them put his head inside to look up, but the rabbit spit in his eye, so that he had to pull his head out again, and they went away with the rabbit still in the stump."

FRANK C. PELLETT.

The Mershon Expedition.

It is now some years since the Michigan Geological and Biological Survey and University of Michigan Museum began to co-operate in making a survey of the life of the State. The annual appropriation for the work by the Survey was very small, but it has done what it could, and has deposited its collections in the University Museum. The museum's expeditions have mostly been sent out by friends who were interested in the work, or in the university.

In the summer of 1910, Hon. W. B. Mershon, of Saginaw, presented to this Survey a sum of money sufficient to send a small party to the Charity Islands in Saginaw Bay to study their fauna and flora. These three small islands are near the mouth of Saginaw Bay. They have not been connected with the mainland since glacial times, and their life must, therefore, have reached them over a wide stretch of water—six or eight miles. They seem also to be on the migration route of many species of birds.

The men engaged in the study have done their field work without pay, receiving only their expenses, and are now preparing their observations for publication. The lighthouse board at Washington, and Commander Morgan, Inspector of the Eleventh Lighthouse District, gave assistance.

The facts collected by the expedition and the conclusions drawn will be published in the annual reports of the Michigan Academy of Sciences under the title, "Results of the Mershon Expedition to the Charity Islands, Lake Huron." It is expected to continue the work next spring and summer in order to make it cover a full year.

This is another example of the many contributions that Mr. Mershon is so frequently making for the public good.

Florida Rattlesnakes.

Fort Myers, Fla., Feb. 16.—*Editor Forest and Stream:* Tillot Henderson, of Punta Rassa, was talking about rattlesnakes and their habits one night last week at the hotel, and he remarked that the best thing to do when bitten was to crush a tablet of permanganate of potash to powder and apply it directly to the bites after slashing them open with a knife so that the blood would flow freely. He thinks that the powder mixed with the blood is better than liquid permanganate to apply to a snake bite unless there are means at hand of injecting the fluid into the wound. He said that he had seen four dogs cured of rattler bites by the use of powdered permanganate of potash, but had not known of a case of a man being bitten.

Incidentally, Henderson remarked that there were some sneaky rattlesnakes in Florida that were too mean and lazy to rattle, and would strike without warning or attempting to evade an encounter with man, dog or horse. He saw one strike at a dog, fail to reach it and instantly coil for another stroke, but the dog did not wait. He quoted an incident in which his setter was slashed by a rattler which gave no warning. The dog was following up some young turkeys in the scrub palmettos and was struck by the snake. "The dog jumped as high as my head and the blood from his head flew higher yet," said Tillot. The snake struck him under the eye and ripped the flesh down to the lip on the side. I do not think that the snake had time to lay back its fangs and squeeze out the venom, the dog ripped away so quickly when struck. Anyhow, the resultant swelling was extremely slight and the dog did not suffer any serious inconvenience from the slash.

I never heard of a case of the kind before and I think it worthy of note. Harrimac.

Cambridge Bird Notes.

Cambridge, Mass., Feb. 4.—*Editor Forest and Stream:* Seeing the article about the crows in Omaha by Sandy Griswold, I am writing about some bird incidents here.

In North Cambridge small flocks of crows are seen flying back and forth in the very heart of the city. Every morning they congregate in a large elm tree in the garden on a wealthy person's land. They are rather shy and can best be seen from a distance, yet it is common to see them. About a year and a half ago a sharp-shinned hawk (*Accipiter velox*) was pursuing an English sparrow. It chased the bird to the piazza of a house, where it struck its head with great force against a pillar and was instantly killed. The sparrow lay dead beside it. This is vouched for by several people. At present I have the bird mounted in my home. We hear of sea birds being killed by flying against lighthouses in a fog, but a hawk to run against a wooden pillar in broad daylight is something I have never heard of. This strange accident occurred on the house next to mine.

About a month ago I saw a little screech owl in the twilight in a little pine tree. Owls are frequently heard about here.

To-day is a drizzly, uncomfortable day with a four-inch snow slowly melting. I saw three flickers in some trees flying about not long ago.

The goldfinches stay with us here till late in the fall. In a public school near here a flicker flew into one of the attic windows a short time ago. The window was shut, the bird not being seen. A week or so afterward somebody went up into the attic and found the bird, evidently starved to death. Sandpiper.

American Museum of Natural History.

Prof. Bashford Dean, of Columbia University, was last week reappointed curator of the department of ichthyology and herpetology of the American Museum of Natural History at a meeting of the trustees. Professor Dean left the institution last year because of differences with Dr. Hermon C. Bumpus, director of the museum, who recently resigned.

The trustees have also promoted Dr. W. D. Matthew from acting curator to curator of the department of vertebrate paleontology. Barnum Brown, who has been assistant curator of fossil reptiles, becomes associate curator, and Walter Granger, who has been assistant curator of fossil mammals, also becomes associate curator.

Dr. Charles H. Townsend is to remain acting director of the museum until a permanent director has been engaged. Madison Grant and Dr. Walter B. James were elected trustees to succeed D. O. Mills and J. Hampden Robb. Henry Fairfield Osborn was elected President; Cleveland H. Dodge, First Vice-President; J. P. Morgan, Jr., Second Vice-President; Charles Lanier, Secretary, and Archer M. Huntington, Treasurer.

Book Exchange.

Among the readers of Forest and Stream there are many who are interested in old out-of-print and rare books on sport, travel, exploration and kindred subjects, and frequent letters are received at the office ordering such books.

In the very nature of the case, however, these cannot be supplied on order, and it often takes months of search to secure copies, by which time the person who ordered them may have forgotten all about the matter. Within a few weeks we have received from readers and from dealers a dozen orders for a supposed book called "A Boy in Indian Camps," which orders were called forth by an article printed not long ago in Forest and Stream, describing a book published in 1850 and long out of print. Such books as Dodge's "Plains of the Great West," "Hunting Grounds of the West," Elliott's "Carolina Sports," Palliser's little book on Western hunting and others are often sought for.

These volumes and others like them contain a world of vivid interesting description of life in the open, as it was from forty to sixty years ago, and furnish the most delightful reading. On the other hand, because they are scarce, they are costly by comparison with the ordinary outdoor book, which has just been published and stands in numbers on the shelves of the book seller.

No doubt there are many of our readers who possess these old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second hand books may ask for what they need, or offer what they have.

The Alden Plumage Bill.

On July 19, 1910, Percy Alden introduced into the English House of Commons a bill "to prohibit the sale or exchange of the plumage and skins of certain wild birds." In presenting the bill Mr. Alden stated that the skins of 25,000 hummingbirds had been catalogued for sale in London during the past year. When the bill was brought in and read the first time, it was received with cheers.

New Audubon Societies.

On Oct. 3, 1910, the Talbot county (Maryland) Audubon Society was founded, and on Nov. 5, 1910, the East Tennessee Audubon Society was organized at Memphis. The Maryland society is evidence of the transferred activity of W. Scott Way, late secretary of the California Audubon Society, who has recently changed his residence from California to the Eastern Shore of Maryland.

Martins in Florida.

Tarpon Springs, Fla., Feb. 16.—*Editor Forest and Stream:* The martins appeared on the third of this month, and looked at their house, but my wife was sure that she heard them three or four days earlier. They do not decide positively about their housekeeping affairs for some days after their arrival. Kelpie.

GAME BAG AND GUN

Going It Alone in the Canadian Woods

In the spring of 1905 Al. Klein, now State taxidermist at Albany, and myself, commenced to plan a hunting trip for the fall. We had camped and hunted together several seasons in the Adirondacks and were anxious to try for larger game in more primitive country.

We finally decided to go to Biscotasing, Ontario, and as the time drew near, there was great scurrying around to get things together, evaporated vegetables and compressed soups to be bought, some articles of our old kit to be repaired, knives and axes to be sharpened. We had written to a guide, but had received no reply, and as there was no time for further communication, we determined to take chances on getting a guide when we arrived at Bisco.

On Oct. 13 we left for the hunting grounds, arriving in Toronto the next afternoon. We hustled to the Parliament Buildings to get our hunting licenses only to find the offices closed on account of its being Saturday. As our tickets allowed no stopover, we could not wait until Monday to get them, so we purchased our provisions and took a chance on getting the licenses later. Tired out as we were, we were glad to turn into our bunks on the train.

At North Bay we found A. E. Lake, the game warden, and bought our licenses from him, paying $25 each for them.

Biscotasing is a backwoods lumber town. The Hudson's Bay Company's store is opposite the station, which with a couple of squared log houses constitute the town. The "settin'" room of the boarding house was filled with Frenchmen, halfbreeds, tobacco smoke and the wails from a violin which one of the men was trying to play. We were told that it was impossible to obtain a guide, as there were but three in the neighborhood and all were out with parties. We determined, if we could not get a guide, to go it alone. A halfbreed told us of a lake about thirty-five miles to the north where he had seen seventeen moose in the water one day the preceding summer, and told us how to get there, but on account of his broken English we understood only half he said.

Monday morning the Hudson's Bay Company's factor, Mr. Armstrong, told us he had just one canoe for sale. It was large enough for four, and after being in the water a day would weigh at least one hundred pounds, but as it was a case of take it or stay where we were, we paid $12 and carried it to Bisco Lake, 400 yards from the store.

We had made a copy of the first fourteen miles of the route on tracing paper, and had little difficulty the first day. On some points near town we passed the tepees of Indians who had not yet started off on their winter trapping.

We made about twelve miles the first day and camped that night on a point in Flying Post Bay. Al. shot a mink which had a small pickerel in its mouth. We tried fishing, but without success.

We passed a comfortable night and were under way early on Tuesday with the weather all that could be desired. At the end of Flying Post Bay we found the small stream the halfbreed had told us of. Up this we went, seeing plenty of moose sign on every side. The stream wound for eight miles through the most desolate, Godforsaken country I had ever looked upon, and I was glad when we reached the end of it at the height of land. It was late, but as there was no suitable place to camp and no wood, we pushed on. Just at dark we reached Dismal Lake and crossed to the trail on the other side. This lake is well named. It lies between hills from which all the timber has been burned, and its shores are low and marshy.

In the morning we were awakened by the howling of wolves, seemingly within a couple of hundred yards. We crawled out, hoping to get a shot, but were unable to catch sight of them. All the time we were getting breakfast the howling kept up, first on one side, then on the other, then suddenly ceased. We got under way in the rain, but about 10 o'clock the rain ceased and the air grew colder. We had a mile carry to another small lake which we reached and crossed and made another carry of about the same distance on the other side.

We then crossed Wa-ka-bush-ka Lake and followed the outlet for a mile where it became impassable, and it was necessary to make a three-quarter mile portage to reach it again. A mile further on was Albert Hoffman Lake, which branches into two arms at the northern end, and we were so anxious to get a shot at a flock of ducks ahead that we took the wrong arm and had to return. At last we found and followed the outlet through beautiful country for two miles to a portage where Al. shot a partridge. We struck the stream on the other side of the portage and were going along in high spirits when we saw two canoes, in one of which there were two fine moose heads, drawn up on the bank. The owners were standing near a cabin fifty yards from the stream. Upon seeing us they came down, and in three minutes we were talking as though we had known each other all our lives. They were Messrs. Washburn and Curtiss, of Ohio, with their guide, Philip Ward, a full-blooded Ojibway Indian, whom we had heard spoken of in Bisco as the best guide in that locality.

They expressed surprise when they heard we had no guide, and old Philip smiled knowingly. Finally he told us that the cabin belonged to a trapper named Feister, who had married one of his (Ward's) daughters, and that he thought they were laying in a supply of fish for the winter at a lake about ten miles to the east. He said if we would follow the stream flowing out of Opeepeessway Lake on the other side of the carry, we might get a moose.

We left them and made the carry to Opeepeessway Lake. It was growing much colder and we had to buck a very high wind. Al. had wrenched his arm during the day, and the constant paddling and hard work had put it in pretty bad shape. On the west side of the lake, near what we supposed to be its head, we camped, intending to hunt from the canoe along the stream the guide had mentioned.

Thursday morning we started out along the right hand shore, as the guide had told us the stream flowed out of the head of the lake on that side, but after paddling to what we supposed was the head of the lake, we found stretched out before us and to the right two large lakes with innumerable bays. We paddled about six miles and found a large stream flowing out of the lake. This we followed for six miles more, seeing plenty of moose sign but no moose.

About noon we turned back, intending to move our stuff further up next day. We got back to the lake, and about half way down that lost our bearings. Seeing a couple of islands off to our left, which we thought we had passed on our way up, we thought we could save distance by passing to the other side of them. We paddled on and on, and at last realized that we were lost. To add to our troubles the sun was hidden behind dark snow clouds, the wind had risen almost to a gale, kicking up an awful sea, and there we were, not knowing in which direction our camp lay, as hungry as bears, and with nothing to eat.

We landed on an island and climbed a tree to get our bearings. To make a long story short, we explored bay after bay and at last found camp. We were happier at seeing that little bit of canvas than if it had been a hotel. We were exhausted. By that time it was snowing heavily and great waves were driving in on the shore. It was still snowing and blowing when we awoke Friday morning. After getting outside of an immense breakfast and taking some erbswurst (pea meal sausage) in our pockets, we started out in the worst country I had ever tried to hunt over. In places the down timber was so high that we could not get over it and had to make long detours. We hunted until noon, and then after shooting three partridges, returned to camp.

We had everything packed in the canoe Saturday morning when we saw a canoe with two Indians in it coming around the point above us. We tried to talk to them, but they could not understand English, and we could not understand Ojibway. The old fellow said, pointing toward the east, "Beeusygan," evidently meaning that they were going for flour.

We passed through the narrows, and instead of going straight ahead as we had done two days before, entered the arm to the right. After paddling three miles we saw smoke coming from a point and some Indians looking down at us, evidently the family of the Indian we had met in the morning. Five miles further on we came to the head of the arm, and followed the stream running out of it for five miles, then camped, as there were moose sign all around us, and any quantity of pond lilies which they had torn up to get at the roots.

Had we put in the rest of the day hunting we might have got a moose, but instead we worked until dark, putting up the most comfortable camp

we had had so far, and cutting enough dry wood to last a week, so that we would not have to make any noise and would have nothing to do but hunt. Next morning we noticed ice extending out into the stream on each side for perhaps six feet, but thought nothing of it until we had paddled up stream, to find it frozen clean across. We hated to go back without a moose after having worked so hard to get to good moose ground and putting up such a comfortable camp, but on the other hand what was the use of staying? If there was any prospect of warmer weather, it would have been different, but it was steadily growing colder. There was such a crust on the snow that a moose could hear a man a long distance away, so that hunting on land was out of the question, and as the stream was frozen up, so also was hunting from the canoe. Therefore, we decided to get back nearer civilization before our provisions gave out.

We packed up in a hurry and started off. When we came to the point where the Indians were camped, we landed to take some pictures. They had evidently seen us, and as we came up the slope to their camp we saw, sitting in a row across the front of the principal tent, a squaw with a papoose; a girl, ten years old, and three or four boys. All had their eyes down when we came up and kept them so for some time. When we spoke to the squaw she smiled and pointed to her head, evidently trying to tell us she was sick. We tried to explain what we wanted, and showed them the camera, of which they seemed afraid. Al. gave the squaw a quarter and took several pictures. Just as we were leaving we heard the two Indians coming. They shoved our canoe aside and rushed up to the camp, not knowing what to make of our visit. However, a few words from the squaw and the sight of the quarter seemed to settle matters, and after taking a picture of the head of the family, we left them.

At the end of the lake we found the stream leading from it to the portage frozen over, and landing, cut a young tree six feet long and four inches in diameter at the butt. By raising this by the small end and letting the butt fall on the ice, we made fair progress for about half the distance, then concluded to carry. We had an awful time crossing a bog and down timber. On the way we met Feister, the trapper, who on account of the freeze up had been unable to get back to his wife and child, who were camped, as Philip Ward had told us, on a lake ten miles distant. He invited us to stay with him over night, and we were very glad to accept the invitation. Feister had the cabin nice and warm and a good supper for us. He thought it would become warmer in a day or so, and as he could do nothing until then and would have to stay at the cabin, he would be glad to have us stay with him. A Pennsylvania Dutchman, he had been miner, cattleman, lumberman and had given up a job as cook on the Government timber reserve at $3 per day and board to go trapping. He showed us a fine lot of mink, lynx, marten, fisher and bear furs, and said that he had cleared over $60 the previous week.

On Monday morning it was colder than ever, and we went with Feister over one of his lines of traps. Al. narrowly escaped stepping into a steel bear trap weighing forty pounds.

Feister showed us how to pitch our bark canoe, which leaked badly from its passage through the ice. He cut a piece of wood, preferably white cedar, two or two and one-half feet long and three or four inches in diameter. One end was notched and put into the fire until it glowed. Then by holding it close to the part to be pitched, and blowing vigorously, the pitch was softened and rubbed into place with the fingers, which had to be moistened to prevent the pitch from sticking to them. We had to repeat this performance several times before we reached Bisco.

It was just as cold as ever next day, and we made up our minds to start out, as we did not wish to impose on good nature and make too great inroads on Feister's scanty store of provisions, which he insisted on using without allowing us to contribute out of ours, saying we might find we had little enough before we reached the railroad; but he persuaded us to wait another day, which we did, and then as the weather showed no sign of getting warmer, we "lit out."

Feister was sorry that we had to go back without a moose, and said that if it was not for the fact that he had to reach his family as soon as possible, he would go along to help us out. He was the best specimen of a good-natured, kind-hearted woodsman I have ever met, and I shall never forget what he did for us. We offered to pay him, but he became offended and refused to take a cent.

We carried our stuff over a trail which he showed us, to Albert Hoffman Lake. We made a sledge of two saplings laid lengthwise, with cross pieces bound to them. On these we placed the canoe with all our stuff inside and dragged it over the ice as far as we could. The ice was so thin in places that we had to run to keep from breaking through. When we reached the open water we paddled until we came to the ice again, and finally managed by running the canoe over the ice and jumping in when it gave under us, then breaking ice until we found it strong enough to bear us to reach the portage between Albert Hoffman and Wa-ka-bush-ka lakes and camped on the end of the portage. Before night overtook us on Thursday we had carried our stuff over the portage, crossed the small lake between Wa-ka-bush-ka and Dismal Lakes on the ice, and managed to get the canoe to the shore of Dismal Lake. Another day we made the portage to Bisco River, crossing the height of land, and were in great glee at finding the river open. Our joy was short lived. Wherever the river was broad and sluggish, it was frozen clear across, and we would have to either break ice or carry along the bank until we came to another open stretch. Night found us in camp in a swamp, the water and moss of which was frozen solid enough to support us. Another day of paddling and breaking ice found us at Flying Post Bay, which was frozen over for about two miles, beyond which the water appeared to be open. We tested the ice, and finding it fairly solid, strapped our packs on our backs and started to walk over it. After breaking through about fifteen times we reached the edge of the ice, and leaving our stuff, started back for the canoe. Each took an end of the canoe. Sometimes one would go through and sometimes both, but we finally reached the tree where we had left our stuff. Putting this into the canoe we broke ice for fifty yards to open water, crossed this, broke ice to an island, carried across this to another stretch of open water, and there, except for a strip 500 yards wide in front of us, the water was open as far as we could see. As our clothes were freezing to us, we ran the canoe across rather than to break ice. By quick work we got within fifty yards of the other side of the strip, then Al. disappeared. Fortunately the ice held me, and I held the canoe as Al., when he came up, was too chilled to think of caution and clambered in over the side. He had no sooner gotten in than the ice gave under me, too.

Al. stayed in the boat, his teeth going like castanets, while I managed, between breaking ice and pulling over it, to reach open water. We paddled for all we were worth for a point on the western shore, where Al. peeled off his wet clothes, after thawing them out before the fire and rolled up in the blankets, almost frozen. I dried his clothes, then he dried mine, and we had supper.

In the morning the bay was frozen as far as we could see. We determined to stay there until it opened, and as it was Sunday we straightened things up, greasing boots and moccasins, sharpening knives and axes, pitching the canoe, besides getting three square meals.

On Monday there was no change for the better, and as about six inches of snow had fallen, we went hunting. Although there were plenty of deer sign all around us, between the crust under the new snow and the thick bush, we were unable to get a shot, although I jumped two. While climbing the hill back of camp Al. saw a wolf about 800 yards away on the ice. We opened on him, but missed. A stiff breeze from the south had opened the bay in places and we decided to make what headway we could. By breaking ice from one opening to another, we reached a large island beyond which there was no ice. We paddled until dark, then camped.

About half way down the lake next morning we were joined by a trapper named Philips and his cousin, who were on their way to Bisco. On account of Al.'s lame arm we were unable to keep up with them, but finally managed, after breaking another paddle, to reach Bisco about 2 o'clock.

No human beings ever welcomed the sight of civilization as we did. We danced around like Indians, and made a rush for the boarding house. We looked like a couple of wild men, with two weeks' growth of beard, dirty long hair, and our clothes burned in places and in tatters. It was All Saints day, and everybody was dressed in his best. After devouring a meal which made even those hearty eaters, the lumbermen, open their eyes, we told them our experience, and as we had as much provisions in our trunks as we had taken with us, we asked them whether it would pay us to wait for the weather to moderate and try it again, but they were all of the opinion that the winter had come to stay, and that we would be foolish to make another attempt.

We sold the canoe back to the Hudson Bay Company, paid a visit to Philip Ward, and after saying good-bye to all, left for home on the night train.

Edw. G. Lane.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

A Night in the Elgayo Valley.

WASHINGTON, D. C., Feb. 9.—*Editor Forest and Stream:* The following story was told me by A. C. Hoey, when we were hunting in Africa last summer. We were camped on the Elgayo Escarpment at the time and were thus on the scene of his adventure, and this situation brought up the story. This is what he told me:

I had arranged to set out on a skin trading trip in to the Elgayo country, and was about a long day's march from Marachori, my destination. Expecting my safari to make the mareh that day, I started off early alone—without even a gun-bearer. I had arranged to meet my safari at a soda spring which was on the line of march, which arrangement, however, was altogether upset because I sighted a herd of impala with some very fine heads among them and left the trail in pursuit of them. I could not approach them, and without even the satisfaction of bagging one of these decent heads, I presently realized that I had missed the path and should probably have considerable difficulty in striking it again. I decided to try and make for the soda springs.

I happened to fall in with an Elgayo warrior who did his best to point out some road to me, but a couple of hours' hard traveling gave me the idea that I had passed the spring a long way on my right, and not thinking it worth while to return, as I had distinctly told the porters we were going to sleep at Marachori, I pushed on in that direction.

The valley being very much shut in, the heat was very trying, the mountains running up to 4,000 feet high on either side. One side of the valley was inhabited by the Kamasia, the other side by the Elgayo—two tribes, which were continually at war with one another and engaged in raiding each other's sheep and goats whenever opportunity offered. Each tribe lived on its own side, the valley being neutral and without inhabitants.

It was my intention to camp in the valley and trade skins with the Elgayo, so I pushed on to my camp at Maraehori, reaching there about 4 P. M. No one had come and I sat down and waited for my safari, expecting them at every moment. After waiting about half an hour and seeing a heavy thunderstorm brewing, I thought it advisable to try to find them, and started back toward the soda spring—a distance of ten miles or so. Before I had been an hour on my way the storm burst with such violence as I had never before seen. Soaked through and through, with torrents of water running everywhere, and signs of the rapidly approaching and more rapidly disappearing twilight, I began to uneasily realize that I was likely to be "bushed" for the night in an unknown and more or less hostile country, with no food and a seantiness of clothing, the thought of which began to make me shiver. Having expected to meet my safari during the day, I had taken no food with me, and knowing the day would be warm had even dispensed with my coat, being dressed just in my khaki shirt and trousers.

The rain came down with such force that, catching sight of a warthog fifty yards off, I could not shoot at it beeause I could not see my rifle sights!

It was now that I realized I was in for a night on the veldt—absolutely alone. To make matters worse, I diseovered that my matchbox, which I should have put in my helmet when the rain eommenced, had gone to pieces in my wet pocket. I then decided to retrace my steps to Marachori, where, at least, there was an old grass hut to shelter me, and where there was just a faint hope that the safari might have arrived by some other path. Alas, the path or game trail that I had come alone was now one of many running streams, and it was impossible to know which track I had taken. Darkness was setting in. I found myself on the banks of the N'do River, which flows down the Elgayo valley and divides the Kamasia from the Elgayo. I knew that several of my Elgayo friends were living on the escarpment not far from the river, and not being quite sure of the exact location of Marachori, I decided that the best thing to do was to swim the river, climb the steep escarpment opposite and endeavor to find the Elgayo huts—where I

HELPING THE COOK IN A FLORIDA CAMP.
Courtesy of George A. Irwin.

was certain to be well received. The river was now in flood, about thirty yards wide and very swift. I swam it with my rifle on my back and at once started to climb up the foothills of the escarpment. In the inky darkness I kept stumbling on, dead tired, falling over stones and boulders, until I calculated that it must be about 8 o'clock. Pretty well exhausted, I felt that the only thing for me to do was to take shelter under a tree for the night, and having found one, I must have fallen asleep almost immediately. I awakened some hours afterward, feeling a trifle fresher, but numbed to the bone, my legs being so stiff that I could hardly stand. I managed, however, to get on my feet and went through physical drill to get the circulation started. Then I lay down and half dozed again, only to feel myself again getting numbed, and being compelled again to repeat the physical exercises.

One thing that kept me awake was the neighborhood, just after I lay down, of a leopard which came quite near me. It was not visible in the darkness, but I recognized its peculiar purring. I fired a shot in its direction, which drove it off for the moment. A little later it came back, though, but my second shot must have passed a little nearer to it, for it troubled me no further.

It can be easily imagined with what relief I felt the rain slackening off at what I thought must be about 2 A. M., and with what delight I observed the first faint streak of dawn.

As soon as I could see at all, I realized that I was on the wrong side of the river and not only had had my yesterday's swim for nothing, but must again attempt the crossing, which in the meantime had not become easier. Away in the distance, as I limped along with my stiff legs, I could see the hill, some five miles off on the other side of the river which marked the position of the Marachori camp. The river was now some three feet higher, but there was nothing for it but to plunge in, and after some effort and being carried down 200 yards from the point I was trying to make for, I managed to scramble up the opposite bank.

It was now sunrise, and I came on a lot of guinea fowl, but I was shaking so from cold that I was unable to get any aim at them with my gun. By carefully maneuvering, I managed, however, to get a rest for my rifle between two stones, and fortunately dropped one with my first shot. Famished as I was, it was a matter of a second to pull off some of the larger feathers, cut off a leg and eat it raw. It tasted so good that I followed with the breast. After this I felt much better, and started off to Marachori with a somewhat lighter heart. On the way I passed a deserted kraal where I found one or two native pumpkins. I immediately cut one in half and enjoyed a good meal of raw pumpkin. By this time my clothes were getting dried by the sun, and I was feeling quite fit again.

As I neared Marachori I saw the smoke of an Elgayo hut and made for it. The inhabitants took me inside, gave me some wimbi (meal) porridge and went off to find my safari, which had not yet reached Marachori. They all came in at about 3 in the afternoon, having camped at the soda spring where they expected me, and having spent (so they said) most of the night in the bush looking for me.

This experience taught me very forcibly that it is unwise, when traveling in Africa, to lose touch with one's safari.

Mr. Hoey tells the story so modestly that it seems less serious than it really was. But any of your readers who have been lost while out hunting will, I think, be able to fully appreciate his hardships. Only one who has traveled in Africa realizes how cold—even under the Equator—the nights are. The coolness begins to be felt as the sun falls toward the west, and after darkness has come fires are needed for comfort. J. J. W., Jr.

Broadbills in Connecticut.

When the bill prohibiting the killing of wild ducks in Connecticut after Jan. 1 was introduced into the Legislature, the opponents of the measure claimed that the broadbills did not come to Connecticut waters until after Jan. 1.

These old-time hunters should have known of what they were talking, and we can believe that their argument was correct. The friends of the bill claimed that all shooting being prohibited after Jan. 1, the ducks would soon learn that Long Island Sound was a safety zone, and that greater numbers would assemble and stay there. This meant that fewer birds would be killed in the South, more ducks would be left to migrate north to the breeding grounds in the spring, and that this would cause more of the old and the young ducks to come back to the Sound in the fall and continue to resort there. It was claimed, too, that more ducks would stop and breed in the ponds and lakes in the State.

Four years have passed and what is the result? Unquestionably black ducks have nested in greater numbers in Connecticut and have appeared in greater numbers in the ponds and alongshore in the fall.

At Essex, on the lower Connecticut River, one hundred black ducks were seen dead at one time, waiting to be shipped away, and I have before me on excellent authority, the statement that two men on the lower Connecticut River "killed over 800 ducks the past season, the greater part of them being black ducks."

In the spring of 1910, broadbills resorted to the mussel beds in Saugatuck Bay in great numbers, and became so tame that at times they fed near the shore, and one day some men after clams threw a stone at them which fell within the outside birds in the feeding flock. The ducks merely moved off shore, returning when the men had gone.

During early December, 1910, broadbills came into the Sound in great numbers, though keeping well out and not coming well to stool.

The tameness of the broadbills at Saugatuck last year has been repeated at Stamford this year. The city has been filling up some of its meadows with the aid of a suction drudge, and on the edge of the channel in the middle of the meadows, is a house with a large family living in it.

On the afternoon of Jan. 4 I saw a flock of over fifty broadbills feeding less than two gunshots away from the house. One of the inmates of the house is under suspicion of not always obeying the game laws, and he was cautioned that he must not shoot at the ducks. He replied, "Did you see them right up to the house? Well, how can a fellow help shooting at them, when they come nearer than they are now—right up to the back door?"

It seemed to me that it would make the fingers of more than one person itch to see a flock of wild ducks feeding unconcernedly by one's back door; but we should not lose sight of the interesting fact that it shows how quickly these wild ducks have learned that they are safe. They remind one of the lesser scaup ducks on the Indian River, Florida, that become so tame as to feed from one's hand, when within the safety zone.

An effort will be made in Connecticut this year to repeal the present law. One bill proposed putting the shooting season back to the first of April.

Sportsmen should ponder well the indisputable increase of ducks in the Sound within the past four years. They should remember that the doing away with spring shooting means more ducks to return to the breeding grounds, and that with the increased number of hunters, the constant breaking up of the breeding grounds in the North for farming purposes, they must give more and more thought to the future of the ducks. They should take no step that will bring the wild ducks to the condition of the grouse and the quail in New England. Reader.

New York Legislature.

These bills have been introduced:

By Assemblyman Miller, amending the forest, fish and game law in relation to taking fish in certain waters of Chenango, Otsego and Madison counties.

By Senator Fiero and Assemblyman Washburn, a bill providing that suckers may be taken through the ice in Ulster county.

By Senator Ferris and Assemblyman Manley relating to the open season for grouse and trout. It provides that there shall be no open season for grouse until Oct. 1, 1915, and that after that the open season shall be from Oct. 1 to Nov. 30, both inclusive, in each year. The bill also provides that the open season for trout in that portion of Oneida county north of the main track of the New York Central and Hudson River R. R. shall be from May 1 to Aug. 31, both inclusive.

By Senator Argetsinger changing the open season for hares and rabbits except in Fulton county from Oct. 1 to Dec. 31, inclusive. It also reduces from ten to six the maximum number of hares or rabbits that may be taken by one person in one day, provides that not more than six shall be transported on a single trip, prohibits hunting hares or rabbits with ferrets and makes the possession of ferrets presumptive evidence of their illegal use. Changing from October to November, the month during which pheasants may be taken and possessed in certain counties on certain days of the week. Prohibiting the hunting or taking of game on Sunday.

By Assemblyman Cosad, a bill relating to lake trout in Seneca county.

By Senator Bayne, a bill relating to claims for damages in connection with purchase of land for the forest preserve.

By Senator O'Brien, inserting a new section, 194a, in the forest, fish and game law, establishing a station for marine fish culture. The bill carries an appropriation of $5,000.

Washington as a Master of Hounds.

WASHINGTON is well known to have been a sportsman and especially a fox hunter. He was deeply interested in the commercial fisheries, but we do not know that he was in any sense an angler.

The following article has been brought to our attention by Daniel B. Fearing, of Newport, whose angling library is believed to be the greatest in America, possibly in the world. It appeared in the English Land and Water forty-four years ago, and it is not known that it has ever been reprinted. It was written by Lord William Lenox.

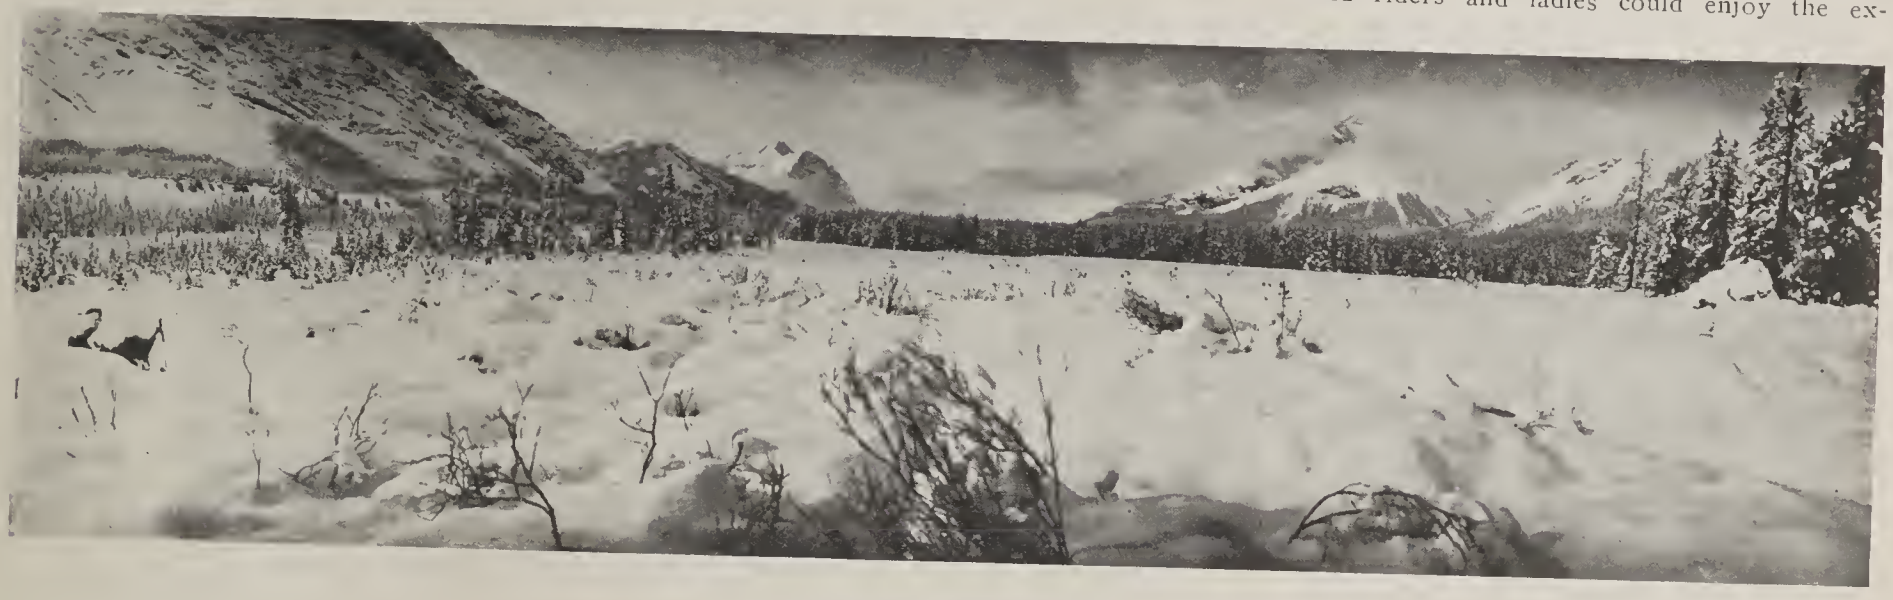
"Great men have always scorn'd great recompenses;
* * * * * *
George Washington had thanks and nought beside,
Except the all-cloudless glory (which few men's is)
To free his country.
* * * * * *
Leonidas and Washington,
Whose every battlefield is holy ground,
Which breathes of nations saved, not worlds undone,
How sweetly on the ear such echoes sound."

The time which Colonel Washington could spare from his building and agricultural improvements, between the years 1759 and 1774, was devoted to the chase. He was neither—to use an Americanism—"a gunner" nor a disciple of old Izaak Walton; but was a passionate lover of fox hunting, and which sport, being of a bold and animating character, suited well with the temperament of the "lusty prime" of his age, and accorded peculiarly with his fondness for equestrian exercises. His kennel was situate about one hundred yards south of the family vault, in which at present rest his venerated remains. The building was a rude structure, but affording comfortable quarters for the hounds, with a large enclosure paled in, having, in the center, a spring of running water. The pack was very numerous and select—the Colonel visiting and inspecting his kennel morning and evening, after the same manner as he did his stables. It was his pride, and a proof of his skill in hunting, to have his pack so critically drafted, both as to speed and bottom, that, in full cry, to use a sporting phrase, you might cover them with a sheet. During the hunting season Mount Vernon, to which he applied the punning motto—*Vir non semper floret*—had many distinguished guests from the neighborhood, from Maryland and elsewhere. The visits of those Nimrods were not of days, but weeks; and they were entertained in the good old style of Virginia's ancient hospitality. Washington, always splendidly mounted, took the field at dawn of day, with his huntsman Will Lee, his friends, and neighbors; and none rode more gallantly to hounds, nor with voice more cheerfully awakened echo in the woodland, than he who was afterward destined, by voice and example, to cheer his countrymen in their struggle for independence and empire. Such was the establishment at Mount Vernon prior to the revolution. We now come to events of late times. After the peace of 1783, the hunting establishment, which had declined during the war, was renewed by the arrival of a pack of French hounds, sent by the Marquis de la Fayette. These *chiens de chasse* were of great sizes:

"Bred out of the Spartan kind,
So flew'd, so sanded; and their heads are hung
With ears that sweep away the morning dew;
Dewlapp'd like Thessalian bulls;
Matched in mouth like bells."

Indeed, by their strength they were fitted, not only to pull down the stately stag, but, in fierce combat, to encounter the wolf or boar, or even to grapple with the lordly lion. These hounds, from their fierce disposition, were generally kept confined; but woe to the stranger who might be passing their kennels after nightfall. Should the gates be unclosed, his fate would be sealed, unless he could climb some friendly tree, or the voice of the huntsman or whipper-in came speedily to the rescue. The habit was to hunt three times a week, weather permitting. Breakfast was served on these mornings by candlelight, the General always breaking his fast with an Indian corn cake and a bowl of milk, and ere the "early village cock" had "done salutation to the morn" the whole cavalcade would have left the house, and the fox frequently be unkenneled before sunrise. Those who have seen Washington on horseback admit that he was the most accomplished of cavaliers, in the true sense and perfection of the character; he rode as he did everything, with ease, elegance and power.

The vicious propensities of horses were of no moment to so skiliful and daring a rider. He always said that he required but one good quality in a horse, that of being able to go along at a good pace, and ridiculed the idea of its being even possible that he should be unhorsed, provided the animal kept on his legs—indeed, the perfect and sinewy frame of this admirable man gave him such a perfect seat that a horse might as soon disencumber itself of the saddle as of such a rider. The General usually rode a horse called Blueskin, a dark iron-gray approaching to blue—hence his name—a fine, but rather fiery animal, and of great endurance in a long run. Will, the huntsman, better known in revolutionary lore as Billy, rode a horse called Chinkling, a surprising leaper, and made very much like its rider, low, but sturdy, and of great bone and muscle. Will had but one order, which was to keep with the hounds—a somewhat difficult one to accomplish in such a stiff country. Mounted on Chinkling, with a French horn at his back, this fearless rider would rush through brake or tangle wood, over hedge and ditch, in a style worthy a modern Meltonian. There were roads cut through the woods in various directions, by which aged and timid riders and ladies could enjoy the exhilarating cry without risk of life or limb.



LOOKING UP THE BOW RIVER.
Photograph by Rutherford Page.

The foxes hunted in America eighty-three years ago were gray foxes, with one exception. This was a famous black fox, which, differing from his brethren of "orders gray," often set his pursuers at defiance. After seven or eight runs, Billy recommended that the black reynard should be let alone, giving it as his opinion that he was very near akin to another sable character, equally remarkable for his wiles. This advice was adopted, and ever after care was taken to avoid the haunt of the unconquerable fox. The chase ended, the party would return to the mansion-house, where, at the well-spread board, and with cheerful glass, the feats of the day, the prowess of the gallant steeds and riders, and the "artful dodges" of the famous black fox were all discussed, while Washington, never permitting even his pleasures to infringe upon the order and regularity of his habits, would, after a few glasses of Madeira, retire to his bed at nine o'clock. In 1787, General Washington being called to preside in the convention which formed the Federal Constitution, gave his hounds away, and bade adieu forever to the pleasures of the chase.

Hunting in the Yukon.

Charmouth, England, Feb. 4.—*Editor Forest and Stream:* I should like to call the attention of any sportsman contemplating a trip to the Yukon to the fact that by a Dominion customs regulation only two heads may be shipped from the country out of the six caribou and two moose allowed to be killed by the Territorial game law.

This regulation is no new one, but was not enforced in the Yukon Territory previous to last September. It was rather a shock to me on getting back to White Horse in October after a hunting trip to be told that the customs would not allow my heads to pass, although shot on license and well below the limit as to number.

The local authorities, who were most courteous throughout, readily granted a permit to take the heads out of the Territory, but the customs would only pass them through in bond to a Canadian port, leaving the difficulty unsolved. The heads are now on their way back, but my method of getting them out of Canada entailed considerable delay and some anxiety.

The Yukon is one of the finest hunting grounds left, parts of it abounding still in moose, caribou, sheep and bear besides smaller game, and not the least of its attractions is the liberality of its game regulations, but until the Dominion Government ceases to enforce in this remote territory a regulation framed for the Eastern Provinces, there will be no certainty of anyone being able to take out the heads which the hundred dollar license permits him to shoot.

It is for the Yukon Legislature to bring pressure to bear at Ottawa to get this matter cleared up if they want their game to be a source of revenue to them. A. D. Pass.

Camp-fire Rules.

Washington, D. C., Feb. 10.—*Editor Forest and Stream:* Securely tucked away in the Indian Allotment Act, approved June 25, 1910, is a provision amending Section 53 of the penal code of the United States in relation to forest fires. The amended section sets forth that whoever shall build a fire in or near any forest, timber, or other inflammable material upon the public domain, or any Indian reservation, shall, before leaving, totally extinguish the fire, and upon failure to do so, shall be fined not more than one thousand dollars, or imprisoned not more than one year, or both. To call attention more effectually to the provisions of this law, as well as to give general istructions to the public relative to the prevention of forest fires, the Secretary of the Interior has issued a circular and linen poster inviting attention to the provisions of the act cited, and further states that the best way to prevent large fires is to be careful with small ones, advising all persons as follows:

1. Do not build larger camp-fires than are necessary.

2. Do not build fires in leaves, rotten wood, or other places they are likely to spread.

3. Dig holes or clear the ground for your camp-fires in dangerous places, and during windy weather.

4. Put out all fires completely before you leave them, even for a short time.

5. Do not build fires against large or hollow logs.

6. If fires are found, put them out, if possible, or immediately notify the nearest government officer.

These rules, while simple, are useful and valuable, being the experience as well as the practice of the careful camper and woodsman, and the thoughtfulness and solicitude of our great government may not be unheeded by those citizens who go into the woods for pleasure and profit. Raleigh Raines.

Low Water.

Minneapolis, Minn., Feb. 8.—*Editor Forest and Stream:* Sport at present is confined to occasional chases after foxes, and even that is poor, for the snows are all off. The snows came this year about Christmas time and the weather to date has been most unseasonable. We have had several good rabbit hunts, but I do not think we will have any more this year. There are a number of men out with ferrets, and they reap a harvest while they are at it. There is a law against it, but few are punished. I know one hunter who ferrets the rabbit out and then lets the creature run until it is almost out of range, then shoots, giving the animal a chance to escape.

The lakes are very low this year on account of the dry summer; in fact, all the ponds are dry to the bottom, and there is not a muskrat in the country. When the ponds lowered, the rats swam down the Minnehaha Creek one moonlit night by hundreds, their destination being the river which, I judge, they reached long before daylight. One trapper set traps in the shallows at a bend and caught one for every trap. If the water rises in the spring, they will no doubt return.

It has been my good luck to find two coveys of quail within the city limits this winter and to have done something to help them out. One covey numbers about thirty and the other is a smaller one. They seem to make out all right, although the conditions have been most unfavorable. They stay around the fields where the abandoned corn shocks are. R. P. Lincoln.

The English Setter Club.

Germantown, Pa., Feb. 16.—*Editor Forest and Stream:* I beg to advise that this club has completed the preliminary arrangements for the holding of the A. K. C. Specialty Show on Friday, April 7. Besides the regular classes we will have classes for members of this club only. The entry fee will be $2 with a percentage division for prizes.

There are a number of attractive special prizes already offered, and we solicit the support of the bench and field enthusiasts and the sporting press generally in this event, and our field day, which will be held on Saturday, April 8, at the same place. Special prize offers will be greatly appreciated.

The field day for our members will be held at the above stated time and the dogs will be worked on liberated Hungarian partridges as heretofore. The prizes will be cups, medals, certificates and ribbons. No fee is charged for entry in these events.

The premium lists will be mailed the early part of March and we will be very glad to hear from anyone who may be interested.

H. T. Bryan, Sec'y.

Winter Protection.

Phoenixville, Pa., Feb. 6.—*Editor Forest and Stream:* Woodcock, pheasants, ruffed grouse and partridges (quail) seem to be in great plenty in this county (Chester), notwithstanding the severe conditions of the weather. If it were not for the natural covers and haunts on the hills as a protection, it is believed many of the game birds would perish or be wiped out.

The ground has been covered with snow in consequence of which food is scarce. Farmers are on the lookout, however, and if possible give them cover, food and protection when and where seen. The farmer seems to have a greater love and admiration for the partridge (quail), for he is considered the farmer's friend.

A thoughtful farmer in the neighborhood seeing a covey of partridges in the snow in the orchard, and moved with pity and compassion toward them, set a fish hoop net, covered it with straw and sprinkled grain in and around it, to where the birds returned and took refuge. The following morning the good man of the farm raised the net, put the plump and gamy birds in a roomy box with an opening in front of lattice work, and set it on the sunny side of the porch, and the noblest of the game birds are fed and watered daily. They show no sign of discontentment. They are as tame and spruce as little chicks.

In the spring, or as soon as the cold weather breaks up, the birds are to be given their freedom. In most instances, with such treatment, they stay on the farm, and notices of trespassing and hunting forbidden are liberally tacked up about the farm. Teddy.

Recent Deaths.

Major Farnham Lyon, of Saginaw, Mich., died on Feb. 14 at the ripe age of eighty-two. He was one of the old "Saginaw Crowd" and had many and delightful shooting and fishing trips on the car Mershon.

Major Lyon loved the goose shooting of the old days when we used to go to Dawson, N. D, and also greatly enjoyed shooting sharp-tailed grouse in the bottom lands of the Little Missouri, where we used to make a camping trip now and then.

He was one of the best trout fishermen; one of the old school type.

Major Lyon was a member of the Loyal Legion and a personal friend of the late General Custer, with whom he served as quartermaster of the old Seventh Cavalry. Part of his service with Custer was in Texas and in old Western campaigns.

One by one the members of the old "Saginaw Crowd" are dropping away. None will be missed more than the Major, as we always called him. He was of a most lovable disposition and had not an enemy in the world. W. B. M.

Albert H. Funke, who died at his home in Flushing, N. Y., last Friday, was a well-known figure in the sportsmen's goods trade of New York city. For a long time he was associated with Herman Boker & Co., importers and jobbers of firearms, in Duane street. In recent years he handled German magazine rifles and automobile lights, first in Chambers street, then in Warren street. His age was forty-three years.

Attacked by a Bear.

New York City, Feb. 14.—*Editor Forest and Stream:* I am inclosing herewith a true bear story, which is part of a letter received from F. H. Nichols, Dixfield, Me. It is as follows:

I took a hunting vacation last week, but did not have any luck, which was about what befel the majority of the hunters hereabout this season, though some of them have been successful, and that there is still wild game about was evidenced by an episode of two weeks ago, which reminds one of the days of the pioneers, and at the same time causes one to realize that things are not very squarely dealt out in this world, and that some unfortunate ones seem to be the targets for "the slings and arrows of outrageous fortune."

About four miles from here on the Carthage Road lives a family named Beals. They are nice people and were fairly well to do, but a year ago Mr. B. went into a lumbering operation and lost about all that he had, and they were obliged to move upon a little old farm. Mrs. Beals had a long sickness and besides having to pay about $600 for doctors' bills she was unable to care for her five small children, and among them one, a little girl, was sent to stay with a relative in Wilton. About Thanksgiving time Mrs. B. was feeling quite well and wanted to have the family together for Thanksgiving, and so Mr. B. on the afternoon before harnessed the horse for her and she started for Wilton (eight miles) to bring over the little girl. Mr. B. expected them home before dark, but they failed to show up, and having become quite anxious, he had just started with a neighbor's team to meet them, when he met the horse without the wagon and showing signs of having had a great scare. He then got a neighbor, and they drove toward Wilton about two miles when they found Mrs. Beals insensible by the side of the road, and the child beside her crying and apparently in great pain. They brought them home and called a doctor at once, but the child died soon after. She showed no external bruises, but the doctor found that one of her ribs had been broken and driven into one of her lungs. This, and the fact that Mrs. Beals had three parallel cuts across her face as if they had been made with a knife, seemed hard to account for. Mrs. Beals was unconscious for three days, but came to herself for a moment at one time and said: "Bob (meaning the horse) wasn't to blame. It was the bear," and went off again instantly, and at another time she started up and cried: "It is a bear! Hold on to mother!" From this it was concluded that a bear had figured somehow in the mix-up.

After three days she became herself and was able to tell her experience. It seems that they had been late in starting from Wilton, and in coming through the woods about two miles from home it was quite dark, when they met a bear square in the middle of the road. The horse reared and shied, throwing out the little girl. He then ran, and a few rods further on Mrs. Beals was thrown out also. She was badly hurt, but she heard the child screaming, and she got upon her feet, and running back up the road she came upon the bear sitting in the road with the child in his arms. She went right up to the bear screaming at him and trying to take the child away from him. He dropped the child and ran, but as he did so he struck Mrs. Beals across the face with his paw, knocking her down. She took the child up and started for home, but only got a little way, when she collapsed. The blow from the bear accounts for the cuts on her face, which were made by his claws, while the squeezing he gave the poor little kid doubtless accounts for her rib being broken with no evidence externally of any bruises. Mrs. B. is doing well now.

P. R. Robinson.

The Michigan Association.

Saginaw, Mich., Feb. 18.—*Editor Forest and Stream:* The Michigan Association held a meeting at Grand Rapids, Feb. 7. About sixty were present at the afternoon meeting, and the proposed bills of the association were thoroughly discussed and unanimously endorsed; these bills being, first, the creation of a game and fish commission, to be non-partisan, honorary, and have exclusive charge of all game and fish matters. Next, the hunters' license bill which in addition to the license now already imposed of $25 for non-resident and $1.50 for residents for deer hunting, and $10 for non-residents for bird hunting, provides a $10 license for aliens (this is to stop the shooting of song birds by the irresponsible foreigner) and a fee of $1 per year for resident hunters, the entire fund to be at the disposal of the newly created commission.

The general game bill does not deal with deer. That is left for a separate bill. But the new bill in general prohibits the spring shooting of migratory birds. It limits the bag on partridges or ruffed grouse to six per day, fifteen in possession and not over fifty in a season; quail to ten a day, fifteen in possession and not over seventy-five per season. There are moderate limits also on snipe, woodcock, plover, etc. The duck bag is left the same, twenty-five in a day, fifty in possession. Provision is made whereby non-residents taking out a license can take home with them one legal day's bag.

The trout fishing law was recommended to be changed so as to make the limit of the daily catch twenty-five instead of fifty. A rod license for trout fishing only to non-residents, and granting non-residents taking out such license the privilege of taking home a legal day's catch of trout. The Audubon bird protective features are included in the bill. The sale or possession of the plumage of protected birds is absolutely prohibited.

About fifty-five new members were added to the Michigan Association at the afternoon session. In the evening a banquet was tendered the association by the Grand Rapids sportsmen. It was held in the banquet hall of the Pant'ind Hotel. About 125 were seated, and a program of speech making and music afforded an entertaining and profitable evening. The following telegram was received, addressed to me as president of the Michigan Association, from Governor Chase S. Osborn:

"I am indeed sorry not to be with you tonight. All my life the objects of your splendid association have appealed to me. There is rare manliness in true sportsmanship making for the finest fellowship. I wish you all and your work success."

W. B. Mershon.

Sportsmen's Recommendations.

San Francisco, Cal., Feb. 14.—*Editor Forest and Stream:* The California Sportsman's Game Protective Association, which for some time has been making its headquarters at 216 McAllister street, San Francisco, has now fitted up a permanent home in the Pacific Building at Fourth and Market streets and recently held its first meeting there. At this meeting a number of subjects of great interest were discussed, most of these being along the lines of amendments to the present game laws. Among these were the following:

1. Shortening of the open season for all game.
2. Curtailment of the daily bag limit on quail and ducks.
3. Protection of abalonies and other marine life from predatory Asiatics.
4. Shipment of game without covering, open to public inspection.
5. A law making it a misdemeanor for any armed person, except a peace officer, to order another person off land containing fish or game belonging to the State.
6. A law making it a felony to accidentally kill a person by use of firearms.
7. State money to be used in propagating fish and game only on land open to licensed hunters or land owned or leased by the State for propagating fish and game.
8. The right for licensed hunters to hunt and fish on all tidewater sloughs and streams navigable by small boats.
9. The repeal of the law which makes it a crime for persons to pursue and take fish and game belonging to the State on land not under cultivation, except land within reasonable distance of a habitation, and except land comprising a State game preserve.
10. A severe penalty for injury to property caused by licensed hunters. Among the resolutions passed by this organization was the following:

Whereas, The ordinary hunter of the State has yet to receive any beneficial return from the enormous gun tax; and

Whereas, Having recognized the expenditure of thousands of dollars of this tax in fruitless fancy game farms in the past, and having been informed that other thousands are about to be spent in investigations of little material benefit to the hunters paying the tax; therefore, be it

Resolved, That the Legislature of the State of California be and is hereby requested to provide to some extent as to how said tax shall be expended, with a view to having some of it devoted to the destruction of the animals that prey upon the game, some to the restocking of convenient hunting grounds with game, and some to securing hunting rights to large uncultivated tracts of land for all hunters on equal terms.

The Bay Counties Sportsmen's Association has been formally organized with headquarters in San Francisco, the objects of the association being "to assist in the enforcing of all fish and game laws as passed by the Legislature of the State of California and all ordinances legally adopted by boards of supervisors of the counties of the State, and to generally promote the interests of sportsmen hunting and fishing in counties bordering on the Bay of San Francisco."

SEA AND RIVER FISHING

Atmospheric Influences on Fish.

Concluded from page 260.

All theory as to magnetic influence must be largely speculative, yet there are grounds to go upon from our own meagre knowledge. It is the fascinating business of some to collect and harness electricity; it is the fate of others to be very much upset by an overdose of it, perhaps in a thunderstorm, perhaps in the electric chair. Most are very much revived by it in small doses, but none know what it is; none can either analyze or explain it. But this we know: animal organisms are sensitized to it. And further we know that certain organisms are capable of being communicated with by it at a great distance.

We may venture still further. They are in actual and perpetual communication with conditions far away in space, and if attuned to respond to them, distance need hardly count. Even with the ponderous man-made wireless apparatus, distance is half annihilated. How little it must be to the more exquisitely sensitive apparatus of an animal endowed with nerves which form naturally attuned "receivers."

Many animal instincts—I would rather say intelligences—can only be explained in this way: that they are ever attuned to the delicate impingements of ethereal waves, at indefinite distances. And the message arrives simultaneously almost with the variations of those forces near or distant. How natural, then, the actions of many animals when an earthquake is pending, and how explicable the terrors of some before the first rumble has alarmed the ears of man. So it is with fish life. Long before the thunder, or the flood, or the north wind which will bring snow, they give signs that they are acquainted with conditions which will disturb or starve them.

How madly will the roach, and indeed most fish feed before the coming of a flood, when they will have to hide and fast. Again, how sportive they often are just before the breakup of a drouth. The knowledge of good things coming stimulates them. Their mercurial livers respond. Expectation excites.

You may say: How do you know? My reply is, I do not know. It is simply open to all to draw common sense conclusions. There is logic to go upon. A man may be very cheerful to-day in his toil if he anticipates a holiday to-morrow, and he can bear a pain with hilarity one hour if he knows an ecstasy will replace it in the next. A horse runs fastest toward the stable. So may a sickly, half-starved fish be revivified by the knowledge of a plentitude of food coming down shortly.

No, I do not know much, but I have my convictions on these points. Sometimes I have a mysterious fellow-feeling. I am overlooking a trout stream. It is the middle of January. If the law allowed it—which happily it does not—I could go out and catch trout to-day with almost any lure except a fly. Some may snigger; others may mutter something, but I know they are to be caught to-day. How do I know it? I feel it. Long experience endows one with more or less accurate sensations. You may call it intuition or acquired sympathy. It is a distinctive knowledge. I am certain those trout are out foraging. It is not temperature, the direction of the wind, sunlight or balmy air I go by; it is a fellow-feeling through long acquaintance.

But that is not satisfactory. It does not help my fellow anglers. Had I, from the beginning of my angling career kept more careful records of all kinds, there would now be some data before me to show why I know that those trout are now out foraging.

I wish all anglers would keep records. It would help as well as interest posterity. Not only records of the conditions during their angling outings, but of the meteorological conditions of the twenty-four hours — at least — preceding and following. They would discover some clear indications, and a good many seeming incongruities would vanish. They should record their own feelings—separate from the physical ones explainable—and study themselves in relation to atmospheric conditions. It is better to acquire such knowledge than have it thrust upon us.

Such knowledge of piscine—as compared with human—feeling was thrust upon a feeder at a hatchery that I visited recently without his ever having either courted or cultivated it. He was preparing several bucketsful of food for the stock ponds. "That's one less than usual," he informed me. "Why?" I asked. "Oh, I can tell when they be hungry," he said. "How so?" "Me own feelin's," was the answer, but I couldn't get him an inch further.

Following him to the stock ponds he soon proved himself right. The fish rose to the food half-heartedly, and soon ceased to come at all. A few blew out what they took. To my remark that they seemed sick, he said: "They be sometimes, and the vunny part ov it is I da generally know it aforehand."

One can hardly touch this great subject in a short article, but I may venture perhaps a few more words on common experience as to the sudden changes of behavior among fish. Take a trout stream on a fair day in June, the water regular, the weather settled as far as we feel, the fish steadily rising. All at once up stream and down the rises cease. Not a fish moves. Wait half an hour, or an hour perhaps, and the water is alive again. Some tell you it is something in the water. That theory is easily quashed. Others tell you it is inter-communication between the fish caused by some great fright or the presence of enemies. So is that. Let us prove it.

Fishing Lake Vyrnwy from a boat with a friend—who held no view of his own and would have none of mine—we could get no rise whatever for two hours. I got ashore and strolled down the river. From 2:30 to 3:30 they rose vigorously, then stopped suddenly. Going up to the hotel in the evening we met. "Ah," said my friend, "you should have stuck on with me," and he displayed seventeen trout.

I knew perfectly well that he must have had a rise in the lake also. But fish in lake water are earlier to respond as a rule to atmospheric changes, and what interested me was the time of it. He happened to have timed it. It exactly coincided in this instance with my experience in the river. I told him that and showed him my fifteen fish. Between the river and the lake, the Liverpool Water Company had erected a dam at a cost of a million pounds, so the chance for inter-communication was nil. The question of the presence of enemies and the changing state of the water must also be ruled out obviously enough.

"Now," I said, "if it was not due to a passing influence in the atmosphere, what was it? Remember the rise of fly was strong all day."

"I can't tell you what it was," he answered, "but your passing influence in the atmosphere isn't good enough for me, and for this reason I took care to note everything, and there wasn't the least change in wind, sky, temperature, or anything else. No, I don't believe it. Had there been a change in the wind, had clouds gathered, had it got colder or hotter I could have understood it, but it didn't. No, I'm not going to take in that."

It was in vain I pointed out to him that even the least things in nature, animal and vegetable, change from hour to hour from causes imperceptible to our senses.

"Well, if you won't have the celestial, you are bound to have the terrestrial," I said. "Was there a little agitation from below do you think? Did a little heat or smoke ooze up to give them warning of some ultimate doom?"

"As likely as the other," he said, quite solemnly.

Two days later I handed him a postcard from some friends fishing the Wye fifty miles away. It ran: "Yes, there was a rise, distinct and strong. Three o'clock."

He would not be convinced. "Coincidence" was the sum of his argument. "Their feeding hour" was the argument of others. That will not do. What dictates the constantly changing feeding times from day to day?

Let us be reasonable. If we cannot explain these subtleties sufficiently, let us acknowledge that it is because our intelligence is incapable of it. Let us admit there must be laws controlling the feelings and actions of these sensitive beings that we are too grossly constituted to recognize. But we may hold some lucid views as to causes, or at least their principles, by being watchful of effects. The merest tyro in logical argument who ever cast a fly must conclude that it is not the darkness caused by the gathering cloud that stops a trout from rising, for he rises in the gloaming, and in the dark, when in the mood. The duns pass over him, but he sinks and is stolid. The artificial falls near him, but he darts to his haunt. He is over-wrought. His organism is more tremulously sensitive than mercury a thousand times. There is that in the cloud or the veering of the wind, or the far off cyclone which vibrates through him. Now, some

oppression stultifies the energy in his delicate organs; now some stimulating wave draws him and he responds with the sureness of steel to a magnet.

The "enormous vanity of bumptious man" will tell you it is a far-fetched fancy. It attacks his vain glory; it belittles his comprehensiveness. It lifts the creature too high over his boastful dominion. So it will draw from him a pitying "pooh." Neither his heaven nor his earth holds such undreamt of philosophy.

For all that, my brother anglers, I would ask you to hold an open mind till you have bestowed upon it a fair research. Though a thousand years might not unveil to us the whole of the truth, we cannot fish for even fifty without learning something, and I give you my slowly acquired impression, very humbly, for what it is worth.

I believe that fish are actuated from hour to hour, sometimes from moment to moment, by atmospheric waves, reaching them from near or far, titillating their super-sensitive organisms into activity, or stilling them to sluggishness; causing buoyancy or depression, hunger or nausea, when the state of the water is normal and has nothing to do with it.

Though a vast deal more may be said, there for the present I leave it. J. Berryman.

Fishing in California.

San Francisco, Cal., Feb. 13.—*Editor Forest and Stream:* The open season for steelhead fishing ended Jan. 31, and for a couple of months there will be no sport of this kind enjoyed, even in tide water. The California Anglers' Association is working to have legislation enacted permitting the taking of steelhead trout in tidewater the entire year with hook and line. The fish are just now commencing to run, and during the best season of the year there is no sport. It is claimed that the number of fish taken by rod fishermen amounts to practically nothing, and that an all-year open season would not affect the supply of the game fish. It is proposed to put a stop to net fishing and to prohibit the sale of the fish also. In former years fishing was allowed during February and March, and fine sport was to be had then in the small streams flowing into the ocean near San Francisco.

The action of certain landowners in the mountain districts in prohibiting fishing on their holdings has brought about the introduction of a bill in the Legislature providing that highways may be condemned by boards of supervisors of the various counties along unnavigable streams for the use of fishermen. Some objection was made by assemblymen from districts where there were gardens and orchards close to streams, but the measure was passed by a vote of 68 to 8.

The San Francisco Striped Bass Club held its annual meeting and banquet recently, and the prizes for the past year's sport were distributed. C. L. Johnson was awarded the prize for taking the largest striped bass, this being a 27-pound fish. There were others taken of greater weight, but not under club rules and conditions. The best striped bass fishing continues to be in the vicinity of Napa Creek, and Wingo and San Antonio sloughs are being visited by but few. These latter grounds have not been frequented by the finny tribe to any extent during the past season, and most of the San Francisco anglers are now seeking the new grounds. A. P. B.

The Royal Coachman Fly.

Hendersonville, N. C., Feb. 12.—*Editor Forest and Stream:* I have just read with much interest the article, "The Coachman," in your last issue by Ladd Plumley. It is the more interesting to me because of a like experience I have had. For years I have been using the royal coachman as my leading fly, and I have caught rainbow trout with the royal coachman in every month from and including March to and including November. I have found it even better than the coachman for our waters here. But in our nearby streams no fly will catch or kill trout after a hard downpour of rain. This is because the water is then full of red clay that colors it so that it is quite impossible to see anything big or little through a half-inch of water.

This is of course quite different in mountain streams, or other streams not so colored. I have seen the water in mountain streams—where the top soil had not been disturbed and there were no fields or cultivated ground—become quite dark in color, but if a glass were filled with it, one can easily see a fly through it; but if you fill a small bottle half an inch in diameter with our red-clayed water, you can see nothing through it.

Like Mr. Plumley, I keep my royal coachman always as my leading fly, and change the upper two as needed. Usually I begin the spring with royal coachman, bee and Cahill; these last two supplemented from time to time with the caddis, black gnat, cinnamon brown, etc. I killed ten nice rainbow trout on the 10th of November some years ago, the ground being white with frost when I stepped into the water, and it was so cold I had to get out and rub myself to get my blood warm. The rainbow took the royal coachman. The combination of white, green and red seems to take the fancy of both rainbow and brook trout in our streams, and if I had to use only one fly, I would take the royal coachman.

It will be both interesting and instructive—to me at least—to know Mr. Plumley's experience with the royal coachman as compared with the coachman—whether the red band of the former is against it in the waters he has fished. My angling has been local—the mountain streams of western North Carolina only. I am all the time on the *qui vive* for information. Nos. 10 and 8 are the best sizes here, and I may add No. 12.

I was much interested, too, in the article of M. T. Davidson, and I am going to ask Theodore Gordon for the pattern of "Gordon's Fancy" fly. I want to have some tied on barbless hooks. I used none but barbless last year.

I plant many thousands of trout in our waters every year and do not care to kill the fingerlings as so many do. Hence the reason of my adopting the barbless—it is in the interest of true sport. E. L. Ewbank.

Fishing in Florida.

Chicago, Ill., Feb. 7.—*Editor Forest and Stream:* William Wolfarth and I. H. Bellows, of the Chicago Fly-Casting Club, and George A. Murrell, of the Illinois Casting Club, will go to Florida this month on an angling trip.

Mr. Wolfarth goes to New Orleans and Havana, returning to Eustis, Florida, on the Divide, where many cold fresh water lakes abound with the gamy bass of large size, and at this point Mr. Murrell will meet him for a week together. They are both anglers and artists of the highest order and will leave their impress on the curiosity of the finny tribe of that section.

Mr. Bellows goes to the Flagler Ranch for tarpon. He has some "fever" in his arm and wants to work it out on a large scale.

H. A. Newkirk.

Fisherman's Club of Chicago.

Chicago, Ill., Feb. 18.—*Editor Forest and Stream:* The Fisherman's Club of Chicago is a unique body. There is no set purpose except foregathering once a year; there are no dues; there are no officers except a secretary, who resigns yearly; there are no membership requirements—every good fellow fisherman is, by virtue of such, a member; there is no property. In-

INVITATION CARD OF THE FISHERMAN'S CLUB OF CHICAGO.

deed, there is "nothin' to it," and yet apparently a strong sentiment prevails over and between those who love the wild outdoor which impels them to get together annually at the dawn of the outing season, and makes them better for so doing.

The fourth annual dinner and camp-fire of the club will be held March 31, at a place to be designated later. Judge E. B. Belden, of Racine, Wis., will preside and chronicle some casting results even more remarkable than any made public.

The secretary will promptiy add suggested names to the roster, and will be thankful for any hints. George Henry Cleveland.

The Anglers' Casting Club of Chicago.

Chicago, Ill., Feb. 17.—*Editor Forest and Stream:* At the annual business meeting held Feb. 10 the following officers were elected for the year 1911: President, L. N. Place; Vice-President, Geo. L. Ames; Secretary-Treasurer, E. M. Town; Captain, H. J. Hokamp; Assistant Captain, F. Kleinfeldt. The executive board consists of our president, vice-president, secretary and captain, assisted by Dr. F. T. Hays, S. F. Campbell and W. S. Maloney. E. M. Town was elected to succeed himself as national executive committeeman. E. M. Town, Sec'y.

New Publications.

Letters to a Salmon Fisher's Sons, by A. H. Chaytor. Cloth, large 8vo., 285 pages, illustrated from photographs, $3 net. New York, Houghton Mifflin Company.

From his large experience in fishing for salmon in Great Britain, Norway and New Zealand, the author has drawn for the purpose of aiding young anglers, but there is much that he has set down which will be read eagerly by veterans. The chapters on rods and tackle, on casting and fishing, are valuable though brief and to the point. He cites a number of instances as apparent proof that salmon feel very little, if any, pain while hooked. One of these is the habit of many salmon to sulk head down while they hammer at the line with the tail. A salmon which for a long time submits quietly to a steady strain or sharp tugs, he believes, feels no pain. Again he compares the actions of a puppy which has snapped up a wasp with those of a salmon that has quietly taken one of these fiery insects from the water surface.

Falling in a salmon stream while wearing waders, Mr. Claytor says, need not be serious if one keeps his head and does not tire himself trying to breast the current. Air in the waders is not dangerous when one has to swim. Steel centered rods, he says, are a mistake.

Several chapters are devoted to the habits of salmon, as observed by the author, who has made a study of the spawning of these fish during many years. This alone is very interesting, as his deductions are in some respects contrary to accepted theories.

The Book of the Dry Fly, by George A. B. Dewar. New edition, cloth, 277 pages with eight full-page illustrations in colors, $2.50, net. New York, the Macmillan Company.

Not all of the teachings of the dry-fly pursuits are applicable to American waters, but some of them are, and the rapidly increasing number of anglers who fish with dry flies and follow, in greater or lesser degree, the methods that have come into vogue in England, have attained an important measure of success. But here as in some continental waters, to quote Mr. Dewar, "the dry fly is as clearly out of place on the wet fly water as the wet fly is on the dry fly stream." Beginners, therefore, will find in this volume much information which will enable them to avoid that which may prove useless here, and at the same time learn how and when it may prove best to fish the rises or to search for trout, using floating flies.

Methods of Attracting Birds, by Gilbert H. Trafton. Cloth, octavo, 171 pages, illustrated with drawings and from photographs, $1.25 net. Published under the auspices of the National Association of Audubon Societies, by the Houghton Mifflin Company.

There are plenty of persons, old and young, who are endeavoring to attract birds to their homes, but who, through lack of experience, do not go about the work in the best way. Mr. Trafton, in telling how this may be done, points out the fact that providing shelter and homes for our birds has become almost a necessity because of the destruction of their natural shelter through the clearing and "improving" of lands, particularly in the vicinity of towns and cities. The birds being willing, the work of attracting and keeping them is easy when it is prosecuted intelligently. The chief enemies of birds, the cat and the sparrow, are difficult to outwit, but how this may be done he describes interestingly, and this portion of the book alone is of great value. The species that may be attracted, their habits, food and shelters that may be made by any person possessing ordinary tools, are all treated fully, while the drawings and photographic reproductions assist materially in making all points plain. Every bird lover and every school should possess the book.

The Big Game of Africa, by Richard Tjader. Cloth, 364 pages, illustrated from photographs. New York, D. Appleton & Co.

It was after he had made three expeditions to British East Africa and had delivered a series of lectures on that large subject that Mr. Tjader's friends induced him to write a book for the guidance of other African hunters. This, then, is different from many of the numerous books on African hunting, recently issued. It is not a recital of events, but a carefully planned and executed treatise on every phase of African journeying and hunting. Each subject is treated separately and fully, though not at unnecessary length.

The author first describes the country, the shooting seasons, licenses and game laws. He gives in detail the necessary equipment, the expense, the men and animals needed and the way in which the stranger may live in harmony with his helpers. Then follow chapters on the habits and the pursuit of all of the large and small game to be met with. The final chapters are on the natives; on missionaries, settlers and officials; on photographing wild animals; on taxidermy; on outfits and routes.

Interspersed throughout are stories of the chase, making the volume anything but dull. In fact, it is far more interesting than the average book of its kind.

Fish Diseases.

The study of this subject is referred to in the annual report of the United States Fish Commission as follows:

During the fiscal year the Bureau has continued co-operation with the New York State Cancer Laboratory in the investigation of thyroid tumor or cancer in domesticated fishes. An aquarium with two independent systems of closed-water circulation, with proper means of refrigeration, has been established for the observation of salmon and trout and experiments in inoculation and treatment. Investigation at various stations of the Bureau and at other hatcheries have shown that the disease is even more widespread and general than was suspected. Considerable difficulty has been encountered in obtaining for purposes of experiment a sufficient number of fish above suspicion of infection, and it has been necessary in this effort to secure a quantity of wild trout from remote streams. Owing to the technical difficulties attending this work, which are equal to those retarding the advance of knowledge relating to the cause and nature of cancer in human beings, progress is made only by slow and painstaking steps and by the use of the most approved appliances and methods. For this reason it is highly important that the Bureau should be provided with a well-equipped laboratory and experimental hatchery, not only for the purposes of the present investigation, but for the study of the many other diseases affecting fishes, both under domestication and in a state of nature.

During the year the Bureau was called on to investigate epidemics among hatchery fish at Spruce Creek, Pa., and Roxbury, Vt. At the former place the mortality was due in part to the thyroid tumor or cancer before alluded to, but the majority of the deaths were apparently caused by the bacterial infection which the Bureau has found at other places, but which it has not the facilities to study at present. At Roxbury the disease is also infectious and annually causes large losses. The Bureau has likewise made investigations in Pennsylvania, Ohio and West Virginia upon the kindred subject of the pollution of streams in its relation to fishes and the fisheries.

By an act of Congress approved April 21, 1910, that portion of the previous law requiring the Secretary of Commerce and Labor to lease the privilege of killing seals on the Pribilof Islands was repealed, and as the lease of the North American Commercial Company expired by limitation on April 30, 1910, the Bureau, under the direction of the Secretary of Commerce and Labor, assumed the entire administration of the islands, including the functions and obligations previously imposed on the lessees. The present duties of the Bureau on the islands, therefore, embrace all matters whatsoever relating to the seal herd and the care, education and welfare of the native population.

Owing to the abuses connected with pelagic sealing mentioned in the preceding report of the Bureau, the condition of the seal herd is more precarious than at any previous period of its known history, and the utmost care must be exercised to save it from commercial extinction. In anticipation of the expiration of the lease recently in force and in view of the advisability

(*Continued on page 317.*)

YACHTING

Some News and a Little Gossip.

Unless the schooner Westward is purchased by some active yachtsman, she will not be raced the coming season. A friend of Alex. S. Cochran, the owner of the famous yacht, recently received a letter from Mr. Cochran, saying that the yacht would not be in commission this year. Mr. Cochran's health is not at all good and yachting is out of the question he fears. He had intended to bring Westward back from Southampton, but unless some enthusiast purchases the vessel, she will probably remain where she is now hauled out.

This is a big disappointment to all yachtsmen. They had hoped to witness some fine races with Westward and Elena, Morton F. Plant's new yacht this year. It is a disappointment, too, to Mr. Plant, and unless some good system of handicapping is arranged, there will be little sport in the big class, as Elena will outclass all existing vessels.

If the owner of the new Fife schooner could be induced to bring his yacht to these waters, he would have lots of opportunities to race his vessel against the best that has been built on this side. Yacht clubs would be only too ready to arrange races and to offer valuable prizes, and he could have much more sport than he is likely to get in home waters.

Several new boats are being built for racing in the small classes, and the racing in New York waters promises to be exceptionally good. Three new 31-raters are being built. One is for a syndicate of the Manhasset Bay Y. C. and has been designed by Gielow & Orr, another is for a syndicate of the Seawanhaka-Corinthian Y. C. and a third is for Commodore William H. Childs, of the Indian Harbor Y. C. These three will compete for the Manhasset Bay challenge cup now held by the American Y. C.. It is probable that a new boat will be built for the defense of that cup, and with four new boats in the class, the racing in Class P will be better than in any other class. These boats will represent different designs and different ideas, and success will not be due solely to good handling or to a boat being kept in better racing trim. Two boats are being built for this class to race in eastern waters, and it is very probable that another inter-city match will be arranged.

In Class Q which races mostly on the Lower Bay a new boat is being built for Gherardi Davis who last year sailed the S boat Alice. This new yacht has been designed by William Gardner who last year turned out Grayjacket, the champion of the class. The older boats, Spider, Soya and Grayjacket will be raced again.

There are two new boats building for Class S, one for Dr. C. L. Atkinson, of the Bensonhurst Y. C., from designs by William Gardner and the other for H. L. Whitlock, of the Brooklyn Y. C., by Herreshoff. These two will make the S Class an imposing one. It has grown wonderfully since it was first boomed four years ago through Sir Thomas Lipton offering a cup, and now there is another cup by the same donor which is held by the Crescent Athletic Club. It has to be won three times to become the property of the yachtsman and was last season won by R. B. Moore's Blue Bill in a series of three races in which there were ten starters.

At the annual meeting of the Huguenot Y. C. last week the following officers were elected: Commodore, E. A. Sanford; Vice-Commodore, G. W. Kear; Rear-Commodore, T. L. Coe; Secretary, H. M. Hyrick; Treasurer, G. C. Allen; Trustees (for two years)—F. B. Lewis and John Holden. Commodore Sanford presided at the meeting and at the sixteenth annual dinner, which followed it. The reports of the secretary, treasurer and regatta committee read showed the club to be in a flourishing condition, with a large fleet of small yachts, both of the racing and cruising type, and a good membership.

The officers, members and guests of the Knickerbocker Y. C. spent a thoroughly enjoyable evening at the annual dinner of the club held on Feb. 15 at the Hotel Manhattan. Commodore Louis H. Zocher, who presided, appointed Vice-Commodore Charles P. Loeser toastmaster. After brief addresses by the guests of honor Commodore H. Davis Ackerly and ex-Commodore A. H. Ostrom, of the Northport Y. C., and Commodore L. M. Allen, of the Norwalk Y. C., the prizes won on July 16, 1910, in the race from Northport and Norwalk to Port Washington, were presented to Harry Morse and Judson Snyder, owners respectively of the sloops Ojibway and Petrel of the Northport Y. C., and to Dr. C. B. Keeler and George Chaderton, owners of the Defiance and the Osprey of the Norwalk Y. C. It was announced that there would be a series of inter-club races next summer between boats from these three clubs. Those present at the dinner included Oscar Chellborg, J. O. Sinkinson, Harry Stephenson, L. D. Huntington and Dr. E. D. Rudderow.

The annual meeting of the Middletown Y. C. was held at the club house last week and the old officers were re-elected for the coming year. They are: Commodore, Arthur L. Miller; Vice-Commodore, T. M. Russell; Rear-Commodore, Harry A. Babcock; Secretary, Edward H. Wilkins; Treasurer, G. Ellsworth Meech; Fleet Captain, A. J. Betteridge. The committees were practically the same as last year.

The elections of the Corinthian Y. C., of Yale, were announced as follows for the coming year: Commodore, Leslie Soule, Dorchester Center, Mass; Vice-Commodore, James Wallace Paramore, St. Louis; Rear-Commodore, Cavour Hatley, Duluth, Minn.; Fleet Captain, Herman Rutgers Emmet, New Rochelle; Secretary, John Coleman, Louisville; Treasurer, Auguste R. Cordier, Woodhaven, N. Y.

Schooner for Dr. Grenfell.

The contract for the new vessel for the use of Dr. Wilfred T. Grenfell, in connection with the work of the Labrador Mission to deep sea fishermen has been recently placed by Bowes & Mower, naval architects, of Philadelphia, Pa., with A. C. Brown & Sons, of Tottenville, Staten Island, N. Y. The vessel will be named the George B. Cluett, as she is a gift to the Mission by Mr. Cluett, who is a life member of the Grenfell Association of America. In a recently published letter Dr. Grenfell expressed the need of a new schooner to assist in carrying on the work of the Mission, and a ready response was received from Mr. Cluett, who offered to give a vessel which should in every detail meet Dr. Grenfell's requirements.

The order for the design of the new vessel was placed with Bowes & Mower, and plans were drawn for a three-masted auxiliary working schooner, 135 feet over all, 115 feet on the waterline, 26 feet moulded breadth and 12 feet moulded depth. While designed to have large cargo carrying capacity, the lines of the hull have been drawn to make a vessel that will be unusually fast under sail, and very easily driven by her auxiliary power. She combines the elements of a working schooner with those of the modern fisherman, and at the same time has the graceful sheer and well proportioned overhangs of a sea-going yacht. She will be heavily constructed in accordance with the rules of the American Bureau of Shipping, and will be built with selected white oak frame and planking and with selected long leaf yellow pine, where oak is not used. Every detail of her construction has been carefully worked out by her designers to stand the hard service, which the vessel must meet and she will be built under the close personal supervision of the architects. Special provision is made for strength in case of her being stranded on any of the dangerous, uncharted reefs of the Labrador coast, where she will be used, and provision is also made to prevent any damage by the ice, which she will encounter in the northern latitudes.

She will be rigged as a three-masted fore-and-aft schooner with Oregon pine masts, and will have a moderate sail spread.

The officers' and owner's quarters are aft under a raised poop deck and trunk cabin, and will consist of a saloon, mess room, pantry, bath room and six staterooms. The galley and forecastle are in the house on deck forward. She will carry a crew of captain, mate, three men and cook.

The auxiliary power will be a 75-horsepower Wolverine kerosene oil engine, which will drive the vessel at a speed of six miles per hour. She will also have a donkey oil engine on deck for hoisting anchors, sails and handling cargo. She will be launched early in June, and will be delivered to the owners complete and ready for sea on July 1st of this year.

This vessel is the largest gift that has been given to the Mission by one individual at one time, and she will be most valuable to the Mission in carrying out its own work, and will also be a source of revenue to the Mission, as she will be chartered for scientific and sporting expeditions "down North" whenever opportunity offers, and when not otherwise employed, she will be chartered to trade out to the West Indies.

Dr. Wilfred T. Grenfell is an Englishman, an Oxford graduate. He first became interested in the work of the Royal National Mission to Deep Sea Fishermen among the fishermen of the North Sea. The work was medical as well as religious missionary work, and did much to better the condition of the men of the North Sea fishing fleets. In 1892 he was sent by the Mission to Labrador to investigate conditions there among the fishermen in the hospital ship Albert, a ketch of about one hundred and fifty tons. After a season among the fishermen, she returned to England, and in the following spring came back to Labrador, carrying equipment for two small hospitals.

From the beginning the work has grown until now the Society has four well equipped hospitals at different points along the coast, cooperative stores have been started, schools established, saw-mills built to give employment during the winter, and the people taught to take care of themselves. An inestimatable amount of medical work has been done among the sick, the poor have been clothed, and the starving fed. While the entire work is built upon a foundation of the truest Christianity, it is interesting to know that no man has ever been engaged by the Deep Sea Mission in the capacity of priest or clergyman. Dr. Grenfell himself is a man of indomitable courage and determination. He is master of his hospital ship Strathcona simply because he could not get a captain who would drive her as hard in all weather as he would have her driven, and the worst gale will not stop him when he decides to go.

In winter when the coast is impassable, he

travels by sledge with a team of dogs, and the hardest journey on skis mean nothing to him.

A skilled surgeon, a good executive, a man of the greatest personal charm and devoting his life to a splendid work, Dr. Grenfell is indeed a man who is doing much in the cause of humanity.

End of the Fleetwing.

The famous old schooner Fleetwing is now a scow. All her costly fittings have been removed. She has a short bowsprit and two pole masts and is tied up at Fairhaven for the winter. In the summer she was used in connection with the work of digging the Cape Cod Canal at the Buzzard's Bay end according to the Boston Globe. The Fleetwing will go back to this work again in the spring as soon as the ice is out on the bay. After the cut has been made the hull will probably be left on some beach to rot away and be forgotten by the yachtsmen.

This yacht, one of the best known of the early American schooner fleet, was built in this city in 1805. She was designed and constructed by J. B. Van Deusen and her dimensions are 126 feet 5 inches over all, 104 feet 10 inches waterline, 23 feet beam and 12 feet draft.

The most famous yachting event that Fleetwing ever took part in was the greatest of all ocean races, between the schooners Henrietta, Vesta and Fleetwing across the eastern ocean in December, 1866. It seems that the owner of the Vesta, Pierre Lorillard, and George Osgood, owner of the Fleetwing, were discussing a race that had been sailed from New York to Cape May in October, 1866, at the Union Club of New York, and this resulted in a match between these two yachts and James Gordon Bennett's Henrietta for $30,000 a crack.

Capt. Johnson, an old deep water sailor man, was navigator, while George Drayton had charge of the Vesta. Capt. John Thomas of the ship New York navigated the Fleetwing, Capt. Samuel Samuels, who died at Brooklyn only a short time ago, navigated the Henrietta, and he was the dean of deep sea master mariners.

On Dec. 11 all looked dark about the starting line off Sandy Hook lightship, wind thirty-four miles an hour, and the onlookers who were about the line on tugs and pleasure craft expressed pity that the race was to be started in such terrible conditions.

The Vesta was the first to cross the line, with the Henrietta a few lengths astern, and just to the weather of the former's wake. The Fleetwing was the last to cross, and she followed between the wakes of the leaders. Once away they worked off shore in a bunch, and held together until 8 o'clock that night, when they separated, and never after sighted each other during the race. They all headed north and sailed the northern course, and were spoken only once.

The yachts, after a most terrible passage, finally arrived off the Needles, England, on Christmas eve, with the Henrietta in the lead. The Fleetwing was second and the Vesta last.

Of the three schooners, the Fleetwing suffered the worst on the day and night of Dec. 19. A lull had taken off a bit of the gale's heft, and for a few hours there was a slight letup. Just before dawn, on Dec. 19, the gale suddenly grew into a violent hurricane, accompanied by the worst seas that the Fleetwing had encountered during the passage. She was swept time and again, forward and aft, all hands being in constant danger. Helmsmen and quartermasters were lashed to the wheel and life lines.

Just before 10 o'clock in the morning the hurricane was at its height where the Fleetwing was. She was eased to the sea under storm canvas. A look ahead showed the mountainous seas, lashed into wild, roaring, jumping water hills. Capt. Thomas had met them before, but then he had under him a clipper ship with a high freeboard. Not so on the Fleetwing, for she sat low on the water and her topsides were low.

The Fleetwing under short canvas for a while did not answer her helm as well as she did under full sail and in softer weather. For hours the helmsman got the better of the hurricane high sea fight, in which nerve was at its highest tension.

Finally about noon when the wind was heaviest and the seas most terrible of a sudden three great seas with the mad rush of a Niagara swept the Fleetwing's deck.

Tons of green, frothy water pounded on the deck and in its wild rush over the taff rail the seas swept eight men overboard and six were lost. After being hove to four hours the Fleetwing again started on her voyage. It was a fearful thing, happening as it did almost in mid-ocean. It proved, however, that even death did not crush Yankee pluck and courage.

The Vesta was the first to pick up the Scilly lights at 6:55 P. M. on Christmas eve. Just fifty minutes later those on the Henrietta made them out. The Henrietta won, because after passing the Scilly lights the Vesta got hung up in a fog, obliging her to slow down, and she lost even to the Fleetwing, which on the 19th had lost four hours on account of the fearful accident.

The Henrietta sailed 3,106 miles in 13 days 21 hours and 55 minutes. The Fleetwing sailed 3,135 miles in 14 days 6 hours and 10 minutes and the Vesta 3,144 miles in 14 days 6 hours and 50 minutes.

After this race and the return to this country in the following spring the Fleetwing passed through many hands until purchased by Emery O. Maples of St. Paul, Minn. In the spring of 1905, Mr. Maples sold the Fleetwing to the American Baptist Home Mission Society for use as a floating chapel in New York Harbor.

Her rig was taken out and small pole masts substituted and she was towed around New York Harbor by a tug. In fair weather services were held on deck, under an awning, for sailors on vessels at anchor in the harbor. In this service the Fleetwing remained until she was taken to Buzzard's Bay.

The Henrietta was lost off the coast of Honduras many years ago, while the Vesta is owned at Bridgeport, Conn., and is used in connection with the trials of submarine torpedo boats.

Narragansett Bay Meeting.

The annual meeting of the Narragansett Bay Yacht Racing Association was held last week in Providence. Two new clubs were admitted to membership in the association and plans were laid for the coming yacht racing season.

The following were elected officers of the association for the coming season: President, Benjamin Peckham, Edgewood Y. C.; Vice-President, William M. Arnold, Newport Y. C.; Secretary-Treasurer, W. Louis Frost, Washington Park Y. C.; Chairman of Power Boat Committee, J. Louis Potter, Fall River Y. C. Other delegate members of executive committee are Walter S. Almy, Bristol Y. C.; T. R. Goodwin, Conanicut Y. C.; Benjamin Franklin, Jr., N. B. 18-Foot Association.

It was voted that race week be held from Aug. 5-12, inclusive. It was announced that the interstate series for the championship of the 18-foot knockabout class had been arranged to be held on July 31, Aug. 1, 2 and 3, the week preceding race week.

A large number of delegates from the different members of the association were in attendance, and there was a general discussion of the coming racing season. Minor amendments were made to the constitution, and the racing rules were amended in a few particulars.

The office of Registration Secretary was consolidated with that of the secretary and treasurer, and the executive committee was increased to seven in number.

The most important amendment to the racing rules is the adoption of classes D and E for catboats, conforming to the limitations of the Narragansett Bay Cabin Catboat Association, and Class F for catboats racing under a rating measurement based on over-all length. Those racing in Class F need not be members of the Narragansett Bay Cabin Catboat Association.

An attempt was made to reinsert in the racing rules the paragraph requiring each yacht to be steered by her owner or other amateur, which was dropped at the general meeting last fall, but the effort failed. Under the racing rules as they now stand the entire crew and helmsman may be professionals.

The East Greenwich Y. C. and the Narragansett Bay Cabin Catboat Association were admitted to membership. This makes the membership roll of the Narragansett Bay Yacht Racing Association seventeen clubs, which is a remarkable growth during the past three years.

The various officers rendered their annual reports, showing the present favorable condition of the association. The report of the retiring president, T. R. Goodwin, was listened to with much interest by the delegates. Among other recommendations made, the president said: "There are still many things for this association to accomplish, the greatest of which is to devise better methods of conducting our racing. Our clubs have the very sad fault of changing their race committees frequently, and electing green or incompetent men for these important posts. In view of the presence of visitors in our waters, and with the lessons of past seasons before us, something must be done to remedy this evil. I would recommend that the chairmen of the regatta committees be called together and given instructions as to the best method of running races, selecting courses, etc., and that they in turn instruct their committees.

"The racing rules should be carefully studied. Protests should be thrashed out with extreme care, and as soon as possible after the race in question, and no snap judgment should be made, nor judgment of any kind until the facts on both sides are clearly established, when the rules covering the points at issue should be looked up carefully and applied.

"Prizes should be purchased with reference to the number of starters and keenness of the racing in the different classes, and should be awarded as soon as possible after the finish of a race. The option of cash prizes or suitable trophies to all prize winners would alone do much to bring into the game many men who now feel that they cannot afford the expense of maintaining a racing craft.

"It is recommended that wherever possible the number and value of prizes in each class be printed on the race circular.

"Clubs should provide suitable marks, signals, guns and other paraphernalia for the proper conduct of races.

"All preparations should be made and understood well in advance of a race day."

The secretary was instructed to communicate with the various clubs and ascertain their feeling in regard to the securing of a paid judge to assist each of the clubs at their respective regattas.

Eastern Y. C.

The Eastern Y. C. last year took a lively interest in ocean racing, and its race from Bar Harbor to Marblehead was a memorable one. It will do more for such contests this year. At the annual meeting of the club held last week a model of the gold cup offered by Commodore Clark for a race for schooners from New London to Marblehead was on exhibition. The cup is ten inches in height and the top is in the form of a Spanish galleon. The trophy becomes the property of the yachtsman winning it three times not necessarily in succession. As three other special cups have been offered the club for long distance racing this season, these events were the principal theme of discussion by the members.

All the old officers were re-elected, and Commodore F. Lewis Clark, of Spokane, Wash., will again fly the blue pennant from the schooner Emerald; Vice-Commodore Robert Treat Paine, 2d, of Boston, the red pennant from the sloop Humma, and Rear Commodore Herbert M. Sears, of Boston, the white pennant from the steamer Hope. The regatta committee which had charge of the international sonder trial races last year will continue in office. The sec-

retary announced that there were 686 club members and 315 yachts enrolled.

The club will be represented once and a half in the international sonder yacht races at Kiel next June in the second American invasion of German waters. The yacht Cima, owned by Guy Lowell, will be the full representative, while the yacht Bibelot is partly owned by R. W. Emmons, 2d, also of the Eastern. The third member of the American team that will go to Germany is Beaver, owned by George C. Dabney, and others, of the Beverly Y. C.

But the features of the coming season for the Eastern Y. C. are the two ocean races that will precede and follow the annual cruise early in July. The ocean race from New London to Marblehead will follow the Harvard and Yale rowing races, and with the Clark cup and anothe rtrophy for sloops and yawls, it is hoped that a number of the large yachts will round Cape Cod. The annual regatta will follow soon after July 4, and then will come the club cruise through the Gulf of Maine to Bar Harbor. A day or two after the finish the large yachts of the fleet will race back to Marblehead for cups offered by Guy Norman.

Gravesend Bay Y. R. A. Meeting.

The annual meeting of the Yacht Racing Association of Gravesend Bay was held in the Assembly, Brooklyn, last week. The clubs represented were Atlantic, Brooklyn and Bensonhurst yacht clubs, New York Canoe Club and Crescent Athletic Club. In the absence of Commodore G. R. Le Sauvage, Horace E. Boucher presided. Secretary Tieman made his report on the championships, and the percentages of boats that qualified in the different classes are as follows:

Class Q—Grayjacket, 73; Spider, 71, Florence, 54; Soya, 42.

Handicap Class (first division)—La Cubana, 73; Miami, 65; Joy, 64; Kentrel, 47.

Handicap Class (second division)—Careless, 77; Breeze, 56.

Class S—Blue Bill, 95; Bensonhurst, 68; M. and F., 52; Alice, 36.

Class X—Slow Poke, 81; Suffragette, 63; Merry Widow, 61; Mouse, 56; Skylark, 53; Bobs, 42; Pike, 31.

Class Y—Aries, 80; Skeets, 50.

It was decided that the election of officers should take place on March 22, to which date the meeting was adjourned, and it will then meet at the Crescent Athletic Club house. A tentative schedule of dates was arranged, the first of the season being on Saturday, May 27, under the auspices of the Atlantic Y. C.

After some discussion it was voted to recommend to the different clubs that the rules should be amended so that yachts of Class S should be allowed one professional in all races. This will make the rules accord with those of other associations.

There was a brief discussion about the lower bay courses, which have not given general satisfaction under all conditions, and the matter was referred to a committee composed of John R. Brophy and W. L. Inslee. It was also decided that there should be an annual dinner of those yachtsmen interested in lower bay racing and that it should be held as usual at the Crescent Athletic Club, when the association prizes will be presented to winning yachtsmen.

Motor Boating.

Motor Boat Challenge.

A challenge is on its way from the Royal Motor Y. C. to the Motor Boat Club of America for a series of races for the British International trophy for motor boats. It is expected to reach the club holding the trophy to-day and action will be taken on it at once. The challenge was accepted, and the British did not wait long after the Deed of Gift had been reframed and the racing rules agreed on.

Motor Boat Show.

The annual exhibition of the National Association of Engine and Boat Builders opened in the Madison Square Garden last Tuesday, and it will be the attraction there until March 5. The show this year is the largest in the history of the Association and probably the largest exhibit of boats and engines ever held in the world. There are more than three hundred exhibitors and every available inch of space has been taken. Not only are the exhibits shown on the arena floor, but the restaurant and the concert hall are filled.

There was not time to study the show and give an extended description of the show for this week's issue of Forest and Stream, but more attention will be paid to the chief attractions next week. There are some very handsome craft to be seen, and the builders have made great strides in building motor boats that fill every requirement and can be purchased for little money. Of course there are costly boats for those who can afford them and in these the Gas Engine and Power Company and the Electric Launch Company rather excelled.

The Gas Engine Company had some splendid boats in size varying from the launch tender to the 45-foot raised deck cruiser and the finish on these boats is beautiful.

The 45-foot cruiser of the midship deck type has a beam of 10 feet 6 inches and a draft of 3 feet. The forward part of the vessel is of the raised deck type, followed by midship deck, and then by a glass cabin with windows sliding fore and aft, with deck either side of same, also deck aft. The motor room, galley and crew's quarters are located forward under the raised deck, while the saloon, toilet for owner and stateroom are aft. The boat is very handsomely finished inside in mahogany joiner work, while the outside joiner work is of teak wood. A 4 cylinder Speedway engine of 32 to 40 horsepower is installed, arranged with deck controls. A speed of 11 miles per hour is guaranteed.

A speed launch 39 feet 8 inches over all, 6 feet beam, planked with mahogany, battened seam construction, with a guaranteed speed of 34 miles per hour is also shown. This boat has a 6-cylinder Speedway engine of the same style as in the Tartar, the fast one that was built last summer for R. E. Slaven, which made such an excellent record.

One of the regulation 30-foot runabouts, with a 4-cylinder, 4½ by 5-inch Speedway engine of 18 to 22 horsepower is exhibited. This boat has a speed of 14 to 15 miles per hour. The next boat is a handsome teak wood yacht tender 25 feet long, 5 feet 6 inches beam, with a 4-cylinder Speedway engine of 12 to 16 horsepower.

In addition to the launches, there will be a number of 1911 model Speedway engines shown.

The Electric Launch Company had several boats, the largest of which is 54 feet long. This is a beautiful vessel and its type is a popular one.

The 1911 Elco-de-Luxe is the largest, its length over all being 54 feet, extreme beam 9 feet 3 inches. The 1911 model has full headroom in the engine room, which is forward and accessible through a new form of sliding glass hatch, affording unusual light and ventilation for the engine room. The bridge deck, directly aft of the engine space, affords ample room to seat a company in wicker chairs and on the permanent settee. The steering wheel with engine controls alongside, is located at forward end of bridge deck.

The main cabin is luxuriously finished and equipped, the woodwork being in selected mahogany with ceilings finished in mahogany, panels finished in white enamel. Plate glass mirrors are used as ornamentation in this cabin. The seating arrangement of extension transoms or sofas is so arranged as to pull out, forming wide comfortable berths if it is desired to sleep on board, two comfortable berths being provided in the main cabin. Hanging lockers and writing desk, with cabinet and china closet, will be installed in the cabin and finished in selected mahogany.

Gas Engines and Launches.
Their Principles, Types and Management. By Francis K. Grain.
The most practical book for the man or boy who owns or plans to own a small power boat. It is motor launch and engine information boiled down and simplified for busy people, and every line of it is valuable. Cloth, 122 pages. Postpaid, $1.25.
FOREST AND STREAM PUBLISHING CO.

Canoe Handling and Sailing.
The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. Bowyer Vaux ("Dot"). Illustrated. Cloth, 163 pages. Price, $1.00. New and revised edition, with additional matter.
A complete manual for the management of the canoe. Everything is made intelligible to the veriest novice, and Mr. Vaux proves himself one of those successful instructors who communicate their own enthusiasm to their pupils.
FOREST AND STREAM PUBLISHING CO.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE,
TRAVEL, NATURE, STUDY, SHOOTING, FISHING, YACHTING

CORRESPONDENCE.
The Forest and Stream is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.
Subscriptions may begin at any time. Terms: For single copies, $3.00 per year; $1.50 for six months. Rates for clubs of annual subscribers:
Three Copies, $7.50. Five Copies, $12.
Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Canadian subscriptions, $4.00 a year, $2.00 for six months.
Foreign Subscriptions and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's. Foreign terms: $4.50 per year; $2.25 for six months.

ADVERTISEMENTS.
Inside pages, 16 cents per agate line. Special rates for three, six and twelve months. Eight words to the line, fourteen lines to one inch. Advertisements should be received by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices, seventy-five cents per line. Only advertisements of an approved character inserted.
Display Classified Advertising.
Hotels, Summer and Winter Resorts, Instruction, Schools, Colleges, etc. Railroad and Steamship Time Tables. Real Estate For Sale and To Let. Seeds and Shrubs, Taxidermists. The Kennel. Dogs, etc. Wants and Exchanges. Per agate line, per insertion, 13 cents. Three months and over, 10 cents per line.
Solid Classified Advertising.
For Sale. Kennel. Property For Sale. Real Estate For Sale or To Let. Wants and Exchanges. Per agate line, 10 cents. Absolutely no display. No advertisement of less than three lines accepted. Cash must in every case accompany order.
FOREST AND STREAM PUB. CO.
127 Franklin St., New York.

20-FOOT GURNET CLIPPER DORY.

Adjoining the main cabin is the galley and a lavatory. The galley will be equipped with the usual porcelain-lined sink, copper sheathed stove bench, large ice-box, metal lined and thoroughly insulated with cork.

The power equipment consists of a gasolene engine of 60 to 75 horsepower of 6-cylinder, with gasolene tank of one hundred gallons capacity. These boats have proved ideal for day service particularly, although provision is made for sleeping four on board in the owner's quarters, with berths for two men in the engine room.

A trip taken by one of these boats last year proved very interesting, from New York to the Thousand Islands, via the Hudson River and through the canals, the owner and his party cruising as he would tour in a motor car over this same country. The trip was most enjoyable. The waterways through this part of the country are most picturesque and afford points of interest that it is impossible to obtain when traveling in any other manner.

For the small boat owner the power dories proved big attractions. These boats are staunch and able. They cost comparatively little and have become very popular in the last few years. The Atlantic Company occupy two spaces and on the main flaar show a 20-foot dory with a 5-horsepower Atlantic special engine and an 18-footer with 4-horsepower motor. Both boats are attractively finished in pine and oak, painted white with anti-fouling bronze below the waterline.

The feature, however, of the Atlantic Company's exhibit of this year is contained in the annex. There is a 30-foot semi-speed Clipper launch, equipped with a 3-cylinder, 15-horsepower Atlantic special motor. The Clipper is handsomely finished in mahogany, hull painted white with a line of gold leaf and an arrowhead following the sheer, anti-fouling green below the waterline and bronze rudder and shoe. The interior is attractively arranged with engine forward and thwart-ship seat for engineer, which covers the gear. The after cockpit is arranged with side locker seats comfortably furnished with cork filled Pantasote cushions, an ice-box of liberal dimensions being arranged under the after seat.

On the space alongside of the Clipper is a 30-foot Gurnet dory raised deck cruiser. This boat is a recent production of the Atlantic Company and embodies in a small cruiser comfortable accommodations for a party of a matter of four or so, including toilet, locker space and possible arrangements for cooking. The motor is the 10-horsepower Atlantic special with reverse gear arranged with one-man control to bulkhead. The completeness of the outfit is evidenced by the fresh-water tank and liberal gasolene storage and numerous small features. The boat is lighted by three ports on each side and a skylight of liberal dimensions rendering the cabin accommodations unusually comfortable.

ELCO SPEED RUNABOUT.

CRUISING 45-FOOTER WITH SPEEDWAY MOTOR.

Canoeing.

Pawtuxet C. C.

The Pawtuxet Canoe Club held its annual meeting at the Newman last week. Officers were elected as follows: President, M. W. Dickinson, Jr.; Vice-President, A. Tabor; Secretary, C. S. Barningham; Treasurer, William E. Collins; Captain, Amos W. Hazard, Jr.; Lieutenant-Captain, Charles A. Domlar; Board of Governors, Daniel R. James, Frank E. Berry, Fred Cowdin and W. C. Grabe; Racing Committee, Amos W. Hazard, Jr.; Fred Cowdin, Al. Tabor, William French; Membership Committee, Al. Tabor, R. S. Thornton, C. S. Barningham, C. H. Shippee, Jr.; Entertainment Committee, William Grabe, Thomas G. Mulgrew, Arthur McCrudden; House Committee, Herbert Davis, C. H. Shippee, Jr., F. E. Berry; Delegate to R. I. C. R. A., Daniel R. James.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Dayton E. Herrick, 99 Spring street, Ossining, N. Y., by A. Rivers Genet, Jr.

Central Division.—Harold D. Stephens, 800 Penn avenue, Wilkinsburg, Pa, and Elmer C. Wayne, 800 Penn avenue, Wilkinsburg, Pa., both by F. D. Newbury; Elmer L. Smith, Euclid avenue, Bellevue, Pa., and P. C. Schoeneck, Wabash Building, Pittsburg, Pa., both by C. C. Edmunds.

Western Division.—David Dunn, 4546 Ashland avenue, Chicago, Ill., by J. G. Roberts.

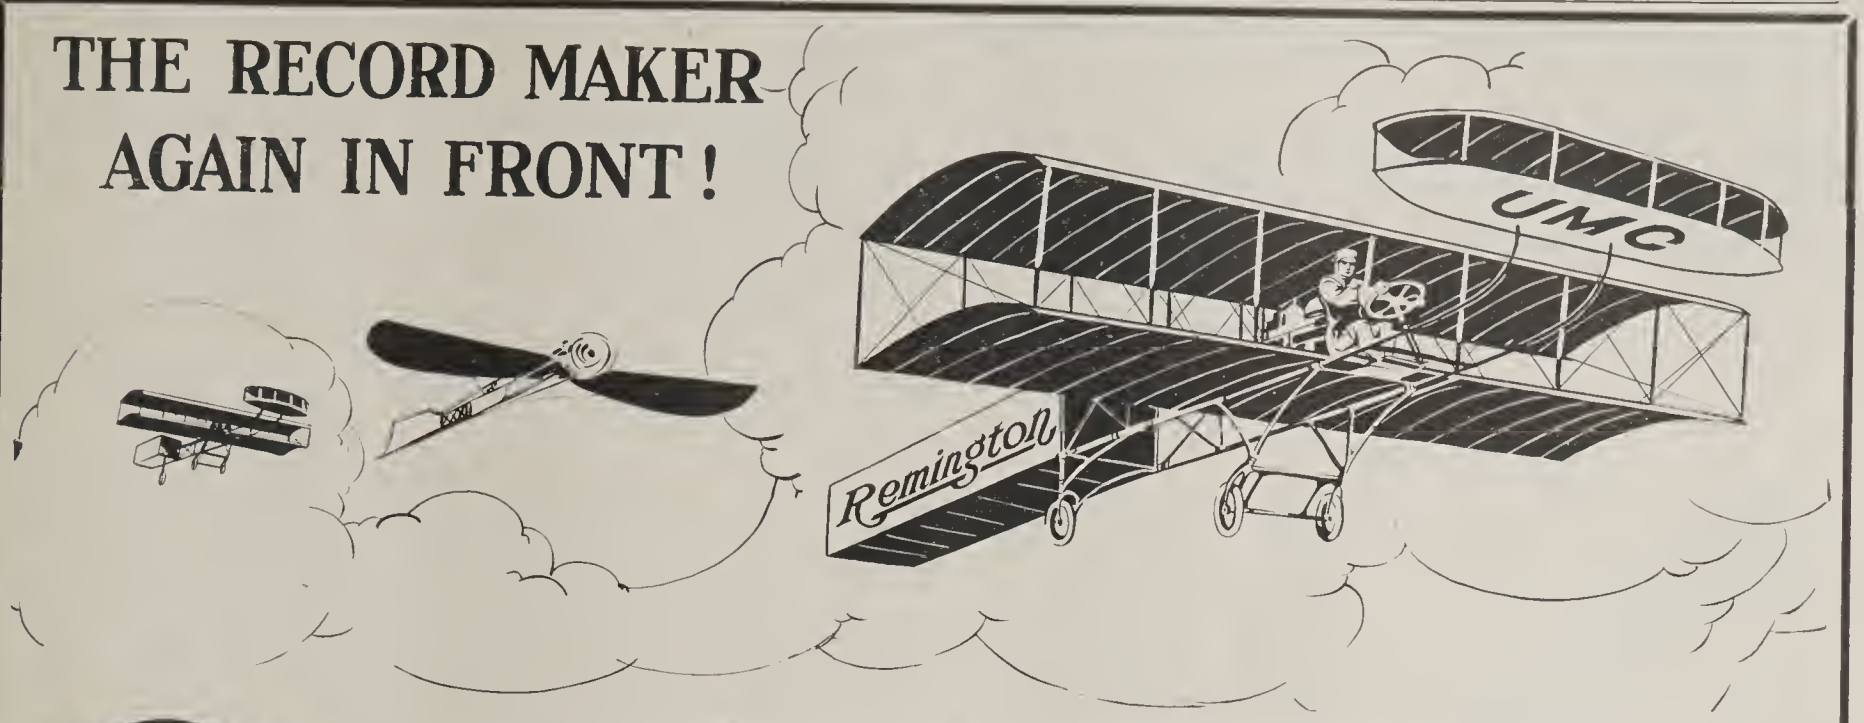
MEMBER RE-INSTATED.

Western Division.—4674, Walter E. Foster, 814 North Grove avenue, Oak Park, Ill., (formerly of Central Division).

MEMBERS TRANSFERRED.

5532, Farnum F. Dorsey, Wilder Bldg., Rochester, N. Y., from Atlantic to Central; 2724, Clarence P. Moser, German Insurance Bldg., Rochester, N. Y., from Atlantic to Central; 2323, William N. Brooks, 329 Lackawanna avenue, Scranton, Pa, from Eastern to Central.

THE RECORD MAKER AGAIN IN FRONT!



REMINGTON UMC

.22 LESMOK CARTRIDGES WIN 100-SHOT WORLD'S CHAMPIONSHIP

Dr. W. G. Hudson, shooting REMINGTON-UMC cartridges and a REMINGTON-UMC Pope Schuetzen Rifle, established a new 100-shot world's gallery record at the Sixth Annual Tournament of the Indoor Rifle League of the United States, January 31st, 1911, with a score of **2482 OUT OF A POSSIBLE 2500.**

Seven out of the first twelve high men in this championship Match shot REMINGTON-UMC Lesmok .22's.

REMINGTON-UMC cartridges were also **FIRST in Bull's Eye Match** **FIRST in Continuous Match** **FIRST in Expert Match** **FIRST in Premium Match**

This unprecedented display of accuracy has never been equalled by any other make of gallery ammunition. Are you using REMINGTON-UMC'S?

***Remington-UMC* — the perfect shooting combination.**

Sept. 21.—Braddock, Pa.—Western Pennsylvania Trapshooters' Association. Louis Lautenslager, Pres.
Oct. 4-5.—Columbus (O.) G. C. L. Fisher, Sec'y.

DRIVERS AND TWISTERS.

The California Wing Club, the only organization near San Francisco using live birds for trapshooting, is preparing for the coming season, and at the annual meeting recently held elected the following officers: President, Clarence Haight; Vice-President, W. W. Terrill; Secretary and Treasurer, Tony Prior; Directors, C. C. Nauman, E. Schultz, and Frank Turner.

A Montgomery County (Pa.) correspondent writes: "The Jenkintown Gun Club has reorganized and will in the future be known as the Mineral Spring Gun Club. The club house and all equipment have been moved from Abington to near the Mineral Spring Hotel, at Willow Grove, and this place will in the future be the permanent headquarters of the club. Many expert wing shots and target men are identified with the organization."

The fourth annual registered shooting tournament of the Keystone Shooting League will be held April 11 and 12 at Holmesburg Junction, Philadelphia, under the new interstate system. The program each day will consist of ten 15-target events, and calls for a $15 entrance fee daily. Each event calls for $1.40, with an additional $1 on the Squier "money back" system, and an optional sweepstakes of $1 each event. By this method each shooter knows exactly what his day's shooting will cost, and those who do not want to shoot for money will be able to get through on $4.00 a day. An additional event, known as the Keystone championship will be decided, two extra events, at 25 targets apiece, being tacked on the end of each day's program. The Keystone League donates $50 in prizes for this event, the money to be divided $25 to high gun, $15 to second and $10 to third. The Inter-State Association also donates $100 in money, to be awarded in the regular program, one-half on each day. All shooters in the regular and Keystone events will shoot from the 16yds. mark. The tournament will be managed by J. H. Anderson, with Luther Squier in charge of the office and Charles North taking care of the traps.

Registration Under the New I. A. Policy.

Pittsburg, Pa.—*Editor Forest and Stream:* We have received several inquiries from gun clubs located in the Rocky Mountains, Intermountain and far Western States, as to whether they may charge more than 2 cents per target, and still have their tournaments registered under our new policy. For the benefit of all concerned, we would state that our new policy does not in any way interfere with any old established custom, and inasmuch as gun clubs in the sections named are compelled to pay very much more for targets (due to excessive freight rates, etc.) than is paid by gun clubs in the more favored parts of our country, said clubs may charge up to 3 cents per target and have their tournaments registered. We would suggest, however, when more than 2 cents per target is charged contestants, that the entrance fee be increased to $1 50 per event, to meet the changed conditions.

Elmer E. Shaner, Sec'y-Treas.

Riverside Gun Club.

Essington, Feb. 11.—The Norwich and Riverside gun clubs met this afternoon in a team race at Essington, and Riverside won by a score of 173 to 141. The conditions were 25 targets a man, 16yds. rise. The scores are as follows:

Riverside.		Norwick.	
Speller	23	Ferry	24
Bowers	21	Duffy	20
C Wiltbank	20	Shaw	17
Diesel	20	Ward	16
Aborn	18	C Bonsall	15
J Wiltbank	18	H. Duffy	13
Horn	17	Staley	13
Shaw	19	A Bonsall	12
Johnson	17—173	Ritter	11—141

Chicago Gun Club.

Chicago, Feb. 11.—This was a fine day, the sky being clear and the sun shining bright, so that thirteen shooters were tempted to try their skill at the traps, while the glare of the sun on the white blanket of snow made it hard on the eyes.

In event No. 1, Stannard took first honors with 49 out of 50, Matthews being a close second with 48. Taggart was high amateur with 44, while MacLachlan and Goldsmith were next in line, each breaking 43. MacLachlan was high on the doubles in event No. 2 with 29, Fox was second with 25, while Taggart brought down 24. Stannard and Matthews certainly shot a good race, each breaking 97 out of 100, and then in an extra frame of 25 Stannard went through without a miss, while Matthews lost one.

Goldsmith was well pleased with his 83 per cent. after more than a year's lay-off from the traps.

Events:	1	2	3	4	5	6	7

J R Sharp, 16	..	22	..	..	..	19	..

Event 2 was at 20 pairs. Event 6 was at 12 pairs. Event 7 was at 10 pairs.

Feb. 12.—The prospects for a busy year at the traps certainly look good when thirty enthusiastic shooters turn out on a day such as we had to-day, dark and gloomy, with a drizzling rain coming down part of the time, but this did not dampen their ardor in the least, and despite the poor light the scores ran quite high and several remarkable good ones were hung up.

J. R. Graham was shooting in great form, and if he keeps up the same gait at Kansas City this week, he will make any of them hustle. He broke 99 out of 100 singles, the first 50 from 20yds., breaking 49, and then broke his 50 straight from 16yds., and then 5 from 23yds., finishing up with 5 more from 26yds. He also broke 38 out of 40 in the event of 20 pairs.

In event No. 1, Peck was second with 47, Clancy third with 45, while H. Dunnill and R. Winters each broke 44.

Graham took the honors in the double event at 20 pairs. Peck again came in second with a score of 31, and H. Dunnill was third with 28.

B. Donnelly shared first honors with Graham in the third event, each making 25, Flewelling, Peck and Clancy 24.

In event No. 4, Graham again went straight, Thwaite, Dr. Robb and Clancy tied for second on 24, Flewelling and Peck each bringing down 23. Peck was going at a good steady clip, getting one 25, three 24s and four 23s, giving him 94½ per cent. on 200 singles. All the boys were glad to see Flewelling out to-day after his long siege with rheumatism.

Mr. C. E. Campbell, of London, England, and three times winner of the Grand Prix at Monte Carlo, France, was with us to-day, this being the first time he shot at targets, and said it is quite a different style of shooting from that which they do on the other side of the big pond.

This was Donnelly's first visit to our grounds, and there is no doubt but that if he comes over oftener in the future he will be up among the top-notchers. Apperson was not shooting up to his usual form.

Events:	1	2	3	4	5	6	7	8	9	10

Mrs Cutler, 16	16	..	9	7	..	..	..	..	..	..
J Gracely, 16	38	..	19	..	..	..	..	..	..	..

Event 7 was at 12 pairs. Event 10 was shot from the 23yds. mark.

Feb. 13.—Seven shooters came out to the park. The drizzling rain and fog failed to scare them out. Fetherston was just about right to-day, as a score of 98 out of 100 on a day such as to-day is certainly going a steady clip, especially when you consider that he shot the last frame from 19yds., where he dropped one target and broke the last five from 23yds. Cutler was hot on Fetherston's heels in the first 100, he smashing 95 out of the 100 with a new pump. Mrs. Fetherston did fine, too, getting 21, a 19, 16 and 15. Mrs. Cutler was jubilant over her success of making the best scores she has had so far, getting one 15 and two 13s.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

C B Willard	18	18	15	..	..	..	..	10	..	..	..	..

Events 8, 9, 10 and 11 were at 12 pairs. Event 7 was shot from the 19yds. mark and event 11 from the 23yds. mark.

W. F. Merkle, Supt.

Frontier Rod and Gun Club.

Buffalo, N. Y., Feb. 15,—The regular shoot of the Frontiers opened with fair weather conditions yesterday afternoon. A large and enthusiastic attendance was on hand to see the sport and twenty-nine gunners faced the traps, both of which worked to pertection.

Eichberg and Dewald tied for high gun with 78 per cent. Wakefield, W. J. McKenna and E. Bidell won the points in the trophy race, while Suckow, Dewald and Kamman at 18yds., and Eichberg at 19yds. tied in the gun race with 19. After a very interesting shoot-off Dewald won with 20 broke. In the club match race the reds were victorious over the greens by eleven birds.

The feature of the day was a 100-bird race between M. J. McKenna and William Boyer, with McKenna a winner by a small margin.

Ossining Gun Club.

Ossining, N. Y., Feb. 14.—Twenty-two shooters faced the traps at the Ossining Gun Club grounds on Lincoln's Birthday. An overcast sky made the light very bad, which accounts for the poor scores made by some of the shooters. Event No. 1 was a fifty-bird handicap event for nine prizes, and event No. 2 was a 100-bird scratch event for the Poughkeepsie punch bowl. The conditions of the punch bowl event are 300 birds, scratch; 200 have been shot at. The third and last 100 will be shot at on Feb. 22. The scores:

Event No. 1, 50 birds, handicap:

J H Moran	20 50	G B Hubbell	6 42
G Brandreth	20 48	D Connors	6 42
J T Hyland	7 48	L Lyons	8 40
D Brandreth	4 46	P Wood	5 40
I Washburn	5 46	Col F Brandreth	5 40
A L Burns	4 45	C Wagner	20 40
W Fisher	8 45	W H Hyland	20 39
A Bedell	4 45	W J Kuder	12 38
F Hahn	13 45	W J Tuttle	9 37
N Hubbell	20 44	E Pratt	15 30
C G Blandford	4 44		

Event No. 2, 100 birds scratch:

D Brandreth	85	A Bedell	82
J T Hyland	83	Col F Brandreth	72
C G Blandford	83	N Tuttle	72
A L Burns	83

The Southern Handicap at Charlotte, N. C.

CHARLOTTE, N. C., Feb. 18.—The decision of the Inter-State Association to hold the next Southern Handicap at Charlotte, N. C., will cause a gathering of shooters in that city such as no Carolina city has in the past entertained, and will be, it is confidently hoped, the means of awakening a love for the trapshooting sport in a section where every boy over twelve is a shooter but very few are trapshooters.

The Charlotte Gun Club has been in active existence for about fifteen years. This is but to be expected when it is remembered that Charlotte has been the home of that prince among ammunition men, Colonel J. T. Anthony, for at least that length of time.

Every regular attendant of registered shoots, east of the Mississippi River, has had the Charlotte Gun Club in mind when figuring on high average, for he was fairly certain that that club would be represented by Nuchols, Crayton, Todd or Bates—perhaps by all of them, and averages must be high indeed to escape that squad.

Aided by all the ammunition men who did not take to the tall timbers, and by a most energetic Greater Charlotte Club, the gun club is reaching out to bring to Charlotte every available shooter. The canvass is being made on a carefully planned and thorough basis and should result in an attendance equal to or exceeding that, at any Southern Handicap held in recent years.

The club has secured the fair grounds for the shoot, and this will make the location ideal. The grounds are a little over two miles from the hotels and can be reached by trolley on a five-minute schedule. No matter how large the attendance of shooters and spectators, there will be seats for all and an unobstructed view of the whole field—the background is superb.

The office will be well taken care of, the squad sheets gotten in good time, and the shoot run on a fast schedule with no breaks. The money will be divided on the Squier money-back system, and no one who attends will have to pay much more than his hotel expenses.

Charlotte itself will prove a treat to the visitors. It is as old as the everlasting hills, and as new as a fresh country egg—no cold storage. It is, and has been alive all the time it has been in existence, and most of the time in the public eye.

It was named for Queen Charlotte of England and survived that, and the Queen's Museum stood where the court house now stands. The connection between these two facts is obscure but still there; however, the museum is not.

On the 20th of May, 1775, the stout burghers—they should have been stout whether they were or not, for they lived in the finest climate in the world (ask any Charlotte man)—met at Charlotte Court House and served notice upon King George III., that he was no longer to consider himself as being boss of that region. In doing this they anticipated the still stouter burghers of Philadelphia over a year and gave them a model. But still better, they gave to their descendants the right to call themselves Descenants and to form a society, and to appear on every jubilee occasion in plug hats and black coats and to have the hats protected by the closed season.

Before reaching Charlotte the traveler gradually assimilates the idea that Charlotte is a dry town. This idea is greatly strengthened by the sight of numerous signs, electric and otherwise, in the vicinity of the depot indicating that Near-Beer, Ni-Beer, Beerine and such like are for sale in the sign-decorated stores. Do not try to learn what all these beverages are until after the shoot—no one really knows what they are, least of all the police; but they interfere with shooting.

The entrance street is broad and well paved and shaded with trees like those under which Pocahontas and John Smith flirted, and under which Uncas, Hiawatha and their friends took their Sunday afternoon strolls, and such as are seldom seen by later-day men.

There is the old Mint, now an assay office, where Carolina gold used to be made into dollars and where gold is now assayed; then the postoffice and the site of the new Y. W. C. A., which will be built as soon as the men put up the money; the Manufacturers' Club; the large part and church of the Presbyterian elect, and the Selwyn Hotel.

Then Independence Square, which is not a square at all, more paved streets, stores, more hotels, the court house, Law Building, the Skyscraper, the Y. M. C. A. then around back to the Manufacturers' Club. If you get cards to one or more of the clubs, you will find that all roads lead to them.

It is a matter of fact that Charlotte is only one night's run from any old place, or to be more exact, any old place is only one night's run from Charlotte. The genial secretary of the Greater Charlotte Club can prove this to you at any time.

There will probably be a show or two at the Academy of Music, the moving picture shows will all be in full blast and the Auditorium may come out of its trance at the same time, and if there is no other convention going on, which will be remarkable, you will find plenty of guides to show you around.

Seriously, the shoot will be well worth while, the Charlotte Gun Club worked for this shoot and intends to make it a success. It will be well managed, your convenicnce will be a matter of convenience to others than yourself, and if you do come, you will be one of two hundred or so satisfied and happy shooters. Mr. Elmer Shaner will be here himself, or by proxy, and the Squier money-back system will make it sure that your roll will not be any more depleted than you care to make it.

Saturday, May 6, and Monday, May 8, will be practice days—the shoot proper will be on May 9, 10 and 11, Tuesday, Wednesday and Thursday.

G. C. C.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

WINCHESTER

TELESCOPE RIFLE SIGHTS

A telescope sight is an instrument of precision and should be capable of positive focal adjustment. This can be obtained only by micrometer markings such as are used exclusively on Winchester telescopes.

Other distinctive features of these sights are: Interchangeable Reticules, Smallest Aperture Reticule made, Top or Side Mounts, Micrometer Adjustmeet of Objective Lens, adaptability to any repeating or single shot rifle, and a method of mounting mechanically correct. See them at your dealer's.

Send for handsome, illustrated, descriptive circular.

WINCHESTER REPEATING ARMS CO.

New Haven :: :: :: :: Connecticut

Independent Gun Club.

HOLMESBURG JUNCTION, Pa.—At our monthly shoot on the 11th, Howard Wills won the gold prize for high gun, after shooting off a tie with Frank J. Hineline, of Camden. Hineline had a 10-target handicap and stood a yard further away from the traps than Willis.

There was another close race for the prize for high net score, there being a tie between Hineline and Thomas Tansey at 83, but on the shoot-off Tansey won and received a club spoon. The spoon for runner-up was captured by Phil DuPont, and the class challenge spoons went to the following: Class A. E. A. Cordery; Class B. F. W. Matthews, and Class C, Joel Davis.

The shoot was at 100 targets, divided into four strings, yet the 24s of Mechan, Budd and Wilson were the nearest approach to a straight made during the day. Tansey was the only one who shot consistently through the program, Mechan spoiling his chances by a 14 and Hineline losing out with an 18 after breaking 22, 21 and 22. The scores:

	Hdcp. Yards.	Targets				Allowance.	Total.
Anderson	16	19	19	22	18	12	90
Davis	16	12	11	12	10	19	61

New York Athletic Club.

Travers Island, N. Y., Feb. 18.—Sixteen shooters lined up for the sport before the traps at Travers Island this afternoon, and competition was keep to the end. F. A. Hodgman was the star performer and the first 100 targets yielded him a total of 96, a most excellent showing in the prevailing troublesome wind, 70 of which were brought down without a miss. The members are most enthusiastic devotees of the trapshooting sport, and anticipate a lively shooting season. The scores of the day were as follows:

Haslin cup, handicap, 25 targets:

F A Hodgman	0	25	G F Pell	2	20
T Lenane, Jr.	2	25	R C Reeves	0	19
E Eckart	4	22	G J Batterson	3	19
F H Schauffler	0	22	B M Higginson	0	19
W B Ogden	2	22	A E Ranney	2	18

Trap at Larchmont.

The weekly competition at the traps was participated in by seventeen members of the Larchment Yacht Club on Sunday the 19th, and one of the most closely contested shoots resulted. Ralph Spots, the high gun, did not win a single event which counted for the prize, but broke 111 out of 125 targets. The special handicap shoot, 125 targets, went to K. R. Hooker, with a total of 118 from an allowance of 12.

Special shoot, scratch, 10 targets:

K R Hooker	10	R L Spotts	8
D McMahon	9	R Johnson	8
W J Elias	9	A W Church	6
G W Lemheck	9	Dr Von Roeder	5
W E Bemis	9	Dr Short	9
J R Collins	8	S Samson	7
E A Wilson	7	Dr Cudlipp	4
G L Bready	6	J G Batterson	7
T Lenane	8		

Special shoot, scratch, 15 targets:

E A Wilson	14	J R Collins	12
K R Hooker	14	S Samson	11
Dr Short	13	G W Lembeck	10
R L Spotts	13	W E Bemis	10
R Johnson	13	G L Bready	8
W J Elias	12	Dr Von Roeder	10
A W Church	12	D McMahon	7
J G Batterson	12	Dr Cudlipp	4
T Lenane	12		

Baudouine cup, handicap, 25 targets:

T Lenane	2	25	W E Bemis	4	23
R Johnson	3	25	J G Batterson	1	21
E A Wilson	2	25	S Samson	1	21
A W Church	3	25	G W Lembeck	2	21
D McMahon	7	25	Dr Von Roeder	7	20
G L Bready	3	24	W J Elias	2	18
R L Spotts	2	24	Dr Short	3	16
K R Hooker	3	23	Dr E C Cudlipp	7	13

Tie between T. Lenane, E. A. Wilson, R. Johnson, A. W. Church, and D. McMahon, won on shoot-off by Mr. Lenane.

Commodore's cup, handicap, 25 targets:

R Johnson	3	25	W J Elias	2	23
D McMahon	7	25	W E Bemis	4	20
E A Wilson	2	24	J R Collins	4	20
G L Bready	3	24	Dr Short	3	21
T Lenane	1	24	A W Church	3	20
G W Lembeck	2	23	J G Batterson	1	21
K R Hooker	3	23	Dr E C Cudlipp	7	16
R L Spotts	1	23	S Samson	1	16
Dr Von Roeder	7	23			

Tie between B. Johnson and D. McMahon, won by Mr. Johnson on shoot-off.

Sauer gun, handicap, 25 targets:

J R Collins	4	25	J G Batterson	1	22
G W Lembeck	2	25	Dr Short	3	23
K R Hooker	3	25	R Johnson	2	21
D McMahon	7	25	R L Spotts	1	23
E A Wilson	2	24	T Lenane	1	22
W J Elias	2	24	G L Bready	3	22
A W Church	3	24	W E Bemis	4	23
Dr Von Roeder	7	24			

Tie between J. R. Collins, G. W. Lembeck, K. R. Hooker and D. McMahon, won by Mr. Collins on shoot-off.

February cup, handicap, 25 targets:

G L Bready	3	25	K R Hooker	3	23
J R Collins	3	25	T Lenane	1	23
D McMahon	7	25	E A Wilson	2	22
G W Lembeck	2	24	W E Bemis	4	23
R L Spotts	1	24	R Johnson	2	21
Dr Von Roeder	7	23	W J Elias	2	21
A W Church	3	23	J G Batterson	1	19
Dr Short	3	22			

Tie between G. L. Bready and J. R. Collins—D. McMahon not in the competition; too late for shoot-off.

Special trophy, handicap, 125 targets:

K R Hooker	12	118	A W Church	12	110
E A Wilson	7	116	G L Bready	12	109
D McMahon	23	116	W E Bemis	16	108

T Lenane		113	Dr Von Roeder	28	105
R Johnson	8	113	Dr Short	12	104
G L Lembeck	8	112	J G Batterson	4	102

High gun prize, scratch, 125 targets:

R L Spotts	111	A W Church	98
E A Wilson	109	J G Batterson	98
T Lenane	109	G L Bready	97
K R Hooker	106	D McMahon	93
R Johnson	105	Dr Short	92
G W Lembeck	104	W E Bemis	92
W J Elias	99	Dr Von Roeder	77

Montclair Gun Club.

Montclair, N. J., Feb. 18.—In event No. 1, a walking match, Bush was high man with 6 breaks. Event 2, at 10 targets, Frazee broke his 10 straight. Event 3, at 15 targets, was won by Boxall with 14 to his credit. Event 4, at 10 pairs of doubles, was won by Frazee.

In the members' handicap, for the monthly cup, event 5, Bush was high man with 21 points.

Event 6, at 25 targets, scratch, was won by Boxall with 23, beating out Frazee by one point.

In the pick-up team race, Team No. 2, composed of England and Winslow, were easy winners, missing but one bluerock.

The Montclair team will visit the Passaic County Gun Club at Clifton, on Saturday, the 25th.

Events:	1	2	3	4	5	6
Targets:	10	10	15	20	H. 25	25
C L Bush	6	8	6	12	4 21	..
G W Boxall	3	5	14	8	3 20	23
J C Atwater	5	4	10	4	3 20	18
Y T Frazee	3	10	12	13	2 20	22
I W England	2	..	11	7	3 20	16
E Winslow	..	..	..	9	.. ..	..

Two-man pick-up team race, 10 targets per man: Bush and Boxall 16. Winslow and England 19. Atwater and Frazee 16.

E. Winslow, Sec'y.

Live Birds at Palm Beach.

Palm Beach, Fla., Feb. 15.—A live-bird match was shot to-day on the grounds of the Florida Gun Club, between Joseph P. Knapp, of New York, and Dennis A. Upson. The latter killed 23 out of 25 and Knapp 22. Upson, out of a second 25, killed 22.

Two matches of 25 birds each were also shot by F. K. Burnham and C. L. Feltman, of New York. In the first Burnham killed 21 and Feltman 20, and in the second Feltman killed 12 straight with one barrel, winning with 22 to 20.

Feb. 19.—Another live-bird shoot was held at the Florida Gun Club yesterday. In the first event, Messrs. M. I. Brabh, of Detroit; F. K. Burnham and D. A. Upson, of New York, and James Carruthers, of Montreal, killed 7, 8, 9 and 7 birds respectively. In the second, Mr. Carruthers killed 9, Mr. Burnham 8, and Mr. Upson 10 straight. In the third round, Mr. Brabb dropped out and Mr. Carruthers killed 7 and Mr. Burnham 9, the latter winning the sweepstakes. The shooting was at 30yds.

In a special 10-bird match between Messrs. Burnham and Carruthers, both standing at 34yds., Mr. Burnham won with 9 kills against Mr. Carruthers' 8, and the former then killed 10 birds straight in a practice shoot.

Crescent Athletic Club.

Bay Ridge, N. Y., Feb. 18.—Almost perfect conditions prevailed while the shooters of the Crescent Club went through the scheduled events. Some 3000 targets were thrown in the nine matches, and a number of ful scores were recorded. Fifteen shooters attended, who kept things humming during the four hours that it took to run through the program. L. C. Hopkins was high gun of the day. The scores:

February cup, 50 targets, handicap:

Geo Felix	2	47	J F James	4	40
L C Hopkins	8	45	D T Leahy	0	40
Geo Piercy	0	43	F S Hyatt	3	37
G Gardner	6	42	A G Southworth	2	38
F T Bedford	2	42	C H Pulis	4	37
F B Stephenson	0	41	C R James	2	36
A E Hendrickson	4	41			

Stake trophy, 25 targets, handicap:

C Blake	1	25	George Felix	1	22
D T Leahy	0	24	C H Pulis	2	21
A G Southworth	1	24	A Blake	1	21
George Piercy	0	23	J F James	2	20
C R James	1	23	F B Stephenson	0	20
C Gardner	3	23	F S Hyatt	1	19
F T Bedford	1	23	A E Hendrickson	2	18
L C Hopkins	4	22			

J. F. James trophy, 25 targets, handicap:

L C Hopkins	4	25	F T Bedford	1	22
F B Stephenson	2	24	C H Pulis	2	22
George Piercy	1	23	George Felix	1	22
G Gardner	3	23	A E Hendrickson	1	21
D T Leahy	0	23	C Blake	1	21
F S Hyatt	0	22	A Blake	1	20
C R James	0	22	J F James	0	17

J. S. Lawson trophy, 25 targets, handicap:

L C Hopkins	4	25	G Gardner	3	20
C Blake	1	24	A E Hendrickson	2	20
C H Pulis	2	22	D T Leahy	0	20
A Blake	1	21	F T Bedford	1	19
A G Southworth	1	21	George Felix	1	19
George Piercy	0	20	F B Stephenson	0	18
F S Hyatt	1	20	C R James	1	18
J F James	2	20			

Lockwood trophy, 25 targets, handicap:

C R James	1	25	J F James	3	21
Geo Felix	1	25	Geo Piercy	0	21
C H Pulis	2	24	A Blake	1	21
A E Hendrickson	3	23	L C Hopkins	4	20
D T Leahy	0	23	G Gardner	3	19
F B Stephenson	0	23	A G Southworth	1	19
C Blake	1	22	F T Bedford	1	17

Shoot-off, same conditions: Felix 25, C. R. James 23.

C. R. James trophy, 25 targets, handicap:

F B Stephenson	0	24	A E Hendrickson	2	17
L C Hopkins	4	20	J F James	2	15
D T Leahy	0	20	F T Bedford	1	15
F S Hyatt	1	18	C H Pulis	2	15

Sweepstake match, 25 targets, handicap:

George Piercy	0	21	L C Hopkins	4	18
J F James	2	21	C R James	1	17
A E Hendrickson	2	21	D T Leahy	0	17
F B Stephenson	0	20	F T Bedford	1	17
F S Hyatt	1	21			

Shoot-off: Piercy 23, Hendrickson 20.

Sweepstake match, 25 targets, handicap:

F B Stephenson	0	25	A E Hendrickson	2	22
George Piercy	0	24	J F James	2	23
F S Hyatt	1	23	C R James	0	22

Ten pair doubles, Westley Richards gun:

A Blake	17	H M Brigham	11
George Felix	15	J H Hendrickson	11
George Piercy	14	F B Stephenson	9
C H Pulis	13	F S Hyatt	9
D T Leahy	13	A E Hendrickson	8
G Gardiner	11	C Blake	5

Sweepstakes match, 25 targets:

L C Hopkins	4	25	C Blake	1	22
George Felix	1	25	George Piercy	0	21
J F James	2	24	A G Southworth	1	21
F B Stephenson	0	23	C H Pulis	2	20
C R James	1	23	A E Hendrickson	2	16
A Blake	1	22	F T Bedford	1	16

Prize divided between Felix and Hopkins.

Linden Gun Club.

Gloucester City, Feb. 11.—Four shooting matches at blue rocks were held at the Linden Gun Club grounds this afternoon. The main event was the first shoot for the DuPont trophy. There were eight contestants, and Thomas Gibbons won, and thereby gained three points, while Frank McQuaid was second and received two points, and Bowe, who was third, made one point. Each shot at ten targets and Gibbons hit eight. In the second event Ashton defeated Pierce in a match shoot by hitting eight. The third event was an open shoot, won by Quinling. The last event was won by Powell, who hit five straight. The following were the scores:

Shoot for points, DuPont trophy, 10 blue rocks or targets each.

Gibbons	8	Shubert	3
McQuaid	6	Howarth	3
Bowe	5	J Mealey	3
Powell	4	Wedemeyer	3

Match shoot, 10 blue rocks each:

Levi Ashton	8	Pierce	5

Open shoot, 5 blue rocks each:

Quinling	4	Ashton	2
Parker	3	Gibbons	2
Hill	3	Bowe	1
Wallace	3	Bobo	0

Open shoot 5 blue rocks each:

Powell	5	Bowe	3
Dingling	4	McQuaid	2
Curtis	3	Crane	2

S. S. White Gun Club.

EASILY the feature of the S. S. White monthly shoot at Holmesburg Junction Saturday was the work of Joseph Lodge, one of the pioneers of the club, and who has not attended a shoot of the club in years. He not alone captured a leg on the Monitor cup, but was the spoon man for high gun on a total of 75 targets. Much of this result was due to his high handicap, but he showed surprising form.

Howard George also starred, winning a leg on the Eames trophy, besides the club spoon. The high gun of the day was Charles H. Newcomb, who had a net score of 96, and was the recipient of a dipper. J. H. Anderson got one also as runner up on the total for the Eames prize, after four times tying with George for the prize on the first 25, and losing on the toss, only getting the prize because one member is ineligible to two trophies.

Legs on the class cups were won as follows: Class A, T. Tansey; Class B, Anderson; Class C, Fontaine and Class D, Rowland.

There was a large turnout of the members yesterday. Scores:

No. 3 was for the Monitor cup.

Class A:	H.B	H.B. T'l.	No.3.	Total on 75	No.4.	Net Score
Severn	1 23	1 23—48	25	74	22	93

Bergen Beach Gun Club.

BERGEN BEACH, L. I., Feb. 18.—Notwithstanding the stiff and bothersome breeze prevailing, sweeping across Jamaica Bay with great force, the sixteen gunners of the Bergen Beach Gun Club showed their mettle by making some excellent scores. R. Morgan showed to the front with 90 out of 100 shot at. Sliding distance handicap was the rule, the following being the complete scores:

Targets:	25	25	25	25	25	Total.
R Morgan	17	18	19	18	18	90
G Remsen	16	19	16	15	20	86
A V Suydam	17	17	17	18	14	83

The Fred Macaulay Business Men's Gun Club

NEWARK, N. J., Feb. 15.—Members of the Fred Macaulay Business Men's Gun Club experienced the roughest shooting day yesterday afternoon since the club has been organized. The wind blew a fierce gale from the east and right in the faces of the shooters, together with a driving snowstorm which nearly blinded the gunners.

B. L. Lindley was high average gunner of the day with 19½ kills out of each 25 white fliers shot at. William Trowbridge was second with 13 1-6 "dead birds" out of each 25.

In the walking match event of 25 birds, between William Trowbridge, Thomas Cook and Fred Macaulay, Trowbridge won, with 17 kills out of 25; Macaulay was second with 14, and Cook third with 10. The birds were thrown when the shooters least expected it, as they walked off the firing line. Cook in this event picked up some of the dropping birds at the longest range experienced at the club.

In the 50-bird match between B. L. Lindsley and William Trowbridge, they tied in the first 25 with 13 kills each, and in the last 25 Lindsley won out by 4 birds, smashing 21 birds to 17 for Trowbridge. George Merritt was referee.

Bud McDonald, the "cowboy shooter" who has been traveling with Buffalo Bill for a number of years, was surprised to find that he could not kill more birds than he did, but he managed to hit five out of a possible 25 in the wind and snow, but promises to do better in clear weather.

The Macaulay gunners will hold a big all-day shoot on Washington's Birthday. The following were the shooters yesterday and their scores:

William Brackett	18	..	..	..	..	..
William Trowbridge	21	15	17	18	21	17
B L Lindsley	21	15	21	21	..	..
Thomas Cook	14	15	12	10	..	..
Fred Macaulay	19	16	14	..	..	..
Bud McDonald	5	..	..	..	..	..

DuPont Gun Club.

WILMINGTON, Del., Feb. 18.—After having tied on four successive Saturdays for Class A trophy in the T. Coleman duPont merchandise event, William M. Foord, State champion, yesterday defeated A. H. Lobb, on the grounds of the Dupont Gun Club. The winner made a score of 25 straight. Lobb was in poor form and broke 18 targets.

In the Coleman Dupont merchandise event for the day, Wm. Foord was first in Class A, with 25 straight.

A. H. Lobb, R. L. Conner, L. C. Lyon, C. D. Prickett, S. B. Trott, T. W. Keithley and W. S. Gavan tied for the prize in Class B of the same event with a score of 18 out of 25.

In Class C the following tied with 15 out of 25: J. B. John, W. A. Casey, H. H. Lukens, Dr. S. C. Rumford, H. T. Reed, W. Smith, and R. Hanby.

In Class D, C. L. Pete, Dr. Hibbert and W. F. Jensen tied with a score of 12 out of 25.

An interesting team race was the return match between the Salesmen and Operators of the Dupont Co. On Feb. 4 the honors went to the Operators. The tables were turned yesterday as follows:

Operators.		Salesmen.	
Prickett	19	H R Lindsay	7
W Matthewson	11	J W Mathews	12
V Dupont	23	Doremus	17
F Matthewson	20	E Dupont	22

Zerby Beat White at Live Birds.

SHENANDOAH, Pa., Feb. 18.—A large gathering of prominent sportsmen of this section witnessed a live-bird shoot this afternoon in the trotting park, between John Zerby, of Pottsville, and Harry White, of Fountain Springs for a purse of $500, at 20 birds each, 21yds. rise. Zerby won by killing 17 out of 20 to his opponent's 15. Considerable money changed hands, due to the reputation of the principals as square and able shots.

Meadow Springs Gun Club.

THREE gunners tied on 25 for first prize in the weekly club shoot on the 11th inst., viz., George, Murdock and Chandler, and in shooting off the tie in an extra 10-bird event, George won, breaking them all, Chandler 8, Murdock 7. Each high man was credited with one point in the yearly cup contest.

George topped the day's scores with 84 out of 100 and won a silver spoon. Murdock and Clegg finished with 83 to their credit, and Clegg, for breaking 18 out of 12 pair of doubles, won the dipper. Scores:

Club shoot, 25 targets, handicap rise, with dead bird added handicap:

	B.	H.	T.		B.	H.	T.
George, 18	32	4	25	Turner	17	4	21
Murdock, 7	21	4	25	Keenan, 16	12	8	20
Chandler, 18	20	5	25	Emery, 16	13	6	19
Hogan, 18	21	3	24	Hutton, 16	12	..	18
Fenn, 17	20	4	24	Hill, 16	15	..	16
Warren, 16	20	4	24	Mack, 16	14	..	14
Soley, 18	20	3	23	Brown, 16	19	..	19
Clegg	18	4	22				

Members of the Meadow Springs Gun Club spent a busy day at the traps Saturday the 18th, when the regular club shoot at targets was held and 19 contestants took part. Two events were on the card, and although the sky was cloudy, the scores were up to the average.

The first event was the club test at 25 targets with a handicap rise and a dead bird added handicap. There were prizes offered for first and second high men; two silver spoons for the gunner making the high actual score of the entire program and another "dipper" for the man who made the most breaks in the 10 pairs of doubles.

In the club shoot MacAlonan, Clegg and Sloan reached the highest total, 25, and in order to determine the winners the gunners had to enter extra events. On the first extra event Sloan and MacAlonan tied, the first breaking his ten, while MacAlonan reached the mark through a handicap of three. Clegg broke nine. In the second shoot-off MacAlonan won the prize by totaling eight, while Sloan could only get six. Sloan outshot MacAlonan 6 to 5, but the handicap helped the latter to the prize.

In the preliminary events, which totaled 99 targes, including 12 pairs of doubles. Sloan led with 86 breaks, Clegg being second with 82.

Club shoot, 25 targets, handicap rise and dead bird added handicap:

	H.	B.	T.		H.	B.	T.
Clegg, 18	4	23—	25	Lobry, 18	3	17—	20
Moore, 17	4	18—	22	Emerson, 18	3	16—	19
Pierce, 17	3	18—	21	Lemmon, 16	7	14—	21
Hogan, 18	3	20—	23	Turner, 17	4	16—	20
Murdock, 17	4	17—	21	Kirsch, 16	4	19—	23
Roland, 16	5	16—	21	Coyle, 18	3	19—	22
Fry, 16	5	8—	13	Mike, 18	3	20—	23
Sloan, 19	2	23—	25	MacAlonan, 16	8	18—	25
George, 17	4	14—	18				

Ninety-nine target event, including 12 pairs doubles:

Keystone Y. C. at Targets.

A SMALL field of gunners attended the weekly shoot of the Keystone Yacht Club at Tacony, Saturday afternoon, Feb. 18, in which Evis and Jann tied for high gun honors, all shooting 25 straight. This necessitated a shoot-off, in which Weensberger took the lead, again scoring a total of 25 points and winning a shooting jacket. With only one point shy, Henry was also given a shooting jacket. Post, who totaled 23 points, received a shell pouch, and Allen, with 21 points, was given a penknife.

Evis	25	Jann	25
McMullen	25	Daubert	22
Allen	25	Rutherford	22
Post	25	Whartonbee	21
Henry	25	Morris	19
Weensberger	25		

Haddonfield Gun Club.

HADDONFIELD, Pa., Feb. 18.—A good field participated in the monthly shoot of the club, shot this afternoon at Haddonfield. The club offered five prizes for the high men, and these were awarded to J. Logan, E. Webster, T. Birdman, H. Pierce and F. Heiss, Jr. Scores:

F Holloway	0	25	E Webster	1	24
Cozens	3	20	Pedlow	5	25
C Holloway	3	25	Eyster	4	20
Bergen	4	22	K Peacock	3	18
T Birdman	3	23	J Peacock	1	23
J Logan	3	25	J Dungan	3	22
Manning	6	19	H Pierce	6	22
Tompkins	4	24	Humphrey	6	15
Clark	4	24	J Hess, Jr	5	21
E Webster	5	19	A Eisele	10	12

97.28%

1910 High Amateur Average

Won by MR. J. S. DAY, of Midland, Texas, using

97.28%

Peters Factory Loaded Shells

Mr. Day shot at **4280** targets in Registered Tournaments, breaking **4164,** an average of **97 28**%, exceeding by over **2**% the highest official amateur average of any previous year. During the season Mr. Day made many long runs, among which are the following:

Gorman, Texas, and Walnut Springs, Texas, August 15-17—**245** Straight
Walnut Springs, Texas, - - - - - " 17-18—**266** "
Midland, Texas, - - - - - - - " 8-9 **133** "
121 "
Big Springs, Texas, - - - - - - " 10-11 **175** "
152 "
Cisco, Texas, and Gorman, Texas, - - " 12-15—**190** "

PARTICULAR ATTENTION

is directed to the fact that all of Mr. Day's shooting was done with PETERS REGULAR FACTORY LOADS, purchased from dealers where the various tournaments were held. His shells were not special in any sense, but were regular stock goods such as can be procured from any PETERS dealer. YOU can get this SUPERIOR AMMUNITION as easily as ordinary loads. You may not always score 97.28% but you will average better than with any other make.

Shoot the shells that have established another World's Record—97.28%—the kind that do not have to be used in any special make of gun to give best results.

South End Gun Club.

CAMDEN, Feb. 19.—Aided by a handicap of seven added targets and shooting in good form, Levi Stiles yesterday afternoon won a leg on the South End Gun trophy with a straight score. In addition, he captured a spoon, the other dipper winner being H. Quigley. The best work in the cup event was done by Frank J. Hineline, who, shooting from scratch, smashed 22. Three events at 10 targets each preceded the trophy shoot, in which Wakeman, Hineline and Feltman featured by straight breaks in at least one of the events. The scores:

Targets:	10	10	10	25	H. T.	Total.
Wakeman	9	6	10	21	1 22	46
Butler	9	7	7	15	4 19	38

S Quigley	4	5	..	..	.. ..	9

Atlantic City Gun Club.

ATLANTIC CITY, N. J., Feb. 18.—The week-end shoot of the Atlantic City Gun Club was run off under quite favorable conditions and good scores were the result. Deemer was again high in the club event with Gladney and Smith trailing. Watson was high for the 21yds. squad, breaking 39, Cook, Westcott, Powers and Sheppard tying on 38.

In the challenge event Westcott took the fob from Powers; in this event he had a very creditable run of 35 straight, and, he now claims that he is going to defend it and keep it, no matter who the challenger may be. Smith came down from Philadelphia and ran 48 out of his last 50.

There is to be a one-day registered tournament Easter Monday, April 17, and it would be well to reserve this date, as every one always has a good time at this event and takes away either some money or a prize. Scores:

Events:	1	2	3	4	5	6	7	8
Targets:	25	25	25	25	25	25	25	25

A. H. SHEPPARD, Sec'y.

Eagle Gun Club.

MANOA, Pa., Feb. 19.—Fred Muller had the hardest luck of the day yesterday. Just when Fred had an elegant chance to clean up first money in the Eagle Gun Club's shoot he drew a screamer for his last shot of the day, and when the bird escaped the lot of shot it enabled "Doc" Redman and Gideon a chance to slip up and get a share of the coin which went to gunners with scores of nine.

Thirteen men faced the field, and they all had more or less trouble with the birds, which proved to be a fast and very erratic lot. The club will hold a 15-bird holiday event next Wednesday. Scores:

Muller, 30	2222222220—10
Doc, 28	2222202222— 9
Redman, 28	1211122101— 9

Brewer 86—Rehrig 82.

MANOA, Pa., Feb. 11.—Jack Brewer, the veteran trapshooter, defeated John Rehrig, of Schuylkill Haven, Pa., in a 100-bird race this afternoon under the auspices of the Eagle Gun Club. Out of his 100 Brewer smashed 86, while Rehrig brought down 82. The match was closely contested in the first half, each man shooting well. Brewer lost four on his first round of 25, while Rehrig lost but two, but on the second round Brewer

totaled 23 and Rehrig lost four of his 25 birds. In the third round Rehrig went to pieces, losing 8 birds, and when Brewer scored 20 of his 25, he had the match won. On the last round Brewer lost three birds and Rehrig four. Detailed scores:

Brewer, 20 .....2022222202220222220220222—21

P Ross, Jr.	16	47	

Parkside—Midvale.

GERMANTOWN, Pa., Feb. 11.—A spirited team race between the Parkside and Midvale gun clubs this afternoon was won by the Parksides by one target. Out of their 200 targets the Parkside gunners broke 152 and Midvale 151. The conditions were 25 targets per man, 16yds. rise, with eight gunners to a side. High scores were the rule, with Williams, of the Midvale team, leading with 24 breaks. Rotzel, with 23, led the Parkside squad, and also finished the runner up to Williams. Scores:

Parkside.		Midvale.	
McFarland	20	Willetts	21
Bender	19	Taylor	19
Jenks	13	Tawing	21
Bryon	22	Yost	15
Rotzel	23	Williams	24
Gerhard	19	Roding	17

Bears	17—152	Jensen	19—151

Bennett Gun Club.

GLOUCESTER CITY, Feb. 18.—The weekly shooting match at bluerocks at the Bennett Gun Club grounds this afternoon attracted a large number of gunners and spectators. There was but one shoot to-day, and there were fourteen participants. Each shot at 5 bluerocks, and at the end of the fifth round there were two tie. They were Benjamin Martel and William Murray, and in the shoot-off Martel won. The following were the scores:

B Martel	4	A Work	2
W Murray	4	H Cheesmau	2
A Cheesman	2	C Hess	1
J Hewlings	2	W Murray	1
S Prickett	2	S Johnson	2
E Cheesman	2	E Hartman	2
C Prickett	2	P Smith	2

Shoot-off, miss-and-out:

Marten	2	Murray	1

Marine and Field Club.

BATH BEACH, L. I.—Only four shooters turned up at the grounds this afternoon, to continue the 300-bird shoot. The performances were rather indifferent, each shot a different number of targets, but all fired in the usual strings of 25. The scores:

	Hdcp.		Total.
C B Ludwig	18	11 14 18 12 15 13 14 6 12	145

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

ANGLING MEMORIES

Seasonable Books for the Sportsman's Library

MEN I HAVE FISHED WITH — **MY ANGLING FRIENDS**

Both by FRED MATHER

These two volumes are a source of endless delight to the fisherman. They deal with every phase of the gentle sport from bent pins and willow poles to salmon flies and special rods—with every kind of fish as well.

They are full of a quaint philosophy, written with a rare appreciation of human nature, and comprising sketches of angling "characters" as well as well-known men who were Mr. Mather's brethren of the angle. Much of other sport and adventure beside fishing will be found between the covers of these books. These two large, splendidly bound, splendidly printed, and richly illustrated volumes of 400 pages each regularly sell for $2 each. While they last we offer

Both together, postpaid, for $3.00

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.

HITTING vs. MISSING.

By S. T. Hammond ("Shadow"). Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond of system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING CO.

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. John Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the author uses. A good index completes the volume.

FOREST AND STREAM PUBLISHING CO.

Building Motor Boats and Managing Gasolene Engines

are discussed in the book

"HOW TO BUILD A LAUNCH FROM PLANS"

A complete, illustrated work on the building of motor boats and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

Clearview Gun Club.

DARBY, Pa., Feb. 19.—Seventeen members of the Clearview Gun Club made the journey to Fourth street and Ellis avenue yesterday to assist in the monthly target event of the club. The usual conditions prevailed for the day. 50 targets per man, class shooting. Henry Fisher, who was the only Class A man on the field, was also the high scorer of the day, breaking 43 of his 50 targets. Holznagle led the Class B men with 42 breaks, just beating Ferry out by one target. Ullman was the best shot among the Class C marksmen with 35. Scores:

	Class A.		
Fisher	43		
	Class B.		
Holznagle	42	Patchel	33
Ferry	41	Bockius	31
Bonsall	35	Krietzenberg	29

Seventh Regiment Annual Rifle Shoot.

ON Friday night, Feb. 17, in the Armory, Park avenue and Sixty-sixth street, New York, the Veterans of the Seventh Regiment held their annual rifle shooting competition for the Mali and the Board of Management trophies. Exceedingly close scores resulted in the class rifle match, with Sergt. G. H. Smith the winner with a total of 68, his four competitors making totals of 67, 66, 65 and 64. The summaries are given below:

Winners in class rifle match:		
"68" Class—Sergt J. H. Smith, Co. D	34	34—68
"67" Class—Private J K Boles, Co. I	34	33—67
"66" Class—Corp R A Bonner, Co. I	33	33—66
"65" Class—Corp P J Clarke, Co. B	33	32—65
"64" Class—Sergt C E Fisk, Co. D	32	32—64
Winners in veteran matches:		
Mali trophy—Sergt J H Smith, Co. D	34	33—67
Board of Management cup, open—Sergt J. H. Smith, Co. D	24	25—49
Board of Management cup, limited—J P Felt veteran	24	24—48
Hicks trophy match, team of three—won by Co. D:		
Private H E Crail	31	31— 62
J L Christy	33	35— 68
R M Dunn	30	32— 62
Totals	94	98—192

	D.	R.	Tl.
Expert qualification:			
Lieutenant J A Le Boutillier, Co. I	68	42	—110

Necessary for qualification as expert, at least 68 in deliberate fire and at least 40 in rapid fire.

Sharpshooter qualifications:		
Corporal W G Lush, Co. I	33	32—65
Corporal G. Kemble, Co. F	30	35—65
J L Christy, veteran	33	35—68

Necessary for qualification as sharpshooter, at least 65.

Eastern League Interclub.

WASHINGTON, Feb. 18.—New Haven, Conn., continues to lead the Eastern League in the inter-club rifle shooting matches, having nine victories and no defeats. Reports from headquarters of the Western League show that the Butte, Mont., team is leading that league. Results of the matches in the Eastern League this week were: New Haven defeated Bridgeport, 986 to 958; Bangor, Me., defeated Pittsburg, 971 to 945; Warren, Pa., defeated Washington, 976 to 919; Portland, Me., defeated Atlantic City, 974 to 838; Providence, R. I., defeated Savannah, 907 to 854; Erie, Pa., defeated Butler, Pa., 943 to 907, and New York defeated Birmingham, 967 to 948.

Squadron A—Seventh Regiment.

THE third team revolver shoot between the First Troop, Squadron A, and members of the Seventh Regiment was had over the Seventh Regiment ranges, on the afternoon of Saturday, 18th inst., and the Squadron A marksmen won handily—thus scoring three straight victories. The scores:

First Troop, Squadron A:

	Deliberate Fire.	Rapid Fire.	Totals.
Sergeant F W Wurster, Jr..	87	132	219
Corporal A Roelker, Jr.....	79	129	208
Private A V Baird.....	77	107	184
Sergeant W Macnaughtan....	84	157	241
Private P Hanford.....	89	150	239
	416	675	1,091
Seventh Regiment:

Intercollegiate Matches.

WASHINGTON, Feb. 11.—The intercollegiate rifle shooting matches this week leaves the State University of Iowa leading with five victories and no defeats. Columbia and Massachusetts Agricultural have four victories and no defeats each.

Results for the week follow: Massachusetts Agricultural made 1872 in its match with Columbia, which made no report; Iowa defeated Washington 1877 to 1800; Cornell defeated Louisiana 1714 to 1650; Dartmouth defeated Princeton 1608 to 1623; Missouri defeated Minnesota 1718 to 1637; Arizona defeated North Georgia 1697 to 1538, and Rhode Island defeated Purdue 1702 to 1697.

Eastern League Interclub Matches.

WASHINGTON, Feb. 11.—The Winchester Rod and Gun Club, of New Haven, Conn., leads the Eastern League in the inter-club rifle shooting matches at the close of the seventh week.

The New Haven club is the only one that has not met defeat. Results for the week follow: New Haven defeated Birmingham, 985 to 950; Bangor defeated New York 978 to 973; Pittsburg defeated Atlantic City 940 to 834; Bridgeport defeated Erie 958 to 931; Warren, Pa., defeated Butler, Pa., 982 to 931; Portland, Me., defeated Savannah 969 to 878; Providence defeated Washington 952 to 902.

Rifle at Milford, Del.

SCORING 457 points out of a possible 500, the shooting team of Company B, State Militia, of Milford, won a silver cup on a Wilmington indoor rifle range on Feb. 11. The members of the team were Capt W. E. Lank, J. C. Webb, G. O. Marvel, C. Curts and J. W. Kern, all of Milford.

PUBLISHERS' DEPARTMENT.

A partial cure for the "fishing fever" is a copy of the new catalogue of Dame, Stoddard & Co., 374 Washington street, Boston, Mass. This old house makes a specialty of standard articles, such as Leonard rods, Forrest flies, Bray fly-books, Vom Hofe reels, etc.

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

SPORTSMEN'S RECOMMENDATIONS.

Continued from page 299.

The board of directors is composed of the following: John D. McKee, George Uhl, Wickman Havens, H. J. Knowles, S. J. Pringle, Hall McAllister, R. Curtain Baird, George D. Boyd and F. B. Norton. Secretary George Uhl is now receiving many applications for membership and the outlook is that this association will soon be one of the largest of the State, numerically speaking.

In San Francisco and Oakland alone over 17,000 licenses are issued annually and a powerful organization could be built up here to act in conjunction with the California Game and Fish Protective Association. Already a number of matters have been given attention by this new association, and its views will be presented to the State Legislature for consideration. It was decided to work for an amendment to the game laws which would provide an opportunity for the raising and marketing of domesticated game animals, birds and fish, especially ducks, pheasants, deer and trout. A provision is also favored allowing salmon and steelheads to be taken in tide water with hook and line the year round. Any legislation will be opposed which will reduce the season for ducks to less than sixty days or the daily bag limit to less than fifteen. However, it is desired that the limit be reduced to that figure.

GOLDEN GATE.

SAN FRANCISCO, Cal., Feb. 13.—*Editor Forest and Stream:* The California State Legislature now in session has had a large number of suggestions for new hunting laws submitted, and there is no doubt but that some of these will be acted upon. However, a large number of the suggestions are considered to be worthless, as they are too drastic as a rule. One prominent member of the Legislature is strongly in favor of prohibiting by law the leasing of any land to be used for the purpose of maintaining a private shooting ground, while another foe of the shooting club is in favor of the State leasing suitable marsh lands and maintaining open grounds for the duck shooters of the State.

These legislators are striving to bring about the passage of measures intended to do away with what they term the monopoly of the clubs controlling preserves. They argue that the poor man has just as much right to enjoy a shoot as the rich man, and intend to give him the opportunity at the expense of the State. A bill has been presented providing for the expenditure of $10,000 annually for the leasing of land for this purpose. A number of strong objections have been made to the passage of the measure, and it is very doubtful if it will become a law. With a public marsh on which all who hold hunting licenses might bang away whenever they wished, ducks would soon become scarce or leave this district and the benefits would be doubtful. Among the clubs in the San Francisco Bay region there is an unwritten law that ducks shall be shot at on only two days a week, and this rule is very well observed. Thus the birds remain in the vicinity of these preserves through the entire season, whereas if they were shot at each day they would soon depart for less frequented grounds.

Southern California sportsmen are noting a great falling off in the number of ducks to be found there, and are asking for special laws to fit that part of the State. The local sportsmen point to the fact that the birds are shot at almost every day on the preserves in the south, and suggest that if the rule of the northern clubs be followed there, birds would be much more plentiful.

The proposed law to cut down the bag limit on ducks and quail from twenty-five to fifteen is meeting with considerable favor and the chances are that the change will be made. A suggestion has been made by a San Francisco sportsman that the present limit be allowed to remain, but that a weekly limit of fifty birds be set. This, it is believed, would put a stop to a large amount of market hunting.

Duck hunting in the bay counties has been very poor during the past month on account of the excessively heavy rains that have fallen. The preserves in the Suisun marshes are now all flooded, and with the Sacramento River at the flood stage, there is no relief expected before the close of the season. Many shooters are putting away their guns and will not attempt to get out any more this season. Along the Petaluma and Sonoma Creek marshes fair sport is to be had, canvasbacks and bluebills predominating in those districts. One of the best grounds to be found now for ducks is in the

vicinity of Newman. The drainage there is good, and while ducks are not more plentiful than in many other places, they can be approached.

At times fairly good sport can be had along the marshes on the east side of San Francisco Bay, but there is considerable complaint being made in regard to the condition of the birds shot there. In some cases it is not necessary to take a gun to secure a bag of ducks, for large quantities of crude oil have been allowed to escape, and the birds becoming covered with this are rendered helpless. Unable to fly or to secure food, the ducks float about on the marsh waters awaiting death. At one place near Point Pedro 2,000 wild ducks were taken in a few hours by fishermen and nearby residents. In some cases the oil had so saturated the birds that their flesh was unfit for food. The fish and game commission has been notified of this condition and attempts will be made to put a stop to the careless handling of oil, most of which escapes from Point Richmond.

A bill has been submitted to the State Legislature permitting the hunting of geese with live blinds. Farmers have complained that geese have done immense damage to their growing grain crops and will welcome the change in the law that will permit of more extensive hunting.

FISH DISEASES.

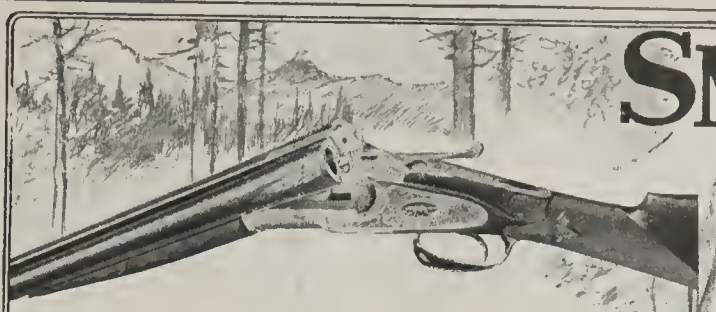
Continued from page 302.

of a change in the methods of administering the islands, the Bureau called a meeting of the advisory board mentioned in the last report, which, together with the employes of the Bureau, embraces practically all of the available naturalists and officials whose experience on the islands qualifies them to pass in judgment upon the present requirements of the seal herd. The Bureau has based its policy in respect to the islands upon the unanimous advice and recommendations of the parties to this conference.

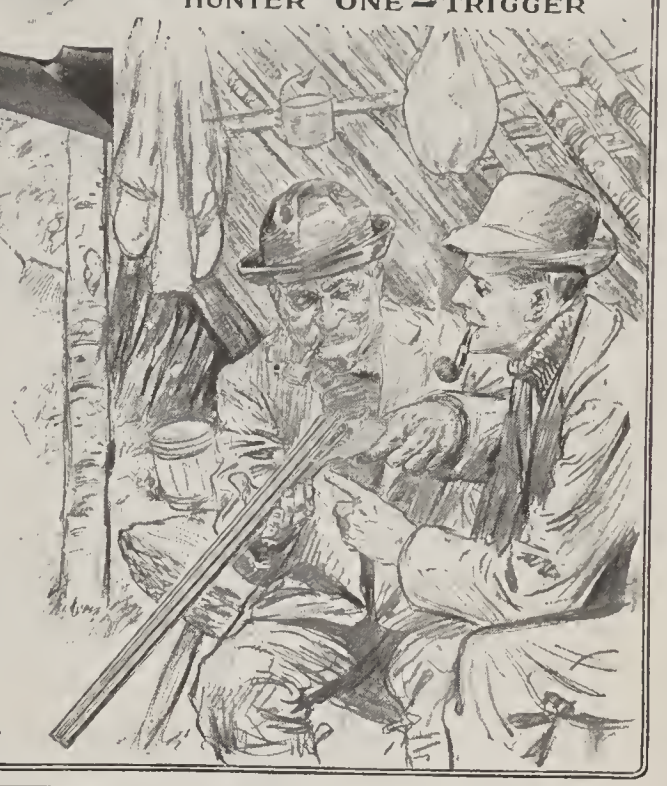
The preponderance of the pelagic kill on the high seas, which is beyond the Bureau's control, consists of mature cow seals, and for reasons that are recognized by those having knowledge of the habits of the fur seal the killing of a limited number of the excess of immature males has been deemed advisable. No definite quota has been fixed, but the number is to be determined by the agents on the islands governed by certain rigid limitations as to age, sex, size and the minimum number to be reserved for future breeding. The breeding reserve is to be selected as far as possible from the most vigorous and perfect individuals with a view to the gradual improvement of the herd.

Under the provisions of the act of April 21, 1910, the Secretary of Commerce and Labor is charged with all matters pertaining to the care and preservation of all the fur-bearing animals of Alaska. Under this authority the Bureau has drawn regulations relating to the killing or capture in Alaska of certain fur-bearing animals other than seals, and said regulations, having been signed and promulgated by the Secretary of Commerce and Labor, are now effective in the Territory.

For the purpose of putting into effect the provisions of the act above referred to, the sum of $150,000 was appropriated. The immediately



SMITH GUNS
HUNTER ONE-TRIGGER



THE simplicity of construction of a Hammerless Smith Gun appeals to all sportsmen. A novice can quickly take it down and put it together. It is this simplicity of mechanical construction that has made it so popular—that has given it undisputed leadership.

IT IS this simplicity, too, that prevents it from ever shooting loose. That is absolutely impossible in a Smith Gun. The longer you shoot a Smith Gun the tighter it gets—it is *self-adjusting*. Our handsome, new lithographed Catalogue explains this more in detail. Ask your dealer for it, or write us direct—*today*.

That Catalogue will also tell you all about the very latest Hammerless Smith Gun—the *20-Gauge Hunter One-Trigger*. The *Hunter One-Trigger* attachment is the greatest improvement in gun-making for more than half a century. The new *20-Gauge* is just the finest gun that can be made at the price. Simply *all gun and no frills*. Weighs only 5¾ to 7 lbs. As a well-informed sportsman you ought to know about it.

THE HUNTER ARMS CO., 90 Hubbard St., Fulton, N.Y.

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

PLANNING A HOUSEBOAT

Will be a leisure-hour occupation in many a family this winter. Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

HOUSEBOATS AND HOUSEBOATING

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length with illustrations. Buckram, heavy paper, sumptuously illustrated.

His Best Book

MY FRIEND THE PARTRIDGE

By S. T. HAMMOND

This delightful presentment of the glories of Autumn days with gun and dog in the crisp New England woods in search of the noblest of native game birds, which has already delighted thousands of readers of Forest and Stream, is now ready for delivery in book form.

Mr. Hammond knows his upland coverts as no other writer of the day. He makes no empty boast when he calls the partridge his friend, and, moreover, makes his every reader a friend of this splendid bird. He succeeds in a rare degree, not only in describing the ruffed grouse, its habits and habitat, and the pleasures of its pursuit, but in surrounding his reader with the very atmosphere of the leaf-scented Autumn woods. Mr. Hammond's book is a welcome addition to the library of sport.

Cloth. 150 Pages. Illustrated. Postpaid, $1.00

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

Postpaid, $1.50

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

necessary additional employes required by the enlargement of the Bureau's functions on the islands have been appointed. The Bureau, under authority of the law and by direction of the Secretary of Commerce and Labor, has entered into negotiations for the purchase of the buildings, boats and other property of the North American Commercial Company on the islands. The company has placed an apparently reasonable valuation on its property, and the proposition is under consideration subject to the results of an inventory now being made by an agent of the Bureau on the islands.

The data relating to the killing and the condition of the seal herds to July 31, 1909, were published in the preceding report of the Bureau Those for the season of 1910 are not available at the time of writing the present report, and in any event are more strictly germane to the succeeding fiscal year.

There is again urged the importance of a station for the study of fish diseases and experiments in the interests of fish culture. In some of the hatcheries of the Bureau and in similar establishments under State and private auspices, certain fish diseases have become so preva'ent as to make it a matter of grave consideration whether the propagation of certain species, especially the trout, should not be abandoned. It frequently occurs that the fish and fry are decimated by epidemics for which there are no known remedies in consequence of which there are annually entailed on fish culture large wastes of time and money. In addition to the financial loss, embarrassment arises at times in filling legitimate demands for fish for restocking depleted waters, and the effect on the morale of the employes of the Bureau who have to struggle hopelessly against an obscure disease is not unworthy of consideration. The gravest phase of the matter, however, is the possible relationship of some of these diseases to more or less kindred affections occurring in human beings. It has been determined that a type of cancerous affection is of widespread distribution among domesticated trout and their offspring planted in the streams. Whether this disease has a causal relation to cancer in human beings, or whether the two are to be even traced to the same source, is a matter of doubt, but the annually increasing mortality from cancer in man and certain remarkable coincidences in the geographical distribution of the disease in man and fish render it imperative that it should be made the subject of minute inquiry. The matter, therefore, has not only economic but humanitarian aspects, and the consideration of the serious character of the latter prompted the President to submit to Congress on April 9, 1910, a special message advocating an appropriation of $50,000 for the construction and equipment of a laboratory adequate to enable the Bureau to discharge its plain obligations. The Bureau in the meantime is proceeding in the investigation to the limit of its powers, but it may be stated emphatically that it can make but little progress without the special facilities asked for.

Laurentian Club membership share. "J. C. W.," care Forest and Stream. 9

WESTLEY-RICHARDS
ENGLISH GUNS

Westley-Richards' guns are hand-made throughout. The lowest priced weapon is a well constructed, reliable shooting gun that any sportsman may be proud to own. The higher priced weapons, which, besides being the finest shooting guns it is possible to produce, are through their workmanship, external beauty and intrinsic merit, works of art, standing in a class by themselves, each one a masterpiece of modern gunnery.

HAND DETACHABLE LOCKS

The invention enables sportsmen to take out the locks for cleaning and oiling without moving a single pin. Simply detach fore-end and bottom plate by hand and the locks can be lifted out and as easily replaced. Extra pairs of locks can be supplied to interchange in the event of a possible accident, or where a different weight of pull is wanted.

NEW PATENT IMPROVED RELIABLE ONE-TRIGGER MECHANISM.

Westley-Richards' one-trigger mechanism does not balk nor double; it is not frictional; cannot be upset by recoil; and always acts the same. Perfect selective action, firing either right-left or left-right, or as many rights or lefts first as may be desired at the will of the shooter.

One-Trigger mechanism is supplied on the higher grade Westley-Richards Guns.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

SAFETY.—While the dictum that "there's safety in numbers" may be true in so far as it concerns individuals, it is certainly wrong when applied to parts of mechanisms; here the simplest is always the best, and the perfect gun is that which does its work effectually with the fewest parts. **Simplicity has always been the Keynote of Greener Guns,** and is clearly exemplified in the **Greener Side Safety.** This consists of a simple trigger-locking spindle absolutely infallible and possessing the following advantages over all other systems. It does not weaken the "grip" as is the case with the Top Safety in its weakest part; a hole 3-16 inch diameter through the "head," the strongest part of the stock, is all that is necessary to accommodate the Greener Side Safety; it is placed in the most rational position for use, just where the thumb falls naturally; it cannot be pushed on or off accidentally; it is a "safe" safety, always there when you want it, but never balking the unexpected shot.

Of course you must have it fitted to a Greener Gun to obtain fullest satisfaction.

This is but one of the many outstanding improvements on Greener Guns. Send for free catalog and let us tell you about the others.

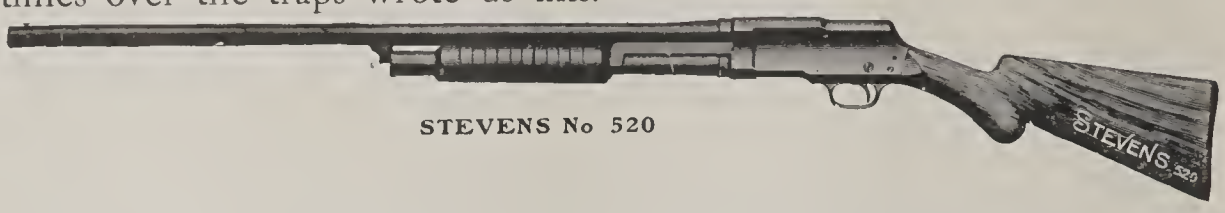
HOW THE "NATURAL POINTER" MADE A MAN MAKE GOOD

A man who had only shot four times over the traps wrote us this:—



STEVENS No 520

"I have only shot over traps four times, and at the Thanksgiving Tournament I entered with thirty-five Trapshooters, ten of them being classed as experts. At the close of the Tournament I had the highest percentage of all except a professional who was with us. I broke 132 out of 150 or 88%.

"It must have been the gun, as I have never done any shooting up to this time."

How do you account for this?

It couldn't have been luck—a man doesn't make 88% on luck.

If you had ever held a Stevens No. 520 up to your shoulder, you would understand why we called it a "Natural Pointer." When a man is shooting at the traps or in the field with the Stevens No. 520, his game or his target are almost NON-MISSABLE.

Go to your dealer **to-day** and prove for yourself that we manufacture not only the best repeating shotgun in the World, but the one that has the classiest, raciest lines and a "feel" that no other pump gun has.

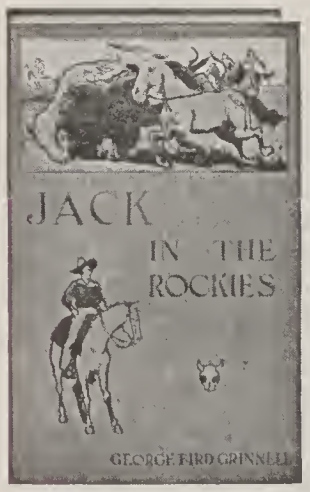
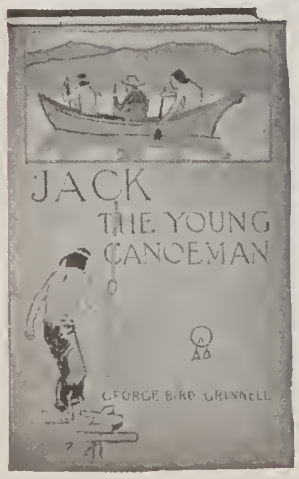
THE JACK SERIES





Best Books For Boys

By GEORGE BIRD GRINNELL

THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

$1.25 per volume, postpaid. $7.50 per set

FOREST AND STREAM PUBLISHING COMPANY

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

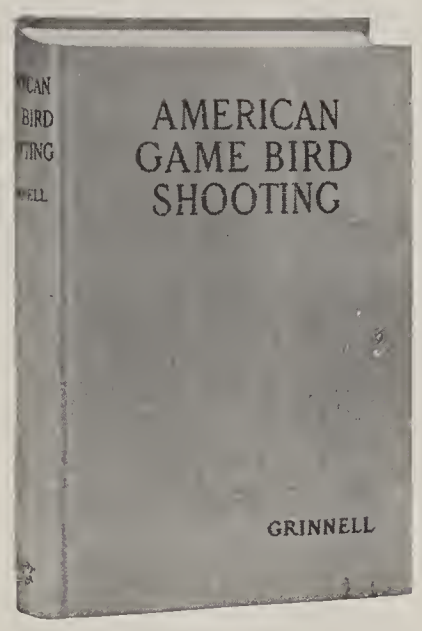
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy. Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Book Catalogue Free on Application.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evening and dull outdoor days "to swap lies." Cloth. 187 pages. Price, $1.25.

Sam Lovel's Camps.

Rowland E. Robinson. Another charming story of life in innermost Yankeeland. Quaint and delightful stories of a delightful life. A splendid book for boys and scarcely less pleasing to their elders. Cloth. Illustrated. Postpaid, $1.00.

American Big-Game Hunting.

The Book of the Boone and Crockett Club. Theodore Roosevelt and George Bird Grinnell, editors. Narratives of white goat hunting, elk hunting, old times in the Black Hills, prong-buck coursing, nights with the grizzlies, buffalo days, blacktails in the Bad Lands, notes on forest reservations and game refuges. Contributors: Theodore Roosevelt, George Bird Grinnell, Owen Wister, Winthrop Chanler, Col. Geo. S. Anderson, Col. Roger D. Williams, Archibald Rogers, F. C. Crocker, Dean Sage, and others. Cloth. Illustrated. Postpaid, $2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people. Cloth, 353 pages. Price, $2.50.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. This is a fourth and by far the largest and handsomest of the club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiak Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics. 490 pages and 46 full-page illustrations. Price, $2.50.

American Duck Shooting.

George Bird Grinnell. With 58 portraits of North American Swans, Geese and Ducks. Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Cloth, 630 pages. Price, $3.50. Edition de luxe, price, $5.00.

The Art of Shooting.

Charles Lancaster. An illustrated treatise on the art of shooting. Illustrated. Cloth. Price, $1.25.

The Gun and Its Development.

W. W. Greener. With Notes on Shooting, Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Choke-boring, Gun Trials, Theories and Experiments. "The Gun and Its Development" is the standard work of the age on projectiles and all relating to them. Fully illustrated. Cloth. 770 pages. New edition. Price, $4.00.

Domesticated Trout.

Livingstone Stone. Contents: Trout Breeding Works, Ponds, Buildings, Hatching Apparatus. The Nursery, Taking the Eggs, Hatching, Care of Alevins, Rearing the Fry, Growing the Large Trout, General Observations. Cloth. Illustrated. Postpaid, $2.50.

Modern Fishculture in Fresh and Salt Water.

Fred Mather, author of "Men I Have Fished With." with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chaper on the Pike-Perch by James Nevin. Illustrated. Price, $2.00.

Familiar Fish and How to Catch Them.

Eugene McCarthy. A Practical Book on Fresh-Water Game Fish. With an introduction by Dr. David Starr Jordan, President of Leland Stanford Junior University, and numerous illustrations. Price, $1.50.

Training the Hunting Dog for the Field and Field Trials.

B. Waters. This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority. Cloth. 281 pages. Price, $1.50.

Log Cabins and Cottages.

William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, $1.50.

Pocket Kennel Record.

A handy book for immediate record of all events and transactions, relieving the owner from risk of forgetting important kennel matters by trusting to memory. Morocco. Postpaid, 50 cents.

Diseases of the Dog.

By Hugh Dalziel. A handbook for amateurs. Treats of the causes of disease in dogs, symptoms and treatment, modes of administering medicine, treatment in cases of poisoning, etc. Paper. Postpaid, 40 cents.

The Spaniel and Its Training.

F. H. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Pheasants; Their Natural History and Practical Management.

W. B. Tegetmeier. New, enlarged edition. 16 plates. Cloth. 237 pages. Price, $3.50.

Woodcraft.

Nessmuk. No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm. Cloth. 200 pages. Illustrated. Postpaid, $1.00.

Houseboats and Houseboating.

Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is $3.00 net. Postage, 34 cents.

How to Build a Motor Launch from Plans.

Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty, stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, $1.50.

Manual of the Canvas Canoe.

F. R. Webb ("Commodore"). Many illustrations of designs and plans of canvas canoes and their parts. Two large, full-sized working (24x38) drawings in a pocket in a cover. Cloth, 115 pages. Price, $1.25.

Canoe and Boat Building.

W. P. Stephens. Contains plan and comprehensive directions for the construction of canoes, row and sail boats and hunting craft, directions that the amateur with tools can follow. Fifty plates and working drawings in separate envelope. Cloth. Illustrated. 264 pages. Postpaid, $2.00.

Canvas Canoes and How to Build Them.

Parker B. Field. The book gives very precise instructions by which a man with ordinary mechanical bent may build a serviceable canoe at slight cost—a plan and all working directions. Paper. Postpaid, 50 cents.

Life and Sport in Labrador

NAPOLEON A. COMEAU.

In "Life and Sport on the North Shore of the Lower St. Lawrence and Gulf," Mr. Comeau has made a valuable addition to the literature of rod and rifle—and more. It is a book of engrossing personal interest to the sportsman or general reader, and of rare value to the student of wild life.

The author describes the events and experiences of fifty years, spent in the cause of humanity and science in one of the most interesting and least known sections of Canada. He writes as one sportsman to his fellows, detailing his experiences with the wild things of wood, shore and sea, with plenty of stirring experiences with big game and gamy fish.

Illustrated, 450 pages. Paper. Postpaid, $2.50.

IVORY-BILLED WOODPECKERS.

It is a pleasant life that Graham Burnham has led for many years in Oklahoma. Burnham is an Indian with a white skin. A long time ago he built a hunting lodge of big logs down on the Little River and "denned up" to enjoy the delights of the wilderness.

No day passes in lawful season without finding game hanging from the rafters of the Burnham smokehouse. He knows more about hunting places than any other man in Oklahoma. The honk of wild geese will wake him at midnight and the hum of wild bees will rouse him at the sleepiest noon and lead him to the woods and the honey hole in the tall sycamore.

It is doubtful if anybody knows more about the fauna of Oklahoma than Burnham. He is acquainted with the haunts of all the furred and the feathered dwellers of the forest, and keeps his eyes open for such strangers as wander to this latitude. Perhaps his most pleasing discovery last fall was a pair of ivory-billed woodpeckers, a male and a female, which he mounted and sent to the Bureau of Biology in Washington.

"The ivory-billed woodpecker, *Campehilus principalis*," says Burnham, "is the largest type of the woodpecker species in the world. It is twenty inches long and of beautiful black and white and red plumage. Formerly quite common over the Gulf States, it is now found only in eastern Oklahoma and in remote portions of Florida.

"A brilliant crimson crest adorns its head. Its note is a two-syllabled shriek or squawk, sometimes resembling the screech of the domestic hen, hence the frequent name of 'squaw hen.' Another commonly accepted name for the bird is woodcock, which is again a misnomer, as the woodcock is an entirely different bird, more on the plover or snipe order, a night feeder and ground dweller.

"The ivory-billed woodpecker is much more destructive to trees than the common woodpecker, as he is greater in size. He not only strips dead trunks of bark, but invariably bores a hole in a solid live tree for his nest, in which from three to six glossy white eggs, about an inch and a half long, are hatched. The bird is very wary, but bids fair to early extermination."—The Sun.

THE TURIN INTERNATIONAL EXPOSITION.

On April 29 the Turin International Exposition of Industry and Labor will be opened by the King and Queen of Italy in the presence of other members of the Italian royal family and government, foreign diplomats and commissioners accredited to Italy, a majority of the members of the Italian Parliament, and a large number of other Italians and foreigners of distinction. The gathering will be one of the most notable ever brought together in Italy since 1861, when the First National Assembly declared from Turin that Victor Emanuel II. was the first King of Italy. It is the fiftieth anniversary of the historic year 1861 that the exposition celebrates. Every country will be represented at the exhibition, and all the great nations and many smaller ones will have their own government buildings. The United States will have the largest government exhibit at the exposition.—Consul Albert H. Michelson.

AUSTRALIAN METHOD OF DESTROYING GRASSHOPPERS.

In reply to a Colorado inquiry, Consul John F. Jewell, of Melbourne, states that the only measure taken in the State of Victoria, Australia, to combat the ravages of grasshoppers is the sale by the Government entomologist to farmers of a locust fungus prepared at the Government laboratory from a secret formula. This fungus is sold at the rate of 1s. (24 cents) per tube of about one ounce, and produces a contagious fungous growth among grasshoppers, from which they die.

A Problem's Solution

LOG CABINS & COTTAGES;
How to Build and Furnish Them.

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth, profusely illustrated, $1.50 postpaid.

—FOREST AND STREAM, Aug. 14, 1873.

DEATH OF BERNARD WATERS.

BERNARD WATERS, for many years the shooting editor of FOREST AND STREAM, died Feb. 27 after an illness that had extended over many months. He was born in New Hampshire about sixty years ago.

As a young man, Mr. Waters went West and devoted himself to the practice of those sports that he loved so well, and especially the sport of field shooting. He had a natural knack with animals and trained his own dogs so skilfully and successfully that they were better than any of the dogs of his companions. About the time when field trials became fashionable, he was engaged to handle certain dogs, did so with signal success, and for a time followed the work of training dogs for the field. But so great was his success that after a time his friends persuaded him to reduce to writing his methods, and he produced several volumes on dog training, which have had a wide vogue. These books are, "Fetch and Carry," "Modern Training" and "Training the Hunting Dog for Field and Field Trials."

Something more than twenty years ago he joined the staff of FOREST AND STREAM; at first as Chicago correspondent, later as kennel editor, and later still as shooting editor. In whatever he undertook Mr. Waters endeavored to perfect himself. He was a man of keen intellect, wide reading and possessed a great fund of information, not only on his special subjects, but on general topics. Besides this he was one of the most skillful of shots, and by his practice in the field and at the traps upheld his preaching in FOREST AND STREAM.

He was a forceful writer and used his wide knowledge of men to teach useful lessons. A dozen years ago there appeared in FOREST AND STREAM a series of articles from his pen entitled "The Confabulations of a Cadi." The articles were a keen but kindly satire directed against certain unreasonable opinions and certain abuses that then prevailed in the trapshooting world. They were read with much pleasure, interest and satisfaction by all shooters and were productive of great good, for the allegory taught simply and in a way which all might comprehend a number of needed lessons.

Few men have had so wide an experience in the shooting field as Mr. Waters, and few men could tell of these experiences in so interesting a way as he. He was especially familiar with the South and had shot over much of Louisiana, Mississippi, Southern Arkansas and Missouri. During his experience in reporting field trials twelve or fifteen years ago, he did much shooting in North Carolina.

It was as an instructor in matters of sport—in his efforts to teach men how to do the right thing in the right way—that Mr. Waters did the best work of his life. He was absolutely devoted to the truth. He was a most kindly and generous man. If his keen insight enabled him to see the faults in his fellows, his large charity always passed them by, for he possessed a sense of proportion which led him to give men's good qualities their true value, and to make allowances for, and pardon their weaknesses. He had a wide circle of acquaintances and a multitude of friends who were devoted to him—a friend once made he never lost.

Last spring Mr. Waters suffered from a serious attack of illness from which his recovery was slow. In the late autumn he underwent an operation, which apparently put an end to his trouble, and in the early days of January he seemed to be on the road to rapid recovery. About the middle of January, however, he was taken with the grippe, and this was followed by a great and increasing weakness to which he finally succumbed.

Few men leave as wide a gap as he has left. Few men will be so keenly missed. The sense of personal loss felt by his associates in the office of FOREST AND STREAM may not be expressed in words.

WILD TURKEYS FOR MASSACHUSETTS.

IN her efforts to stock her covers with flocks of native game birds, and to replenish her brooks with trout, Massachusetts stands first among the States. Only within her borders has success crowned the effort to rear native game birds on any large scale. No territory in all the United States is better adapted to experiments in game preservation work than Massachusetts; and whether it be to increase the fish in her streams, the quail and partridges on her uplands, or the wildfowl that frequent her shores and ponds, the conditions are everywhere most favorable.

In Massachusetts, too, remains the sole little colony of that nearly extinct bird, the heath-hen, which for a century has been struggling to survive—and only within a decade or less has had any help from man—against man and natural enemies. At present the colony stands on the very verge; some years numbering only a few more than a hundred, in other years two hundred, the pendulum swinging one way and another, moved by influences which we only dimly comprehend.

Among the active associations of sportsmen in Massachusetts the Springfield Fish and Game Association is one of the largest. Moreover, it occupies a region peculiarly favorable for game preservation work. It is remembered that a few years ago, some California quail were turned out near Springfield, and, quite without care, survived for several seasons.

Now it is purposed to endeavor to reintroduce in Western Massachusetts the wild turkey, which endured there until the middle of the last century; for the last turkey on the Mt. Tom Range is reported to have been killed in 1852. A Springfield sportsman intends now to procure several pairs of wild turkeys from the South and to liberate them in the wildest parts of Western Massachusetts, in the hope that they may breed and multiply. This is certainly worth doing. The effort to restock thickly settled lands with wild turkeys has been suggested many times in FOREST AND STREAM, and the effort should be made. The history of this bird in New England given in many of the books is most interesting. Robert O. Morris, in a letter written to the Springfield Union, has given many facts of this history, which are also found in the recently published book, "American Game Bird Shooting."

THE PASSENGER PIGEON INQUIRY.

THAT the liberal rewards offered last year for the discovery of an undisturbed passenger pigeon's nest were not claimed proves nothing. There was much misunderstanding of the terms of the offer, and the passenger pigeon and the mourning dove are so nearly alike as readily to be confounded by persons who are wholly without a knowledge of birds, and whose eyes are untrained. Many an ornithologist interested in the passenger pigeon has been deceived into making a long journey to see a reported flock of passenger pigeons only to find at its end the common mourning dove.

This year, as printed on another page, the rewards are offered again—amounting in all to over $3,000—and the conditions are so distinctly stated that no one who will read them with care should misunderstand them.

The opportunity is offered here to the country dwelling man or boy who will keep his eyes open and his wits about him to earn a large sum of money. With a thousand dollars one can do a good many desirable things; and those who offer the rewards are as anxious to pay this sum over to him who makes the discovery as anyone can be to gain the prize.

One thing should be remembered by all who are interested, and that is not to write to Dr. Hodge for further information. It is all given here in FOREST AND STREAM.

THE SPORTSMAN TOURIST

The Palisades in Winter

By ROBERT S. LEMMON

FAMILIAR as they are in summer to the hundreds who tramp and camp and sail on and about them, the Palisades of the Hudson are not so well known in their winter garb of snow and ice. The camps beside the river are all deserted then, the roads along the cliffs are seldom traversed save by an occasional wood-cutter, and when the river traffic is stopped by huge ice floes one might almost think the whole region some distant wilderness, it is so still and grim and austere. This very grimness and austerity form one of its greatest charms at this season, and the charm is much enhanced when the ground is covered with freshly fallen snow. The snow has another use, too, for he who can read and understand the records written on it, may be astonished at the variety of wild life that moves and has its being so near the great city.

On a clear, crisp morning in early January we take the ferry which runs from West 130th street, Manhattan, and crossing the river, board a trolley which takes us, after a half-hour's pleasant ride, to Englewood. From there a broad, straight avenue leads up the western slope of the Palisades to the front, showing along its two miles of length many an extensive view across the rolling country inland.

It is just nine o'clock when we reach the cliffs and pause a moment before starting down the winding road to the river. The tide is ebbing strongly, and broad fields of ice, some of them acres in extent, are drifting steadily southward. They must have come from far up the river, for some of them are heavily scored with the marks of the ice-harvesters. Almost directly across from where we stand is Spuyten Duyvil, backed by the rolling Westchester hills, and away to the southward the skyscrapers of New York show clear in the sparkling air.

Save the gulls which wing their grave way far below or float like tiny white specks on the blue-gray patches of open water, no signs of wild life are at first apparent. But just as we are about to descend to the river level, there comes from among the rocks at the foot of the cliffs a series of clear, ringing whistles, strongly suggestive of the notes of the cardinal, only considerably louder. It is a Carolina wren, and throughout the year he may be heard singing here as he dodges in and out about the rocks and bushes with true wren-like pertness. It is a singularly attractive bird—especially at this season—when its song is one of the very few that enliven the winter woods.

The scenery is beautiful as we descend the old road which leads to the shore. The great weather-worn cliffs rise sheer for two hundred feet on the one hand, and on the other a precipitous rock-strewn slope falls abruptly away to the water's edge. Time was when this road was a thoroughfare, and the few scattered houses to which it leads are but the remnants of a once thriving little settlement. In the old days of plentiful shad and sturgeon the fishing industry was quite extensive and not a little boat-building was carried on in the very shadow of the towering cliffs. Then a small steamer used to run to Yonkers and New York, carrying passengers and occasionally freight, and the remains of its old dock are still visible.

Leaving the last house behind, we tramp

THE PALISADES NEAR COYTESVILLE AND THE ICE-FILLED HUDSON RIVER.
Photograph by Perry D. Frazer.

along a path which meanders northward a few feet above the water. The snow which fell two nights before is still soft and light, and everywhere we see the dainty, interlacing trails of the white-footed mice, like delicate stitching, joining each rotted tree stump with every nearby brush pile or jumble of loose stones. Here and there much larger, more dashing tracks show where a red squirrel has scurried about in search of food, and on the sheltered side of a steep bank we find where his eager paws have scratched away the snow to reach some store hidden away in the damp leaves beneath.

A turn of the path brings us close to the water, and as the tide is sufficiently low to expose a narrow strip of stony beach, we leave the path and proceed along the shore, the better to observe the bird-life of the river. Everywhere are the gulls, and soon the glasses reveal a flock of a dozen or more old-squaws comfortably riding toward the sea on an ice floe far out in the middle of the river. Even at that distance the white necks and backs of the male birds are distinctly visible, and we watch them until their chilly conveyance has carried them nearly out of sight.

A little further on two sheldrakes are surprised in an open cove where they were contentedly diving for food, and with a great spattering they rise and skim away close to the water, to resume their interrupted meal at a safe distance. Crows are common and their unmistakable footprints form a perfect network in the wet sand about the body of a dead fish left stranded by the falling water.

In a sunny spot on the leeward side of a great rock we "boil the kettle," and the hot tea and sandwiches are very welcome after the vigorous exercise in the open air. For an hour we bask by the little fire of driftwood, then continue on along the shore for perhaps a mile to where a narrow trail zig-zags up a steep gorge toward the top of the cliffs.

As we turn up this path into the straggling woods which cover the long talus slope, a new track is seen in the soft snow. At first glance it might be taken for that of a little dog, perhaps a fox-terrier. But look more closely; see how accurately the prints are spaced, each directly in line with the others. No trotting dog would place his feet in just that way, and the manner in which the track leads on without break or variation over rough ground and smooth, leaves small room for doubt as to its maker's identity. If further proof be needed, see here where the trail skirts an old brush pile. Under the brush a rabbit was crouching in its form, and the larger tracks seem to take on added caution as they approach the unsuspecting victim. A yard away from the pile the even trail is broken in a scatter of disturbed snow, where the stalker sprang, while close beside the trampled form the bloody remains of poor "bunny" bear silent witness to his sudden end.

SHORE ICE IN ONE OF THE COVES.
Photograph by Robert S. Lemmon.

What! A fox so near Manhattan Island? Yes, a fox. There are plenty of them here, and they find pretty safe sanctuary in the caves and huge, loose piles of stone that lie between the river and the foot of the cliffs. Seldom are they seen, for they venture out principally at night, and when one, like the fellow whose track we have been following, goes hunting by daylight, he takes care to keep out of the way of visitors. Under cover of darkness, however, the foxes wander far and wide, and in a good tracking snow we find their trails in every direction, especially in the woods and thickets at the top of the cliffs. Halfway to the summit the path fades away, and the rest of the distance is a hard scramble along a little brook which comes down over the rocks in an almost continuous waterfall. Green Brook, it is called, and in the summer when the thick moss on its rocks is shaded by the dense foliage of over-hanging trees, it well deserves the name. But what a change from the bright July day when we last were here! Then the stream was but a trickle of moisture, exhausted by the long drouth; now it is a great sheet of ice, ribbed and furrowed and mounded, the glistening particles coating each projecting stone and branch within the limits of the falling spray. One dead sapling that has lodged across the stream bears a fringe of ice a foot long, and we almost expect to see the stick break under the weight of its burden. The ground here is so steep that the snow has found scant lodgment, so we are fairly safe from sliding during the laborious climb to the top.

On the level ground above the uppermost falls, where the brook leads back to its source, is an extensive swamp, a mink has been hunting mice in an old windfall. His odd tracks, somewhat like a large cat's, neatly placed in pairs, wind in and out among the trunks and branches, finally bearing away through the woods on a route that may take their maker for miles before he stops to sleep again in some snug hole in rocks or bank.

The lowering sun foretells the closing of the short winter day, so reluctantly we turn into the faint path that straggles southward close to the brink of the precipice. A flock of crows fly off with noisy cawings as we approach the dense clump of hemlocks where they have been tormenting an owl, and as we pass beneath the trees the victim himself slips away on silently fanning wings. At another place a stunted cedar clinging to the rocks at the very verge of the cliffs attracts the camera-man's attention, and he stops to make the last exposure remain-

ing on the film. The tree is interesting, for its dead branches, gnarled and twisted into almost human semblance by long years of contest with the winds, remind one of the dwarfed evergreens of Japan.

The last mile of the tramp is by moonlight, and by the time the trolley is finally reached again, we are willing to admit that for exercise, as well as general interest, the Palisades in winter possess advantages peculiarly their own.

[For a number of years it has been the custom of a small group of Hudson River canoeists to visit Green Brook on Sundays in winter, when the river is closed or filled with floating ice. They meet at the West 130th street ferry about 9 o'clock, cross the river and walk to Buttermilk Falls, on Green Brook. Just above the cascades in a grove of hemlock they build a fire, prepare tea or coffee, and eat lunch; then, after resting, return to their homes via the same route, or follow the footpath under the cliffs. It is a walk of more than fifteen miles, much of it up and down if the river route is taken. Fair days and rough days find them on these outings, each equipped with a pack containing food, tiny cooking utensils or cameras. Sometimes the snow is deep or the wind bitter, but they love their Palisades in all nature's moods, and the elements do not frighten them. They are of the hardier set of canoeists who, in summer, have come to be week-end fixtures alongshore and on the river, but in winter they are sometimes whimsically referred to as the Blistered Heel Association because in inclement weather this long tramp—the short winter days considered—is disastrous to beginners.—EDITOR.]

NATURAL HISTORY

The Otter.

For the last time, the name of Manly Hardy appears in FOREST AND STREAM. This article on the otter was finished but thirty hours before he died, and less than an hour before he was made to take to his bed. He left nothing else prepared, no notes, and no journals from which any one but himself could have worked. These are his ultimate words.

Begun when he was in his usual health and worked upon leisurely, a few pages at a time, it was finished under sharp pain and with the full anticipation of death coming soon. Yet no one but myself could tell at what point in it he decided that he was doing his last work and made haste to finish it. Up to the last word, it is the otter that he is hunting, and his only care is to leave some trustworthy information about its habits.

The night before he died I was with him, waiting upon him, and among other directions which he gave me was the instruction to go to his desk, where I would find the concluding pages of this sketch. He had not wanted to leave it unfinished, and he worked upon it up to the last moment. He had left off where he did, he said, wishing to consult me as to whether to add something about the great extinct mink and otter of the Maine coast, which he believed to be different species. I considered his own condition, and advised him that he had already once, some time ago, given FOREST AND STREAM an article upon the seashore mink and otter, which seemed to be sufficient.

"Except for that, is it done?" I asked.

"Yes, all done. When you typewrite it, make any changes you wish to and send it in as my last contribution to FOREST AND STREAM."

Here it is as he wrote, save only the minor changes always required in reducing hasty manuscript to a printable form. Those who would understand my father may read here the way in which he always faced death and danger, and will better understand that to those who knew him it was the omissions in his tales of personal adventure that were often the most significant parts of his relation.

"Let others frame their creeds—mine is to work;
To do my best, however far it fall
Below the keener craft of stronger hands;
To be myself, full-hearted, free and true
To what my own soul sees, below, above;
To think my own thought straight out from the heart;
To feel and be, and never stop to ask:
'Do all men so? Is this the world's highway?'
To look unflinching in the face of life
As eagles look upon the noon-day sun;
To cut my own path through primeval woods;
To lay my own course by the polar star
Across the trackless plains and mountains vast;
To seek, not follow, ever till the end.
And for the rest—bare-handed have I come
Into this world, I know not whence nor why.
Bare-handed and alone and unafraid,
With heart of fire and eyes that question still,
Will I go forth into the wide Beyond,
As went the men who bore my blood of old
To Ebb's or Valhalla nothing loath." F. H. E.

ONE of our most interesting animals, and one concerning which very little reliable information can be found in books, is the otter. While otter are found in most parts of the United States and Canada, they vary very little in size, though those from the west coast average a little larger than those from New England and Canada. Otter from Maine and the Provinces are from four to four and one-half feet in length and usually weigh from eighteen to twenty pounds, twenty-five pounds being an exceptionally heavy weight.

While not gregarious in the sense of collecting in large numbers, still I know of no other of our fur-bearing animals, except the beaver, which is so seldom seen solitary, and no other, not excepting squirrels, which spend so much time playing together. Two or three are seen together as commonly as one is seen alone. Often four or five are seen in company, and I have known of seven. When swimming, one is usually in the lead and the others follow in his wake with short intervals between each, and when their backs roll out of water as they swim, three or four will often look like one body thirty or forty feet in length. The seeing of several swimming in this manner has undoubtedly given rise to the stories often repeated in our newspapers of large fresh-water snakes being seen in our lakes. Usually if the one in the lead sees or smells anything suspicious, he will raise his head and neck a foot or two above the water, looking very much as the head of a large snake would look, and as the others dive when he does, people not used to otter are not to blame for thinking they have seen an immense snake. This belief is further strengthened by seeing places in flag beds or on marshy points where it looks as if heavy bodies had been dragged. These places are made by the otters sliding over them.

There is one habit which many writers mention. This is the sliding for amusement. This otters indulge in at all seasons and in many different situations. Sometimes in winter when there is a little snow on the crust, they slide for rods on the crust where the land is nearly level. At other times, in summer and fall, they slide down banks only two or three feet above the water, or sometimes where the bank slopes for twenty to thirty feet, or sometimes in winter down banks of snow, and I have once seen where they slid down a bank of pure white sand which the spring freshet had heaped up ten or twelve feet high. In sliding they throw their forefeet back over their shoulders and slide on their breasts. Whether they ever use their hind feet to propel themselves in any cases is more than I can be positive of; but I once followed two of them more than two miles across a nearly flat bog and they slid fully half the way. There was a light snow on the crust, but I could not see any evidence of their using their hind feet when sliding. They will often slide on a flag bed where the water is only a few inches deep. I have watched two otters slide across a flag bed ten or twelve feet wide, one coming out of the water about the time that the other went under, and repeating this scores of times, going so swiftly that it looked as if an endless chain of otters was being hauled across it.

While most animals occasionally quarrel with each other, I have never heard of otters being seen fighting together, and in handling some thousands of their skins I have never seen any evidence of their biting one another. I have seen two mink, which are a near relative to the otter, fighting like bulldogs, and our snow-shoe rabbits often fight like cats, but if otters ever quarrel with each other it must be very seldom. This is not because they are not willing to fight with other animals or with men, as I have known of several men being badly bitten by them. Sometimes when attacked they give a sharp scream, somewhat like the scream of a mink, only much louder. This and a noise they make when they are calling each other are the only noises I have ever heard of their making, except that I have heard of one snoring when asleep, and when one rises out of the water and smells a person he will snort or blow very much as a seal does. In fact, in many ways they resemble seals, especially in the way they will rise up straight in the water with head and neck exposed, and in the way they rise with a fish in the mouth.

Otters will sometimes whip a large dog in a fair fight. I know of one case where there was a large bulldog with a lumber crew. The landing sawyers heard him all the afternoon bark-

ing down near the outlet of the pond, and as he did not come to camp at night, they went in search of him with a lantern. They found him lying between a dead otter and the otter's hole. He had killed the otter, but was himself too badly hurt to move. Some writers state that "no dog ever killed an otter in a fair fight." This is an error, as there are many dogs that can do it. Once my father when hunting moose found the tracks of three otters which were crossing over high land in making a short cut from one pond to another. His companion had with him a quite small dog which had been trained to kill animals in traps by backing up to them and letting them jump on his back, when he would wheel and catch them by the throat. In this case on coming to the otter, the one he attacked rose on his hind feet and jumped on the dog's back. The first two times the dog got the otter by the throat he was thrown several feet to one side, but the third time he held his grip and did not let go until the otter was dead. The dog did not get hurt. This I know, as I well remember helping an Indian skin the otter.*

In another case my old friend William H. Staples was crossing some burned land when there was snow and came upon the tracks of three otters. He had with him a large bulldog which took the track, and when Staples came up, the dog had one of the otters dead. I came into the Seboois House only a few minutes after Staples came in with the skin. The dog showed no signs of being bitten. If there was any fight it must have been a very short one, as the first Staples knew of it was finding the dog with the dead otter. I think any dog which can kill a large raccoon can kill an otter if he can have the otter on the land. Certainly such dogs as they have in the West trained to fight mountain lions and coyotes, would make short work of an otter, as although very tough and good fighters, no animal not weighing over twenty-five pounds and having little help from claws can be a match for a large dog trained to fight wild animals.

*The reason for his remembering so well was that a horse, scared by the smell of otter grease which the Indian had playfully rubbed on him, kicked my father in the temple and nearly killed him outright.—F. H. E.

BUTTERMILK FALLS ON GREEN BROOK.

ONE OF THE STUNTED PALISADES CEDAR TREES.

In one case I know of three otters making common cause and beating a man. Two men, with both of whom I was well acquainted, were deer hunting and were traveling parallel with each other and not far apart. One of them, called Crooked-eyed Joe Penney, came upon three otters and fired at and wounded one. The otter fell, and Penney, who had a single-shot muzzleloader, rushed up to get him when the others attacked him. He broke the stock of his rifle and bent the barrel in trying to kill them, with the result that he was badly bitten and his trousers nearly torn off, while the otters, including the wounded one, escaped. Penney told me that he bent his rifle in pounding their heads and that he might as well have pounded a bag of wool as far as hurting them; but the opinion of his partner and myself was that he was so excited that he struck over and bent his rifle by striking the ground, as I have known of otter being killed by a few blows from a scale rule, a goad stick or a pitch-fork handle, and in several instances I have known them killed where the man had nothing but his feet and hands. The well known guide, T. W. Billings, of Brownville, Me., once told me that one time he was crossing a bog to look an otter trap when he met an old otter and two young ones. He tried to kill one of the young ones by jumping on it when the old one attacked him and, as he said, made him take steps that a dancing master would never have taught him. He finally killed one of the young ones, but was badly bitten.

MANLY HARDY.

[TO BE CONCLUDED.]

Harbinger?

MILFORD, Conn., Feb. 20.—*Editor Forest and Stream:* Crossing the lots the other day, Feb. 18, from the hill toward a piece of woods, I saw as I entered a marshy meadow a small bird drop down from the branch of a tree a long way off and then fly from the ground to the branch again. From the way in which it acted I knew that it was either a rusty grackle or a bluebird, and presently as I drew nearer and I saw the bird move a few inches along the branch, it was evident that it was a bluebird and in very high plumage of blue coat and red vest. The blue on his back looked almost as dark as that of an indigo bird.

I do not think I have seen a bluebird since last November, and I record this as the first one that has come under my notice in 1911.

ORANGE.

Pacific Coast Woodcock.

IT is much to be hoped that the next summer will give us some definite information with regard to woodcock on the Pacific coast. A letter received by Clarence Parker, of Norwich, N. Y., from A. Bryan Williams, Chief Game Warden of British Columbia, states that Mr. Williams on a number of occasions has heard rumors of woodcock in the Kootenay district, British Columbia, but has never been able to have them satisfactorily confirmed.

A private letter from Dr. A. K. Fisher, of the Biological Survey, recently received, refers to the isolated colony of woodcock in Northeastern Colorado, which originated there after irrigation developed. Dr. Fisher says:

"There is no reason to my mind why woodcock should not do well in the Northwest coast region, if they ever happened to get there and could find suitable winter quarters after they migrated. In general terms I believe woodcock can live where moles exist, for both are more or less dependent on earth worms for food. The Northwest abounds in moles.

"If the Los Angeles bird is a true record, it probably was a migrating bird from some breeding region in the Northwest. It would be important to have the sportsmen of the region look out for woodcock, and if possible get them to refrain from shooting so as to develop a colony."

Passenger Pigeon Investigation.

The following list of rewards with conditions governing them has just been issued:

One thousand dollars reward for first information, *exclusive and confidential*, of the location of a nesting pair or colony of passenger pigeons, anywhere in North America; when properly confirmed and if found by confirming party with parent birds and eggs or young *undisturbed:*

Col. Anthony R. Kuser will pay a reward of $300.
John E. Thayer will pay a reward of $700.

For first nesting discovered thereafter in the following States will be paid by:

John Burroughs, New York	$100
A. B. F. Kinney, Massachusetts	100
Anonymous, Massachusetts, for second find	100
Allan B. Miller, for first nesting found in Worcester county, Mass.	20
Edward Avis, Connecticut	100
Harry S. Hathaway, Rhode Island	100
Worthington Society, New Jersey	100
John Dryden Kuser, for second nesting found in New Jersey	10
Henry W. Shoemaker, Pennsylvania, $200 (adds $25, if nest is protected)	225
W. B. Mershon, Michigan	100
R. W. Mathews, Minnesota	100
Ruthven Deane, Illinois	50
John E. Thayer, Maine, New Hampshire, Vermont, Ontario, Wisconsin, $100 each	500
John Lewis Childs, for first three nestings not entitled to any of the above rewards, $200 each	600

The purpose of these offers is to secure an intelligent search of the American continent for breeding pigeons in the hope that, if found, the species may be saved from extermination.

All above rewards are offered solely and only for information of location of undisturbed nestings. We do not desire possession of any birds, alive or dead, but are working solely to save the free, wild pigeon.

To insure intelligence and good faith, informants of nestings are advised to inclose or agree to forfeit at least $5 in case they have failed to identify the birds correctly. This is only fair, since the amount may cover but a small part of the costs occasioned by a false report. The money will be immediately returned if the birds are found to be passenger pigeons (*Ectopistes migratorius*). In the case of nesting pigeons there can be no excuse for sending in false reports. Disregard all nests on the ground. The wild pigeon always nests in trees, generally ten feet or more from the ground.

Priority of claim will be decided by time of receipt at post or telegraph office. Rewards will be equally divided, if two or more letters or messages bear record of same date and hour. All nestings within one mile of one another will be counted as one colony.

Please report all pigeons seen, giving exactly date, hour, number in flock, direction of flight. Unless absolutely certain that you know the band-tailed, Viosca and red-billed pigeons, do not report that you have seen the passenger pigeon in the Rocky Mountains or Pacific coast region, from British Columbia to Mexico.

As soon as a pigeon nesting is surely identified write the undersigned, who will arrange for confirming party and for payment of the reward. All rewards not claimed by Oct. 31, 1911, will be withdrawn.

C. F. Hodge,
Clark University, Worcester, Mass.

Note.—You are millions to one, already busy, man. Please do not write Dr. Hodge for information. One hundred dollars pays the postage on only 5,000 letters.

The Snowy Heron in Missouri.

At a meeting of sportsmen where the question of real and artificial plumage was being discussed, the snowy heron was spoken of. It was positively asserted by the gentleman addressing the assembly that in the State of Missouri the snowy heron was entirely extinct. I was much surprised at this statement, for I had seen at least 200 during the spring and summer months of 1910.

If the speaker had referred to particular sections of the State, I might not have noticed his error or at least not offered an answer.

On the mountain streams I saw only three during the entire year, and I floated down every mountain stream in Southeast Missouri last summer. The snowy heron was peculiarly conspicuous in Southeast Missouri, in the southeastern part of my county that borders Arkansas. The swift mountain stream, Little Black River, suddenly changes its character and becomes sluggish on its journey the moment it enters the alluvial country. A few miles east a stream of similar character, called Cane Creek, changes in the same way when it meets the same conditions, making two streams of but mediocre capacity for the task of draining the immense area of level lands.

Their impotence to accomplish this task is evident by the large overflowed territories in this section that remain in that condition nearly the whole year if the rainfall has been normal.

On the east, Cane Creek jumps its banks and forms the series of ponds in the cypress and tupelo gum brakes, called the Red Sea. On the west a branch of Little Black River does the same, cutting into the Dandy Lake, and forms Bethel Lake, Running Lake, Open Pond and joins with Cane Creek in widening the Red Sea, which at this point is named the Main Overflow by the swamp natives. At this point of juncture among cypress, gum, willow and water oaks, we find the roosting and nesting places of the snowy heron.

For many years the plumage hunters waged a ceaseless war of extermination on these beautiful creatures, buyers at different points eagerly paying the price demanded by the hunters for the few feathers secured from each bird. The rest of the inoffensive creatures remained in the swamps to add to the putrid smell of the miasmatic waters. At first the lightly loaded shotgun was used as the most formidable weapon; later, it was supplemented by the heavier gun, then the .22 long rifle, and lastly, as the quarry became more wary, high power rifles were brought into requisition.

Plumage hunters from different States flocked into this section and it was not unusual to see ten or twelve in a day scouring the swamps for aigrette feathers. When the Western Tie and Timber Company began cutting the white oak for ties, the birds left suddenly, and for several years snowy herons were seen only now and then in that formerly frequented locality.

During the year 1901, birds began once more to nest in this place, but the building of the Frisco R. R. brought a horde of ignorant Italians here who pursued the birds not alone for their plumage, but for food purposes. So persistent were they in devouring all wild life with which they came in contact, that the buzzard, the most loathsome of carrion eaters, was killed and eaten by them. This inroad was a severe check on the snowy heron's increase, and again for a few years they refused to visit these swamps.

During all this time the tie companies kept an army of men at work in the overflow. Suddenly the limit of their operations was reached, the work ceased, and the swamps once more became as devoid of human beings as before. Then and only then the herons began to return. The plumage hunters learned of this and made ready for devastation once more. But for once their plans failed. The timber operators left in the swamps such a mass of down timber that the hunters in their small bateaus could not gain access to their former fields of slaughter, and in the late autumn, the only time the swamps can be waded in boats, the birds have left. So everything now favors an increase of the herons.

It is strange how they cling to a certain roost, and almost adjoining it is a large blue heron roost. The noise from the latter can be heard at great distances throughout the overflow—a dismal, ominous sound on a dark stormy night.

During the months of June and July I had frequent occasions to visit this territory, and greatly enjoyed seeing the birds in their flights to different parts of the overflow. But this is the only region where I saw them in large numbers the last year. And I might add I have been in every township of the sunken lands.

J. B. Thompson.

Birds of the Olympic Peninsula.

At the recent meeting of the Central Branch of the American Society of Zoologists, many interesting papers were read, most of them very technical. One, however, of much interest to ornithologists is entitled, "Birds of the Olympic Peninsula," by Albert B. Reagan, U. S. Indian Service.

The Olympic Peninsula, long famous for its game, its fish, its snowy peaks and its tangled forests, extends from Gray's Harbor north to the Straits of Juan de Fuca, and east to Puget Sound. So far as the birds are concerned, the region divides itself into three parts—the islands off the coast, the strip of coast land, and the mountains that lie back of this strip. The central high mountains range from 6,000 to 8,000 feet in height, and the whole mainland area except the highest mountains is heavily forested and covered with a dense tangle of underbrush.

The islands on the Pacific side number something like a hundred, and by position are divided into three groups, each of which was made a bird reserve by President Theodore Roosevelt. These islands swarm with water birds, gulls, murres, puffins, petrels, cormorants, grebes, loons, surf ducks and oyster catchers. It has been estimated that—including the migratory birds—the birds of the island groups number at least 100,000.

The land birds of the coast strip and of the mountain are many, and altogether 137 species have been listed from the Olympic Peninsula.

GAME BAG AND GUN

In a Scottish Highland Marsh.

It was a chill morning in early November, and the sun, shining through the mist, lit up the tops of the mountains powdered with a slight coating of snow. It was ideal weather for wildfowl, for frost had driven snipe down to the valleys, and with the coming of winter the widgeon's whistle once more echoed in the lonely marshes of the Scottish Highlands. Other species, too, put in their appearance, the tufted duck, goldeneye and a few stragglers from the great skeins of geese paused awhile on their southward journey.

Four guns all told, we rattled merrily along the frost-bound road, our host beguiling the way with tales of former days. Stopping at a bridge, he threw the reins to the groom and we clambered out with guns and ammunition. The marsh lay below us, an endless stretch of rush-covered meadow, with here and there a pike-haunted tarn reposing in their midst. Beneath the bridge a rapid stream brawled onward to the sea, and a river watcher who joined us as we stood speculating as to the probability of the fowl being in, volunteered the welcome news that a big lot of widgeon had passed down the valley at daybreak, and he thought they settled on a loch at the far end of the marsh.

Four keepers and gillies joined us, and forming into line, we commenced operations in a real "quaker," a bog which surrounded a tiny lakelet fringed with plants and rushes. I was on the right, my host next, and two crack shots whom I will call A. and B., on the left of the line.

We had scarcely entered the bog when a bunch of teal rose in front of my host, who drew first blood with a neat right and left. The shots were followed by a whir of wings as ducks rose in all directions, the sharp "scaipe" of many snipe mingling with the quacking of mallard and teal. A succession of shots, more or less successful, was the result, and a loud yelping indicated that the retriever, who had run in to the first bird, was receiving the customary punishment for his fault. Incidentally it is worth noting that the dog worked to perfection during the rest of the day. Ducks were now wheeling round in all directions, and, at a signal from our host, we crouched in the rushes. A whirl of wings rewarded us for our patience, and a bunch of widgeon wheeled past, of which, however, I only secured a single bird. At the shot they rose and circled away toward the left of the line, a really marvelous shot from A. adding another to the bag. It turned out afterward that he had slipped in a couple of No. 3 shot cartridges as he saw them approaching.

As the fowl were so wild, a short consultation between our host and the keeper resulted in A. and B. being sent to the far end of the marsh with a gillie, while we worked round the small tarn on the chance of a snipe or duck which might have remained during the fusillade. My host's dog, a steady old Sussex spaniel, promptly flushed a jack, which he neatly killed, and a single snipe, rising in front of me shared the same fate. Both were retrieved by the spaniel, no easy matter in the thick marsh vegetation. A mallard drake, evidently wounded, rose heavily on the edge of the tarn, and fell into the water to my right barrel. The spaniel took the water without the slightest hesitation, but the bird was only winged and escaped by diving. We failed to discover the slightest trace of it again, but the keeper secured it next day. A couple of teal gave me my first chance of a right and left, of which I took full advantage, but a snipe rising while I was reloading got away unscathed.

UNAPPROACHABLE GEESE.
From a painting by Archibald Thorburn.

A. and B. had now evidently reached their position, for six or eight shots fired in quick succession showed that they had commenced operations. A loch, rather larger than the one we had just beaten, lay at the far end of the bog, and after working round its edges, our friends were to be posted in suitable positions commanding the water, for it was the custom of duck flushed at our end of the marsh to settle there after circling. Our host and myself with the gillies walked steadily forward.

We obtained a few long shots at duck, but for the most part these rose out of range. Teal, however, were less wary, for this species is always inclined to hide at the approach of danger, crouching in the thickest cover, while their larger cousins evince a preference for the more open parts of the marsh, where they can readily mark the approach of an intruder. However, the wariness of the mallards gave us little concern, for the continual popping of our friends' weapons showed that the maneuver was successful. As this plan had never been tried before, the ducks were unsuspicious of danger when alighting at the far end of the marsh, and though the big packs of widgeon made straight for the sea, a few fell victims to A.'s No. 3 shot.

Snipe continued to rise at intervals and a fair proportion were added to the bag. In common with many wildfowlers, I am of the opinion that good snipe shooting is practically unequaled as a sport, with, perhaps, the exception of flight shooting at sunset and early dawn. To add to the charm of the day, we found jack-snipe numerous, the year in question being a record season for these game little longbills. I have never seen them in big wisps like their larger brethren, but on this particular morning three or four were often flushed within a radius of a hundred yards.

My host distinguished himself by killing two jacks right and left near a wide ditch, and one of them falling on the further side, the spaniel was sent to retrieve it. As the dog entered the water he flushed a bunch of tufted duck, which were now beginning to appear, though few bred in the locality. They were within easy range, and three fell to our four barrels, both of us, unfortunately, firing at the same bird with the first shot. A couple of stragglers were likewise secured. The remainder of the flock made a wide circle, then flew toward the loch where our friends were hidden. They received an unexpected welcome, four more barrels greeting their arrival, with what success we could not see. All six were stone dead, and were easily gathered, which was fortunate, for tufted duck are exceptionally strong divers and can swim under water for a considerable distance.

We now had to make a detour to a wooden bridge which crossed the ditch, only to find that the planks had been carried away by a flood some few weeks before. There was nothing for it but to jump. Gillies included, we all jumped short, and much laughter accompanied each successive plunge into the water. However, we kept the guns dry, which was the most important consideration, the water being little more than knee-deep. Then followed a capital bit of snipe shooting, which was but the prelude to an exciting stalk after some mallards, which, turned back from the loch by the shooting of our friends, settled on a small pond surrounded with rushes. We approached them on all fours from two directions, and, though I succeeded in killing only one bird, my companion, one of the best and coolest shots I have ever met, secured his right and left as usual.

The next meadow being rather too dry for wildfowl, was drawn blank, but it held a few brown hares, which we spared, as these animals were scarce in the district. Our friends now left their posts, and we could see them picking up ducks in all directions. When they subsequently joined us we all agreed that we had seldom a more charming morning.

W. R. Gilbert.

Good Stuff.

Byron, Ill., Jan. 30.—*Editor Forest and Stream:* Forest and Stream of the 28th day of the Wolf Month, 1911, is a wonderful issue of a great outdoor journal of sport. The wild man with his perfect skis and sail looks sharply at me as I write.

The Winter Camp-Fires of W. J. Bignell, now running in Forest and Stream, rings eternally true. I have made down my bed on the mountain top in mid-winter when the elk yet ran in bands of a hundred. I have followed them at the foot of Cloud Peak on the summit of the Big Horn Range and made a killing. Forty degrees below zero the settlers in the Big Horn vales far below me said it was on that day of the Wolf Month when the killing was made. When the last elk had been gralloched and cared for, and I slowly and painfully straightened my limbs and wrestled with the crook in my back, I found that my heavy hunting knife was frozen to my hand so that it hung to the palmar surface for a moment or two when I opened the stiffened hand. Did I suffer? No, sir. The air was dry; we were mountain hunters, properly outfitted, mounted and armed, and slept o' nights in Buckskin Ed's old cabin just below timber line and made one camp in the open air on the way up.

What Mr. Bignell says of the caribou on the wind-swept mid-winter ranges of the Shickshock Mountains of the Gaspé Peninsula of Quebec I personally know—in the main—to be true of the elk bands of the Big Horn Range in the latter part of the last century in mid-winter. The parallel is most striking.

Incidentally, a band of one hundred traveling elk pack down the snow as if a train of Government wagons had been along, so hard and smooth is it. In it you are all right; out of it your horse may flounder mid-flank deep. He will not get out of it of his own free will and accord—not he.

Again, with Mr. Bignell, I know that the supreme joy of the wild is not for the guided, and that there are summer guides, winter guides, who are invariably "chasseurs de pelleteries"—good guides, poor guides and downright bad ones. I never followed a guide a rod in my life, but I thoroughly believe in the value of a good one. It has always been my fortune to have what the men of the old West called a "partner," "pardner" or "podner." Here is to them, one and all. Albert J. Woodcock.

[The elk have long been extinct in the Big Horn Mountains, but recently the State of Wyoming has introduced there about fifty young ones, which, if guarded, may restock those rough hills.—Editor.]

Taking Food in China.

To the North China Daily News, H. T. Wade, of Shanghai, contributes an interesting letter describing sights witnessed up the country which, if novel to him as an old resident in Shanghai, will be still more so to most of our readers.

In his interesting volume, "Shooting in China," and before that was published, in Forest and Stream, T. R. Jernigan gave an interesting account of Chinese sportsmen and weapons. He described two or three methods of capturing ducks, and gave illustrations of these methods from Chinese drawings, one of which we reproduce here, as well as an illustration of one of the guns used. One of these methods is referred to in Mr. Wade's letter, the essential parts of which read as follows:

"During the recent Christmas holidays it happened that we passed through the townlet of Hukou on the Nadoo Creek. A crowd was on the bank watching the maneuvers of two fishermen who were reaping a harvest of mussels and winkles. Many have read how the natives collect wildfowl by going into the water after them and dragging the birds under by their legs, but possibly no one has witnessed the operation. Now, these fishermen were dressed in fowling costume; a cow skin coat and stockings all in one piece, with the hair turned inside. The only apertures in the garment into which the wearers worked their way feet foremost were at the neck and the cuffs, which were securely tied before entering the water, into which the men waded up to their necks. As soon as their feet came in contact with any of the shell fish, which seemed to lie in beds, the fishermen loosened them as well as they could from the muddy bottom of the creek and then brought up the 'take' in a grasp net, which at other times possibly did duty for collecting the slime for a top dressing for the fields. The men were eminently successful during the short time we stopped to watch them and piled up a 'big catch' on the foreshore.

"Another sight which interested us was a novel way of fishing. Two small boats were moving parallel with one another about thirty feet apart. The ends of a line about sixty feet long to which small, unbaited hooks were attached about four inches apart to two sticks, were held respectively by a man in each boat. As the boats moved slowly along, first one man and then the other would give his stick a jerk. Immediately that the hooks struck anything, the line was gradually hauled in and invariably with success. We certainly saw fish struck four out of five times, many of them running apparently from half a pound to two or more pounds. It may be that China is the only place in the world where fish are caught with unbaited hooks.

"The third incident we witnessed occurred at the well known Shapa, or lower barrier.

"A native shooter had his gingal with him—a most uncanny looking weapon. That there should be no question as to its length, it was placed upright alongside myself and towered above my head two feet two inches (measured) which would make the piece of ordnance over eight feet in length. It weighed eighteen catties. We foreigners sometimes growl at the 6½ or 7½ pounds our guns usually weigh. Fancy having to carry a 24-pounder which was what this man did all day long and for every day in the

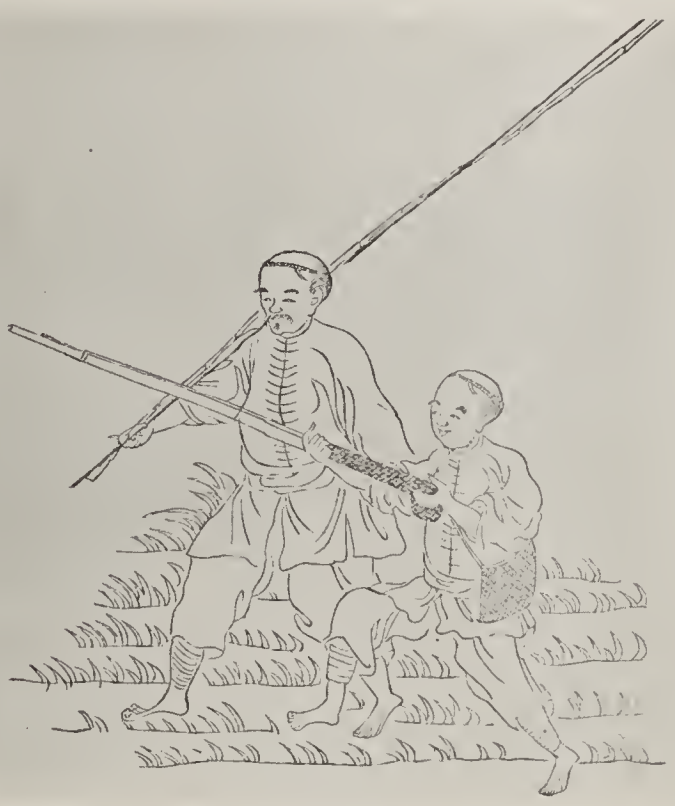
week. He was accompanied by a small, weird looking animal, a most unpresentable little wonk, on whom he laid great store. Curiosity impelled us to look at man and dog at work, and what we saw made such an impression upon us that we thought some little record of it might interest others. To cut a long story short, this is briefly what we saw: A hen pheasant happened to drop into a furrowed field at feeding time. We saw her dictinctly running up and down in search of food. The native took her bearings, crept up as closely as he safely could, deposited his gun on a bit of higher ground and kept it trained on the bird. Meantime the dog lay down across the barrel of the gun as a screen for his master. The psychological moment arrived, the gun was fired, the bird was killed upon the ground, and the dog remained upon the barrel until his master took the gun up to reload it. Now, this doubtlessly reads very much like romance, but it is a fact that can be attested by three eye witnesses."

This manner of collecting shellfish is more or less suggestive of the way in which in old times Indian women used to gather wappetoes on the Pacific coast. These wappetoes are small tubers which grow on the roots of a water plant. It is the practice of the women to wade into the water where these plants grow, and feeling in the mud for the tubers to break them free from their stems with the toes, when the tubers, being light, rise to the surface and can easily be gathered.

The method of fishing described by the Shanghai writer suggests also the way in which the Pacific coast Indians catch herrings and oolachans. The use of the "rake," as the Pacific coast implement is called, often yields large results. It is a long pole flattened on either side and in its widest part perhaps two inches or more across. The flattening makes the pole a narrow oval in cross section, and into each of the narrow edges of the pole is driven a row of nails, an inch or more apart. These nails firmly driven into the wood are filed down to sharp points at the outer end. The Indian sitting in his canoe and holding the upper end of the pole in both hands, as he would hold a paddle, sweeps the lower end, which has the nails in it, though the water, using the paddling motion. The herrings and oolachans collect in great schools in certain places which the Indians know, and every time the man sweeps the pole through such a school it strikes the bodies of several of the fish with sufficient force to drive the nails into them. As the man continues the stroke, the impaled fish are pushed ahead of the pole, and when the stroke ends, the pole is brought out of the water with the fish still sticking on the nails. The Indian then brings the nailed end of the pole in over the canoe, taps it on the side, and the fish drop off into the boat.

Mr. Jernigan's illustration of the Chinese punt shooter is of special interest, because the punt is used only to carry the gun, while the gunner wades along on the bottom.

CHINESE PUNT SHOOTER.



A CHINESE UPLAND GUNNER.

Game Law Hearings.

Albany, N. Y., Feb. 27.—*Editor Forest and Stream:* Hon. Thomas M. Osborne, Forest, Fish and Game Commissioner, has called a conference of representative sportsmen, anglers and business men interested in game law enforcement to be held March 9 and 10 in the Assembly parlor at the Capitol, Albany. The forest, fish and game committees of the Senate and Assembly will sit at this hearing. The object of the meeting is to discuss measures relating to the forest, fish and game law, and to ascertain what changes, if any, in the present statute will be desirable. A clear understanding of the requirements of each section of the State and the various interests affected by the administration of the game law is necessary in order to obtain the most intelligent action. To this end Commissioner Osborne invites the attendance of all those concerned in such matters. He would be pleased to receive at an early date the briefest possible written presentation of the views of each individual who intends participating in the conference. Fish and fisheries will be considered Thursday, March 9. Matters pertaining to wild game and fur-bearing animals will be taken up Friday, March 10.

At its last meeting the Senate forest, fish and game committee gave a hearing on the bill of Senator Long, to repeal the present law preventing spring duck shooting on Long Island and vicinity waters. Long Island hunters and those who have made a living in years gone by from the slaughter of ducks in the breeding season for the New York markets desire to extend the open season from Jan. 10 until April 1. Ever since the bill prohibiting duck shooting in the spring was enacted, some six or seven years ago, there have been repeal measures introduced but without success.

There was a big attendance, and those who spoke in opposition to the Long bill included Deputy Commissioner Burnham, of the State Forest, Fish and Game Commission. He declared the reason why the department objected to the bill was because it believed that the ducks should not be slaughtered in the spring when they were about to nest. Representatives of the various State sportsmen's associations, and numerous local organizations from counties all the way west to Niagara, appeared in opposition.

Hon. Martin W. Littleton represented the delegation of Long Island residents and hunters who favor spring shooting. He came in response to a resolution adopted by the board of supervisors in Suffolk county asking him to appear in favor of the Long bill. Senator Long and a number of Long Islanders spoke in favor of the bill. They asserted that ducks have become so plentiful along the shores of Long Island that no harm could come from the reopening of the spring season. E. C. C.

North American Association.

Quebec, Canada, Feb. 25.—*Editor Forest and Stream:* The attendance at the eleventh annual convention of the North American Fish and Game Protective Association, held in Montreal last week, was even more influential than usual. It included Sir Lomer Gouin, president; Hon. Mr. Hazen, Premier of New Brunswick; Hon. Mr. Grimmer, Surveyor-General of the same Province, under whose department is placed the administration of the fish and game branch; General Butterfield, of the Vermont Legislature; Dr. Bishop, of Boston, representing the chairman of the Maine Fish and Game Commission; Hon. L. A. Bergevin, Member of the Legislative Council of Quebec; Dr. Finnie, Member of the Legislative Assembly of Quebec; C. H. Wilson and C. F. Burhans, of Glens Falls, N. Y.; J. B. Townsend, Jr., of Philadelphia; W. H. Parker, of the Laurentian Fish and Game Club; L. O. Armstrong; H. R. Charlton; Mr. Maltby, president of the Province of Quebec Fish and Game Protective Association, and others.

William Dutcher, president of the American Association of Audubon Societies, was prevented by illness from attending, Hon. Dr. Reaume was abroad, and Dr. Hornaday of New York, Professor Prince of Ottawa, Dr. Evermann of Washington and others who had expected to be present were prevented at the last moment, by press of business.

Apart from the reading of a number of interesting papers and addresses, several important resolutions were adopted.

On motion of C. H. Wilson (New York), it was resolved that this association most respectfully urges all States and Provinces to formulate their legislation in matters of fish and game, in harmony with the International treaty between Great Britain and the United States.

On motion of Hon. Mr. Grimmer, seconded by Hon. Mr. Hazen, it was resolved that this association approves of the action of the Provinces of Quebec and New Brunswick in endeavoring to have provision made by the Government of Canada for the electrification of the Grand Trunk Pacific Railway when it passes through the Crown Lands of said Provinces, and respectfuliy urges upon the Federal Government the great importance and necessity of complying with the requests of said Provinces, with a view to the preservation of their forests.

It was resolved on motion of L. O. Armstrong that the association most earnestly recommends that the various Provinces and States should encourage fish farming in every possible manner, notably by the establishment of fish hatcheries and the publication and distribution of bulletins and other educational matter. This work should be done in order primarily to add to the supply of fish food for the people.

On division, it was resolved that it is the opinion of the association that leases of shooting and hunting privileges, in all cases where the upkeep of the fish and game is entrusted to the lessee, should be made for a term long enough to make it for the interest of the lessee not only to maintain but to increase the existing stock of fish and game on the leased premises. We believe that long leases help conservation, while short leases encourage depletion.

Perhaps the most important action taken by the association was the adoption of a resolution appointing an influential committee empowered to negotiate with the Federal Government for such legislation as would permit the service of a Provincial warrant in any of the other Provinces upon offenders against Provincial fish and game laws, and also for the enactment, if possible, of an extradition treaty between Canada and the United States with the same objects in view. The members of this committee are the three cabinet ministers having under their respective control the enforcement of the fish and game laws of the Provinces of New Brunswick, Ontario and Quebec, Messrs. Grimmer, Reaume and Devlin. This important matter was brought to the attention of the association by a paper read by Mr. Townsend, of Philadelphia, on the subject of offenses against the laws of the State or Provinces, regulating forests, fisheries and the preservation and protection of game, where the offenders had fled the jurisdiction before it was possible to effect their arrest, and where, after the necessary informations were laid and warrants of arrest issued, they had continued to absent themselves from the Province or State within whose boundaries the offense was committed, so that the writ could not be served or the just penalties meted out.

In illustration of this condition of affairs the case of two residents of the State of New York was mentioned, who in contravention of the laws of the Province of Quebec, were guilty of killing three cow moose, though they did not make any use of either the skins or carcasses. Before warrants could issue, the offenders had made good their escape from the Province.

Surveyor-General Grimmer, of New Brunswick, referred to the case of a New York banker named Grant, and also to one Stanton, of Philadelphia, and his three companions, who had violated the New Brunswick laws, while it is a common occurrence for poachers residing near the boundary line between the Provinces of Ontario and Quebec, and those of Quebec and New Brunswick to commit depredations in the neighboring Province and to escape the consequences of their offenses by hastily recrossing the line to their homes.

Mr. Townsend went very thoroughly into the question of State and Provincial legislation to show that there need be no difficulty between the different Provinces and States in exchanging offenders against the fish and game laws, but admitted that the establishment of any such relations between the Dominion and the United States Government would be a matter of far greater difficulty, and undoubtedly attended with a reformation of treaty rights. He eloquently contended, however, amid the applause of the convention, that if the man who utters a forged check, no matter how insignificant the amount, can be brought back from Canada to stand trial in the States, a man who has subjected himself to the possibilities of imprisonment or of fines, for the violation of the forestry, fish or game laws, running into hundreds or thousands of dollars, should likewise be compelled to suffer the proper punishment for his wrongful acts. "Call my idea utopian, if you will," he said, "say that it is beneath the dignity of two adjoining governments to go to so much trouble to secure the punishment of the man who has killed his deer out of season, or who has dynamited fish, but, recollect, gentlemen, that if the present conditions are allowed to continue, and you carry the theory of immunity from punishment for offenses of this character to its logical conclusion, that the laws relative to fisheries in the Great Lakes can be violated by the inhabitants of one territory in the waters of the other with absolute impunity, and that the man who wilfully and wantonly sets fire to standing timber, resulting in the loss perhaps of thousands of dollars, and escapes from the scene of his crime, is quite as immune from punishment as is the slayer of the cow moose, or the violator of the laws relative to close season."

The reports of fish and game legislation in the different States and Provinces furnished a great deal of interesting information and gave rise to considerable discussion.

Most instructive and complete was G. H. Richards' report of the Massachusetts legislation. Mr. Richards is a strong advocate of game farming, and declares that his great hope of the future abundance of game in Massachusetts rests in the efforts of individuals in this direction. He referred to the recent six-day open season for deer in western Massachusetts, when over 1,300 deer were killed and some others wounded, and the comic side of the provision that a shotgun only could be used. The gun was generally loaded, he said, with ounce balls. In the course of the discussion on his paper, Mr. Richards said that it was suspected that some farmers made use of the excuse of damage being caused by deer to their crops, to justify the otherwise illegal killing of them, and that within the last few years, the damages claimed from the State for such alleged injuries to crops had increased from $1,000 to $7.000, some of them being both preposterous and absurd.

General Butterfield reported the defeat of an ill-advised attempt of the Speaker of the Vermont Legislature to reduce the limit of size of trout that might be caught from six to five inches, the absurdity of which proposal was shown by the fact that fingerlings as large as five inches long, obtained from the State were actually being planted at the same time, so that had the bill passed, an angler might follow the men planting the fingerlings and take them out as soon as they had been put into the water.

C. H. Wilson was enthusiastic over the work of tree planting and preservation done by the Boys' Conservation League at Glens Falls, N. Y., and elsewhere, lauded the hatchery work of Dr. Bean, and said that the output of fry last year in the State was "the largest ever." He referred to the pheasant farming of the State and rejoiced that the hounding of deer in New York was forever over.

Remarkable stories of the abundance of moose in New Brunswick were told by Premier Hazen and Surveyor-General Grimmer of that Province. So abundant were they that the game department was flooded with demands from farmers for the payment of various sums for damages caused by moose and deer to growing crops. They declared that a moose head with a spread of fifty to sixty inches was nothing unusual in New Brunswick.

The best moose story told, however, was undoubtedly that of Hon. Mr. Grimmer, who,

while out in a canoe at night with two young women and two guides, for the purpose of examining live moose with a jacklight, passed four of them almost close enough to touch them before they encountered a big bull in a narrow creek, who with his attention riveted on the light was unfortunately touched by the bow of the canoe, through a miscalculation of the man in the stern. The animal reared on his hind legs, and as he came to earth again his front feet came down into the canoe, one of them scraping the skin from Mr. Grimmer's arm from the shoulder to the elbow, and carrying the canoe to the bottom of the creek with its living freight, the inmates being up to their middles in water before the animal could extricate himself and get away, which he fortunately did without inflicting any further injury upon any of the party.

Mr. Townsend gave some instructive illustrations of the success of fish planting in Pennsylvania streams, and reported upon the extensive reforesting operations of the Pennsylvania Railway and also of the Lehigh Coal & Navigation Co., in order to conserve the water supply.

Much interest was manifested in the report of fish and game conditions in British Columbia, furnished by Mr. Chaldecott, of Vancouver. He declared that wapiti and moose in the Kootenay reserve are rapidly increasing, while the increase of beaver has been so large that they are more than plentiful, and that a general open season will probably be declared. Hungarian partridges are doing well, and Mongolian pheasants, imported some time ago, are said to be improving on the older bird in the Province (*Torquatus*), the former being by far the more hardy variety.

The next annual convention of the association is to be held in Boston, and the election of officers resulted as follows: President, G. H. Richards, Boston; Secretary-Treasurer, E. T. D. Chambers, Quebec; Vice-Presidents, Hon. Leroy T. Carleton, Augusta, Maine; F. S. Hodges, Boston; R. E. Plumb, Detroit; Hon. W. C. H. Grimmer, St. Stephens, N. B.; Hon. W. C. Witherbee, Port Henry, N. Y.; A. Kelly Evans, Toronto; Dr. J. T. Finnie, Montreal; General F. G. Butterfield, Derby Line, Vermont; Alan D. Wilson, Philadelphia; Dr. Geo. E. Porter, Bridgeport, Conn. Executive Committee: Hon. J. W. Brackett, Philips, Maine; Dr. Heber Bishop, Boston; Hon. J. D. Hazen, St. John, N. B.; C. H. Wilson, Glens Falls, N. Y.; Oliver Adams, Toronto; C. E. E. Ussher, Montreal; F. L. Fish, Vergennes, Vermont; J. B. Townsend, Jr., Philadelphia; J. C. Chamberlain, Bridgeport, Conn.

E. T. D. Chambers.

New York Legislature.

Bills introduced:

By Assemblyman Shepardson, relating to hunting hares and rabbits with ferrets in Chenango county.

By Senator Thomas, prohibiting the hunting of hares or rabbits with ferrets in Chenango county.

By Senator Bayne, relating to the open season for hares and rabbits in Richmond county.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

The Yellowstone Park Elk.

This winter—as every winter for several years past—we hear the usual accounts of elk starving in the mountain country between the southern end of the Yellowstone Park and the town of Jackson. The problem of what shall be done with them is unsolved, and perhaps insoluble.

In the old times the elk that wintered in the highlands of the Yellowstone Park, and in the lofty mountains where rise the Yellowstone and Wind Rivers, made their way south at the approach of winter, going down to the Red Desert in Wyoming, a great dry, warm tract then unoccupied, where the elk wintered on good feed, returning in spring to their mountain homes. Even after cattle and horses were abundant in the country, the elk still went to their old feeding grounds, but as settlements came in on the streams lying between the Red Desert and the mountains, and the country was fenced off, it became impossible for the elk to get south. Since then they have suffered every winter from hunger and often have starved to death by hundreds, if not thousands. Moreover, of late years the country of the Red Desert has been so overstocked with sheep that there is no longer any feed there.

It is obvious that if the elk are protected they will increase. It is also evident that they cannot winter in the high mountains. Neither the United States Government nor the State of Wyoming is likely to spend considerable sums of money every year in putting up hay for the purpose of feeding the elk on the southern side of the Yellowstone Park, and if they did so it would only be putting off the evil day. The matter is summarized in the report of the game preservation committee of the Boone and Crockett Club, issued last December, which says:

"As things stand to-day it seems as if the southern herd of Yellowstone Park elk must ultimately be exterminated by starvation. After it has been reduced to a few hundred, those left may be able to winter on the bald hills about Jackson's Hole.

"Years ago Major Pitcher irrigated and sowed an alfalfa field in the Yellowstone Park on which he grew hay for the antelope, deer and mountain sheep which winter in the low ground at the north of the park. In recent years the elk have attacked the alfalfa stacks and have consumed much of the hay which was intended for the smaller species. Major Pitcher has urged that the great flats along the Yellowstone River within the park be irrigated; for, at the expense of a few thousand dollars for labor and seed, they would grow heavy crops of alfalfa which would carry many elk through the winter. The Interior Department has never been willing to authorize such expenditure. But even if the elk were fed there and were thus for a time saved from starvation in severe winters, the continued increase would make the herd too large, and the question as to what shall be done with them would still remain unanswered."

That these elk on the south side of the Yellowstone Park must perish seems inevitable. They cannot live without a winter range. One thing that should obviously be done is to stock the Bison Preserve in Montana, the Wichita Game Preserve, the Glacier National Park and any other reservations adapted to elk with these animals. Game refuges ought to be set aside in certain of the forest reservations, and elk introduced in refuges which have both summer and winter ranges. This, while tending to preserve the elk, throws no light on the question of preserving the elk in the south part of the National Park, and no suggestion has been made that gives any prospect of a way out of this difficulty.

Early February has been very hard on the protected elk in the Yellowstone Park, on the north side. It is reported that more have left the park than ever before in the memory of residents in the Yellowstone Valley. It is said that there must be 8,000 between Crevasse Creek and Six Miles. Every day in the Yellowstone Park, near Gardiner, Montana, hay is being fed to about 600 elk and a few antelope. The snow is so heavy that it seems that the antelope will not stay in the park. Soldiers have driven them back several times, but they soon leave the park again.

Anderson, one of the park scouts, has already killed about one hundred coyotes this year and is still at it. The Livingston Enterprise under date of Feb. 11 publishes a dispatch from Bozeman as follows:

"Reports from miners and woodsmen from the West Gallatin basin, adjacent to the Yellowstone Park, during the past few days, indicate a deplorable condition of the elk and other big game in that region. The snow is unusually deep and a twenty-four hours' rain about a week ago, followed by a cold spell, has made it almost impossible for the animals to reach forage beneath a coating of ice. One of the basin farmers reports that eight elk died within sight of his cabin last week. It is with difficulty that they can keep the elk out of their limited supplies of hay.

"A party composed of Forest Supervisor D. T. Conkling, Deputy Game Warden Henry Ferguson and Gus J. Steffens, all of this city, will leave in the morning to make a thorough investigation. It may be necessary to secure hay for the game which will have to be transported for many miles."

Washington, D. C., Feb. 27.—*Editor Forest and Stream:* Senator Warren, of Wyoming, has tacked an amendment to the agricultural appropriation bill providing the sum of twenty thousand dollars for feeding, protecting and removal to safety of the elk in the Jackson Hole and Teton localities in the State of Wyoming. The appropriation was made in response to a memorial of the Legislature of Wyoming and to the earnest solicitation of Governor Carey, of that State. The New York City Zoological Park also added its appeal for the proper care and protection of the elk. The appropriation, which comes none too soon, might have been secured earlier if the same influences had been brought to bear and the same aid enlisted. Governor Carey estimates that probably 35,000 elk, the largest herd in the United States, are drifting around in Wyoming, coming with the first snows and drifting to the settled valleys, destroying hay stacks and fences in quest of food. Each winter many thousands have succumbed to starvation, though the State of Wyoming is spending annually $20,000 for their protection, which, combined with the appropriation of Congress, will now afford adequate care and protection, thus rescuing from extermination our largest band

of elk. It is hoped their sufferings are now to end, for Uncle Sam will spread his mantle of protection over them and insure their preservation and care. It is proposed to begin their removal as soon as the weather will permit to the Big Horn Mountains or to several of the national forest reservations, employing a troop or more of cavalry in addition to enlisting the aid of stockmen. It is intended that the complete removal and herding will continue until the entire number of elk are provided for, which will probably not be entirely completed until fall.

The Federal Government should wake up to the importance of preserving the native big game of this country, and one of the principal reasons for this awakening is the agitation of the question by the sportsmen of the country who have been for years trying to enlist the Federal Government in caring for, protecting and preserving the game and fish supply. The large number of forest reservations with an army of forest rangers affords an opportunity for the care and preservation of these creatures, and it should now be a comparatively easy matter for the Government to care for and protect the big game with little or no additional expense by the mere act of placing the animals on the forest reservations.

In this connection there is an item in the agricultural appropriation bill providing the sum of $5,000 for the purchase, capture and transportation of game for national reservations. In the course of a decade it is very probable that the big game of the country will have reached such numbers that a fixed per cent. of the yearly increase may be allowed to the public either for stocking private preserves or for other purposes. It has been a source of gratification to many lovers of our native game animals to see the growing interest among all classes in the preservation and care of these animals.

On Feb. 16, Congress passed and President Taft approved the law for the care and protection of the antelope in Arizona, and now comes an appropriation for the preservation of our largest band of elk, and another for the capture, purchase and transportation of game animals for the national reservations. This is only a beginning for each year; as the interest increases, so will the appropriations. Truly it is a sign of the times. RALEIGH RAINES.

Massachusetts Legislature.

BOSTON, Mass., Feb. 25.—*Editor Forest and Stream:* A hearing was held the past week before the Massachusetts Commissioner of Fisheries and Game on the bill drawn by the commission to provide for the leasing, purchasing or construction of "one or more fish hatcheries." At the hearing President Charles, of the State Association, explained why a year ago, in behalf of the association and the trout fishermen of the State, he did not feel justified in urging the expenditure of any considerable sum of money for the establishment of a hatchery while the State was the unfortunate owner of three comparatively worthless stations on which considerable money had been expended during the last decade without any adequate returns. He argued against the breaking of new ground for the establishing of a hatchery while there are in the market several commercial hatcheries where the water has been thoroughly tested and where no difficulty has been experienced in rearing trout to the fingerling and adult stages. It was also pointed out that in the case of a new establishment it would be at least two or three years before trout of any size would be ready for distribution.

Mr. Priest, superintendent of the Sandwich Hatchery, was requested to inform the committee what might be expected from his hatchery, which is one of those which might be obtained by the State. Mr. Priest went into details in regard to the rearing of fingerling trout for stocking purposes and for larger fish for the market. He stated that there would be no difficulty in rearing 500,000 fingerling yearly, or even a larger number if desired. The price for which he is willing to sell is somewhat less than the sum asked for by the commission last year. I left the hearing encouraged to hope that the committee would make a favorable report on the bill.

House bills 275 and 278, the former to determine how birds that feed on the gypsy and brown-tail moths, could be colonized—the latter for an investigation of infectious diseases of birds were objected to by C. W. Adams, secretary of the Massachusetts Gunners' Association, on the ground that the work outlined in those bills should be done, if needed, by the department in charge of the destruction of the gypsy and brown-tail moths or by the State ornithologist under the direction of the Board of Agriculture.

The third recommendation of the commission (as printed in H. 273) is as follows: "On account of the alarming decrease in the number of useful birds, and consequent damage from insect pests to shade trees, garden and farm crops, some provision for rearing game and insectivorous birds should be made." The commissioners therefore urge that they be authorized to "lease, purchase and construct increased facilities" for the rearing of birds. To carry out this recommendation they introduce House bill 277. At the hearing, President Charles called the attention of the Committee to the fact that the bill was practically identical with the one drawn and presented by him, and this was admitted by Commissioner Garfield, who was present as the representative of the commission. He also stated that when drawing their bill they had the laws of other States and President Charles' bill to work from.

HENRY H. KIMBALL.

Hunting in California.

SAN FRANCISCO, Cal., Feb. 20.—*Editor Forest and Stream:* On Feb. 1 the closed season for quail commenced and on the 15th of the month all duck hunting ceased, so that there is but very little hunting to be enjoyed by California enthusiasts. There is still some excellent goose shooting, but this fowl is to be found in limited sections of the State only, and at a considerable distance from San Francisco and other large cities, and the sport is enjoyed mostly by those living near the grain-growing districts of the State. Many of the gun clubs closed operations for the season long before the close season commenced, for since the middle of January very heavy rains have been falling and most of the preserves have been flooded. The ducks have been badly scattered and a heavy migration has set in from the bay district. As it is too early for the birds to leave for the North, there was considerable speculation as to where they could be, but word has been received from the extreme southern section of the State that they have appeared there in immense numbers. Just below the State line the birds have gathered in great numbers, but California sportsmen are not able to hunt there, owing to the regulations of the Mexican Government against carrying firearms across the border.

Goose shooting is now at its best around Rio Vista, Dixon, and other Sacramento Valley points, and farmers in that vicinity are anxious to have hunters visit their fields, for the geese are very destructive to the growing grain. Measures have been introduced into the State Legislature permitting the hunting of geese behind live blinds, and it is believed that this will result in a greater activity on the part of market hunters.

Amendments are to be made to the State game laws this year by the State Legislature permitting of the marketing of certain kinds of wild game that may be raised in captivity. This is to apply especially to pheasants, the hunting of which is prohibited, but the domestic rearing of which promises to become an important industry. Certain regulations will be made governing the marketing of the birds so that the fish and game commission will have means of knowing that the law is not being violated.

A. P. B.

Season Closing.

NEW ORLEANS, La., Feb. 25.—*Editor Forest and Stream:* There is very little hunting now on account of the warm weather and the lateness of the season. The ducks are practically gone, or else are so far out they are beyond range. The warm spell for this season of the year has been unprecedented and unquestionably cut the hunting season short several weeks.

The State game commission has practically decided to have a traveling exhibit and to charter a car for this purpose to tour this State. It is proposed to exhibit the various specimens of birds, fish and animals on the train, and to reach the remote sections, and especially the school children. In addition to the exhibits there will be two moving picture machines which will display many pictures of birds and fish. Commissioner Miller and Attorney Ponder will deliver lectures. It is expected that the tour will prove popular, although there has been some criticism of the plan on the grounds that it will be too expensive, and the board ought to spend its money in other directions. Mr. Miller says his proposed trip is solely one in behalf of education, and to show the people the value of the natural food supply of Louisiana.

A book describing the various birds in Louisiana is wanted by the State game commission. President Miller points out that he has had many inquiries for data on the subject of Louisiana birds, but he has been unable to furnish any. He states that if some enterprising person who understands the work will publish a reliable work on ornithology in reference to this State, he feels sure that the book will be in considerable demand. It is said that there are more different species of birds in Louisiana than any other State in the Union. F. G. G.

A New Conservation Magazine.

The first number of American Conservation bears date February, 1911. It is the organ of the National Conservation Association with headquarters at Washington, D. C., and its aim is to work singleheartedly for the conservation of the resources of this country.

The number opens with a letter from Colonel Theodore Roosevelt, to American Conservation, and this is followed by some pages of editorial by Gifford Pinchot. Dr. Joseph A. Holmes, Director of the U. S. Bureau of Mines, contributes an exceedingly interesting and informative article entitled, "Saving Miners' Lives." He points out the danger of coal mining, the fact that the accidents which occur are in large degree preventable, says that the creation of the National Bureau of Mines by the last Congress was a step forward in the effort to reduce the number of deaths through accidents.

Hon. Robert G. Valentine, Commissioner of Indian Affairs, asks, "Is the Indian worth conserving," and illustrates his article by a number of beautiful pictures by the young halfbreed artist, Richard A. Throssel. Within the last few years efforts stronger than ever have been made to teach the Indian to be self-supporting. Rations have been cut off, day schools established, the Indian has been put to work and the end to his pauperization seems in sight. Down in the Southwest about 300 young Indians are earning from $2 to $3.90 a day in railroad shops.

Hon. James Wickersham tells very interestingly about Alaska, "A Land of Opportunity," and Logan W. Page, director of public roads for the United States, writes of the "High Cost of Hauling," showing that it costs more to carry the farmer's wheat to market than it does to ship it from New York to Liverpool.

The first number of American Conservation, printed on coated paper and very beautifully illustrated, promises great things for the future, and we may feel certain that its high standard will be maintained. It has a work to perform, and under the able and patriotic head that directs it, it will perform this work well.

Arthur W. Vandiveer.

One by one the hunters of the old school are passing away. The experts of the old days of the muzzleloader shotgun and the patch rifle will soon all be gone beyond the great divide.

Arthur W. Vandiveer, a keen sportsman of the old school, recently died at his home in Wabasso, Fla., in his sixty-first year. He was born in Miami county, Ohio, July 4, 1850, and was left an orphan at the early age of five years. Forty years ago last Christmas he married Miss Laura Groby, who, with a daughter, two sons and two grandchildren, survive him. Three years ago he removed with his family to Florida, settling at Wabasso.

Mr. Vandiveer was an expert wing shot and has always held his own at all kinds of shooting. Among those who have hunted with him in Ohio are the well known trap shots, Ed. Rike and Rolla O. Heikes, of Dayton, Ohio. The shooting companions of his later years were his sons, Charles and Clarence, the latter a frequent contributor to Forest and Stream.

Mr. Vandiveer was long a reader of Forest and Stream and greatly enjoyed it. Not three hours before his death he requested one of his sons to read to him from some of the back numbers which hold a prominent place in the library.

Death of Edward S. Lentilhon.

Edward S. Lentilhon died at 9 o'clock Saturday morning, Feb. 18, at his residence in Philadelphia.

Mr. Lentilhon had been failing very much of late and his death was scarcely unexpected by his friends, although the end came very suddenly. He was only about fifty-five years old. He was formerly assistant secretary of the Hazard Powder Company, but for several years past had been assistant secretary and also one of the assistant treasurers of the Du Pont Company, which dual positions he filled at the time of his death. He was in his office as late as Tuesday, Feb. 13. Funeral services were held at his Philadelphia home this morning, and later in the day his body was taken to New York where it will be laid in the Kensico cemetery.

Grazing Examiners for National Forests.

A new Government position is disclosed by the announcement of the United States Civil Service Commission in Washington of an examination which will be held Feb. 23 and 24 to find three grazing examiners for the Forest Service. The positions will pay a salary of $1,200 a year at entrance.

The applicants must be men, at least twenty years old, and possessed of at least one season's experience in handling range stock, together with at least one year of technical training in specified botanical studies.

New Publications.

The Conservation of Natural Resources in the United States, by Charles R. Van Hise. Cloth 8vo., 413 pages, illustrated, $2 net. New York, the Macmillan Company.

Collected in compact form we have in this volume the substance of twenty lectures given by the author at the University of Wisconsin; papers printed in Government reports and in various magazines. So large is the scope of conservation that it is necessary to treat it under separate departments. Part I, therefore, treats of mineral resources; Part II of water; Part III of forests; Part IV of land; and Part V of the conservation and mankind. Each subject is treated exhaustively and all its branches referred to in proper order, making the book one of great value.

The Airy Way, by George A. B. Dewar. Cloth, 253 pages, $1.75 net. New York, the Macmillan Company.

In the main this is a book of flight. Its theme is the magic and mystery of the master-feat in all nature. Though here and there the author touches on some of the authorities, old and new, who have written of natural flight, he treats the subject in a wholly new light. The author has been watching for many years the wing feats of birds, bats and insects. Among others the feats of the swift, the swallow, the rook, the herring gull, the saddleback gull, the black-headed gull, the golden-crested wren, the woodpeckers, the fritillary butterflies, the emperor butterfly, dragonflies, syrphi flies, bees, the pipistrelle bat, and other species of its kind. Though the book touches on many other things of the open air, this theme is never lost sight of, and though it will naturally be read by the large body of people interested in aviation or artificial flight, is no severe technical book. It is perfectly simple, written throughout in the simplest English.

The Old North Trail, or Life, Legends and Religion of the Blackfeet Indians. By Walter McClintock. Illustrated with eight colored plates and many cuts in text. Price, $4. The Macmillan Co.

In Mr. McClintock's interesting volume, which deals with a land of myth and legend, there is a world of interesting matter for people who love the out-of-doors. His introduction to the Blackfeet—the Piegans—came through William Jackson, well known to the older readers of Forest and Stream as Billy Jackson, or Siksikakwan, which, being interpreted, means the Blackfoot man, the name given him on their return to his relatives, the Piegans, who did not know him until after the end of the Indian Wars in the Southern country, when the Cheyennes and the Sioux had been at last subjugated and dispersed.

Mr. McClintock lived for several seasons on the Cutbank River on the Blackfeet Reservation in Montana, and was, in fact, finally adopted by Siyeh, the camp crier or herald of the Piegans, a man of importance in the tribe, and the possesser of a beaver medicine bundle. From Siyeh and from many other friends, whom Mr. McClintock met in his successive visits to the reservation, he heard many traditional stories, many beliefs about religion, birds, animals, flowers, religious and other tribal ceremonies, and heard and set down many songs. To the students of Blackfeet literature, many of these versions will be new, but it is obvious that of such variants there are many, and that all of them should be recorded.

The book is a delightful story of life in a beautiful country, with vivid descriptions of scenery, of plains travel and mountain hunting, and of life among Indians as they were ten years ago. It deals with these people from the human point of view, seeing them as they really are as fathers, mothers, sons, daughters and friends, with all the simple kindliness and affection of a people still primitive and more or less unspoiled. It is interestingly told and full of life. The volume is interesting reading for all out-of-door people. There is especially a detailed description of the ceremony of the medicine lodge, which the author calls by the common name "Sun Dance," used in the medicine lodge ceremony among the Sioux to the South.

It is to be regretted that apparently the author did not have an opportunity to see his proofs, for some of the Blackfeet names are misspelled, though near enough right to enable anyone familiar with them to know what is intended.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

SEA AND RIVER FISHING

Small Brook Angling.

THE same arguments that are valid for fishing up stream against the current with the fly for trout can be used for fishing a small brook with bait. The fish, when at rest, lie with their heads up stream and cannot see the angler clearly if he approaches from down the water; and it is also true of a small brook, as it is of a larger stream, that anything disturbed floats down into water already fished by the angler.

It is, perhaps, proper to say that the use of bait in small brooks is regarded as legitimate by most fly-fishermen. In such brooks it is frequently impossible to cast a fly, bait being necessary if any number of fish are to be caught. I use the general term "bait," for the lures may be of great variety, including insects, worms and fish.

The worm is considered by many to be the best of all, and doubtless this is true at certain seasons of the year. The time for using this bait is in spring and the early fishing season, or when the brooks are discolored by heavy rains. It is important to remember that worms from clean, loose garden soil live longest in the bait box and are more pleasant to use than the short, black worm found in heavy, wet soil.

For fishing a brook in mid-summer no bait is better than the cricket, with the single exception of the loach, as explained later in this article. Crickets found on a rocky hillside under flat stones are best, being large, black, and so lively that a nimble small boy should be the hunter. But if you are fairly active, love sunshine and small outdoor excitements, go after crickets; you will get almost as much fun out of it as you will when you fish with them. There is a lack of responsibility that is delightful, for if a big trout is seen coming toward the hook in clear water the angler knows that it is probably the fateful moment; if he is lost, there will be a broad line of black sadness in the spectroscope of the day. Not so with the loss of a fat cricket; you are certain to find another cheerful leaper under the next flat stone. Grasshoppers can be classed with crickets, but are not as easy to use and lack a quality of attractiveness possessed by the latter.

Memory takes me back a good many years, and I remember the big trout at the mouth of Gory Brook in the Pocantico, a half-mile above the Sleepy Hollow Cemetery in the village of Tarrytown. That trout was—well, I am tempted to be profane. There were few trout in all Westchester county, and that fellow would rank up here in a trout country, where I am writing, a first-class fish. And he would take nothing.

By sneaking behind a convenient birch and poking my head out cautiously, he could be seen on a little sandbar at the mouth of the brook. Doubting friends assured me I had spotted a sucker. And even a good pipe was wagered that I could never show him. I did, and caught him on a cricket. But before that happy afternoon I threw such a variety of flies at him that he must have become a savant as to conventional entomology. Resting on the sandbar, he may have known what day of the week it was by the curious insects that began to flop below him, for I was a schoolmaster then and my afternoons were not always free, and some were assigned to other things than fishing. Mondays, Wednesdays and Saturdays I used to take my rod and stroll up the path at the edge of the cemetery and under the arched aqueduct beyond; until, arriving within range of my trout, began with long distance practice the artillery of the fly. But, in the end, being spent with my labors, and, it maybe, low as to ammunition, it being difficult casting and easy to hang a fly in the trees beyond hope, I would crouch on a log and use a worm. All was futile. There were times if I had been sure of hitting so agile a thing as a trout under water I would have cast a rock and broken the law with pleasure.

At length June passed and the long vacation was at hand; if I did not get the trout then, it was likely I never would. So, going to the brook for almost my last opportunity, by chance I overturned a flat stone and a lively black cricket leaped before me. I had used crickets for bass, but never for trout. As other things had failed, the thing was worth a trial: and a little later I hung the sleek spotted fellow on a twig. I got my pipe, but gave the Sleepy Hollow trout to the friend who had declared it a sucker. It was said his was no ordinary flavor; of that I do not know; the important thing is that when he would take nothing else he took a cricket.

For August fishing and low water nothing is so deadly for small brook angling as the chub. I use this word because the country fisher has affixed the term, "chub fishing" to this method of angling. The bait should not be a small chub, but of that order of fishes scientifically known as *Lota maculosa;* being of the order of the fresh-water cod. But not like their salty relatives, they are very small. John Ridd in "Lorna Doone" speared loach, I believe, with a fork; I think I remember the fork, but have not the book at hand. The loach of the American brooks are even smaller than those of Great Britain. They are a pretty little fish living under stones in shallow water and as slippery as an eel.

The country boy has a novel way of getting this bait, but must have an active companion to help. A smaller brother is best, because you can boss him, he wishing to go to fish with you far up the creeks, a place he dares not go alone. A little side runway is chosen where a log or rock divides the brook in two parts. You order the small brother to go a few yards above, where he is expected to execute a wild dance in the water, coming slowly down stream, overturning the stones with his feet, and being constantly urged to greater exertions. The loach are frightened from their hiding places and chased below, where the older boy holds a bent willow covered with mosquito netting.

"Go it, old fellow; keep 'er churnin'! That's it! Got a bully one that time!" and he swings the net out, slipping the darter, as I have heard them called, into his tomato can.

One-half of the loach is used, the tail portion being considered best; and the angler, if new at this game, will be surprised at the eagerness with which the trout will rush at this bait. Very likely it is something like sweetbreads to the epicure and difficult for the trout to get.

You will find, also, that the bait is difficult for the angler. The best plan is to offer a liberal price to two country boys, sit on a rock, smoke your pipe and watch them; it is more fun than going fishing, and you will not begrudge the price of admittance to the show.

There are other baits that are good—I remember a fat three-quarter pounder caught on a helgramite in the Bronx on the outskirts of the city of Yonkers—but those already mentioned are the most satisfactory. Whatever the bait used, it should be thrown with an underhand swing up the brook, the fisherman being careful to take advantage of every possible cover; a bunch of tall fern or a clump of bushes—anything will serve. A long light rod is best, and a plain cane pole has its advantages if provided with rings for the line and a reel. Do not use a leader more than two feet long, for there are many places in a little brook where the line must be shortened to the minimum and the bait dropped into a pot hole under overhanging leafy branches. How an eight-incher will dart from nowhere as if he had been waiting with impatience for your loach!

As to clothing, that does not matter much, except it should be old and stout. But do not wear a big straw hat, and move as quietly up the bed of the brook as if you were stalking a moose.

As my eye wanders from the page I am writing through my eastward window this glorious morning, beyond the meadow the shadows from the clouds indolently move across a great hollow in the mountains a mile away. A small brook comes down there and drops five hundred feet in two miles. That ravine to-day is so seductive—no other word will do—that as soon as the season opens the enthusiasm so begat will take me with my rod and basket, and I hope to get a few fair fish.

Fringed with ferns and jewel weed and in places under small hemlocks and balsams, the brook everywhere is as sweet and pretty as a brook can be—and that is saying a good deal. And, then, presently the loose stones of the bottom give place to a smooth bed of rock, and beyond the brook slides down the first of the ledges of red sandstone. Here are little pools so clear that the bright pebbles in the crevices could be counted, although the water is five feet deep.

Beyond the first of the pools the water slide is bordered with black-green moss, with yellowish-red rock for the bottom; while the sun sifts through the leaves, mottling the mosses and

rock with gold. The angler almost forgets his sport and lingers with rod poised in air. For no one is a real angler if he is indifferent to the beauty of such a brook, and if, at moments, the fishing does not hide behind his appreciation of the witchery of the dainty water course.

I am wandering a little from my text, but fishing a small brook is a sort of wandering anyhow. From getting the bait to the very end when you loiter through the sap bush on your way home and stop a moment to push open the rough door of the sugar house to look at the boasted merits of the new evaporator, there is a happy-go-lucky freedom about the whole thing. There is little like it in the whole range of fishing, and it takes a man back to the time when life held nothing in the way of trouble except that wood must be brought in from the shed, and the additional worry whether they ate all the huckleberry pudding at dinner.

We start our fishing with a brook, and as years speed along there is a time when great rivers like the Nipigon and the Restigouche count much with us, but the beginnings of a river have the peculiar enchantment of youth. Perhaps that is the reason that in fishing a small brook I find it easy to be a small boy again. And if I am successful with my store of loach one day, the trout of the next morning are pretty sure to have a flavor all their own; and, anyhow, will be more satisfactory than the spring that Ponce de Leon never found.

Ladd Plumley.

Signs of Spring.

Hendersonville, N. C., Feb. 24.—*Editor Forest and Stream:* Everything here to-day is spring-like. Bright sunshine and balmy air and birds singing everywhere.

The robins began to arrive weeks ago and to-day they are singing gleefully. The cardinals also and the flickers are singing their love songs, and these are not all. The grass is growing greener daily, while the maple trees are budding, and others show every indication of "putting forth." To-day I also saw swarms of gnats flying and dancing in the sun and all nature seems to say, "We are pretty well through with winter and will now put on new growth."

Yet many of us fear a sudden return to cold days. Prophets are numerous who do not hesitate to say we can yet, and will yet, see many hard days before April 1. "Sufficient for the day are the evils thereof." So I also, having the "spring feeling" in me am getting ready for the time when the trout will be waiting for the delusive fly. I never wait till the last minute. My rods and reels have been put in good shape and all ready, as I say, when the day shall come that I think I can fairly give the trout a trial. Rainbow trout here spawn until March and even up to the 15th of March some years. This has been a singular winter. It began the latter part of October and all of our cold weather came in November and December, most of it, so I do not expect, as many do, a very late spring, but there is no saying. At present it looks like spring now.

Ernest L. Ewbank.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Fishing on the Western Slope.

San Francisco, Cal., Feb. 20.—*Editor Forest Stream:* Some fishing of high order is still being enjoyed in Napa Creek and vicinity, but the inclement weather has served to keep most of the local anglers away and the sport has not been enjoyed by many. The San Francisco enthusiasts have been content to visit the nearby fishing grounds and many have been slinging clams on Wingo Slough of late, but the sport there is still far below par. However, one day recently two anglers visited this old-time fishing ground and succeeded in landing 140 pounds of striped bass, the best catch of the season there. Ten of these fish averaged ten pounds each, making this catch one of the best of any made in a long time in the bay section. Just what is the reason bass are not to be found where they were formerly so plentiful is a mystery, but the fact remains that the fish have changed their old-time feeding places and are now to be found further up the bay than formerly.

In the deep waters of the bay the fishermen are enabled to make about as large net catches now as ever, indicating that the fish are practically as plentiful as before, but they do not seem to be running in the sloughs as formerly. Complaints have been made by sportsmen that market fishermen are shipping large quantities of the fish out of the State, and a bill has been introduced into the State Legislature prohibiting the exporting of striped bass. A bill has also been introduced prohibiting the use of seines in the sloughs or creeks tributary to San Francisco and San Pablo Bays, and in case these are favorably acted upon, it is believed that much better sport will be enjoyed in the future.

From the present outlook the trout fishing season this year will be very late in commencing in the streams of the sierras, for very high water is expected. The snowfall has been the heaviest in the past twenty years, and but little of it has melted as yet, making it certain that high water will prevail during the spring months. The rainfall also has been very heavy along the coast, and coast streams are now much higher than usual at this season of the year with prospects of much more water during the spring months than is usually the case. This will mean that the trout fishing season will last longer here than has been the case in past years.

Shrimp fishermen have not been exercising much care in their operations of late, and a number of them have come to grief. The new power boat Quinnat of the fish and game commission has been appearing suddenly at various points where shrimp fishing is carried on, and as a result a number of arrests have been made. Recently five Chinese were taken into custody near Point Richmond on the charge of having undersized striped bass in their possession, and only on the payment of bail to the extent of $50 each were they released pending their trial.

Sportsmen in Humboldt county are greatly interested in a measure that has been introduced into the State Legislature changing the Eel River tide line from Dugans to East Ferry. Formerly the tide line was placed at East Ferry, but it was changed a couple of years ago, much against the wish of anglers. The change in the tide line here means the difference between good and indifferent steelhead fishing most of the open season.

Word has just been received from the Catalina Islands that a big run of tuna is now on there, and that the big fish are to be seen in large numbers close in shore. Usually they are to be found first in the vicinity of Seal Rocks, but this season they are in among the larger islands.

Whale hunting has become quite a popular sport in Southern California waters and a recent killing was witnessed by a large number of sightseers. A fishing launch has been fitted out with a whaling gun, and the Catalina Channel is patroled. A recent catch took place off Long Beach when a 35-foot California gray whale was killed after an exciting struggle. A large number of small craft followed the whaling launch and the capture of the leviathan was witnessed by thousands.

If a measure now before the State Legislature becomes a law, all streams and sloughs tributary to San Pablo and San Francisco bays will become part of a great fish preserve, and market fishermen will not be allowed to operate there. This will apply not only to the finny tribe, but to shell fish as well.

A. P. B.

Anglers' Club of Milwaukee.

Milwaukee, Wis., Feb. 24.—*Editor Forest and Stream:* The annual meeting and banquet of the Anglers' Club of Milwaukee, was held on Tuesday evening, Feb. 14, at the rooms of the Milwaukee Athletic Club. The attendance was not very large, but it is a certainty that all who attended had a most enjoyable time.

The impossibility of James Nevin, State Superintendent of Fisheries, and E. M. Griffith, State Forester, to attend, was regretted by all. Mr. Nevin, who had promised to be there and also give the members a short talk on the propagation of fish, could not come for the reason that circumstances over which he had no control prevented. Mr. Griffith could not attend for the reason that the Legislature had decided to hold the general hearings on the forestry bills commencing Feb. 14.

There was considerable discussion on the subject of spring shooting, and a motion was proposed and adopted expressing the sentiment of the club as opposed to spring shooting and authorizing the board of directors to take such action as they think will be most effective in preventing the passage at the present session of the Legislature of any law allowing such shooting.

There was also some discussion regarding the closed season for black bass. The majority of the members expressed themselves as being in favor of the season opening on July 1. This is in accordance with Mr. Nevin's views as will be seen by an extract from his letter to the secretary of the club which is as follows: "I wish the club would use every effort to extend the closed season for black bass to June 25 or July 1. Unless such action is taken for the protection of the black bass, it will be but a matter of a few years when our waters will be depleted of this species of game fish. By the present law the season opens far too early and innumerable mature fish are caught while on their nests."

The fifth international bait- and fly-casting tournament, which is to be given under the auspices of the National Association of Scientific Angling Clubs, by the Anglers' Club of Mil-

waukee, was one of the important matters which were taken up at the annual meeting. Several communications received from Messrs. H. Wheeler Pierce, President of the N. A. S. A. C., and E. M. Town, Secretary-Treasurer of the Anglers' Casting Club of Chicago, which contained information regarding the big event, were read by the secretary. Dates for the tournament were not set, but Aug. 17, 18 and 19 will undoubtedly be the dates decided upon at a meeting of the executive committee this month. The members were requested to give the officers of the club all possible assistance in making the event the most successful one on record.

The following officers were elected for the ensuing year: President, M. A. Beck; Vice-President, H. W. Lewis; Secretary and Treasurer, C. L. Tolfson; Captain, Gus Schoenlaub; Directors, in addition to the above, Alb. Lahman, J. H. McBride and Chas. Rhine.

A hearty vote of thanks was extended the retiring officers. C. L. Tolfson.

As to Foreigners.

New Orleans, La., Feb. 25.—*Editor Forest and Stream:* Judge Rufus E. Foster, of the United States Circuit Court in this city, has announced an important decision in connection with the cases of John Ashen and L. Mew, involving the right of the State Game Commission to confiscate and destroy seines. Judge Foster holds that the game commission cannot confiscate a seine and destroy it without due process of law, and in order to destroy or take a seine, the board must apply to the courts and get a judicial process. Judge Foster sustains the contentions of the game commission in all other respects and holds that the State owns all the fish in the waters of the State, and it can, therefore, impose certain conditions, rules and regulations in catching or seining for fish. The judge says that the right to fish is not a personal one, but a property right which the State can regulate.

Judge Foster, in announcing his opinion on the allegations of one of the petitioners that he is a subject of the Emperor of China, and the rules governing or the laws applying to his fishing or the men under him in the waters of Louisiana, are in violation of a treaty between this country and China, says that the laws of this State do not abrogate the treaty, and the State has the right to prohibit a foreigner from fishing at all here. The judge concludes that any regulations the State or the game commission might make, even though these rules require a higher license than from a citizen of this State, would be legal and binding.

The game commission, after a long conference and investigation, has decided to allow the Louisiana Fish Company, of Berwick, La., to seine in Lake Verret for buffalo fish only until April 1, which is the beginning of the closed season. There was a great deal of interest in the controversy and the claims of the Assumption parish authorities in regard to Lake Verret. The game commission held that the catching of buffalo fish would be beneficial to the growth of game fish in that lake.

Henry Righter, a well-known local fisherman and member of several fishing clubs, has the honor of landing the largest green trout [black bass] of the season. The fish weighed four and a half pounds. It is declared by all the fishermen to be the largest green trout caught in many years in these waters. The fish was landed at Chef Menteur and attracted much interest and attention.

Fishing as a rule is not very good and only fair luck is reported. It is said that the fresh water from Pearl River has caused a kind of milky way which is not conducive to fishing in the several salt water bodies near the shore line. It is a little early for spring fishing. The visitors to the carnival here as well as the regular winter visitors who are spending some weeks in New Orleans are in many instances interested in fishing, and quite a number will go out to the fishing places near New Orleans and enjoy the sport.

Superintendent of Fish Hatcheries Tullian is busily engaged in making an inspection of the various streams in Louisiana with a view of locating hatcheries and also for the purpose of studying the character of the fish. Mr. Tullian is familiarizing himself with conditions in this State, and he hopes to increase the output of game fish. He advocates protection for the alligator so that they will kill the alligator gar.

F. G. G.

Anglers' Club of New York.

During the week of March 6 this club will hold a limited number of casting contests in Madison Square Garden in connection with the Sportsmen's Show. The space allotted is not extensive enough to permit distance casting, but the events decided on are popular and furnish good practice for the fishing season, now but a few weeks in the future. The events follow:

Tuesday, March 7, 3 P. M.—Quarter-ounce bait-casting for distance, 130-foot class, amateurs; 8:30 P. M.—trout fly-casting, distance, 70-foot class, amateurs.

March 8, 3 P. M.—Quarter-ounce bait-casting for accuracy, novice class; 8:30 P. M.—Trout fly-casting, distance, five-ounce rods; open.

March 9, 3 P. M.—Dry-fly accuracy, five-ounce rods; five targets, one cast at each; open. 8:30 P. M.—distance fly-casting, five-ounce rods, forward obstacle; amateurs.

March 10, 3 P. M.—Half-ounce accuracy bait-casting, novice; 8:30 P. M.—accuracy fly-casting, target placed under a bush; amateurs.

March 11, 3 P. M.—Half-ounce accuracy bait, open; 8:30 P. M.—distance trout fly-casting, four-ounce rods, amateur.

March 13, 3 P. M.—Accuracy bait-casting, quarter-ounce, open; 8:30 P. M.—trout fly switch-casting, five-ounce rods, amateurs.

The Long Sault Dam.

New York City, Feb. 24.—*Editor Forest and Stream:* The bill now before the Senate in Washington, proposing the damming of the Long Sault Rapids of the St. Lawrence River, is in grave danger of being enacted. If it is, aside from the fact that the bottling up of such a river as the St. Lawrence will deprive thousands of people from going through that beautiful stream, it will also prevent any fish from coming up stream. There is no provision in their plans looking toward this important matter.

I am taking the liberty of writing you requesting that from your standpoint in the interests you represent through your paper that you take a hand in the fight. Senator Frye is chairman of the whole committee, and Senator Burton, of Ohio, is chairman of the sub committee. Others of the committee are: Stephen B. Elkins, of West Virginia; Knute Nelson, of Minnesota; Jacob H. Gallinger, of New Hampshire; Boies Penrose, of Pennsylvania; Chauncey M. Depew, of New York; George C. Perkins, of California; Samuel H. Piles, of Washington; William Alden Smith, of Michigan; Jonathan Bourne, Jr., of Oregon; Theodore E. Burton, of Ohio; Thomas S. Martin, of Virginia; William J. Stone, of Missouri; F. M. Simmons, of North Carolina; James P. Clark, of Arkansas; Francis G. Newlands, of Nevada; John H. Bankhead, of Alabama; Clerk Woodbury Pulsifer.

Personally, I have been quietly fighting this bill from the standpoint as a resident on the St. Lawrence, but even if I did not have a home on that beautiful river, I would fight it from the standpoint of good citizenship. I consider it the wanton destruction of a beautiful waterway that belongs to the citizens of the United States and Canada, and if this bill passes I venture to predict that when our people begin to thoroughly understand it, which they do not now, it will lead to serious misunderstandings and grave complications. Geo. C. Boldt.

Casting Tournament in France.

The Casting Club de France will held a four-day tournament at the Bois de Boulogne, in Paris, this month. The dates are March 9-12, inclusive.

The opening event will be trout fly casting for accuracy, followed by three novice events, as follows: Obstacle fly-casting, half-ounce distance bait and distance fly-casting with 5½-ounce rods.

On Friday the first event will be a single cast for accuracy at 65 feet with one-ounce weights. Novice salmon fly-casting will follow, rods not to exceed 15 feet in length.

On Saturday the events will be: Novice bait-casting with 2½-ounce weights; novice distance bait, quarter-ounce; same, 1½-ounce; novice salmon fly, rear obstacle.

Sunday's events are: Accuracy bait, 1½-ounce, targets at 100, 115 and 130 feet, five casts at each; novice trout fly, distance; novice salmon fly, distance.

British Amateur Fly- and Bait-Casting Club.

This club has been holding regular contests throughout the winter at the Welsh Harp, Hendon, near London. The program has been varied to give practice in various styles of fly- and bait-casting, and improvement has been shown. If any club in this country, with the single exception of the San Francisco Fly-Casting Club, were to hold contests during the winter, it would only be possible to do so on the ice or over the ground. It is true that a few enthusiasts practice now and then on the snow, but only on sunny days. Bait-casting on the snow, for either distance or accuracy, is good practice, and one can see clearly just what he is doing, but fly-casting under similar conditions is not so satisfactory. There is little or no pull on the line in retrieving it, and in the back cast the line falls to the ground, so that it is difficult to extend the line, either by working out or shooting. For strengthening the wrist, however, the practice is excellent.

YACHTING

Some News and a Little Gossip.

The Royal Canadian and the Rochester yacht clubs have agreed to bury their differences which arose out of the last race for the Canada Cup, and arrangements have been made for a race for the Fisher cup, to be sailed off Toronto next September. The representatives of the two clubs have agreed on the conditions which have been most clearly drafted, and it is thought that this race will be the entering wedge for further international events which in former years have been such an attractive feature of the sport on the Lakes. The conditions are printed elsewhere.

At the meeting of the regatta committee of the Yachtsmen's Club, held last week, the proposition of forming a racing association on the waters of the Delaware River was favorably discussed and after the project is brought up before the board of directors of the club, invitations will be sent to all the boat clubs on the Delaware to attend a meeting for the purpose of organization. This would include such clubs as the Philadelphia Y. C., the Corinthian Y. C., the Yachtsmen's Club, Keystone, Camden Motorboat Club, Delaware River Y. C., Beverly, Red Dragon, Chester City and other clubs located along the waters of the Delaware.

The Eastern Y. C., at its annual meeting, elected the following officers and committees: F. Lewis Clark, Commodore; Robert T. Paine, Vice-Commodore; Herbert M. Sears, Rear-Commodore, Henry Taggard, Secretary; Patrick T. Jackson, Treasurer; W. Starling Burgess, Measurer; George A. Goddard and Frank B. McQuestion, Council at Large; William L. Carlton, William B. Stearns, Henry A. Morse, Louis M. Clark and Stephen W. Sleeper, Regatta Committee; Arthur Adams, Charles P. Curtis, R. G. Fessenden and A. Hemenway, Jr., Committee of Admissions; Edward M. Beals, P. Dexter, W. N. Goodnow and W. B. Revere, House Committee.

The annual meeting of the Baltimore Y. C. was held last week. The annual report of the secretary and treasurer was made, showing the financial affairs of the club to be in an excellent condition, with a very neat surplus left over after all the expenses had been paid out. The club is highly gratified over the status of affairs, for some doubts were expressed as to the standing in that line. Nothing definite was planned for the coming season for, as was explained by several of the influential men, the yachting season is yet too far distant to take up matters for discussion.

These officers were elected: Commodore, I. E. Emerson; Vice-Commodore, W. Ancker; Rear-Commodore, Arthur D. Foster; Secretary and Treasurer, J. A. Davis; Measurer, H. M. Foster; Governors—Robert Ramsay, George M. Shrier, H. B. Gilpin, Charles W. Miller; House Committee—Robert Ramsey, W. T. Kuhns, R. H. Goldsmith. Regatta Committee—H. M. Foster, W. H. Towles, F. W. McAllister.

A meeting of the incorpoators of the Beach Terrace Y. C., of Bristol, was held last week for the purpose of electing the first set of officers. William H. Skeel was chosen temporary chairman and William F. Huntley was made secretary of the meeting. The following officers were unanimously elected to serve for one year: Commodore, Richard W. Smith; Secretary, William F. Huntley; Treasurer, William H. Skeel; House Committee—Theodore Droz, George Whaley and Herbert Freese; Directors, Richard E. Smith, William F. Huntley, W. H. Skeel, Hermann T. Droz, George E. Whaley, Herbert Freese, Lloyd C. Wilbur, William M. Birtwell and Walter B. Swanson.

At the annual meeting of the Interclub Yacht Racing Association John J. Harland, who has been president since 1905, was re-elected. The other officers elected were L. S. Coffin, Vice-President; Theodore H. Campbell, Secretary-Treasurer; Ralph E. Winslow, Measurer; Joshua P. Holbrook and Howard Gannett, Executive Committee. An inter-club race will be held this year under the auspices of the Lynn Y. C. from Bass Point to Marblehead on Aug. 6. The Lynn club will hold its regatta the day previous and on Aug. 7 the midsummer series of the Corinthian Y. C. will begin at Marblehead. These dates have been chosen by the association: May 30, South Boston Y. C.; June 3, Mosquito Fleet Y. C.; July 1, Cottage Park Y. C.; July 4, City of Boston regatta; July 15, Columbia Y. C.; July 29, Squantum Y. C.; Aug. 5, Lynn Y. C.; Aug. 19, Winthrop Y. C.; Aug. 26, Quincy Y. C.; Sept. 2, Wollaston Y. C. There will also be races on invitation of the Corinthian Y. C. off Marblehead on Aug. 9, 10, 11 and 12.

These officers have been elected by the Bayonne City Y. C.: John J. Ryan, Commodore; Arthur A. Gere, Vice-Commodore; Edward Wortman, Rear-Commodore; P. W. May, Secretary; William Meyerholz, Treasurer; Dr. B. S. Heintzelman, Fleet Surgeon; John Erickson, Measurer; Charles B. Easton; Fleet Captain; Julius Luick, Sergeant-at-Arms.

At the annual meeting of the Robins Reef Y. C. the following officers and committees were elected for the coming year: Frederick J. Muller, Commodore; Theodore Koerner, Vice-Commodore; Charles Bush, Rear-Commodore; Valentine Steinmetz, Treasurer; Frederick Sauerman, Financial Secretary; Frederick Golding, Recording Secretary; Dr. P. F. Stevens, Fleet Surgeon; Samuel Fowler, Measurer; C. Frederick Raichian, J. E. Jones, Max Bernhardt, J. O. Smith, Valentine Steinmetz, Frederick Beers and Theodore Koerner, House Committee; William F. Miller, John Nickels, M. Hanna, Oscar Peterson and Charles Bush, Docks and Ways Committee; Oscar Peterson, Samuel Fowler, James Dunn, M. Luton and Samuel Seals, Regatta Committee; Frederick Golding, Frederick Sauerman and C. J. Stalling, Investigating Committee.

At the sixteenth annual meeting of the Staten Island Boat Club the following officers were elected for 1911: President, Frank G. Janssen; Vice-President, Charles F. Hart; Treasurer, Frederick G. Huber; Secretary, Arnold W. Lenderoth; Captain, William B. Tyndale; Directors, Edward W. Gould, Jr., Norman H. Donald, Harold C. Scrymser, Albert E. Hart. The president's cup for long distance rowing during 1910 was awarded to S. Wells and the captain's medal to William B. Tyndale.

The officers chosen by the Kill von Kull Y. C. follow: J. B. Smith, Commodore; Jaffrey Buchanan, Vice-Commodore; John Gibson, Rear-Commodore; Edward Smith, Secretary; John Gilbertson, Treasurer; Dr. Lucius F. Donohue, Fleet Surgeon; John H. Donohue, Fleet Captain, and John J. Higgins, Measurer. Anthony Schneider has been elected again as commodore of the Pavonia Y. C.

Fisher Cup Conditions.

THE Rochester and Royal Canadian yacht clubs have agreed on the conditions to govern the series of races for the Fisher cup held by the Canadian club. The first of the series will be sailed on Sept. 2, and it is probable that the Canadians will build a new boat to meet the challenger Seneca. When the Rochester club challenged, the Canadaian club accepted and made some suggestions which were considered by the challengers. The result is that every possibility of any trouble over the race has been covered and a rattling good contest is anticipated. These conditions which have been ratified by both clubs are as follows:

The racing and management rules shall be those of the Lake Yacht Racing Association as existing at this date, subject to such conditions and variations as are herein provided and in accordance with the deed of gift.

The yachts shall be of wooden planking.

The competing yachts shall be in Class P.

The winner of two of three races shall be declared the winner of the match.

The first race shall be sailed on Saturday, Sept. 2, 1911, and the other races on consecutive days until completed. Sundays excepted.

The races will be sailed on Lake Ontario off Toronto on course to be decided upon by the judges. The first course shall be triangular. The second course shall be to windward or leeward and return. If the wind appears steady the tug bearing the buoy shall start as near as possible to the time at which the preparatory gun is fired. The third course shall be similar to the first. The triangular races shall be twice around and equilateral triangle of ten and one-half nautical miles. The windward or leeward races shall be four and one-half nautical miles to windward or leeward and return, twice around, making eighteen miles. The triangular courses shall be sailed so that one side of the triangle shall be laid to windward. All starts shall be to windward if practicable in windward and leeward races all buoys shall be left to starboard or port as directed by the judges.

Measurements under L. Y. R. A. rules shall be made by the judges or by the measurers to be appointed by them at least five days before the date fixed for the first race, and their certificates of measurements shall be given at least forty-eight hours before said date.

The judges shall determine displacement by weighing the yacht when fully equipped and in racing trim. All races shall be started at 11 A. M. Any race not sailed in five hours by the winning yacht shall be resailed. There shall be no time allowance. The start may be postponed by the judges, first, in case of fog; second, if in their opinion the space around the starting line is not sufficiently clear at the time appointed for starting; third, in case both yachts consent to postponement; fourth, in case of serious accident to either yacht, as hereinafter provided; fifth, should such a course appear to them desirable. In case of postponement the judges shall determine the time for starting, but in no case shall a race be started later than 1:30 P. M. A yacht crossing the line before the starting signal is given shall be recalled by five short blasts of the whistle and the hoisting of her national flag and shall also be recalled by megaphone.

An unfinished race shall be resailed until competed. In case of accident to either yacht prior to the preparatory signal notice thereof shall immediately be signalled to the judges, who shall have power to postpone the race if the accident, in their opinion, is sufficiently serious to warrant such a course, or if an accident occurs during a race the yacht to which the accident has happened shall have such time as the judges shall consider reasonable to make

repairs before required to start in the next race.

Each yacht shall have on board during the races a representative named by her competitor. The names of the scrutineers shall be given to the judges not less than twenty-four hours before the first race and the scrutineers shall report to the judges within six hours after the termination of each race.

The races shall be sailed under the management of three judges, none of whom shall be interested in either yacht. One shall be appointed by each club and the two so appointed shall select a third on or before the first day of August, 1911, and they shall act as judges and timekeepers and settle all disputes. The decision of a majority shall be final in all matters.

In case any judge shall be unable to act a substitute shall be appointed by the club which appointed him or if the third judge be unable to act then a substitute shall be appointed by the two judges appointed as above. The judges shall be the regatta committee referred to in the rules of the L. Y. R. A. The challenged club shall provide all necessary equipment and appliances for the match, including a judges' boat suitable for the service and all necessary marks, and boats for laying same.

Each club shall appoint a representative as to details of management and all arrangements shall be made and equipment provided by the challenged club.

Charts of the course and instructions shall be furnished to the competing yachts not later the 7 o'clock on the morning of the race.

These conditions may be altered or amended by mutual agreement at any time.

No boat not actually owned by a bona fide member of at least eight months' standing of a club belonging to the L. Y. R. A. shall be eligible to compete. The purpose of this clause is to prevent the sailing in said race of any boat not intended in good faith for use on Lake Ontario and each of the said clubs agrees to prevent to the best of its ability any evasion of this provision.

California Yachting.

SAN FRANCISCO, Cal., Feb. 13.—*Editor Forest and Stream:* Stormy weather has been the rule on San Francisco Bay for the past three weeks, and even the few enthusiasts who keep their yachts in commission during the winter months have not been enabled to enjoy their favorite sport. With spring but a short time in the future, plans are now being made for the coming season, and there is considerable activity in yachting circles in the line of making schedules, planning new craft, and arranging for new club houses. A number of fine homes for the local yacht clubs are to be erected during the coming year and a great amount of interest is being shown in yachting. Committees have been very busy during the winter season adding to the membership, and some of the clubs have practically all the members they can take in with the present accommodations. A number of fine yachts will be launched here this spring, and the coming season promises to be a very active one. The season will probably open earlier than usual, as some of the scheduled events could not be carried out last fall on account of the rather unfavorable conditions that prevailed late in the season.

At a recent meeting of the Corinthian Y. C. held at the Argonaut Hotel in this city, Commodore William J. Hogg was re-elected Commodore. E. J. Convey was elected Vice-Commodore, and he, with two directors chosen, made the only changes in the list of officers. J. H. Keefe was re-elected Port Captain, a post he has filled with great credit for many years; C. F. Morrell was chosen Treasurer, and H. Westerfield, Secretary. The new Directors are John F. Campbell and H. E. Picker. In speaking of the new club house at Belvedere, Commodore Hogg said: "We cannot build until the close of the season, because construction would interfere with the season's yachting, but about Sept. 15 we will go ahead with a building that will be a credit to the club. Regarding the coming season I can say that we have several things up our sleeve." A. P. B.

Corinthian's Ocean Race.

THE Corinthian Y. C., of Marblehead, is to have a new course for its annual ocean race this year. Until 1909 the race was to the Isle of Shoals. Last year this was changed and Portland Lightship was made the turning mark. This course did not give general satisfaction, and this year another course will be tried. The new course will be in Massachusetts Bay and will be probably from Marblehead to Cape Ann and then to the entrance of Provincetown Harbor and back to Marblehead. It has not been decided which way around the course that the yachts will be sent, whether to Cape Ann or to Cape Cod first.

It is the intention of the regatta committee to arrange the course so that the racers will make Cape Cod in daylight, that there will be no trouble in picking up the turning buoy. There are two buoys near the entrance of Provincetown Harbor that can be used for a turning mark. The easiest to make is the spar buoy on Wood End Bar, off Wood End Light, for it is a straight course to that mark from either Marblehead or the Cape Ann whistler. The other is the white bell buoy off Long Point, this mark would be easier to pick up, but the course to Long Point is around the hook of the cape, which necessitates two changes in the course after making Wood End. It would also make the total sailing distance for the race about 7 miles longer.

The sailing distance from Marblehead to Cape Ann whistling buoy, which is well outside of Thatchers, is about 17¾ miles. Across to Wood End buoy is 40¼ miles south ½ east. If the course should be to Long Point bell buoy it is 41 miles south ½ east until Wood End and Long Point lights are in line. Then the sailing directions are 1⅞ miles east by south followed by 1¾ miles northeast to the bell buoy. From Long Point to Marblehead the course is resailed until Wood End and Long Point lights are in line, then it is 39¼ miles northwest by west ½ west until Marblehead light bears west by north ¼ west, when a course of about 1¾ miles west by north will bring the yachts to the finish line.

With the Wood End bar buoy as the turning mark the total distance of the course is within a quarter of a mile of 100 miles, and with the bell buoy off Long Point 107 miles. As the course will be planned so that the yachts will make the Cape Cod turning mark in daylight, it seems as though the bell buoy would be the better. The black spar buoy off Wood End is quite well in toward the beach, and under certain condition of sea and sky would be hard to pick up, whereas the bell buoy off Long Point is white and should be easy to find.

Southern Yachting.

NEW ORLEANS, La., Feb. 24.—On account of the building of the seawall at West End, it is probable the Southern Y. C. regattas will not be as largely attended this summer as usual. The club may decide to give some of its races at Spanish Fort, a short distance from West End, but no announcement has been made and official information is lacking.

The Southern Y. C., at its annual meeting held this week, elected the following officers: L. H. Fairchild, Commodore; W. A. Cook, Vice-Commodore; E. H. W. Davies, Rear-Commodore; W. H. Parham, Secretary and Treasurer; Dr. A. A. Pray, First Surgeon; H. P. Johnson, Treasurer; Governing Committee—William Allen, J. W. Perch, J. A. Badger, F. F. Farrell and C. A. Sperl. Commodore J. J. Hooper was elected an honorary life member in recognition of his long and active service. The club's indebtedness is $1,450. The club borrowed $5,000 from a local bank on a bond issue aggregating $6,000. Commodore Fairchild advocated subscription to the bonds on the part of the members and headed the list with $500.

C. K. G. Billings' yacht, Banana, has arrived here from Jacksonville, Fla., and will remain for several days awaiting the arrival of Mr. Billings from New York with a party of friends. Several of Mr. Billings' friends are also expected from Chicago, and when they arrive the entire party will board the Banana and go to Tampico, where they enjoy the sport of fishing for tarpon.

Bensonhurst Y. C. Dinner.

THE annual dinner of the members of the Bensonhurst Y. C. is always one of the features of the winter season, and this year it was even more popular than in former years. This club is one of the most progressive in this vicinity, and for a small club it makes itself most prominent. Its members are ardent sportsmen and race because they love the sport rather than to win prizes, although they are very successful at that. It is a club devoted mostly to small boat sailing. It has a membership of about 105, nearly every one owning a yacht, but what it lacks in quantity it makes up in quality. About seventy-five of these members, quite a large percentage, dined at the Hotel Brevoort last Saturday.

There was fun and frolic from the start, which began with a "welfare exhibit" which had been prepared by Committeemen Wilson, Dingman and Doutney. The exhibits were novel and were joshes on the members for something done during the year. There was a model of the familiar red spar buoy No. 12½, which is a turning mark on the lower bay, and this showed two prominent dents where Dick Moore and Billy O'Neil hit it. There was a model of the crack sloop Joy—rather a crude one—showing how she crossed the bar on June 17. The Blue Bill, Dick Moore's sloop, with which he won the Lipton cup, was shown, the hull being made out of a tobacco box and each part labeled, showing how that crack skipper trains his crew of novices. Richard Rummell's patent swab, which enabled him to keep boat clean for a whole season, was shown among many other.

The menu was filled with clever cartoons and during the evening the originals were sold at auction. Commodore George R. Le Sauvage was the auctioneer and he succeeded in raising more than $40 for the drawings.

Commodore Le Sauvage presided, and with him at the guests' table were Commodore Barnard of the Atlantic Y. C.; Chairman Horace E. Boucher, of the Larchmont regatta committee, Thomas Fleming Day, father of ocean racing; the Rev. Dr. Wellwood, the fleet chaplain; Vice-Commodore Samuel Cochran and E. F. Geer, who is part owner with the commodore of the sloop Joy. During the evening these made short speeches. Thomas Fleming Day offered an oil painting as a prize for the member who started in most races during the season, and it was announced later that the season would be too short to determine the winner and midnight races would have to be arranged.

Among those present were W. W. Roberts, C. H. Clayton, W. I. Inslee, Louis Wunder, Ed. Zimmerman, George L. Beston, R. B. Moore, H. H. Smith, Rear-Commodore Atkinson, O. O'Neil, H. Leggett, J. H. Ives, J. L. Mitchell, Richard Rummell, Alfred Mackay, W. Stringer, E. D. Hunter, W. B. Meloney and John Palson and Jimmy Dunn. The latter during the evening gave one of his Harry Lauder impersonations and told some stories.

Several prizes were distributed during the evening. They were wonderfully fashioned and made mostly of aluminum. W. J. M. O'Neil received a big growler for making the best runs on Sunday to the brewery at Clifton. Edwin Hunter received a small cup for never having attended a meeting of the executive committee. Treasurer Billingham was remembered for having the record number of upsets. Gus Stahlman for being the best dressed member in the racing class, R. B. Moore for being the best skipper of amateur crews, and other prizes were presented to W. W. Roberts and John Palson. The Bensonhurst men are looking forward to a very busy season, and Commodore Le Sauvage will keep things hustling.

MOTOR BOATS ON EXHIBITION.

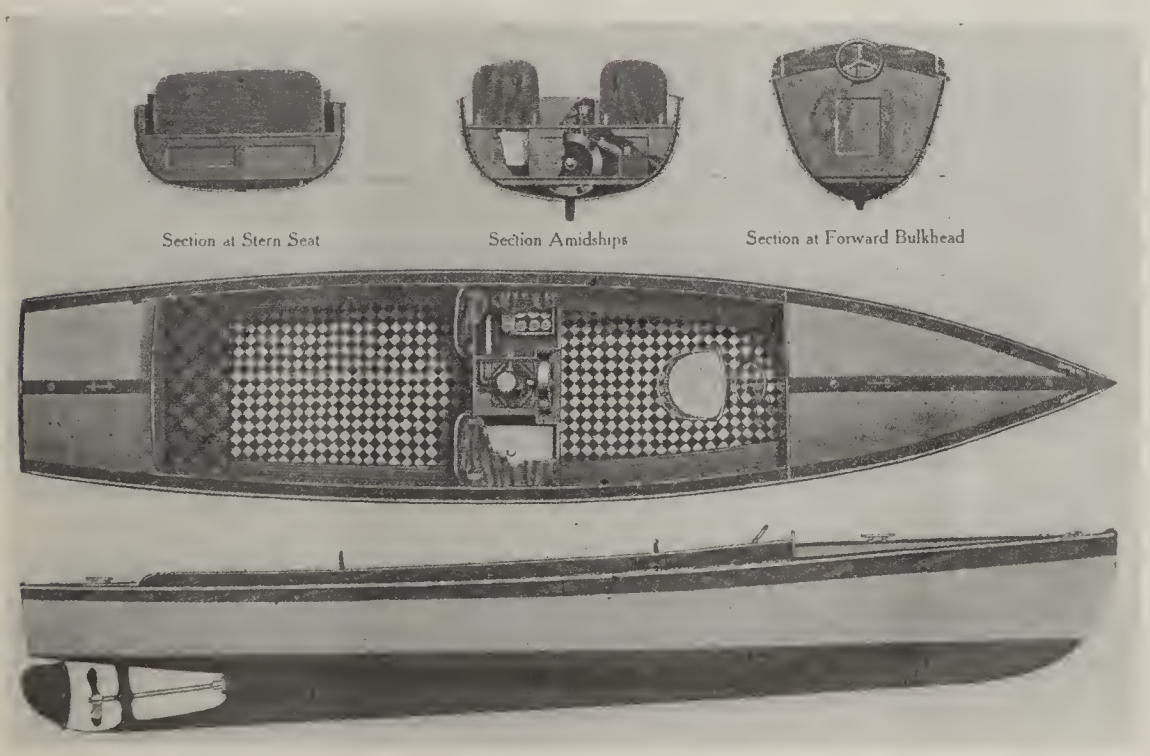
Motor Boating.

The Motor Boat Show.

THERE were so many good things to be seen at the Motor Boat Show that it really took several visits to study them all properly, and as the show was well attended from the day it opened until it closed, motor boat men must have learned lots, and they should be well able to start the coming season in good shape.

The exhibitors were all well pleased with the show because their visitors were mostly those who wished to understand what was being shown, and there were so many who wished to learn just what was best to purchase. Of course, in a show of this kind there are good and bad exhibits, and one must not always take as gospel what he is told by a salesman. Some really startling statements are made. For instance, one could hear that a 30-foot boat with a 15-horsepower motor would make 20 miles an hour. It is probable that those who have the exhibits to display are worked up to such a state of enthusiasm about them that they forget how they add a little each day to the speed of some boat until they get beyond the bounds of all reason. There are some exhibitors, many, in fact, whose statements can be absolutely relied on and whose word is a guarantee. A novice at the game should for his own protection always get some expert advice before purchasing a boat or a motor, and many who have gone in for the sport would have been less disappointed if they had taken advice on their first boat.

As a whole, the exhibition was a very fine one, far better than any previous exhibition held in this city, and it showed, too, how the motor boat industry has grown and what wonderful improvements have been made. The boats shown were mostly of the wholesome type and there were not nearly as many freaks



PLANS OF 20-FOOT LAUNCH TO COST $275.

YACHT and BOAT SAILING
By the late Dixon Kemp
We have two copies in fairly good condition, published at $12, which we will sell for $7.50 each.
FOREST AND STREAM PUBLISHING CO.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE
TRAVEL, NATURE STUDY, SHOOTING, FISHING, YACHTING

CORRESPONDENCE.
The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.
Subscriptions may begin at any time. Terms: For single copies, $3.00 per year; $1.50 for six months. Rates for clubs of annual subscribers:

Three Copies, $7.50. Five Copies, $12.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Canadian subscriptions, $4.00 a year, $2.00 for six months.
Foreign Subscriptions and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's. Foreign terms: $4.50 per year; $2.25 for six months.

ADVERTISEMENTS.
Inside pages, 16 cents per agate line. Special rates for three, six and twelve months. Eight words to the line, fourteen lines to one inch. Advertisements should be received by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices, seventy-five cents per line. Only advertisements of an approved character inserted.

Display Classified Advertising.
Hotels, Summer and Winter Resorts, Instruction, Schools, Colleges, etc. Railroad and Steamship Time Tables. Real Estate For Sale and To Let. Seeds and Shrubs, Taxidermists. The Kennel. Dogs, etc. Wants and Exchanges. Per agate line, per insertion, 13 cents. Three months and over, 10 cents per line.

Solid Classified Advertising.
For Sale. Kennel. Property For Sale. Real Estate For Sale or To Let. Wants and Exchanges. Per agate line, 10 cents. Absolutely no display. No advertisement of less than three lines accepted. Cash must in every case accompany order.

FOREST AND STREAM PUB. CO.
127 Franklin St., New York.

as have been seen in former motor boat shows.

There were boats for those who want costly vessels, and there were others for those who want sane craft at moderate prices, and the prices ranged from about $200 for a small open dory to $15,000 for a high speed boat just useful for afternoon fun. In style and finish, too, the boats showed much improvement over former exhibits, and even in the small craft made to sell for little money there was a style and finish that could not have been approached two years ago. At the same time the luxurious craft were even more luxurious in finish and in fittings.

The most attractive exhibits, because of the costliness of the boats, were those of the Electric Launch Company and the Gas Engine & Power Company. The Electric Launch Company showed as its chief attraction an Elco de Luxe, 45 feet long which cost $12,500, and the Gas Engine & Power Company displayed the speed boat able to make 34 miles an hour, to cost $15,000. These two exhibits were described in the last issue of FOREST AND STREAM.

At the Standard Motor Company's exhibit was a very handsome raised deck cruiser well arranged and simply equipped. This boat was built by the Electric Launch Company and fitted with a 20-horsepower Standard motor, which will give her a speed of 11 miles. In the cabin forward are berths for seven, the galley is large and well ventilated, and aft there is a very roomy deck space. This boat attracted much attention and its cost was $5,000.

A boat of similar type was shown by the Gas Engine & Power Company, but this craft was fitted and finished in a more costly way, so that its cost was $8,000. It had its quarters aft which consisted of a large stateroom with double bed, a cabin fitted with transoms, a large engine space with berths for crew and a galley forward. This boat is 45 feet long and 10 feet beam. The Reliance Company displayed another boat of the same type which cost $4,000, and the Racine Company had still another, so that lovers of this type had opportunities to study how the different designers had worked out the plans, and each had its good features.

The Reliance Motor Company showed two little racers 23 feet long by 4 feet beam fitted with 24 and 28-horsepower motors. One very much resembled Peter Pan II., which is well known for the records it made. The whole exhibit of the Reliance Company was most attractive, as the boats were well modeled, substantially built and offered at moderate prices.

The W. H. Mullins Company displayed several of its steel boats, varying in size from 16 to 26 feet long. These boats made a very pleasing appearance and embodied many novel features in their make up. The largest was equipped with a 30-horsepower motor, was built of non-corrosive metal and the deck fittings were of oak.

For the lover of the small boat there were many attractive features. The Atlantic Company showed several power dories ranging in size from 18 feet equipped with a 4-horsepower motor to a 30-foot raised deck cabin cruiser, which was one of the attractive features of the show. This little cruiser was offered at $1,400. Forward there was a cabin large enough and fitted to sleep four. There is a toilet at the forward end, and aft, just forward of the bulkhead, is the motor. The controls are all placed near the steering wheel. The cockpit is large. The model shows a big bodied craft with plenty of freeboard. This company is planning to turn out a 35-foot cruiser, and as the Atlantic dories have made a name for themselves, the new boat is sure to be a good one.

The Toppan company showed a 19-foot dory equipped with a 3-horsepower motor, as well as models of other boats turned out by this company. Other dories were shown by the Cape Cod Company, which are also well known along the coast. The dory has grown to be a very popular boat, and these three companies have done much to make their boats as attractive as they are safe and serviceable.

The Detroit Boat Company showed boats of all sorts and sizes, some suitable for speeding over smooth water and others safe and sane cruisers for use anywhere. They ranged in size from a 14-foot runabout to a 27-foot auto boat. They also had canoes, some of which were equipped with small motors.

The Rice Company, of Bordentown, showed a 40-foot racer built of mahogany and fitted with a 250-horsepower motor which was intended to compete in the International cup trials last year. Fay & Bowen showed a 25-foot runabout well proportioned and free from freakish ideas.

The Truscott Boat Company had two runabouts fitted with 35 and 18 horsepower motors respectively. The Racine Company showed a 36-foot cruiser yawl rigged as well as some attractive small boats.

Another attractive small boat was shown by the Luders Company. It was 20 feet long, 5 feet 6 inches beam and fitted with a 6-horsepower motor. This boat is built of oak frames, cedar planking and oak sheer strake. The trimmings are of mahogany. It has two cockpits—one for the motor, in which, too, there was plenty of locker space, and one fitted for the helmsman and his guests. It was fully equipped and offered for $900. Rice Brothers showed a trim 20-footer built of mahogany. The arrangement of the boat was good, and she would be well adapted for use on small lakes or rivers.

In the motor department there were exhibits by all the leading motor builders in the country, and their power varied from 2 horsepower to 300 horsepower. These exhibits were instructive, too, because in many cases the interior workings were shown and every part of the mechanism was fully explained. The Gray Motor Company made a fine display. These motors are made in all sizes and a complete line of the new model T design were on the floor. The most characteristic feature of this new model is a double inlet system combining the advantages of both the two port and three port systems. The carburetor is attached to a chamber which is divided into an upper and lower half by a cross web. The upper half communicates with the crank case through a third port in the cylinder wall, and is fitted with a check valve which has a vertical lift. This year's model is a big improvement over models of last year and is a most attractive looking motor, too.

The Ferro, Stamford, Holmes, Relaco, Sterling, Palmer, Mianus, Buffalo, Jencick, Doman and Speedway motors all attracted well, and the new models were closely examined.

The exhibit of accessories was a remarkably good one. Carburetors, batteries, spark plugs, sparkers, propellers, reverse gears, clutches, grease guns, whistles, horns, lamps, lights, dynamos, magnetos, bathroom fittings, and in fact everything connected with a motor boat was to be found at the Garden.

One of the most interesting features was a motor life boat similar to those used at present in the United States Life-Saving Service on the Atlantic and Pacific coasts, and the Great Lakes. When motor lifeboats were first installed by the Government in 1899, the best motor obtainable for the purpose was a 12-horsepower engine weighing 1,800 pounds. To show to what an extent improvements have been made along this line it is only necessary to say that the motor in the boat weighs but 950 pounds, and has a 30 to 35 horsepower capacity. The boat is 36 feet long, 8 feet beam, built entirely of mahogany and fastened with Tobin bronze and gun metal. It has six watertight compartments under the deck, filled with 112 copper cases. The boat is self-righting and self-bailing; that is, if capsized, it rights itself instantly, and will empty itself in nine seconds. One peculiarity about the boat is that it is diagonally planked with two thicknesses of mahogany, having canvas between. Each plank commences at the gunwale at one side, running under the bottom to the gunwale on the other side, and riveted through. The motor is installed in the after compartment with the starting crank and all controllers on the bulkhead of this compartment. It carries fuel sufficient for a 250-mile run. Its sailing equipment consists of a foresail and mainsail with hollow spars, which are easily put in place when required. There are fifty-eight of this type of this motor boat in use in the Life-Saving Service, and are built by the Electric Launch Company, Bayonne, N. J., which has done practically all of the life boat work for the Government.

Canoeing.

Tippy C. C.'s New Home.

THE Tippy Canoe Club is to have a new house at Glenover. This club was organized three years ago by Pittsburg canoeists. The club has been using a remodeled hotel at Glenover. The new club house will be of brick and will cost about $6,000. There will be 18 spacious rooms in addition to the boat room. The building is to be completed by Sept. 1.

The officers of the club, which was recently granted a State charter, are: Commodore, W. W. Sanderson; Vice-Commodore, A. T. Brockway; Secretary, Board of Directors, Carl Feich; Secretary, Board of Governors, W. W. Noble; Purser, John E. McHugh.

A. C. A. Membership.

NEW MEMBERS ELECTED.

Atlantic Division.—6158, Spencer G. Lane, 395 Washington avenue, Brooklyn, N. Y.; 6164, Elmer J. Lloyd, 818 Carteret avenue, Trenton, N. J.; 6165, Carl R. Lucke, 1 West 104th street, New York, N. Y.

Eastern Division.—6160, John C. Kendrick, 5 Richfield avenue, Cranston, R. I.; 6162, Walter B. Gorton, 49 Ring street, Providence, R. I.; 6161, George A. Smith, 52 Hillwood street, Olneyville, R. I.

Western Division.—6159, Christian G. Ewertsen, 1465 Carmen avenue, Chicago, Ill.

Book Exchange.

AMONG the readers of FOREST AND STREAM there are many who are interested in old out-of-print and rare books on sport, travel, exploration and kindred subjects, and frequent letters are received at the office ordering such books.

In the very nature of the case, however, these cannot be supplied on order, and it often takes months of search to secure copies, by which time the person who ordered them may have forgotten all about the matter. Within a few weeks we have received from readers and from dealers a dozen orders for a supposed book called "A Boy in Indian Camps," which orders were called forth by an article printed not long ago in FOREST AND STREAM, describing a book published in 1850 and long out of print. Such books as Dodge's "Plains of the Great West," "Hunting Grounds of the West," Elliott's "Carolina Sports," Palliser's little book on Western hunting and others are often sought for.

These volumes and others like them contain a world of vivid interesting description of life in the open, as it was from forty to sixty years ago, and furnish the most delightful reading. On the other hand, because they are scarce, they are costly by comparison with the ordinary outdoor book, which has just been published and stands in numbers on the shelves of the book seller.

No doubt there are many of our readers who possess these old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second hand books may ask for what they need, or offer what they have.

If There is Any Doubt in Your Mind About the Superiority of Remington-UMC, These Facts Will Dispel It.

REMINGTON-UMC firearms are built solid breech, hammerless. That means safety—not occasionally but ALWAYS.

REMINGTON-UMC firearms are symmetrical, simple, perfectly balanced and dependable. They clean *from* the breech.

The REMINGTON-UMC Pump Gun is the only bottom-ejecting pump gun.

The REMINGTON-UMC Autoloading Rifle is the only recoil-operated rifle embodying the military style rotating bolt locking to the barrel until recoil has ceased.

The REMINGTON-UMC Autoloading Shotgun is the only gun of its kind on the market. Recoil ejects empty, throws loaded shell in place and cocks gun.

The REMINGTON-UMC .22 Repeater has fewer, bigger, simpler and stronger parts in its action than any other repeater.

REMINGTON-UMC Steel Lined Shot Shells are the only American shells made with a steel lining around smokeless powder.

REMINGTON-UMC Cartridges are individually made and guaranteed for every standard rifle in use.

May 30.—Cleveland (O.) G. C. F. H. Wallace, Mgr.
June 1.—Tarentum, Pa.—Western Pennsylvania Trapshooters' League. Louis Lautenslager, Pres.
June 2-3.—St. Charles, Mo.—Missouri State R. A. C. C. Crossman, Sec'y.
June 6-8.—Moberly, Mo.—Annual State tournament of the Missouri Trapshooters' Association, under the auspices of the Moberly G. C. L. R. Hulen, Sec'y.
June 6-8.—Huron, S. D.—South Dakota State tournament under the auspices of the Huron G. C. T. H. Null, Sec'y.
June 7.—Norwich, N. Y.—Chenango County F., G. and G. C. E. D. Borden, Sec'y.
June 7-9.—Columbus, O—.Ohio State tournament, under the auspices of the Columbus G. C. Lon Fisher, Secy.
June 13-15.—Hickman, (Ky.) G. C.; $1,000 added money. S. L. Dodds, Pres.
June 13-15.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State S. A. W. E. Hookway, Sec'y.

June 14-15.—Montpelier, Vt.—Vermont State tournament, under the auspices of the Montpelier G. C. H. B. Moulton, Pres.
June 14-15.—Brownsville (Pa.) R. and G. C. H. O. Hornbake, Sec'y-Treas.
June 26-27.—Kenmare, N. D.—North Dakota State tournament, under the auspices of the Kenmare G. C. L. Harrison, Pres.
July 3-4.—Upper Creve Coeur Lake, Mo.—Falstaff G. C. Fred C. Suhr, Sec'y.
July 8.—Catasauqua, Pa.—Bryden G. C. H. W. Osmun, Sec'y.
July 9-10.—Fargo, N. D.—Gate City G. C.—Albert E. Rose, Sec'y.
July 11-13.—Wilmington, Del.—The Interstate Association's sixth Eastern Handicap tournament, under the auspices of the Du Pont Gun Club; $1,000 added money. Elmer E. Shaner, Sec'y-Treas., Pittsburg, Pa.
July 18.—Coraopolis, Pa.—Western Pennsylvania Trapshooters' League. Louis Lautenslager, Pres.
July 14.—Salisbury (Md.) G. C. T. B. Lankford, Capt.
July 26-27.—Butler (Pa.) R. and G. C. S. G. Purvis, Sec'y.
July 31-Aug. 2.—Belleville, Ont., Canada.—Dominion of Canada Trapshooters' Association. Mark Sprague, Sec'y.

DRIVERS AND TWISTERS.

President Neaf Apgar gives notice that "A special meeting of the Westy Hogans of America will be held at the Grand Hotel, New York city, on Sunday, March 12 next. The meeting will be an important one and every member who can possible attend is urged to do so."

At a meeting of representative trapshooters of western Connecticut, held at Danbury, at the initiative of the Pahquioque Rod and Gun Club, the Western Connecticut Trapshooters' League was formed. Six clubs enrolled, viz., Pahquioque, of Danbury; Bethel, of Bethel; Seaside, of Bridgeport; Mattatuck, of Waterbury; New Haven, of New Haven, and Hillside, of Long Hill. It is intended not only to further the interests of trapshooting, but also to take up the protection of fish and game in the State, and to work for a strict enforcement of all laws now on the statute books, or to be enacted by the Legislature. The tournaments to be held will be registered with the Interstate Association. Edward H. Bailey, the efficient secretary of the Pahquioque Club, was unanimously chosen president of the League.

The following circular letter has been sent to all Iowa gun clubs: "The directors of the Iowa State Sportsmen's Association have arranged to hold this year's State shoot at Des Moines, Ia., April 18, 19, 20. They have also arranged with D. Y. French, of Des Moines, Ia., to fill the office of acting secretary for W. B. Linell, who is out of the State. Under the new policy of the Interstate Association, it is necessary that our State Association be composed of ten or more organized gun clubs. The membership fee of same is $3 per club. This entitles all of the members of a club to participate in the State events, as per program. An individual membership fee will be $1. Make your remittance to D. Y. French, care Hopkins Bros. Co., Des Moines, Ia., who will return receipt, and also notify Mr. Elmer E. Shaner, Pittsburg, Pa., Sec'y-Treas. of the Interstate Association, that you have joined our state organization."

Mr. F. H. Schauffler, chairman of the shooting committee, N. Y. A. C., in sending an invitation to the sixth annual amateur championship of America at clay birds, given under the auspices of the New York Athletic Club, at their country home, Pelham Manor, N. Y., says: "The program for this year is a departure from previous programs, we deeming it more consistent with championship shooting to have the main event at 200 birds instead of 100, as in past years. For high gun there will be a diamond medal indicative of the championship of America, and in this same event there will be second, third, fourth, fifth, sixth, seventh, eighth, ninth and tenth prizes. The fact that there will be 200 birds to shoot during the course of the day necessitates the prompt arrival of shooters on the grounds, and we have arranged for shooting to begin at 9 A. M. sharp on March 23. The entrance for the championship event will be $6, which price includes the 200 targets. On the preceding day (March 22), beginning at 9:30 A. M., there will be four 15-bird events, which will constitute practice, shot over the four sets of expert traps which will be in use. Following this there will be a preliminary event of 100 birds in strings of 25, with handsome first, second and third prizes. The entrance for the practice is $1, and for the preliminary event of 100 birds, $3. Everything that can be done for the convenience of shooters will have our attention, the resources at Travers Island being such as to insure comfort, food and overnight accommodations, if desired."

The Indians' Tribute to E. D. Rike.

Go softly, where the twilight falls,
Like as a curtain o'er the way;
The Night, beyond those jasper walls,
Foretokens e'en a fairer Day.

Over the highlands of Life I rode, down into the Valley of Sleep; and there O Chief, was the silence supreme, where even the voice of the winds is still, with never a wild thing moving, nor ever a whispered sound.

But also there was the softest air and the purest light and the feel of the best that is; where few may tarry for e'en a time, and only the good and true in heart are chosen to abide. And there, O Comrades, my search did end for the Brother who went away.

With naught of trouble or stress of pain—with the air of the hunter who rests well content at the end of the wearying chase—in silence he greeted me, in the mood of the utterly free and fearless, as if to say, "Return to thy fellows and grieve not, but say to them all, it is well—it is well with me."

Even so might the Herald have spoken of the passing of our friend and fellow Chief, E. D. Rike, and because we loved him and would keep his memory green, this tablet is enscribed and affectionately dedicated by

THE INDIANS.

TOM. A. MARSHALL, High Chief. FRANK C. RIEHL, Chief Scribe.

BERNARD WATERS.
Shooting Editor of FOREST AND STREAM, whose death occurred on Feb. 27.

Trapshooting at the Sportsmen's Show.

AT the Madison Square Garden Sportsmen's Show, March 7 to 13, the trapshooting will be managed by Mr. Luther J. Squier, who has devised the following program:

From Wednesday, March 8, until Monday, March 13, inclusive, except Sunday, the traps will be open from 11 A. M. to 2 P. M., and from 4 to 8 P. M. for shooters to qualify for the final round in the championship contest, which will take place on Monday, March 13, at 4 P. M. Conditions will be as follows: The qualifying rounds will be 50 targets per man, re-entries unlimited, entrance price of targets at 2 cents each. The final round will be 100 targets per man; entrance, price of targets at 2 cents each. Those eligible to compete in the final round of the championship will be the ten contestants present having respectively the ten highest scores made in the previous qualifying rounds shot on any of the preceding days of the tournament. No contestant can qualify with more than one score, that score being the highest made by him in any qualifying rounds. As re-entries for the qualifying rounds are unlimited, any contestant can, during the qualifying rounds, try to better any record made by him in the previous rounds.

PRIZES.—Prizes in the international indoor amateur championship are as follows: To the winner in the final round of the championship contest will be donated a handsome gold watch fob, emblematic of the international indoor amateur championship. To the contestant making the second highest score, will be donated a silver watch fob. To the contestant making the third highest score will be donated a bronze watch fob. In addition to the above prizes, the management will donate a prize each day to the contestant making the highest score in the qualifying rounds shot that day. In case of a tie, such tie will be shot off next day at 25 targets

SPECIAL EVENTS.—In addition to the foregoing program, special events will be arranged as the occasion requires. Optional sweeps will be run in connection with all practice and scheduled events. Intercity three-man team races will be shot in connection with the 50-target events. Arrangements can be made with the management for special matches, team contests, etc., to be shot during the tournament.

Professionals.—A special prize will be given by the management to the professional shooter making the best general average during the tournament. To qualify for this prize, the contestant must take part in the competition every day, except Tuesday, March 7. No re-entry score will be counted. Should a contestant shoot two or more scores of 50 targets each on any day, his first score on that day shall alone be credited for this average. The traps will he open for preliminary practice from 5 to 8 P. M., Tuesday, March 7. A special match at 100 targets between two well-known trapshooters will be shot at 7 o'clock P. M., Tuesday, March 7.

Novices will be instructed to shoot over the traps from 9 to 11 o'clock A. M. each day, by experts. Trapshooters are requested to ship their shells and ammunition to the Sportsmen's Show, care of M. J. Pike, Madison Square Garden, New York City.

Cincinnati Gun Club.

THE live-bird shoot given by the club on Feb. 16, was a big success, and it certainly seemed good to see something doing at the grounds after so many weeks of absolute quiet. The light was poor, owing to clouds and a slightly hazy condition of the atmosphere, and late in the afternoon considerable rain fell.

The birds were an unusually good lot, with more than the average number of extra hard ones, and there was not a shooter but drew more than one screamer, which taxed his skill to the limit. The program consisted of one event at 25 birds, handicap, and optional sweeps in the first and second 10 birds, making three sweeps for those who cared to go in. An extra event, and one which aroused much interest, was the team match between two of the old guard, Col. Max Fleischman and Dr. A. B. Heyl (Medico) and John Schreck and J. A. Payne. In the days before live-bird shooting at the traps was prohibited in Ohio, Fleischman and Heyl were among the best shots in the State, but for several years neither of them has done much shooting, and were considerably out of practice. Of the other team, Schreck is one of the old-timers, and a good one, having won the Schuler trophy, the last prize, if memory serves us correctly, offered by the club for live-bird shooting, while Payne is comparatively new at the game, and has come to the front within the last few years. He is now reckoned one of the best in this section. A feature of the shoot which every one enjoyed was the dinner served by Mrs. McFee, wife of the ground superintendent, even those who got their lunch before coming out could not resist the temptation to indulge in a piece of home-made pie and a cup of real coffee. The regular events were finished at $2.30. Ruble, of Hillsboro, O., and G. Osterfeldt, tied for first on straight scores of 20 in the first event. George Walker was back to his regular form to-day tying on 19 with "Tug" for second place. His tenth bird, a fast tailer, got over the boundary before falling dead.

In the second event, Osterfeldt, Medico and Ruble tied on 10 straight; Walker and Tug second with 9 each.

First honors in the third event were divided by Ruble, Walker, Schreck, Tug and Osterfeldt.

As soon as the regular events were finished, the match was started, R. H. West, Jr., acting as referee and scorer. At the half-way post, Payne and Schreck were in the lead by 2 birds, the score being 44 to 42. In the last half, this team did a little better, scoring 45, while their opponents killed but 37, and lost the match by 10 birds, 79 to 89. Payne made high individual score of the match, losing but 4 birds, and one of those was dead out. Medico did the best work for his team, killing 43, and tying with Schreck.

During the latter part of the match rain began to fall, and the balance of the afternoon was wet and disagreeable.

Event No. 1, 20 birds, handicap, entrance $5, divided 50, 30, 20, class shooting:

Ruble, 27	22122122222112222121—20

Team match, 50 birds per man, 30yds., $100 a side:

Payne	46	Medico	43
Schreck	43—89	Fleischman	36—79

Several miss-and-out events wound up the shoot.

DuPont Gun Club.

WILMINGTON, Del., Feb. 26.—The feature of the weekly match yesterday was the shooting of J. T. Skelly, of this city, who broke 97 out of 100. In addition to this remarkable shooting, Charles Newcomb won a silver spoon offered for the best out-of-town amateur, not a member of the club. His score was 96.

The shoot was participated in by 115 shooters, of whom 103 members shot in the T. Coleman du Pont merchandise event. In this event ties resulted in four classes as follows:

Class A, 23 out of 25—Wm. M. Foord, Eugene du Pont, W. S. Simpson, F. Holt.

Class B, 19 out of 25—W. Tomlinson, F. Matthewson, S. B. Trott, R. L. Conner, R. W. Smith, T. W. Keithley, H. C. McClane, W. W. Bacon, P. J. Pape, A. Richards, A. M. Lindsay.

Class C, 16 out of 25—E. E. Handy, W. Matthewson, J. W. Anderson, Jr., J. R. Bailey, C. R. Jefferies, Sr., J. F. Porter, C. R. Kenworthy, J. A. MacMullin.

Class D—W. H. Nealy, R. B. Evans.

These ties will be shot off on next Saturday.

Hessian gave some fancy shooting, breaking lumps of coal thrown in the air with a .22cal. rifle. He broke three targets in the air at one time, and then ejecting an empty cartridge from his shotgun, threw it into the air and hit it before it reached the ground. He was assisted by Thorpe Martin, of the local club. E. F. Slear, of Philadelphia, amused the crowd with cartoons of the shooters, one of A. H. Lobb being particularly apropos.

In the ties made in last week's T. Coleman du Pont merchandise event, the shoot-off was as follows:

Class B—A. H. Lobb, winner with 23 out of 25. Class C—Dr. S. C. Rumford and Wm. B. Smith again tied on 17. Their tie will be shot off next week. Class D—W. F. Jensen, winner with 15 out of 25.

The Du Pont Club counts itself fortunate to have one of its recent members, George S. McCarty, of Philadelphia. He is one of the crack amateurs of the country. In 1907 he started his trapshooting career by winning the second Southern Handicap at Richmond, Va. Since then he has won a number of shooting matches, outclassing a strong field of competitors. For two successive years he won the New York Athletic Club amateur championship, the amateur championship of Pennsylvania and a number of other events of like character.

The complete scores of yesterday's shoot are as follows: Harry J. Reed, 10 out of 25, J. M. McKelvey 21, A. B. Richardson 20, J. Hessian 18, F. H. Mason 4, H. H. Lukens 15, H. Winchester 21, W. Tomlinson 19, W. E. Ross 15, E. F. Slear, 19, Dr. Bedford 20, G. H. Mitchell 18, Dr. Hibbert 10, A. F. Hickman 22, F. Matthewson 19, Eugene du Pont 23, M. E. Rose 23, E. E. Handy 16, W. A. Casey 9, W. Matthewson 16, Guy Lambert 5, T. B. Rogers 18, W. L. Wardell 14, L. C. Lyon 18, J. A. Kaiser 17, R. W. Linderman 8, R. L. Naudain 22, Thorpe Martin 15, H. H. Hegan 9, N. K. Smith 15, J. W. Cann 22, E. H. Lambert 10, S. B. Trott 19, J. W. Anderson, Jr., 16, W. H. Nealy 12, J. B. McHugh 22, S. G. David 13, R. W. Ferguson, 17, D. J. Dougherty 12, H. L. Morgan 18, W. E. Husbands 17, N. K. Smith 13, C. L. Petz 9, C. Leedon 11, P. Pennington 11, H. P. Carlon 21, R. L. Conner 19, R. B. Evans 12, L. Evans 20, G. F. Huber 20, T. C. Wilkinson 20, R. W. Smith 19, T. W. Keithley 19, Charles Buckmaster 21, F. M. Whitehead 14, Ross Robinson 10, H. C. McClane 19, H. J. Taggart 18, C. V. Ferriday 20, J. Birch 17, Dr. S. C. Rumford 17, Dr. L. Rumford 20, Major Ramsay 17, W. S. Simpson 23, S. Tuchton 18, C. H. Simm 21, W. W. Baun 19, W. S. Gavan 18, J. J. Baun 3, P. J. Pape 19, J. R. Fitzgerald 18, O. L. Cook 17, W. G. Jensen 15, F. Sheehan 21, Dr. Bullock 11, N. D. Martin 12, J. R. Bailey 16, Dr. Petz 14, J. Monohan 6, W. McKinney 5, L. W. Crawford 14, W. B. Abbott 17, J. Kaiser 20, A. Richards 19, J. T. Brown 16, W. H. Ferrew 7, Dr. Darlington 15, J. H. Minnick 17, Wm. Coyne 15, J. B. D. Edge 6, C. R. Jeffers, Jr., 14, C. R. Jeffers, Sr., 16, Harry Lindsay 14, J. Montgomery 10, Joslyn 20, J. F. Porter 16, C. R. Kenworthy 16, H. S. Hart 24, MacMullen 16, T. E. Doremus 22.

Shoot at Newton.

NEWTON, N. J., Feb. 20.—Thirty-five shooters were on hand to-day on the grounds of the Newton Gun Club, and eight events were shot. A very close match was shot between Newton and Great Meadow, seven men on a side, 50 targets per man, Newton winning by the slender margin of 1. Scores:

Great Meadow.		Newton.	
G Kennedy	31	G Stranline	31
D S Snyder	39	G Batson	40
B R Bailey	27	C B Bridner	35
J N Gulik	39	Joe Stranline	35
A J Cregar	42	A B Bridner	40
L J Dereamer	45	L M Morford	41
I Welsh	43—266	A I Kinney	45—267

Two-man team match:

Rockaway.		Newton.	
Ed Tippet	24	L Lomme	20
G Freeman	22—46	A B Bridner	22—42

Each team won a leg on a pair of watch fobs. Lomme and Bridner have challenged the winners for a return match at an early date.

Erne and Cavanaugh at Live Birds.

SHENANDOAH, Pa., Feb. 22.—A large gathering of leading gunners of this section witnessed a live-bird shoot between John Erne, of Girardville, and Thomas Cavanaugh, of Lost Creek, two prominent and popular shooters of this region for a purse of $300, at 16 birds each, 21yds. rise. Erne won by killing 8 to his opponent's 6.

The Winning Combination

FRED GILBERT AND WINCHESTER "LEADERS"

A Reliable Man And Reliable Shells

FRED GILBERT

Reliability will usually tell. Here was old reliable Fred Gilbert shooting in the Great Western Handicap at Live Birds with reliable Winchester "Leader" Shells. He killed the 25 straight, tieing two other shooters. Then, shooting off the tie, he killed five more straight, running ahead of his competitors. Reliable shells help to make a reliable shooter. Winchester shells have won every World's live bird and inanimate target championship and have been the year's high average winners for years.

Remember This And Shoot
WINCHESTER SHELLS

Hyde Park Gun Club.

THERE was a good attendance at the weekly shoot on Feb. 25, thirteen shooters facing the traps. The weather was fine, and there was not a breath of wind to interfere with the flight of the targets. The club was honored by the presence of "Pop" Heikes, of Dayton, O.; L. J. Squier, Pittsburg, Pa., and Burt Call, Newark, O., all well-known and popular trade representatives. High score was made by Heikes, who broke 94. Johnson was high amateur with 92, and De Mar second with 87, several targets below his average. Squier didn't get going till the third event, and then missed only 4 in the 60. Sam Leever, of Goshen, O., the well-known pitcher of the Pittsburg Club, shot a 90 per cent. gait, but could not stay to finish. Hammersmith, one of our best local shots, has been out of the game for many months, but the lure of the Grand American Handicap was too strong, and he started in again to-day; his score of over 93 per cent. shows that he hasn't forgotten how. A wager of 3 to 1 was made to-day that the entries in the G. A. H. would be between 800 and 900. Ed. Frohliger had his hands so full scoring and collecting shells and targets, that he never got a chance to even put his gun together. We would be much pleased to see Phillips, Rugg, Stevenson, Reif, and a few of the other old regulars at the grounds once more. Holaday shot a 90 per cent. clip in the first three events, but lost out in the last 40 targets. Welch is coming all right, and will have them all guessing before the summer is over. Dull and Malloy, of Goshen, O., shot a very good race, although we expect them to account for a few more targets than they did to-day. Dea was not at his best to-day. Irwin is still monkeying with guns. When he settles down, he'll get back where he belongs.

Targets:	20	20	20	20	20	Total.
R Heikes	20	18	17	20	19	94
Johnson	17	18	19	19	19	92

Live Bird Shoot at Ryland, Ky.

A live-bird shoot was held at Ryland, Ky., under the auspices of the Crystal Lake Gun Club, on Feb. 22, for the wing-shot championship of Ohio. This was a renewal of the Cincinnati Gun Club championship event, which was last held about eight years ago, just before the prohibition in Ohio of pigeon shooting at the traps. Many of the old members of the Cincinnati Gun Club, as well as other Ohio amateurs, had requested that the event be placed among the annual fixtures once more, and the result was one of the best live-bird shoots that has been held in this locality for a long time. Twenty five shooters were present, and half a hundred spectators. The program consisted of three events; one at 40 birds and two optional sweeps on the first and second 20 birds of the main event. All shooters were handicapped by J. A. Payne and R. H. West, Jr., and they did their work well. No one could go further back than 33yds. nor nearer than 26yds. Al. Wuest acted as referee and scorer, and R. H. West, Jr., handled the financial end of the shoot, both giving good satisfaction in their respective places. Judge Denny, of Lexington, Ky., and W. W. Ruble and Hill, of Hillsboro, O., were among the few outsiders present. The day was pleasant, the only drawback being the dazzling light caused by the sun shining on the snow. The birds were an unusually good lot of strong, fast fliers.

The championship event proved a close one, and the winner was only decided after shooting off three ties. When 20 birds had been shot, Schreck was in the lead with 18, and was the favorite. Ruble, Pohlar, Johnson, Tug, Hill and Payne were tied for second on 17 each. The next 10 birds changed the positions a little, Ruble going straight and taking the lead with 27; Schreck and Pohlar second with 26 each; Johnson, Tug and Hill, 25 each, and Payne 24. In the last 10 birds, Schreck had hard luck, losing 5 birds, which put him out of the race. Ruble lost 2 birds and Pohlar lost but one, which put him tie with the former on 35. Payne got busy and made 10 clean kills, finishing in a tie with Johnson for second place on 34. The latter had a chance to get in the tie, and killed his birds clean up to the last one, which was hard hit, but had strength to get over the boundary. The two high men were called to the score to shoot off the tie at once, each shooting at 5 birds. Each man missed his second bird and were tied again. Another trial at 5 birds, resulted in a tie on 5 straight. Then they started a miss-and-out. Ruble drew a hard one for his second shot and it got away. This left just one bird in the traps for Pohlar, and he killed it, winning the match and trophy, a handsome solid silver loving cup, suitably engraved. Of those who withdrew Irwin shot at 37 birds; Thoms at 36, and Walker at 35, Wuest at 28 and Carey at 20.

In the second event there were nineteen entries, and Schreck took first money on a score of 18.

Pohlar and Ruble tied for first in the third event on 18. There were twenty-four entries in this event.

Dinner was served in the club house at noon, and Kentucky burgoo was on tap at the ground club house all the afternoon. The shoot was a big success, and the club proposes to make it an annual event. If they will change the date, the chances for a much bigger entry would be improved, as most of the clubs hold shoots on their own grounds on the 22d, and most of the members prefer to stay at home. George Walker was still a long way from being in his usual shooting form, or he would have made the leaders go better than 87.5 per cent. to win. Ruble has done no live-bird shooting at the traps, but he is an old trap shot, and a good one, and a good shot also in the field. He takes to the game in fine shape, and can make the old ones travel to keep up.

Event No. 1, 40 birds, Ohio State wing-shot championship, distance handicap, entrance $20, divided 60 and 40 per cent.:

Harrisburg Sportsmen's Association.

HARRISBURG, Pa., Feb. 22.—The twenty-fourth annual live-bird handicap for the Pennsylvania State challenge trophy of the Harrisburg Sportsmen's Association was shot to-day. Weather conditions were most unfavorable, it being very windy, with a temperature of 14 degrees. The ground was covered with snow to the depth of five inches. Samuel Kurtz, of Newmanstown, was high man, killing 19 out of 20 birds. Lee Wertz, of Temple, who won the trophy last year, did not contest. The birds were good, and there were few killed with one barrel.

The Pennsylvania State trophy is shot at 25 live birds, under Interstate rules, only members of Pennsylvania State Sportsmen's Association being eligible. Trophy becomes property of person who scores two consecutive wins at annual shoot, and who successfully defends same during intervening twelve months. The trophy scores:

Trafford, 28	16	Byron, 26	16
Sommers, 28	16	Meily, 26	13
Brownell, 26	12	Shearer, 27	17

Lescure	6	Bollman	8

Two miss-and-outs followed.

K. STEWARD, Sec'y.

Boyertown Gun Club.

READING, Pa., Feb. 22.—The following scores were made in the target shoot of the Boyertown Gun Club, held this afternoon, 50 targets:

A L Rohrbach	14	W Kuser	23
M H Rhoads	38	Thomas Endy	19
W D Schaeler	32	R Spotts	11
C J Kutz	31		

Philadelphia Amateur Championship.

EDGE HILL, Feb. 23.—Harry Kahler leads in the race for the amateur trapshooting championship of Philadelphia and vicinity, winning the first of a series of three shoots under the auspices of the Highland Gun Club yesterday with a score of 114 breaks out of a total of 120 targets. But though he won the principal prize yesterday, his lead is only a slender one, as George S. McCarty and Thomas Tansey, each broke 112, Frank S. Cantrell, Jr., 110, and Jesse Griffith 109.

The winners in the respective classes were: Class A—A. Heil and George McCarty tied with 182 each. Class B—F. W. Mathews and Harry Oliver, each 170. Class C—William B. Clegg 167. The high gun honors of the day were divided between George S. McCarty and A. Heil, who each smashed 182, Harry Kahler falling one target behind.

The Highland Club offers a total of $330 and trophies in the local championship event. Three shoots are scheduled, the championship being decided on the grand total, the shooter breaking the greatest number being awarded a championship trophy and $25, the same prizes being given in each of the three classes.

Yesterday's shoot was at 200 targets, divided into ten events, the last six only counting for the championship, the purse being divided according to the number of entries in each class. Scores:

		Championship	
Class A:			
A Heil	19 18 19 18	20 19 17 17 18 17—108	182

Mohawk Gun Club.

SCHENECTADY, N. Y., Feb. 23.—A big attendance was out to witness the shooting at the Mohawk Gun Club traps yesterday, when the annual Washington's Birthday shoot was held, with Jim Elliott, the big champion shot, and several other professionals, in competition. Shots were also present from many neighboring cities. The day being ideal, some handsome scores were chalked up. The Mohawk people proved themselves excellent hosts, and everyone out had a good word for the managers of the big event.

Jim Elliott broke 144 out of 150 targets. Sim Glover was second with 140; H. H. Stevens was third with 139. Of the amateurs, Barker, of Gloversville was high average, breaking 132, Porter being second with 129, and White third with 128. Among the out-of-town shooters were Deputy Commissioner John B. Burnham and Chief Legge, of the State Forest, Fish and Game Department, Albany; M. E. Barker and E. P. Hotaling, of Gloversville. H. H. Stevens acted as cashier; M. C. Smith as referee, and Ben Ellis as scorer. The tournament was a big success. The program consisted of ten 15-target events, four average moneys, $10, $7, $5 and $3.

	Shot at.	Broke		Shot at.	Broke
Elliott	150	144	Sann	135	111
Glover	150	140	Shorey	75	65
Stevens	150	139	Legge	75	61
Sibley	150	134	Adams	75	52
Barker	150	132	Sitterley	75	31
Porter	150	129	Beller	45	36
White	150	128	Hill	45	32
Smith	150	126	Defoe	45	28

J. W. WHITE, Sec'y.

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., Feb. 23.—Chris. Feigenspan smashed 23 white fliers out of a possible 25 at the Speedway traps yesterday. In his match with B. M. Shanley, Jr., he was also victorious. The 50-bird match between John Hausman and James J. Quinn was won by Hausman, who broke 15 to Quinn's 11 in the first 25, and 18 to Quinn's 17 in the second 25, winning by 5 birds on the 50 shot at.

In the 50-bird match between Fred Macaulay and Jas. J. Quinn, in which Macaulay gave Quinn a handicap of 10, Macaulay was the winner, killing 42 birds out of a possible 50, while Quinn got 31, and with his added handicap totaled 41. Mac won out by the close margin of 1 bird.

In the walking match, unknown angles, Tom Cook, of the Macaulay Gun Club, was the victor.

Holiday Shoot at Bay Ridge.

WASHINGTON'S BIRTHDAY saw one of the largest gatherings of the season of Crescent A. C. shooters, at Bay Ridge. It was a cold, blustery afternoon, requiring all the shooters' skill to "connect" with the targets. The best work was done by champion Frank B. Stephenson, who not only won the holiday cup, but also scored in the gun-below-the-elbow event for the Clinton R. James prize, as well as winning two of the club trophy shoots.

G. G. Stephenson, Jr., a brother of the champion, also was a double winner. He not only took a leg on the J. S. Lawson prize, but also won the most interesting sweepstake of the day. The latter event ended in a tie among F. S. Hyatt, G. G. Stephenson, Jr., F. B. Stephenson, A. Blake and A. E. Hendrickson. In the shoot-off that followed, G. G. Stephenson, Jr., and F. S. Hyatt, both again tied for the prize. The final winner was Mr. Stephenson.

L. C. Hopkins won the only other fixture of the afternoon. It was a special leg on the Stake trophy, and it was taken with a score of 23 out of a possible 25 targets. There also was a shoot at 10 pairs doubles. The prize was divided between G. Felix and C. H. Pulis.

Among the winners of trophy prizes were Capt. H. W. Dreyer, F. S. Hyatt, A. Blake and A. E. Hendrickson. The scores:

Trophy shoot, 25 targets, handicap:

H W Dreyer	1	22	F S Hyatt	1	19
A Hendrickson	2	21	*A V Suydam	0	19
C Blake	1	21	A Blake	1	19

Eagle Gun Club.

MANOA, Pa., Feb. 23.—Twenty-four holiday marksmen made the journey to Manoa yesterday to help the Eagle Gun Club celebrate Washington's Birthday by shooting in the 15-bird event, and out of this number, only three succeeded in running a clean slate. Sharon, Fisher and Coblentz were the winners, and they divided first money, which amounted to a tidy sum. The match scheduled between Brewer and Hendrickson for to-day at Bristol has been postponed. Scores:

Meadow Springs Gun Club.

PHILADELPHIA, Pa., Feb. 23.—Harry H. Sloan outshot a small but select field of holiday gunners who participated in the special events held under the auspices of the Meadow Springs Gun Club, at Fifty-seventh street and Lancaster avenue, yesterday afternoon. Out of his 100 targets, Sloan broke 88, besides smashing 16 of his 12 pairs of doubles. Sloan secured the silver dipper for his efforts in the 100-target event, and also won the spoon donated for the best score in the doubles.

C. T. Garrett, shooting under the name of Hogan, was second high man, with 84 breaks, winning the merchandise prize event. Scores:

Washington Birthday Shoot at Larchmont.

LARCHMONT, N. Y., Feb. 23.—A largely attended holiday shoot was held by the Larchmont Yacht Club yesterday afternoon at its traps on the Sound. Sixty gunners reported at the firing line. In addition to the home squad, there was a full representation from the New York Athletic Club and the Manhasset Bay Yacht Club. There were also many visiting gunners who came for shoot from Albany, Portland, Me., Boston, Philadelphia, Wilmington, Del., and Willimantic, Conn. Several professionals also competed.

The main event of the day was that for the trophy donated by the chairman of the Larchmont shooting committee, Ralph L. Spotts, who arranged and conducted the big program. The shoot was a handicap affair, 100 targets, and required a deciding round. It was finally won by Dr. De Wolfe, who actually broke 91 clay birds. C. H. Newcomb, of Philadelphia, broke 95. The latter had the high average for the day.

In a fine-man team shoot between the Larchmont Yacht Club and the New York Athletic Club the former won by 422 to 409. Each man shot 100 targets.

A special 50-target shoot, the feature of the morning's competition, was won by J. H. Anderson, of Philadelphia, who made only one miss. The summaries:

Spotts cup, handicap, 100 targets:

Dr De Wolfe	15	100	W D Hinds	11	91
J R Collins	20	100	F Schauffler	8	91

Won by Dr. De Wolfe on shoot-off.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

97.28%

1910 High Amateur Average

Won by MR. J. S. DAY, of Midland, Texas, using

97.28%

Peters Factory Loaded Shells

Mr. Day shot at **4280** targets in Registered Tournaments, breaking **4164,** an average of **97 28%**, exceeding by over **2%** the highest official amateur average of any previous year. During the season Mr. Day made many long runs, among which are the following:

Gorman, Texas, and Walnut Springs, Texas, August 15-17—**245** Straight
Walnut Springs, Texas, " 17-18—**266** "
Midland, Texas, " 8-9 **133** "
" **121** "
Big Springs, Texas, " 10-11 **175** "
" **152** "
Cisco, Texas, and Gorman, Texas, " 12-15—**190** "

PARTICULAR ATTENTION

is directed to the fact that all of Mr. Day's shooting was done with PETERS REGULAR FACTORY LOADS, purchased from dealers where the various tournaments were held. His shells were not special in any sense, but were regular stock goods such as can be procured from any PETERS dealer. YOU can get this SUPERIOR AMMUNITION as easily as ordinary loads. You may not always score 97.28% but you will average better than with any other make.

Shoot the shells that have established another World's Record—97.28%—the kind that do not have to be used in any special make of gun to give best results.

Analostan Gun Club.

Washington, D. C., Feb. 24.—The Analostan Gun Club held a shoot on Feb. 22.—The elements were against good scores. The wind blew at the rate of 35 miles per hour, and the reader can imagine how it affected the targets. It was also very cold, and taking into consideration the fact that the boys had not shot since last October, the scores were creditable. We had with us as visitors Winchester Worthington, Du Pont Lewis and U. M. C. Anderson. Following are the scores:

	Shot at.	Broke		Shot at.	Broke
Steubener	100	85	Toohey	50	26
Anderson	100	78	Lewis	50	26
Peck	75	59	Ferree	50	23
Dufour	75	52	Varella	50	18

Columbus Gun Club.

Columbus, O., Feb. 23.—Fifty-one shooters took part in the midwinter tournament held on the Columbus Gun Club grounds on Feb. 22 and 23. C. Collins, of Aldine, Ind., carried off high average; Bert Cooper, of Thornville, second. W. Webster, of Columbus, tied Mr. Cooper for second place. Jim Smith, of South Solon, third. C. Coburn, of Mechanicsburg, fourth. High professional, was won by R. O. Heikes; C. A. Young was second, only one bird behind; L. J. Squier third, one bird behind Young. The attendance was cut down on account of cold weather and quite a number of shoots at other places held on Washington's Birthday.

After changing the program to pay losses each day there were only a few to take advantage of it. Quite a number of shooters are attending now. Interest in trapshooting is on the boom. The way shooting is starting up in new and old places this year promises to be a banner year for trapshooting. No cleaner sport exists. The best shot wins. The writer wishes to thank you all for attending this our annual midwinter shoot, and hopes to see you all back often.

L. Fisher, Sec'y.

Trap in Chenango County.

Norwich, N. Y., Feb. 22.—The Chenango County Gun Club held their shoot on the club grounds on the afternoon of Feb. 22. A strong wind and a blinding snowstorm cut the scores down somewhat.

With visitors from Oriskany Falls and Waterville, they had a nice crowd, considering the cold day. All of the boys were sadly out of practice for this first shoot since last fall. One thousand targets were trapped, and the boys all seemed to enjoy the sport. Following are the scores:

	Shot at.	Broke		Shot at.	Broke
Bonney	75	50	Harvey	85	72
Fowler	100	70	Hennery	85	55
Race	100	80	Borden	100	89
Lewis	100	79	Steere	70	50
Brooks	100	80	Allen	70	55
Ames	85	75

New York Brokers at the Traps.

On the grounds of the Country Club of Westchester, brokers of the New York Stock Exchange on Saturday, 25th prox., established a new annual trapshooting event at 100 targets, handicap, for the championship of the financial district. At the inaugural shoot, thirty-seven contestants faced the traps and made the following scores:

L Frost	25	96	H E Dewing	22	75
P Kellogg	22	92	E M Leask	35	72
A L Norris	20	89	N Borland	15	72
S Scott	0	88	F W Duryea	24	72
N L Carpenter	8	87	H E Butler	20	71

Ossining Gun Club.

Ossining, N. Y., Feb. 23.—The holiday shoot at the Ossining Gun Club was participated in by eighteen trapshooters yesterday afternoon, and the Poughkeepsie cup became the property of Daubeney Brandreth with a score of 242. The event was at 300 birds in strings of 100 each. John T. Hyland held the lead on New Year's Day and Lincoln's Birthday, but finished yesterday with a total of 239.

The Montclair cup was won by James H. Moran, in a handicap event at 100 birds. His score with an allowance of 20 birds, was 95.

The result in the prize event at 50 targets was as follows:

J T Hyland	5	44	Wm Fisher	8	39
A Bedell	4	37	I T Washburne	5	41
C G Blandford	4	43	G Brandreth	15	27
Col F Brandreth	5	36	J H Moran	15	40
N Tuttle	9	40	R Frank Zarr	15	47
G B Hubbell	6	39	W F Wagner	15	30
L F Lyons	8	49	J V Kirby	20	40
J F Hahn	13	36			

Lyons won a silver cup as first prize.

After the scheduled events there was a scratch shoot at 25 targets.

Scores of the Poughkeepsie cup event, 300 targets, in strings of 100 each:

	First 100.	Second 100.	Third 100.	Total.
D Brandreth	80	85	77	242
J T Hyland	85	83	71	239
C G Blandford	76	83	77	236
A Bedell	81	82	68	231
Col F Brandreth	71	72	63	206

J. T. Hyland, Sec'y.

Siwanoy Country Club.

Mount Vernon, N. Y., Feb. 22.—The gun section of the Siwanoy Club held a holiday shoot, with the following results:

	Shot at.	Broke.	Per C't.
Z C Offutt	95	62	65.2
H J Smith	95	53	55.7
L G Rauch	75	58	77.3

C Dick	70	48	68.5
H V Morgan	80	45	56.2
J Wintjen	60	45	75

C. G. Stone, Sec'y.

Hudson Gun Club.

JERSEY CITY, N. J., Feb. 26.—The appended scores were made at the traps of the Hudson Gun Club this morning. There was a special race at 50 birds between C. Durkee and H. J. Burlinton, for a suitable purse, and was won by the latter with a score of 44 to 37. W. W. Emmons led a field of 34 shooters with high average of 93 per cent., and was crowded pretty closely for the honor by D. D. Engle, who was second high with 90 per cent., scoring the only straight score for the day.

Event No. 3 was the club prize handicap, with Burling, Emmons, Thoben and H. Pape finishing with 6 points each, enabling them to win a leg on the same.

The morning was balmy and spring-like, no wind to bother the flight of the targets, a good light—in fact, an ideal day for trapshooting, and with a jolly good bunch of old-timers, talking dog, snipe, ducks, the bags they used to get, and of the quantities of fish that they caught when they were boys (lies that would make Baron Munchausen turn green with envy), the day was passed very pleasantly.

Schortey was using a double gun this morning, instead of his single-sticker. George Piercy has gotten over in the pump gun squad, and tried it out to day for the first time. Jack Williams was also flirting with a pump gun, but thinks that he will stick to the old gun with the choke shot out, and as they were all strange to them, their scores suffered accordingly. Harry Burlington thinks that he will get back to a double gun again.

We shoot again on Sunday, March 12, and invite all trapshooters to come over to our grounds and see some classy shooting, or if you feel like getting in the game you are welcome. Take the Turnpike car and get off at the Hackensack River bridge. Ask anybody you meet where the grounds are situated, or look north to the D., L. & W. R. R. bridge, where you will see the Stars and Stripes flying to welcome you.

Haddonfield Gun Club.

HADDONFIELD, N. J., Feb. 20.—The Haddonfield Gun Club held a bi-monthly prize shoot on Saturday the 18th. The gunners were out in force. Capt. Cozens is down to earnest work, and has promised to have old-time shoots again soon. The shoot was a success in every way. Fred Holloway made the only straight score. Fred's score did not count, as he styles himself an expert. To expedite the shoot ties were shot off on trap No. 2. The background on this trap is not so good, and as the light was failing, big scores could not be expected. Seasoned shooters like Peacock, Webster and Logan did remarkably well. Logan won out over C. Holloway and Pedlow for first prize. Webster did the nerviest shooting of the day on shooting off the ties with Clark and Tompkins; he missed 2 targets in his first 5 and then ran straight, landing second prize, a fine silk umbrella. Clark was so hot on his trail he could not breathe until he fired his last shot. Biedeman, a new member and a consistent shot, took home with him a box of cigars, the third prize. H. Pierce with a liberal handicap won fourth. Heiss, Jr., landed in a safe place and was as much surprised as any one else when informed he had won fifth prize. Scores:

Twenty-five targets, bird allowance:

F Holloway	0	25	E Webster	1	24
Cozins	3	20	Pedlow	5	25
C Holloway	3	25	Eyster	4	19
S Bergen	4	22	K Peacock	3	18
T Biedeman	3	23	J Peacock	1	23
J Logan	3	25	J Dungan	3	22
Manning	6	19	H Pierce	6	22
Tompkins	4	24	Humphrey	6	15
Clark	4	24	Heis, Jr	5	21
Webster	5	16	Eisele	10	12

Ties, same conditions:

C Holloway	3	21	Ed Webster	1	23
J Bergen	4	21	Pedlow	5	22
T Biedeman	3	25	J Peacock	1	24
J Logan	3	25	Dungan	3	20
T Tompkins	4	21	H Pierce	6	25
Clark	4	22

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

ANGLING MEMORIES

Seasonable Books for the Sportsman's Library

MEN I HAVE FISHED WITH MY ANGLING FRIENDS

Both by FRED MATHER

These two volumes are a source of endless delight to the fisherman. They deal with every phase of the gentle sport from bent pins and willow poles to salmon flies and special rods—with every kind of fish as well.

They are full of a quaint philosophy, written with a rare appreciation of human nature, and comprising sketches of angling "characters" as well as well-known men who were Mr. Mather's brethren of the angle. Much of other sport and adventure beside fishing will be found between the covers of these books. These two large, splendidly bound, splendidly printed, and richly illustrated volumes of 400 pages each regularly sell for $2 each. While they last we offer

Both together, postpaid, for $3.00

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK

YOU know mallards—wisest and wariest of all ducks Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

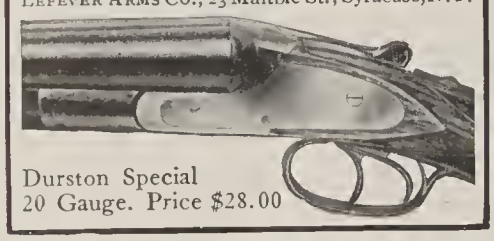
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

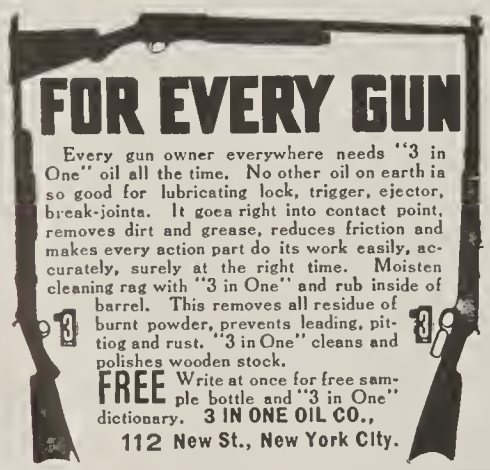
But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For ins ance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.
LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00



FOR EVERY GUN

Every gun owner everywhere needs "3 in One" oil all the time. No other oil on earth is so good for lubricating lock, trigger, ejector, break-joints. It goes right into contact point, removes dirt and grease, reduces friction and makes every action part do its work easily, accurately, surely at the right time. Moisten cleaning rag with "3 in One" and rub inside of barrel. This removes all residue of burnt powder, prevents leading, pitting and rust. "3 in One" cleans and polishes wooden stock.

FREE Write at once for free sample bottle and "3 in One" dictionary. 3 IN ONE OIL CO.,

Building Motor Boats and Managing Gasolene Engines
are discussed in the book
"HOW TO BUILD A LAUNCH FROM PLANS"

A complete, illustrated work on the building of motor boats and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

Northern Kentucky Gun Club.

It has been many weeks since so many shooters have attended a club event as were present on Feb. 26—fifteen men took their places on the firing line, and nearly all of them shot in all the events. The spring-like temperature was responsible for the turnout, and in spite of the hazy condition of the atmosphere and a strong cross-wind, which made the targets rather difficult, some good scores were made. Bert Call, the well-known trade representative, of Newark, O., and J. A. Payne, one of Cincinnati's crackerjacks, had a close race for first place, the former winning by only one target, with a score of 92 to 91. Luther Squier, of Pittsburg, got in third place, on a score lower than his average by several targets, but he had bad luck in the second and third events, which cut his total down. "Sunday" got back into the game to-day, and was fourth man. He used to be one of the best shots in the Cincinnati Club, but has done no shooting for several years; a little steady practice would put him back where he belongs. Darton, of Portland, Me., a popular trade man, came over to look on, but could not resist the temptation to take part in the sport, the result was a low score, made with a borrowed gun. J. B. C. has not been out for some time, but a rest has evidently done him good, as he put up a somewhat better score than usual, and improved in each event, missing but one target in the last 20. Frohliger was too busy to do any shooting at Hyde Park on the 25th, so came over to get his weekly sport here, and put up a very good race. Woodbury shows the lack of practice, as his work to-day was not nearly up to his usual mark, when he is in good form. George Dameron has not yet recovered his health so as to be able to shoot, but is slowly improving, and we hope will be with us again before long. Uncle John Dea stayed in to the end, as he always does, but he did not make so good a showing as usual. Richards' gun does not fit him exactly, and he attributes his misses to this cause. Something is surely the matter, as he generally gets nearer 90 than 80 per cent. The team match to-day was the fourth of the series between these teams, and for the first time the youngsters, Holaday, Jr., and Payne, were victorious. It was a close finish, and the old-timers promise to reverse things next week.

Team match, 50 targets per man:

East Millstone Gun Club.

EAST MILLSTONE, N. J., Feb. 23.—The sixth annual shoot of the East Millstone Gun Club was held on the club's grounds, Washington's Birthday. Twenty shooters faced the traps, and high gun for the day turned up in R. C. Stryker, the crack of the Whitehouse Gun Club. Van Cleef, of the home club, was second, shooting steadily throughout, and Morgan, of the Bergen Beach delegation, was third.

The championship of Somerset county and the right to hold the Fleischmann cup for one year was won by W. T. Laird, of Franklin Park, N. J., and a member of the home club. The competition in this event was keen. Welsh, Jackson and Laird were all tied on 40 out of 50. In the shoot-off, under the same conditions, Laird won.

A fine case of articles used in "first aid to the injured" was presented to the club, and was shot for after the regular program had been completed. During events 9 and 10 the wind had fallen, and some fine scores were made in this race, which was at 50 targets. Laird, shooting in fine form, got a straight, and emerged the winner by 46 breaks. Events 5 and 6 constituted the championship race.

The Millstone boys were glad to see a delegation from the Bergen Beach Gun Club, as well as shooters from Plainfield, New Brunswick, and other nearby towns. The best of good-fellowship prevailed, and every one vowed to come again at the next shoot of the club. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10

Western Connecticut Trapshooters' League.

DANBURY, Conn., Feb. 20.—A meeting of representative trapshooters of western Connecticut was held at the Seaside Outing Club's house, on Saturday afternoon which resulted in forming the Western Connecticut Trapshooters' League, with a membership of six gun clubs. The clubs of which the League is made up are Pahquioque, of Danbury; Bethel, of Bethel; Seaside, of Bridgeport; Mattatuck, of Waterbury; New Haven, of New Haven, and Hill Side, of Long Hill.

The League is the result of the members of the Pahquioque Club, of this city taking the initiative in its formation. Edward H. Bailey, of Danbury, was unanimously elected president of the new organization and the other officers are as follows: Vice-President, W. Rice, of New Haven; Secretary-Treasurer, Dwight W. Hall, of Bridgeport; Directors, W. G. Olmstead, of Danbury; W. B. Judd, of Bethel; Dr. E. M. Johnson, of New Haven; Charles Sherwood, of Bridgeport; Samuel Cutter, of Long Hill, and Peter Fitzhenry, of Waterbury.

During a discussion previous to the actual forming of the League, it was voted that an association be formed not only to create increased interest in trapshooting, but to take up the protection and propagation of the fish and game of the State and work for the enactment of better laws by the Legislature to these ends, this idea of the representatives being that in a union of clubs there would be strength for concerted action.

The plans of the League are to give tournaments under the auspices of each club in the union, starting May 1 with a shoot at Bethel, May 30 at New Haven, July 29 at Danbury, at Waterbury in September, and at Bridgeport and Long Hill upon dates to be decided on later.

There will be five-man teams representing the clubs at each tournament, and this is expected to increase the attendance, as each club can enter as many teams as it wishes, the team winning the most legs at the end of the season being declared the champion of the League.

The League will also offer a trophy for the high gun for the series of shoots. The tournaments will be registered with the Interstate Association.

The League starts with the brightest prospects, as some of the most active members of the six clubs of which it is made up are the men instrumental in its formation, and with E. H. Bailey, of Danbury, at its head during the crucial test of its first year of existence it should develop into one of the strongest organizations of its kind in New England.

Buffalo Audubon Gun Club.

BUFFALO, N. Y., Feb. 21.—George F. Fish, the Lyndonville thresher, who won the high average on Jan. 1, again demonstrated his superiority in trapshooting yesterday at the Audubon shoot, and was high gun, defeating Stevens and Glover, both professionals. His score of 73 out of 80 was high enough to defeat all the others.

Dr. W. H. Wootton shared the honors with Mr. Fish in winning the Class A badge, also the Reed trophy and breaking 19 targets for each event.

Dr. Burke and Will Imhoff won again yesterday, this being their fourth consecutive win.

It has been suggested that these two be given their prizes for their respective classes and begin all over again, if, in this way, there might be some chance of the others winning.

There was some very excellent double target shooting, and Covert was high with 52 out of 60. Lambert followed with 51, and Fish next with 50. These are scores which are very hard to beat, and will win in most any company. Scores:

Targets:	20	20	20	20	Total.

June 26-27.—Kenmare, N. D.—North Dakota State tournament, under the auspices of the Kenmare G. C. L. Harrison, Pres.
July 3-4.—Upper Creve Coeur Lake, Mo.—Falstaff G. C. Fred C. Suhr, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

The Palefaces.

BOSTON, Mass., Feb. 15.—With weather just to the trapshooters' liking, only eight shooters in all attended the regular Palefaee shoot held to-day, but those who did were completely satisfied with the afternoon's entertainment, and were more than regretting the matinee did not continue for a longer period. Needless to say, Walter Clarke was one of the high averagites, with the prettiest score we have seen for a long time, and he deserves great credit for the phenomenal work; 96 is a dandy score anywhere, but right here on our grounds we look at it as being good for another two to three targets where targets are thrown for good scores, and not wholly for practice.

Our friend Rule also took a hand in the good work and was right up near the top with a 92, but while good enough to win ordinarily, on this day, with Clark in the form which he was, had to be content with a second.

All in all, every one seemed imbued with the target-breaking spirit, Frost with 68 coming along fine, and is extra good for the second appearance at any trapshooting grounds. Scores:

		Hdcp.	Total.
Clark	14 15 17 15 15 20	4	100
Rule	14 13 17 14 14 20	8	100
Marden	12 13 18 14 13 17	12	99
Morse	13 13 18 12 11 19	12	98
Chapin	15 12 17 14 11 17	8	94
Osborne	13 12 16 13 14 18	4	90
Frost	9 11 13 12 10 13	20	88

Feb. 23.—With a handicap of 35 targets and an actual breakage of 129, Frank won the high gun honors for the holiday shoot of the Palefaces at Wellington yesterday. Frank's score of 164 was 4 better than Marden, the next best handicap man. Marden led the field for net shooting with 140, and with his handicap of 20, brought him within 4 targets of the winner in the handicap match. Centre and Richardson shot to a tie for the fifth prize, and will settle it later. A booby prize was won by Green, who failed to reach the 100 mark in net shooting, his round score, with handicap, netting him a total of 124 targets.

One hundred and seventy-five targets:

	Broke.	Hdcp.	Total.
Frank	129	35	164
Marden	140	20	160
Burns	137	20	157
Center	126	28	154
Richardson	112	42	152
Brown	112	38	150
Morse	126	20	146
McArdle	134	7	141
Green	96	28	124

Indianapolis Gun Club.

FEB. 19.—In the practice events at the Indianapolis Gun Club yesterday afternoon. Barr broke 132 out of 135 targets shot at and established a record for shooting on the local grounds. The conditions were so unfavorable that no one else made a showing except Dixon, who broke 46 out of 50 in the handicap race for the Du Pont trophy. Scores:

	Shot at.	Broke		Shot at.	Broke
Dixon	60	53	*H Heikes	90	73
Hymer	60	54	Britton	60	50
Lewis	40	28	Neighbors	40	27
*Barr	135	132	Hymer, Jr.	45	22
Noble	60	43			

Du Pont trophy, 50 targets, handicap:

Dixon	5	50	Noble	2	43
Hymer	5	47	Britton	9	48
Lewis	7	42	Neighbors	10	44

Feb. 22.—The Washington's Birthday tournament was well attended and every one had a good time, in spite of the unfavorable conditions, due to a high wind and freezing temperature. While no one did better than 90 per cent., many of the scores were creditable under the conditions.

Interest now turns to our spring tournament, April 7 and 8, for which an attractive program will be prepared and widely distributed.

	Shot at.	Broke		Shot at.	Broke
*Barr	225	199	Crawford	120	76
Straughn	225	202	Heyman	120	88
Rice	205	165	Smith	115	93

Tuckahoe Rod and Gun Club.

TUCKAHOE, N. Y., Feb. 18.—The Rod and Gun Club held their weekly shoot Saturday, and in the club shoot Barnes was high man with 46 out of his 50 birds.

Next Saturday Fraser shoots Garren—a handicap shoot of 25 birds, for $50 a side. The day's scores ran as follows:

Barnes, 18	4	5	5	3	5	5	5	5	4	5	46
Batdorf, 18	5	3	4	4	4	5	2	5	4	5	41
Ewing, 18	4	5	5	4	2	5	4	3	5	4	41
Fraser, 17	4	4	4	5	4	4	4	5	3	3	40
Kirchhoff, 17	5	5	3	5	3	1	4	5	2	5	38
Madden, 16	4	5	3	5	1	5	2	5	3	4	37
Hand, 16	3	3	3	3	4	5	4	5	3	3	36
Tomlin, 17	5	3	3	4	3	3	5	3	4	3	36
Shaw, 16	2	2	3	4	4	5	3	5	5	3	36
Crema, 16	1	2	2	4	1	..	..	..	..	..	10
Garren, 16	3	2	2	1	1	2	3	4	0	2	20
Gandy, 16	0	3	1	3	1	..	..	..	..	..	8

A Wonderful Victory For THE PARKER GUN

At the Great Western Handicap, held at Kansas City, Mo., Friday, Feb. 17, Mr. Fred Gilbert won the event by the magnificent score of 25 straight, and 5 straight in the shoot-off of the tie, standing at the extreme handicap mark of 33 yards. Mr. Fred Cockerel at 30 yards and Mr. H. Dunnell, at 31 yards, made scores of 25 straight. These three gentlemen were the only ones to tie, and were shooting the **"Old Reliable" Parker Gun.** Mr. Gilbert at this tournament shot at 475 targets, losing but 21,—thereby winning first average for the tournament.

PARKER BROS.

New York Salesrooms: 32 Warren St. **Meriden, Conn.**

New Model 27 **Marlin** *Repeating Rifle*

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working *"pump" action;* the wear-resisting *Special Smokeless Steel* barrel; the modern *solid-top* and *side ejector* for rapid, accurate firing, increased safety and convenience. It has *take down* construction and *Ivory Bead* front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full *Marlin* line. Sent for three stamps postage. Write for it.

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

New York Athletic Club.

TRAVERS ISLAND, N. Y., Feb. 25.—At the regular weekly shoot of the club to-day, F. A. Hodgman acquired the Haslin cup as his property by breaking 25 straight from 16yds., winning the fifth leg and the ownership under the conditions. Dr. E. R. De Wolfe, by scoring 25 to Hodgman's 21 in the shoot-off, won the tournament cup. The distance cup was taken by R. M. Owen, the Travers Island cup by G. F. Pelham, and the February cup by T. Lenane, Jr. Scores:

Highland Gun Club.

A SERIES of shoots for yearly class trophies and class period trophies was started over the Edge Hill traps on the 25th prox., by the Highland Gun Club. Jesse Griffith started off with the initiatory honors by breaking 24 in the former event, with Thomas Tansey and J. H. Anderson sharing the remaining points with 23 each, and Biddle managing to qualify with 22.

In the class shoot, Tansey was high with 24, Griffith and Anderson being tied with 23, and Hoover, Wentz and Meehan finishing next with 21.

The class spoon winners were: Thomas Tansey in Class A, with 24; J. H. Anderson in Class B, with 23; Dr. Wentz in Class C with 21, and Walter Firth in Class D with 17. In this latter event Laurent tied Firth, but forfeited.

The club has voted $200 for trophies, while two members each donated $50, thus making $300 in club prizes. The scores:

					Total.
Class A:					
Tansey	25	23	24	25	97
Griffith	24	24	23	25	96
Class B:					
Anderson	20	23	23	20	86

Hart cup, 10 pair doubles:

C H Daly	10	A O Headley	8
A Colgate	9	D Boise	7
Heller	8	E Adams	7
D W Granberry	8	P Hauck, Jr.	5

Bryden Gun Club.

CATASAUQUA, Pa., Feb. 18.—It was a cloudy day, but six of the Bryden boys set out for the club grounds and shot three events of 25 targets each. R. Thomas had not been out on the field for quite a while, but to-day showed the boys how to smash them, missing but 3 birds out of his 75. Granville says, "It's a cinch for Mr. Thomas." John L. Englert was away behind the game to-day; he used a new gun, which did not fit him. John, get wise, and use your own home-made stock again. President Brown tied Englert in the first and second events. Capt. Silfies broke 23 in the first and second events, scoring 46 out of 50 targets, a 92 per cent gait.

Registration certificate has been received from Secretary E. E. Shaner, to hold a registered tournament on Saturday, July 8, 1911.

Events:	1	2	3	Shot	
Targets:	25	25	25	at.	Broke.
J L Englert	18	20	18	75	56
Dr Milson	18	16	18	75	52
R Thomas	24	25	24	75	72

Smith	45	W F Soverel	34
L Hogan	43—481	C Wise	32—479

E. WINSLOW, Sec'y.

Why do you go Hunting?

One of the reasons is, you like to try your luck and skill against Nature's protection of game. You like to feel the pride of personal accomplishment. One of the chief necessities for a satisfactory day's sport must be good ammunition. In your load of powder you must have confidence in its efficiency, and to point the gun right, you must not fear recoil. Use

Dead Shot Smokeless

and you will have the necessary confidence and you will not feel the recoil.

Any ammunition loaded with this popular powder gives uniform velocity, uniform pattern and uniform light recoil. Nearly all dealers can supply you with ammunition loaded with Dead Shot.

AMERICAN POWDER MILLS COMPANY

CHICAGO ST. LOUIS BOSTON

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips.

The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and game. ¶All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. ¶Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

PLANNING A HOUSEBOAT

Will be a leisure-hour occupation in many a family this winter. Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

HOUSEBOATS AND HOUSEBOATING

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, $3.34

Sportsmen, spend your winter vacation here. All kinds of hunting, from panther to duck; exciting game fishing; fighting tarpon in the bay; big mouth black bass in river. Booklet sent free. Correspondence invited. Address T. D. BRIGGS, Prop.

The Rendezvous, Homosassa, Fla.

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. John Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the author uses. A good index completes the volume.

FOREST AND STREAM PUBLISHING CO.

The Pistol and Revolver.

By A. L. A. Himmelwright, President U. S. Revolver Association, Director New York State Rifle Association.

A handy pocket-size volume of 157 pages of practical information, covering the entire subject of Pistol and Revolver Shooting. This work is strictly up-to-date, including the latest development in smokeless powder; the 1908 Revolver Regulations and Practice of the United States Army, the United States Navy, and the National Guard; the Annual Championship matches and Revised Rules and Regulations of the United States Revolver Association, etc. Besides being a useful, practical handbook for the experienced marksman, the work will also prove particularly valuable for beginners.

Contents: Historical: Arms—Military, Target, Pocket Ammunition; Sights; Position; Target Shooting; Revolver Practice for the Police; Pistol Shooting for Ladies; Clubs and Ranges; Hints to Beginners; Selection of Arms; Manipulation; Position and Aiming; Target Practice; Cleaning and Care of Arms; Reloading Ammunition—primers, shells, bullets, powders, reloading. Appendix—Annual Championship Matches of the U. S. Revolver Association; Rules Governing Matches, etc. Records of the U. S. Revolver Association.

In three styles: Paper, 60 cents. Cloth, $1.00. Full morocco, $1.50. A liberal discount to military organizations and shooting clubs on orders of ten or more copies.

FOREST AND STREAM PUBLISHING CO.

Nursing vs Dosing.

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given especial attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness. Out-of-Sorts Dam. Puppies. Diet. Other Foods. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin. Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

FOREST AND STREAM PUBLISHING CO.

HITTING vs. MISSING.

By S. T. Hammond ("Shadow"). Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond of system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING CO.

Marine and Field Club.

Bath Beach, L. I., Feb. 27.—The special shoot at 300 targets, which has been running during the month at the club's traps, was won by P. R. Towne, with a total of 238 (handicap 72). The following tallies were made:

J. S. Crabtree, Sec'y-Treas, U. S. R. A.

Rifle and Revolver at Wilmington.

Wilmington, Del., Feb. 26.—There was considerable interest manifested in the rifle and revolver department by the members of the Du Pont Gun Club, and some good scores were made yesterday. There were a number who qualified for the prizes that have been offered. The scores in these departments follow:

Fifty-yard revolver qualification scores: J. W. Hessian 84, 84, 79, 77; E. G. Ackart 78, 77, 72; F. B. Harkins 75, 74, 74, 72, 71, 70, 69, 68, 64.

Fifty-yard revolver practice scores: E. H. Lambert 43; S. B. Trott 19; C. Coyne 5; J. F. Porter 40, 16.

Fifty-yard rifle practice scores (.22cal.): F. B. Harkins 81, 65; C. H. Shepard 79, 67; J. I. Burrell 62, 51, 56, 44; R. P. Fletcher 59, 44, 31, 31; J. T. Birch 57, 54; J. Beatty 56; H. G. Ely 55, 19, 28; R. F. Connor 55; J. J. Stillwell 51, 45; J. F. McElwee 50, 49, 47, 38; H. P. Carlon 49, 47; Joseph McElwee 47; Edgar Schafer 45, 32; G. E. Lambert 43, 29; Al. Short 40; F. G. Farry 33, 23; L. Zebley 32; H. Parker 31; L. B. McArdle 29, 22; J. F. Mullin 28; J. G. Mullin 23; W. H. Neely 22; J. F. McArdle 21; J. W. Anderson 15; W. Crumlish 18.

U. S. R. A. Indoor League.

Feb. 25.—Below are unofficial scores made by the St. Louis Revolver Club in matches 17 and 18 of U. S. R. A. Indoor League:

Match 17, St. Louis vs. New Oakland:						
Dr M R Moore	43	44	43	42	46	218
W C Ayer	43	44	41	46	41	215
C C Crossman	39	43	42	44	41	209
W L Schrader	40	44	41	43	40	208
Paul Frese	40	42	38	35	41	196—1046
Match 18, St. Louis vs. Belleville:						
C C Crossman	48	40	49	44	47	228
W C Ayer	49	44	44	39	42	218
Dr M R Moore	41	44	41	46	42	214
W L Schrader	40	36	45	43	46	210
Paul Frese	33	40	45	37	44	199—1069

Secretary.

Co. D, Seventh Regiment Wins Trophy.

The trophy donated by the 71st Regiment to the 7th Regiment for an intercompany rifle shoot for teams of five men, had its second competition on Friday night, Feb. 24. Two contests are held annually for the prize, and as the first took place several weeks ago the one on Friday decided the possession of the cup for the year.

The surprise of the night was the defeat of the representatives of Company I, who led in the first shoot with an aggregate score of 320, and who were regarded as being reasonably certain of being ultimately victorious. Riflemen of Company D, who had been sixth, came up with an unusually fine exhibition of marksmanship and took the trophy by a margin of two points. Their total was 633, while Company I and Company K were tied for second honors with 631 each.

Zettler Rifle Club.

Scores of the Zettler Rifle Club, Feb. 14, at their indoor range, 159 West Twenty-third street:

A Begerow	228	236	240	231	241—1176

PUBLISHERS' DEPARTMENT.

Fishing Tackle.

The annual catalogue of the John J. Hildebrandt Co., now ready, will be sent for the asking. They show a large line of fishing accessories, the best wood and steel rods, reels, lines; in fact, whatever a fisherman needs to complete his outfit. This is in addition to their regular spoon baits and specialties, which are made to catch fish and not merely to sell. It will be worth the while of any fisherman to know definitely what they have for sale, and to send at once to the John J. Hildebrandt Co., Drawer No. 6, Logansport, Ind., U. S. A., and ask for Catalogue C.

Wonderful strides have been made in recent years by Meek reels in tournament bait-casting. These, as well as moderate-priced, but good fishing reels, are made by B. F. Meek & Sons, Louisville, Ky., who will, on request, send a very interesting booklet containing information of value to every angler.

Dr. W. G. Hudson, on Feb. 22, won the American Record Match, which was shot at Greenville Shooting Park, Greenville, N. J. Dr. Hudson shot Schuetzen smokeless Powder. His score for the 100 shots on the Standard American target was 922 which broke the former 100 shot record of 917. In his last 10 shots he made a score of 99, duplicating a former record made by him.

At Bloomington, Ill., Feb. 15, Mr. E. K. Crothers, of Bloomington, won high amateur, and tied for high general average, 136 out of 150, using Peters factory loaded shells. At East Millstone, N. J., Feb. 13, Mr. Neaf Apgar, shooting Peters factory loaded Ideal shells, won high general average, 93 out of 100.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Tumbler Bolting Safety.—Of course you are convinced that the Greener Side safety is a sine qua non of the perfect gun, yet to make assurance doubly sure your gun should be fitted with an internal or "tumbler bolting" safety, operated automatically and entirely independent of the shooter's volition. A safety that will safeguard the user of the gun and his companions against all risk of accidental discharge.

The Greener Tumbler Bolting Safety is almost human in its ingenuity, yet consists of but two limbs operating in such a manner that it is a mechanical impossibility for a Greener gun fitted with this safety to be fired unless the triggers are actually pulled Should the locks by any mischance jar out of bent, the "silent sentinel" checks the fall of the tumbler instantly and effectually. Should the tumbler through dirt or other cause fail to go properly into bent, the safety prevents its fall upon the cap. When the trigger is pulled voluntarily, a projection of the trigger blade depresses the rear end of the Safety, lifting it clear of the tumbler's path and permits the gun to be fired in the usual manner

Look at the drawing, it explains the simple working of the device exactly; of course you will have this safety fitted to your new Greener gun. *Catalog free.*

American Duck Shooting

By GEORGE BIRD GRINNELL

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Price, library edition, $3.50.

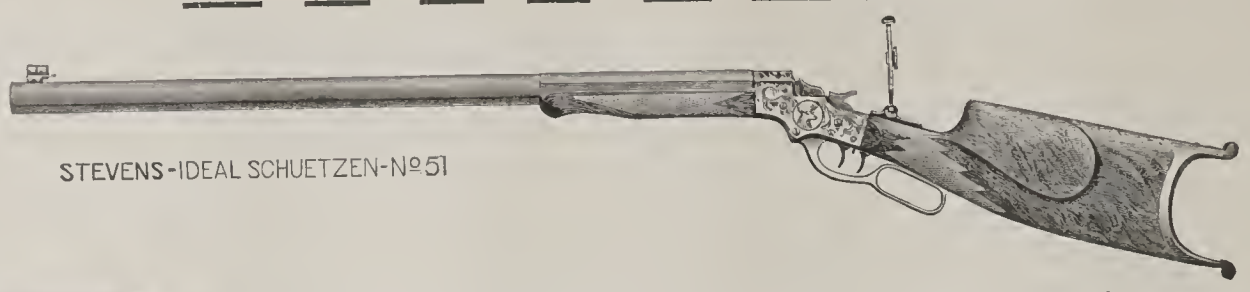
ACCURACY



13

The key note of successful target shooting, as far as the rifle is concerned is—accuracy.

The rifling of the Stevens barrels is one of the things that has helped make American firearms famous. That's a big statement, but the proof is the International Victories in Great Britain; the International Victories in South and Western Australia; and the fact that a majority of RIFLE TOURNAMENT TROPHIES IN THE UNITED STATES is held by owners of Stevens Rifles.

The same accuracy which characterizes the manufacture of the Ideal barrels applies to the Stevens Rifle Telescopes, which are made in the Stevens Optical Laboratory.

What subject do you wish to cover with our literature?

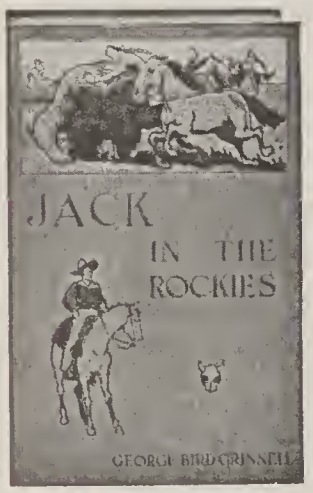
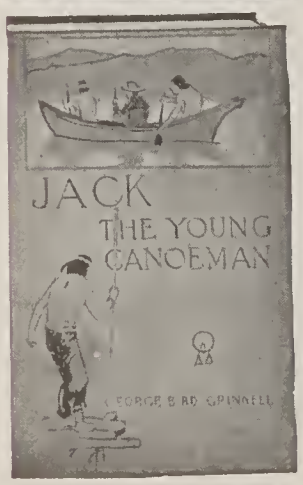
THE JACK SERIES





Best Books For Boys

By GEORGE BIRD GRINNELL

THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

$1.25 per volume, postpaid. $7.50 per set

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

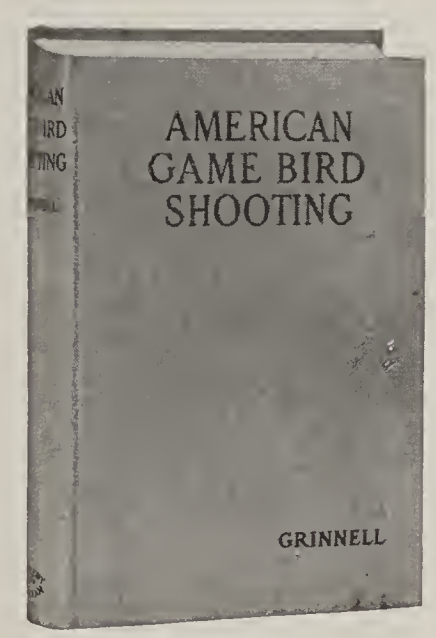
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy. Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Book Catalogue Free on Application.

Contents: Hunting in East Africa, W. A. Chanler. To the Gulf of Cortez, George H. Gould. A Canadian Moose Hunt, Madison Grant. A Hunting Trip in India, Elliott Roosevelt. Dog Sledging in the North, D. M. Barringer. Wolf Hunting in Russia, Henry T. Allen. A Bear Hunt in the Sierras, Alden Sampson. The Ascent of Chief Mountain, Henry L. Stimson. The Cougar, Casper W. Whitney. Big Game of Mongolia and Tibet, W. M. Rockhill. Hunting in the Cattle Country, Theodore Roosevelt. Wolf Coursing, Roger D. Williams. Game Laws, Charles E. Whitehead. Protection of the Yellowstone National Park, George S. Anderson. The Yellowstone National Park Protection Act. Head Measurements of the Trophies at the Madison Square Garden Sportsmen's Exposition. National Park Protective Act. Price, $2.50.

Modern Sporting Gunnery.

Written by the well-known English gun expert, Mr. Henry Sharp, and contains 525 pages and many illustrations. It tells of the various makes of guns and rifles, beginning with the early days of the art up to the present time. It deals with the subject of mechanism, boring, effect of different loads, and gives the results of scientific experiments. It tells "why" in entertaining and easily understood language, and is a book every lover of gun or rifle should have in his library. Cloth bound. Postpaid, $1.70.

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. This is a collection of papers on different themes contributed to FOREST AND STREAM and other publications, and now for the first time brought together. Price, $2.00.

My Friend the Partridge.

S. T. Hammond. An inimitable study of the noblest of our game birds,following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game. Cloth, 150 pages. Postpaid, $1.00.

Inter-Ocean Hunting Tales.

Edgar F. Randolph. A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint and dealing with every kind of game that falls to the rifle of the American sportsman. Cloth, 200 pages. Postpaid, $100.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. W. Hamilton Gibson. Containing hints on camp shelter and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. Illustrated. Cloth, 360 pages. Price, $1.00.

Jack, the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, $1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, $1.25.

Jack in the Rockies;

Or a Boy's Adventure With a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, $1.25.

Jack the Young Canoeman.

George Bird Grinnell. Illustrated. Cloth, 286 pages. Price, $1.25.

Jack the Young Trapper.

George Bird Grinnell. Illustrated. 278 pages. Price, $1.25.

Manual of Taxidermy for Amateurs.

C. J. Maynard. A complete guide in collecting and preserving birds and animals. Illustrated. New edition. Price, $1.00.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

W. T. (Bill) Hamilton. The author was the last survivor of the old race of free trappers. Bill Hamilton was born in 1825, and was on the plains in 1842, trapper, Indian fighter, sign talker, trader, scout and guide so long as the old West survived. This book is the simple unaffected story of his adventurous life, more thrilling and full of personal interest than any romance. Cloth. Illustrated, 223 pages. Postpaid, $1.50.

Nursing vs. Dosing.

S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents: Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Earl, Mange, Nervous System, Colic, Worms. Cloth. Illustrated, 161 pages. Postpaid, $1.00.

Rhymes of the Stream and Forest.

Frank Merton Buckland. A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, $1.25.

The Still-Hunter.

Theo. S. Van Dyke. A practical Treatise on Deer-Stalking. Extra cloth, beveled, 350 pages. Price, $1.75.

Log Cabins and Cottages.

William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated, 44 full page plates and numerous text illustrations. Postpaid, $1.50.

The Angler's Workshop. Rod Making for Beginners.

Perry D. Frazer. A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, $1.

The Book of the Black Bass.

James A. Henshall. The standard work on the black bass, comprising a complete scientific and life history of the black bass, together with a practical treatise on angling and fly-fishing, a full description of tackle and implements, and general observations. Cloth. Illustrated. 470 pages. Postpaid, $3.00.

Men I have Fished With.

Fred Mather. Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. Illustrated. Price, $1.50.

My Angling Friends.

Fred Mather. A second Series of "Men I Have Fished With." Cloth, 369 pages, with 13 illustrations. Price, $1.50.

Training vs. Breaking.

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1.00.

How to Build a Skipjack.

Complete plans and instructions for building a light draft sloop. Plans and directions easily followed. Cloth. Illustrated. Postpaid, $1.00.

How to Build a Knockabout.

A wholesome boat for all-around cruising and racing; 33ft. O. W., 10ft. beam, 26in. draft. Full working plans and drawings, with instructions for building. Cloth. Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUB. CO., 127 Franklin St., New York

No. 6
KEEPING POSTED

1. As you read Forest and Stream through each week, you are frequently reminded of one thing or another that you desire to purchase. Such and such must be supplied to make your Shooting, Fishing, Camping or Cruising outfit complete.
2. Possibly you need waterproof shoes, or waterproof clothing. Or a new tent? It is your intention to take a much longer trip this time, than usual. And you may be located where you do not have access to sporting goods houses where all of your wants can be filled. In fact, even the best of us are often in doubt when it comes to knowing **where** to get the **thing** we want at the **right** price. You wish you had a friend at your elbow to suggest.
3. **Our** experts are right at your elbow. It does not cost you a penny (except your postage) to take advantage of their knowledge. They know **where** to **buy** and **how.** It is their business —and your advantage.
4. Glance carefully over our advertising columns. If you don't see what you want, write in to our Information Department. You will receive a full detailed reply—post haste—we're always on the job.

Isn't this worth while, if for no other reason than to get the **right** information on **how** to reach your destination by the quickest and surest routes—what railroads or steamship lines to take?

Don't put this off. Co-operate with us by telling your relatives and friends, what we can do for them.

Keep posted. Write to

Life and Sport in Labrador

NAPOLEON A. COMEAU.

In "Life and Sport on the North Shore of the Lower St. Lawrence and Gulf," Mr. Comeau has made a valuable addition to the literature of rod and rifle—and more. It is a book of engrossing personal interest to the sportsman or general reader, and of rare value to the student of wild life.

The author describes the events and experiences of fifty years, spent in the cause of humanity and science in one of the most interesting and least known sections of Canada. He writes as one sportsman to his fellows, detailing his experiences with the wild things of wood, shore and sea, with plenty of stirring experiences with big game and gamy fish.

Illustrated, 450 pages. Paper. Postpaid, $2.50.
FOREST AND STREAM PUBLISHING CO.

LOON BOARDS THE PHOEBE.

THE night was dark and dreary, a wintry gale was sweeping Long Island Sound, with all that that implies, and Captain Bell, in the wheelhouse of the stanch little packet Phoebe, was keeping her east a half south and thinking of the pie in the cupboard at home. Captain Bell's breath was frozen in his beard, of course. Also mountain-e-ous seas were sweeping over the Phoebe. Likewise her crew were telling one another that a sailor's life is bold and free.

Captain Bell knocked a few icicles out of his beard.

"A tough night on the farmers, this. A frost that will go into the ground twenty feet. Let's thank Providence, Bill, that our money is not invested in carrot pits."

"Ay, ay, skipper," called the cheery mate, who was manicuring his nails under the cabin light.

It was at this point, reader, that a gigantic loon, flying before the blast and powerless to control itself, was blowen against the forward light of the wheel house, shattering it. Bird and particles of splintered glass struck Captain Bell full in his deadlights. The mate relieved the wheel as Captain Bell clinched with the bird, and whiskers and feathers were mingled on the wheelhouse floor.

It would be well for all loons desiring to know who is in charge on board the Phoebe to invade her wheelhouse and start something. Captain Bell's nose was broken in the imbroglio, but the loon lost the number of his meses for good and all, as the saying is.

Captain Bell's proofs are the loon, which is two feet eight inches high and five feet from wing tip to wing tip, the Phoebe's log and his nose. So again, if anybody doubts any part of this story, let him look Captain Bell squarely between the eyes—and start something.—N. Y. Herald.

IVORY SALE AT ANTWERP.

CONSUL-GENERAL DIEDERICH, Antwerp, Belgium, reports that the fourth quarterly ivory sale for 1910, held at Antwerp on Nov. 4, was composed of the following, the amounts representing kilos of 2.2 pounds each: Kongo (hard), 57,038; Kongo (soft), 1,902½; Angola, 24,787½; Cameroon, 137½; West Coast, 2,838; Senegal, 2,765; Sudan, 798½; Abyssinia (soft), 1,494½; Benguela (soft), 294; Egypt (hard), 27½; Siam (soft), 282½; curiosities, 746½; total, 93,112.

The sales at the same time in previous years were, in kilos, as follows: 109,018 in 1909, 100,216 in 1908, 102,105 in 1907, 73,013 in 1906, 97,393 in 1905, 77,115 in 1904, 103,449 in 1903, 84,101 in 1902, 81,779 in 1901, 85,871 in 1900.

The prices paid were lower by about 1 franc (19.3 cents) for large tusks, but prices for bangle and billiard tusks, as also for "scrivailles," were generally firm. Soft ivory, less in demand, was sold at 2 francs (38.6 cents) lower.

The present stock is about 182 tons, as against 190 tons in 1909, 210 in 1908, 110 in 1907, 97 in 1906, 96 in 1905, 96 in 1904, 145 in 1903, 142 in 1902, 112½ in 1901, 98½ in 1900.

The next quarterly ivory sale will take place on Jan. 31, 1911.

DUCKS FOR LIGHT KEEPER'S DINNER.

Keeper William C. Williams, of the Boon Island Lighthouse had black duck for dinner a short time ago. He didn't shoot the birds or capture them in a trap, but they fell at his feet in the dark ready to be picked, like manna from Heaven. He was standing his watch in the tower when he heard a terrific blow struck against the parapet wall.

He hurried outside and found a couple of fine black ducks lying dead. Thinking it must have been more than two to make the thump he heard, the keeper searched the rocks below and found four more. They had been attracted by the bright light of the tower, and blinded by its rays on close approach, had dashed out their lives against the lenses and wall of the light.—Kennebec Journal.

—FOREST AND STREAM, Aug. 14, 1873.

FORBID SALE OF GAME IN NEW YORK.

SEVENTEEN years ago—in February, 1894, to be exact—FOREST AND STREAM announced its platform plank, "The Sale of Game Should Be Forbidden at All Seasons." The novelty and boldness of the idea startled the world of gunners. Here was food for thought for game protectors, for plain average shooters, and above all for commercial shooters and market men. From the start the game protectors ranged themselves with FOREST AND STREAM, and so did some of the plain average shooters. Some of these, however, were timid, and declared that the time had not yet come for such action as this, that no State Legislature would ever pass such an act. Others said it sounded well, but was too radical. As for the market shooters and the commercial dealers, they regarded this as one of the finest jokes that had ever happened. They declared that FOREST AND STREAM must be crazy and laughed heartily at its folly.

Well, those who have followed the course of game protection, know what came next. Game protective clubs all over the country began to get together and discuss this novel movement. Presently the Legislatures of one State after another passed laws prohibiting the sale of game, until at the present time there is a long list of States, in some of which the sale of game is forbidden throughout the year, while in others it is forbidden in close seasons, and in others still, the sale of some species is forbidden, and that of others permitted.

At Albany, Senator Bayne has introduced a bill in the New York Legislature amending the game laws and forbidding the sale of game—whether mammals or birds. This law ought to pass, for wild game should be made absolutely non-commercial. So long as men can make a profit by slaughtering game, or so long as they can pay the expenses of an enjoyable outing by selling their game, so long the wholesale destruction of our wild things will continue. It should be forbidden to sell game, and this prohibition should be universal over the whole country. The present bill is broadly drawn and seems to cover the ground well, protecting alike the game of New York and that of other States.

If a time shall come when it is demonstrated that wild animals or birds may be reared in domestication in commercial quantities, then they may properly be sold under suitable restrictions.

Meantime it will be an enormous benefit to the community and a great satisfaction to all game protectors if New York will drive a solid spike into FOREST AND STREAM's now well-seasoned platform plank.

CONGRESS AND GAME PROTECTION.

OUT of the tumultuous session of Congress, which has just ended, has come not a little comfort for those who are interested in the preservation of natural things.

The passage of the Weeks Appalachian forest preserve bill, though so tardy, was a great gain. In the Sundry Civil bill the appropriation for warden service in Alaska has been increased from $10,000 to $15,000. This should count for something, though Alaska is a vast territory. Two items in the Agricultural Appropriation bill, passed on the last day but one of the session, are of high importance. One of them—referred to in FOREST AND STREAM two weeks ago—provided for an appropriation of $5,000 for the purchase, sale and transportation of game for national reservations. The other, spoken of in last week's issue, is an appropriation of $20,000 for the feeding, protection and removal to safety of the Jackson Hole elk.

This last item was retained in the bill unchanged and may do much good. The other item was reduced in amount to $2,500, but its passage establishes the eminently proper precedent for the appropriation of funds with which to stock various national reservations from other reservations owned by the Government, or—where it may be necessary—for the purchase of animals for that purpose.

This is an encouraging entering wedge, and looks toward the establishment of game refuges in various places and the stocking them with various species of wild animals. It thus promises protection and perpetuation for various species.

For many year FOREST AND STREAM has been urging the establishment of the game refuges in some of the forest reservations. After a time Congress will reach a point where it will provide such refuges—and the Western country is full of sections where they might properly be set aside—and henceforth it will probably be found easier to convince Senators and Representatives that these reservations ought to exist, and ought to be stocked. Last week our Washington correspondent urged this again, and gradually the idea is being taken up by the newspapers all over the country.

The Agricultural Department is already taking steps to co-operate with the Wyoming State authorities to help the starving elk.

OUR cover picture shows a group of the starving Wyoming elk for the relief of which Congress has appropriated $20,000.

CUT DOWN THE BAG LIMIT.

WITHOUT wishing to reflect on the sportsmanship of the person referred to, we quote the following paragraph from a letter received from one of our California correspondents. In reference to the wildfowl season, which closed last month, he said:

> * * *, a member of the Blue Wing Club, which is our best shooting club, closed the season with his fifty-seventh consecutive limit, the result of shooting during the last two seasons since the twenty-five bird bag limit has been in force. This is a great record, and shows better than anything else the phenomenal consistency of the shooting on the Blue Wing preserve.

This is indeed a great record. The bag limit is twenty-five per day. Multiplying this by fifty-seven gives a total of 1,425 wildfowl for the two open seasons, an average of 712½ for each season. At present the season opens on Oct. 1 and closes Feb. 15.

In justification of this record there are these facts: This club has, through artificial means, improved the shooting, at great expense to its members. The sportsman in question can no doubt exhibit an array of figures to show that it cost him a good deal of money to make this record. Evidently few have closely approached it and none has equalled it. The record maker has observed the law to the letter. Fellow members, and other California sportsmen, have twice agreed to observe a reduced bag limit law, first from fifty to thirty-five, and then to twenty-five per day. They do not insist on spring shooting. Californians do nothing by halves. In a land where nature is so kind, picayunish things are not considered. Viewed from the Californian standpoint, a bag limit of twenty-five ducks is moderate. So much for the existing state of affairs.

Viewed from other standpoints, the California bag limit is still too large. It cannot be justified on the ground that prolific nature sends flocks of ducks into that glorious region and directs but few to other waters, for history shows that the duck supply is not inexhaustible, and the Californians owe it to other States to conserve the visible supply, so that the surplus may seek other feeding grounds. This can best be done through a reduction of the bag limit, but it would also be in accord with the best principles opposed to spring shooting if the season were shortened by closing in January.

THE death warrant of the last one of the great stone quarries, once so numerous along the Palisades of the Hudson, has been signed. On June 30 next blasting on Hook Mountain will cease, thirty days later the crushers will be closed down, and all the machinery must be removed before the close of the year. The Palisades Interstate Park Commission has purchased the land for the Hudson River Park.

THE SPORTSMAN TOURIST

Porpoises and Escallops

The Log of a Motor Boat Cruise on the Hudson River and Long Island Sound

By JULIAN BURROUGHS

CAN you see the red buoys shouldering their way through the tide, the wheeling gulls, the white sails of the oyster flee, green water turning in a smooth, foam-edged furrow under your bows, or feel the sand underfoot and smell the wind from off the sea, or taste the escallops and snappers fresh from the clear, salt water? We could. Impatience did more than stand on tiptoe; it danced on the cylinder heads.

Yes, everything was aboard at last; it must have been, because in any case there was room for nothing more. Just a mad jumble of blankets, clothing, baskets of food, pails of fruit and vegetables, butter, milk, suit cases, lanterns, fishing tackle, charts, rope, anchors, tools, umbrellas, and on top of all my bicycle. There was no room to turn around or pass one another. Still the rain held off; the ebb, oily and streaked with floating soot, began to flow. I threw off the lines, jumped aboard, and stepping over the dunnage, found the engine. It had not been turned over for more than a year, but responded instantly, after the manner of kerosene engines, to a touch of the fly-wheel.

All our friends had said rain, a big rain, a storm, a real equinoctial for our starting day. It had looked like it. Now the heavy, lowering sky took on a more yellow color, with a hint of clearing. As we pulled away down the Hudson, slipping along with the ebb, we all fell to clearing up. In a couple of hours everything was quite ship-shape and livable; the two anchors in place on the bow, the bicycle taken apart and strapped to the engine room wall, the food, clothing and blankets all in the lockers and bunks. I filled the bow tank with fresh water and went over all the gear. The women swept up and prepared to be comfortable. Sometimes a fine rain would come slanting across the decks, at others the sun would almost peep through.

There were four of us, Mrs. G. and her daughter—whom I just had to call Jean, because she was in many ways so unlike the Jean MacNeil that Harry Lauder sings about, and Jean is a nice, vibrant name that fits the tongue nicely—Mr. D. the scholar, and myself just filled the 30 by 8 cabin cruiser. We were off for the sea and adventure; we had cleared for strange ports and others not so strange. The anchor flukes were anxious to bite some salt mud and sand, and the motor eager once again to feel the salt water in its veins.

The Hudson is a nice place to cruise when you have a fast boat and want to get somewhere. A sail is all right, too, when it is hanging over an engine. We only had a little seven horsepower pressure motor and a loaded boat and a sixteen-foot tender, yet in just eleven hours and ten minutes we had passed under the Poughkeepsie bridge, sailed through the Highlands, past West Point, turned into the wide, hill-encircled Haverstraw Bay, Tappan Zee and left Yonkers behind and dropped the mud hook in the little creek behind the island at Spuyten Duyvil. The wooded hills were over us on one side, and on the other were sights and sounds that made us aware that we were in Greater New York. With a sailboat we would have been drifting with the tide fifty or more miles up the river at the mercy of every passing steamer.

That night as I lay in my bunk I could hear the rustle of the tide about the boat and the far-off roar of the electrics. How strange it all seemed! I felt responsible for the three people in my care, and wondered what they thought of it all. I had an anchor light burning brightly, and knew the big kedge would hold us, unless it should slide out into deeper water, or the rope should chafe off on some sharp object on the bottom, or a big floating timber or piece of wreckage drift into us. Things could happen, and what would become of us sleepers adrift on that swift tide?

Never can I forget one night at Spuyten Duyvil. I was sleeping soundly in the cabin with my wife and two little girls when bang! bang! thump! bang! something came against the Wance, making her quiver in every timber. I ran out on the dewy deck to find that a big catboat had drifted into us. I passed her on down stream and went back to my berth. For an hour I was startled and sleepless, and when at last I got into a sound sleep I was rudely awakened by someone yelling in the cabin door: "Hey! hey!" the voice shouted, "do you know where you are?"

Utterly bewildered and half asleep I tumbled out of bed, "No," I managed to answer.

"Well, you're adrift, and 'll wake up with mud in your eye!"

Having satisfied myself that the man was intoxicated, and that we were not adrift, I went back to bed, though it was a long while before I could compose myself to sleep.

What a waste of energy this tide business does seem! Percival Lowell tells us that in time the friction of the tides will stop the earth's rotation on its axis. It is a wonder to me that it does not do so very soon.

Sunday was a beautiful sunshiny day with a fresh breeze from the south that sent the whitecaps chasing over the sound, and filled all sails with a good measure of wind. Once clear of the terribly "gummed-up" Harlem and East River, and the free, clear sound under our keel, we settled down to a day of enjoyment—all but poor Jean, who ate too much fudge just before we began to roll, and who disappeared for the day.

Because of the onshore wind I kept well off, and at 5:15 P. M. we pulled into Bridgeport, Conn. There were several hundred people fishing about the breakwater for snappers, and how they did stare at us as we ran past them. We found a perfect anchorage and spent a long, quiet night of unbroken sleep. There were oyster sloops about us, with the owners of which I scraped acquaintance. One of them offered to give us all the oysters we wanted, "but don't eat them," he cautioned. He opened two to show us that they were all green from sewage. "From the Norwalk Islands to the Thimbles it is the same," he added. What an unfit people to live are we Americans! We destroy our forests, rob our soil, dump our sewage into the nearest water, and then buy fertilizers from Germany and South America and spend hundreds of millions in trying to get pure water! It will be a real blessing when the mines of nitrates, potash and phosphoric acids are exhausted.

Monday was a September day at its very best, a day limpid with soft haze and sunshine, a day of glorious colors, a day free from doubts as to the weather, a day to cruise on and on.

Once a water pipe clogged up and flooded the engine with water, and it was twenty minutes before we could go again. Also from 10 until 4 o'clock we had an unfavorable tide. Aside from that, it was a day of unalloyed pleasure. At 4 o'clock we were passing a school of porpoises playing on the glassy water just outside of Plum Gut, and a few minutes later we were in Gardiner's Bay, where the low wooded shores reached out to greet us. Gulls wheeled, bunker steamers were going home, oyster stakes seemed to dip in welcome, the sun went down in smoky glory. We ran straight across Gardiner's Bay, slowly leaving Orient Point behind and raising the wooded shores of Long Island with Shelter Island off to starboard and Gardiner's Island to port. How wild and peaceful it was—mirroring water, shores and hills of unbroken woods, long stretches of inviting, lonely sand beaches. Just

at dark we crept into the gut-way of Three Mile Harbor, the swift clear tide rushing over the white sand, swirling about the gravelly points, and a moment later the anchor embraced the clean sand under the bank inside the harbor. With jollifications we got a big supper, passing jokes right and left and making merry. Our lanterns drew to us great swarms of white moths that flew about our heads much to the disgust of Jean. I thought they were good fun and infinitely more welcome than mosquitoes.

In the morning the escallopers were somewhat surprised by our arrival, and on their way out to the escalloping grounds they rowed all around us. Jean heard some of the fishermen say that we must be from New London with things to sell. "I have some things I would sell," she laughingly said.

One old escalloper informed Mr. D. that "there's lots of water if you keep in it," and another that he had "some round clams, but the law wasn't off long clams yet."

Soon we lifted the anchor and started down the harbor for the landing. Three Mile Harbor is an ideal place for small boats. Except for a few picturesque fishermen cottages, the rounded rolling hills that encircle it on three sides are unbroken forest. There are some sweeps of grassy pasture, broken with park-like lines and clumps of oaks, and beaches where farmers gather sea weed. Long, low grassy points reach out, little sequestered bays put up into the flats toward the woods, tame ducks cruise about, gulls cry and fishhawks scream. The fishermen are genial and honest. The sweep of wind and water, the constant association with nature and the elements, the hard work, have weather-beaten their faces and mellowed their souls until it is a pleasure to spend days in their company, hearing their stories of sailing and fishing, told in their rich sympathetic voices that carry a suggestion of wind in the sedge flats or the gurgle of the tide about the boat. There was Captain Billy waving us welcome from his white Sally, and Captain Elisha on the Avon, and Mr. Lee on the silver gray wharf.

Once away from New York, man's humanity to man grows and waxes strong. At Three-Mile Harbor I was welcomed by everyone and could leave my oars or any of the gear of the Wance lying about for weeks at a time undisturbed. The law in regard to clamming and escalloping, too, is carefully observed, which is refreshing to one bred in the thieving, law-defying atmosphere of the upper Hudson. The little basin, about the size of the proverbial millpond where we left the Wance anchored while we spent three weeks over at East Hampton, is three times landlocked. Coming in through Sammy's Beach in the main gutway, the larger harbor is entered, a lovely sheet of water of perhaps two square miles area, then through a still more narrow gutway between the grassy points into a second little harbor, and from there a number of openings lead into quiet bays. "You ain't got very good holdin' bottom, but if you do go ashore here you can't hurt nothin'," said Captain Billy.

Never have I seen so many escallops, and it was fun to catch them. Often they will come to the surface and jump half out of water, and even the biggest ones when disturbed will go zig-zagging along at a rate that makes one swing the net at a lively rate. The water is as clear as air, and the interesting life on the bottom, from big welks to darting sand-colored flounders or flatfish, can be plainly seen. To cook escallops properly is to fry them a very little in butter and serve with a sauce. If fried too long they get hard and do not melt on the tongue. When opening them I can never resist eating about every fourth or fifth one. They make a delicious stew. The fringe, or part that is thrown away, makes excellent bait for cunners and was also relished by the trio of tame wild mallards that swam about the Wance while I opened escallops on the poop deck.

THREE-MILE HARBOR.
Photograph by Julian Burroughs.

Why does a school of fish make the surface of the water red? Mr. Lee says it is their gills. I do not see how this can be. One day, during northerly weather, David, Howard, Louis and I, cheered on by the women folks, drew a seine over on the ocean beach at East Hampton. A school of mullet came along, a large area, all red and boiling. When they were inside the jack there was some pulling and yelling. When the waves came in we all pulled and gained yards; when they went back they dragged us feet first through the sand. Soon the fish realized that something was wrong, and the red, boiling spot went furiously around inside the net. In a few moments we had a pile of silvery, flopping mullets, snappers, flounders, skates and dogfish on the sand. If there is anything better than a fat mullet, fresh from an October sea, I have yet to taste it.

Surf bathing, clamming, escalloping, blackfish, snapper and cunner fishing, enjoying quaint old

East Hampton and bicycle rides through the woods, dreaming by the open fires, the time to start back came all too soon.

At 2 o'clock of an October afternoon, when the sunlight brooded on the purple hills, we said good-bye and pulled away down the harbor and across Gardiner's Bay toward the dim Orient Point Light that seemed to swim in the haze far to the northward. Flocks of coots streaked away over the glassy water, oyster boats dredged, the motor hummed us on and on. Out over the sound we could see the Connecticut shore and the two white light houses at the mouth of the Connecticut River. Brown-skinned porpoises, oily and heavy-breathed, rolled through the green water; tugs with coal barges and lazy four-masters kept us company. As the sun dipped into the sound in the resplendent west, the full moon came up behind us. The lighthouses on all sides began to flash their lights, the dull red glow of Orient Point, the intense white flash of Plum Island Light, the curiously timed double flash of Cornfield Point Lightship, the spots of light at the Saybrook house, and so on. The strong flood tide, meeting the zephyr from the west, sent a bouncing roll through which the Wance plunged gayly. Just as night had become fixed and all the waters were silvered with the flooding moonlight, we rounded Duck Island breakwater and anchored near a lobster car on one side, and a schooner on the other. After a delightful supper of escallops and cunners, and an interesting visit to the lightkeeper on the little boulder-strewn island, we turned in.

At 4 o'clock I was awakened by the rattle of the hoisting of sails on the schooner near us and got up. It was like day and a gentle breeze from the north, so awakening Louis, who was returning with us instead of Mr. D., we raised the anchor and slipped away through the elusive, enchanting moonlight, drifting effortlessly into the west, leaving the dark shore behind, swept along by the rushing flood. Again the conditions of the evening before were repeated in reverse order. The silver moon swimming down into the horizon haze seemed to lift the sun in the east. The light on Faulkner's Island was still flashing as we passed, the long rays of the morning sun just stealing over the water. At breakfast time we were passing the indescribably lovely Thimble Islands. The great gray rocks, crowned with shrubbery of gold and purple and carpeted with green, were set in a chrome green sea. The low gray cottages and the lobster pot buoys gave the human touch.

All day we hummed on down the Connecticut shore, passing the busy fleet—like a cloud of white butterflies—dredging for oysters off Bridgeport. Immense flocks of coots tore themselves out of the water and went driving away to new bedding places. A very few, I regret to say, trusted us too well and were pitched back into the green water with charges of No. 5 shot. The escalloping net quickly dipped them up. Some of them were great handsome birds. Glossy black with white wings, white iris and red-capped bills, they were prizes. When, however, after almost ruining my thumb in picking them, and after parboiling with an armful of celery for six hours, they were still rank and fishy, my conscience felt better. The good eating ducks are not to be approached by a boat, and this seems a working principle in nature. The wild ducks are toothsome and the tame ones are fishy in direct ratio. Are the wild ones wild because toothsome, or does the wildness make them edible?

It being part of our plan to visit strange ports, we selected Portchester for the sacrifice. The wind had worked around to the south, so I headed in past Great Captain's Island, studying out the course on the chart. Rocks, rocks everywhere, big and little, like a drove of cattle coming down to the water, some on shore, some knee deep, others almost submerged. The shore was crowned with woods in autumn dress and many handsome cottages. We found the harbor delightfully quiet with the Byram River leading up through the rocks on one side and a gutway going into another harbor opposite. The tide was low and the escallopers were out, eagerly scanning the bottom for their prey. They were an entirely different looking lot of men from those at Three-Mile Harbor. The escallops, too, looked dingy and mean. One old fellow informed me that a man got nearly a bushel the day before, "and I don't see how he did it," he added. When I told him that at Three-Mile Harbor I could get a bushel in twenty minutes, he looked surprised. Since he had never even heard of Plum Gut, Gardiner's Bay, or the Connecticut River, I could not tell him where Three-Mile Harbor was. I should have asked him if he had ever heard of Long Island Sound or New York city.

After moonlight sails in the tender about the harbor, enjoying the great black rocks and silent autumn evening, we had a restful night, waking up to find the world securely wrapped in fog. Even the breakwater, but a few feet away, was invisible. Only the hoarse bellow of the trumpet on Great Captain's Island told us where we were. Our luck had turned, seeking revenge for the march we had stolen on her the morning before, getting the tide from Duck Island at 4:30 in the morning. At 12:30 the fog let us sally forth. We now had lost all our tides, and instead of having the flood to Fort Schuyler, the ebb to Spuyten Duyvil and the flood up the Hudson, we had the tides so strongly against us that we only got to Port Morris at 4:30. We were sorry to leave the clean, free sound behind us and have the big city to pass.

In a pouring rain we saw a big steamer break down in Hell Gate next morning. There was mad blowing of whistles, rushing about and throwing of the anchor. We could hear the anchor grate over the rocky bottom. Presently a tug came to their help. Even though it is a fine sight to watch the fleet of Sound steamers, vast towering masses of light go parading past, and to see the back door of a great city with all its activities by way of contrast, we were glad to turn into the Hudson and leave it all behind. Once more the Palisades frowned down on us, and the great river, like a long inland lake, stretched away to the north and home. All one needs to navigate the Hudson is a pair of eyes and an enjoyment of steamer swells.

The sun came out, we dried our wet clothes and watched the great flocks of black mallards flash the silver lining of their wings at us in derision. They were the wild kind. Tugboats, whose names were familiar to me, passed with tows, and sailboats, reflecting their canvas in the glassy water, drifted with the tide. The sun went down, streaking its beams of light over the shadowed mountains above Nyack. Feeling sure of a wind from the north, I ran on and on until we found a secure anchorage in Green's Cove, under Verplanck's Point. In the night the cold wind came pouring out of the north. It could not reach us, though the next forenoon it fought us savagely nearly all the way home. The brown waters and slaty beaches of the Hudson always sadden me, somehow. I miss the clear green and the lonely sand beaches of the land of porpoises and escallops.

A Canadian Ice Harvest

By S. A. WHITE

THE old-fashioned method of harvesting the ice from the lake or river is passing. Mechanical devices have been constructed with an ingenuity almost excluding the manual touch, which was before so necessary, yet, in spits of these, on various bodies of water throughout this Province (Ontario) and others one may see a band of workers still gathering the crystallized spoil for its hoarding till the blazing summer comes, when in the sweltering cities the ice-block is almost worth its weight in coin in the comfort it provides.

If the morning is mild, the harvesters pass out to their toil with merry jest or song, all outer clothing thrown aside; but when the bitter northeaster comes skirling down the ice plain at a forty-mile clip, perhaps sifting stinging blasts of snow in its course, the dim dawn is anything but inviting. With fur caps jammed down and reefers buttoned up, they file out in silence, and set to work like Trojans, the rushing blood under their laboring muscles fighting with the cold and barring it out.

Should there be snow on the lake, it is cleared by a ponderous scraper, drawn by a team or several teams, according to the size of the scraper. Then, an opening having been made, the plow is set in motion. This is an iron plow frame made for the purpose, and set with broad vertical blades, which resemble giant sawteeth. Sometimes a single row of these blades suffices, but often a double or even a triple row is used. A well-broken horse draws the contrivance. One man guides the plow while another rides the horse, and keeps it in its proper place. If there is a squat Englishman in the "gang," he will probably be found on the blanketed back of the old horse. Whether from innate laziness or love of superior elevation, it is hard to say, but there he sits, clad in a flaring green sweater, puffing at a short clay pipe to keep his nose from freezing, and drawling

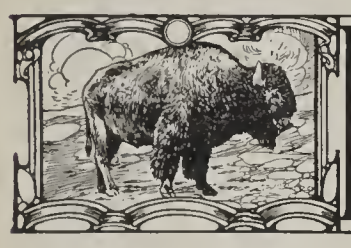
out: "Git halong, git halong hyar—by the Lawd Charles, but this 'oss must 'ave the dead mawch by 'eart!"

When the ice is marked in sections and cross-sections, the plow is driven in deeper till there is merely a "bottom" holding each line of blocks. This is sawed out with a short saw deprived of one handle, and the row moves out in the open water; but as it goes a worker runs along the margin with a blade-ended bar in hand, deftly separating each block by a blow in the groove which the plow has made. A light boom holds the blocks *en masse*, convenient for being lifted out with the tongs.

Merrily the teamsters' sleighs come bowling down the slope at the head of the lake, glide out on the glassy track and draw up for the loads. "Yo! yo yo!" sing the loaders; thump, thump, go the blocks, and the sleigh is filled like magic, while abbreviated remarks float out through the scrape of feet and the clanking of the tongs. Away that driver goes! Another comes—and away! Sleigh after sleigh, load after load, in quick succession, traverse the twin paths up and down the icy sheet.

So, daily, goes the work. The hardy fellows stand the cold like woodsmen, and joke the sufferer who gets nipped. Accidents are rare. A hand will sometimes get a squeezing or a toe gets crushed, and at intervals a man may make a false step, to go plunging into the chilly water. Then there is a rush for pikes and boat hooks, and as the bedraggled, nay, even terrified, fellow rises to the top, he feels himself in the grip of something with many fingers, something not unlike an octopus. The gripping fingers tighten, and without any ceremony, or at least regard for appearances, he is pulled out. A robe or two about him, he jumps for the sleigh, and in two minutes he is getting into dry clothes before the big roaring fire-place in the house.

Such is the picture of the old-fashioned ice harvest, which still lingers, although the whirlwind pace of the twentieth century is committing the picturesque conditions of earlier days to deep oblivion; and in spite of the advance culture, the trained tastes, the subordinated desires of the modernizing revolution, there is that spark of barbarism, that blood strain of the wild in us which calls us forth body and soul of a stormy winter day to see the ice-harvester bare the bosom of the lake or the lumberman swing his ax into the heart of the mighty pine.



NATURAL HISTORY

The Otter.

Concluded from page 331.

There are few animals as quick as an otter. When looking at a person they will dodge a bullet as quickly as a seal can. I once fired at one which had his head out of his fishing hole in the ice. The ball struck not six inches beyond in the exact range of the center of the hole, but the otter had drawn his head down before it struck. I have known of many cases where they dived before the charge struck. They will catch any fish we have by chasing it as a cat chases a mouse. A friend of mine while fishing in a pool just below a small fall, saw several large trout come rushing over the fall, and almost at the same time he saw something which, as he said, looked like a shadow, pursuing them round the pool, and an instant after an otter raised his head with one of the trout in his mouth.

While they feed on trout where trout are plentiful, otters also eat all kinds of coarser fish—chubs, suckers and horned pouts. I have several times seen them eating eels, which they seem to prefer to anything else. Sometimes when fish are plentiful and easy to catch, the otter will kill them for sport, just as too many of our visiting fishermen do. I have known one to pile up a large lot of suckers which he had caught for the fun of it. Besides fish, they often catch muskrats, and in winter I have known them to entirely depopulate the houses of a large colony of muskrats. When in a beaver country they often kill the young beaver, and I feel quite sure that they also sometimes kill ducks. I was once being paddled up to a black duck which we had heard quacking in a logan; I saw what I thought were the backs of several ducks and beyond them just then a duck gave a loud quack and flew. I then saw that what I had taken for ducks were two otters which seemed to be trying to catch the furthest duck. While they were under water I put a charge of BBs in one barrel, and on their rising with their heads close together, I killed one and wounded the other. The same fall the man who was paddling me on this occasion saw two otter trying to catch some woodducks.

Otters are very tenacious of life and often escape when shot squarely through the body and sometimes when shot through the head, especially when on the ice. An Indian named Louis Nicholas crept close to one's fishing hole while the otter was under water. The otter came out with a trout in his mouth and lay on the ice facing the Indian. The trout being before his eyes hindered him from seeing the Indian, who fired a Spencer rifle ball which went into the mouth and out through the back of the otter's head, carrying brains out on the ice, but the otter dived into his hole and the Indian and his partner, after cutting ice and looking for him nearly half a day, were unable to find him. The partner told me that both brains and teeth lay on the ice when he went to help search for the otter.

I once bought of an Indian the skin of an otter which had an ounce ball fairly through the body just back of the shoulders. This otter, which was shot lying on the ice, dived into his hole, and after being under a long time, suddenly threw himself out of another hole some rods from the one he entered and died almost as soon as he struck the ice. I have known many times of otter fairly shot being lost, and on the other hand, several times of two being killed at a shot and both saved, and in one case of three shot and all secured. A hunting partner of mine once killed and got three otters at two shots from a rifle in less than a minute's time. I once bought the skins of four otters, all shot in one forenoon by one man.

I have known of several otters being got in singular ways. Rufus B. Philbrook, who had been my partner the year before, was traveling on snowshoes up the Allegash Stream above the lake. On turning a bend in the stream he saw an otter lying on the ice and fired at him with his ten-inch rifled pistol. As the otter lay still he supposed that he had killed him, but seeing his eye look bright as he came up, he struck the otter with his belt hatchet. On skinning him, Philbrook found that the otter had not been touched by the bullet. In another instance a man who was not hunting, but who carried a revolver, came to a place where otters had been playing in the light snow around some fishing holes. Seeing a patch of dark fur showing through the snow, he fired and found that he had shot a dead otter. It appeared as if the otter had died on the ice and then it had snowed on him, and the other otter in playing had partly uncovered him.

When otters are caught in log slide-traps, or killheags, other otters quite often cover them up nicely with moss or leaves. I have several times seen where mink had so covered other mink which were in log traps, but have never heard of either mink or otters doing it to an animal which was in a steel trap. When otters are trapped where they cannot get into the water, they will fight a trap terribly, and if they cannot pull out or break the chain, will usually kill themselves in a short time. No one who has not seen it would believe how an otter can twist the links of a chain which has no swivel in it. I have seen a chain which seemed strong enough to hold a horse broken by an otter. I have twice set traps on Saturday afternoon and on Monday forenoon have found otter dead from fighting the trap, which appeared to have been dead for twenty-four hours. When caught on the land they usually break most of their teeth in fighting the trap, and I have several times seen the whole end of the lower jaw broken, and I have had several of the old-fashioned hand-made traps which plainly showed the marks of otter's teeth on the bed-pieces.

While many animals foot themselves, otters seldom do. In buying several thousands of

their skins I have had but one skin where the otter had taken his foot off, and I have known of but two other cases. In one instance the trap was set just at nightfall and was looked very early the next morning and the Indian trapper showed me the foot that forenoon. It was evidently the foot of a young otter. In the other case, a year after the foot was taken, the otter was tracked on a late snow back from the stream and found in a hollow log with two young. She had a nest made of shredded cedar bark. I have known of their having dens in ledges, but this is the only instance I know of one's denning in a log.

Usually otters have but two young, but I have known of their having three. Some writers speak of more, but I very much doubt their having more than three.

Otters seldom stay more than a few days in one place no matter how plentiful the fish are. The Indians say: "Otter don't happy in Heaven." A family will have a route which they will follow as regularly as a Methodist circuit rider. Sometimes it will be only fifteen or twenty miles, but oftener twice as much, which round they will make in from two to four weeks, going through chains of ponds, up or down streams and sometimes making carries on land for quite long distances, sometimes meeting others, but oftener one party coming into a pond soon after another has left. When one sees tracks of otters leaving the water and going overland, he may be sure that they are taking the shortest route to some other water.

In winter otters make fishing holes through quite thick ice just as seals do. As their noses are formed so as to shut air-tight they can swim across large ponds under the ice just as beaver or muskrats do, by putting their noses against the ice and throwing out a bubble, which looks like that in a spirit level, and renewing their breath by drawing it in again. If not disturbed they can swim any distance in this way; but if driven away from their air-bubble, they soon drown.

In places where the snow drifts deep over the banks on the edges of streams or ponds, they often have places under the snow banks where they bring out their fish and eat them.

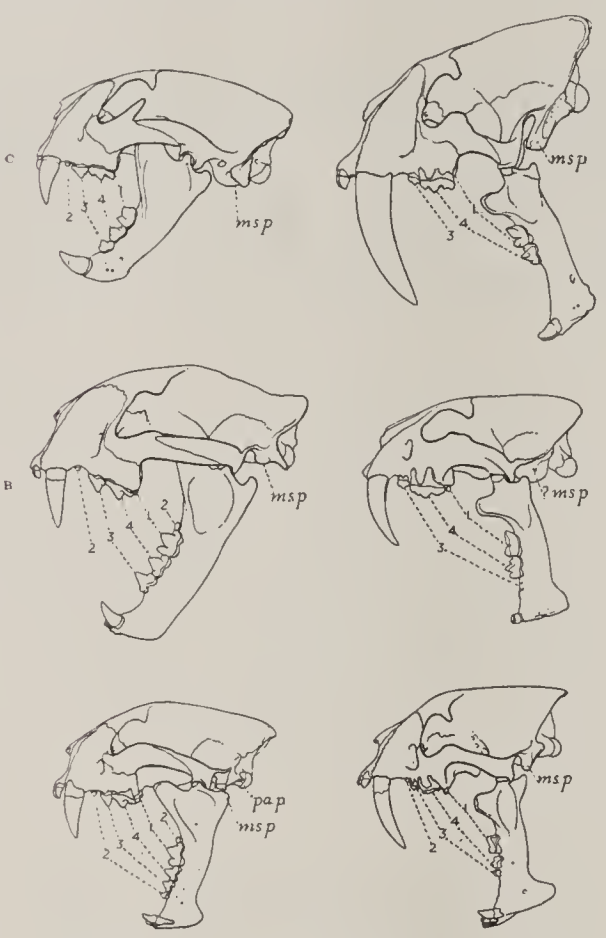
Often the fur of otters taken in the winter has the long outer hairs curled or kinked at the end like card teeth. This is called "sun curl" by the fur buyers and is supposed to be caused by the reflection of the sun from the ice. Yet this hardly seems a satisfactory explanation as I have seen them as badly curled early in December as at any time late in the winter; but I have never seen one taken after the ice was out that was so curled.

How deep an otter dives when fishing no one knows, but I know positively of two cases where otters were taken on lines set for togue with live bait in deep water. One was on Moosehead Lake, the other in one of the Roach River Ponds, probably in not less than twenty feet of water. In these cases the otters got hooked in catching the live bait, just as the togue would have done, and as the line was fastened to a spring pole which would bend, and as he could not get his feet on bottom, he drowned much quicker than a fish would have drowned.

I once knew of a man, who was pulling a pickerel through a hole in the ice, feeling a suddenly increased resistance which continued until he hauled the head of an otter into sight. The otter had seized the pickerel as it was being drawn up and had held on until he saw the man, when he bit the fish in two and left the fisherman in possession of the head part. Sometimes large fish escape from otters, and I once saw a large pickerel whose back was deformed, evidently from having been bitten by an otter, as the scar was plainly to be seen on both sides.

While in handling over half a million of muskrats, I have seen but a single albino, yet in handling not over a hundredth part as many otters I have seen five pure white ones and another of a yellowish white. As these were all taken within a few years in quite a limited area, it seemed as if the albinism were transmitted, especially as R. McFarlane, the Hudson Bay factor, while he speaks of sometimes seeing white beaver and some other kinds, does not mention ever seeing an albino otter. It is a singular thing, that of the five pure white ones that I know, three were shot. I saw two of them before they were skinned. The fourth was said to have been caught by a man in his hands as the otter was diving into a hole in the ice; he was held till he drowned. I had the skin of this one. It was a very large skin and as white as "the driven snow" and showed no mark of either trap or bullet. I do not know how the fifth was taken, but it seemed singular that when not one otter in twenty is taken except in traps, that four out of five white ones should not have been trapped. I know of one other white otter being taken near where these were. Besides these, I have in over sixty years never heard of but three others being taken, one in New Brunswick and bought by C. & E. Everett, King's Square, St. John, N. B., and the others taken in Maine, one at Blue Hill and the other in the western part of the State.

MANLY HARDY.



SKULLS OF CATS AND SABRE TOOTH TIGERS.

Ancestry of the Cats.

THE lion, the wildcat and the domestic tabby, while differing much from each other, have also many points in common. One of these is the substantial similarity in size of the canine teeth. In Tertiary times many cats existed of which a number equalled or exceeded in size the largest living species. These old time cats are distinguished by a great enlargement of the upper canine teeth which thus become long curved flattened tusks. One of these sabre-toothed tigers we have heard of as existing in Northern Europe as contemporary of the cave bear and the hairy rhinoceros, and in the middle and later Tertiary there were many such forms, which possessed these great canine teeth in various degrees of specialization. Of true cats in which the upper and lower canine teeth are of nearly equal size none are known, until near the end of Tertiary times.

Dr. W. D. Matthew, of the American Museum of Natural History has recently published a paper on the ancestry of the cats. It is far too technical for reproduction, but his view is that the cats of the present day are descended from one of the less specialized sabre-toothed tigers, perhaps that known as *Dinictis* or some related form. Dr. Matthew believes that while the modern cats use the canine teeth for grasping, holding and tearing, these ancient sabre-toothed forms used those teeth for striking a downward blow with the mouth wide open, thus ripping or gashing the thick skinned slow-moving pachyderms on which they preyed. Objection to this theory has been made on the ground that the animal could not open its mouth wide enough to give such a blow effectively, but Dr. Matthew advances proofs for his belief that it was possible for these animals to open the mouth as suggested.

He says of the life of those far distant times that the large and abundant vegetable feeders of the early and middle Tertiary were chiefly thick-skinned short-necked animals, powerful and well adapted for fighting, but not swift of foot. During the later Tertiary a different set of animals made their appearance, thin-skinned, long-legged, slender-necked horses and ruminants; swift runners, but far less powerful and well armed than the pachyderms. The larger cats prey upon the larger ruminants and usually fasten on the back of the animal and bite through the neck, but the sabre tooth tigers—if Prof. Matthew's theory is correct—preyed on the large pachyderms, ripping and gashing the neck until the animal succumbed. As the various pachyderms increased in size and strength they grew fewer in numbers and developed defensive armor in the shape of thick skins, like the rhinoceros, elephant, tapir and pigs of to-day. Thus they became harder to kill by the great sabre-toothed cats, and finally, as the pachyderms grew scarcer and their geographical range became more limited, the sabre tooths became extinct.

The accompanying cuts, taken from Dr. Matthew's paper, show various types of cat skulls, the line marked C showing our ordinary mountain lion and an ancient sabre tooth. These diagrams show Dr. Matthew's idea of the way in which the sabre-toothed tigers opened their mouths.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

GAME BAG AND GUN

Bose, Ben and Beppo.

BURNS tells us of "The Twa Dogs," called Cæsar and Luath, but I shall go one better, and tell of three dogs, named as above.

The first was presented to me when a boy, after my recovery from typhoid fever, when for days I was out of my head, nor did I fully recover for months afterward. This dog was a beagle, and his picture now hangs on the wall in my sanctum.

A hunter does not like to loan his dog indiscriminately to Tom, Dick and Harry, any more than he likes to loan his gun. Usually, upon the return of either, something will be found to have happened. Such has been my experience at any rate.

Now, a friend of mine wanted me to let him have Bose for a day's hunting over at the lakes, where there was an abundance of game, hares, rabbits, quail and partridges. I accommodated him; and with a party of friends he went over to Lakeville. Arriving there before sunrise, the party, having put up their horse, started for the upper end of Elder's Pond, where they expected to have good shooting.

Arriving at the swamp, they were not long in starting something that took a direct course through the swamp and across the fields to Loon Pond; and Bose followed on the track in hot pursuit. Lewis, one of the party who chanced to be near the dog at the start, heard the noise made by the quarry as it fled through the bushes, but got no sight at it. Lewis remained at his post the whole day, while the other hunters all made off in the direction taken by the dog and game.

The chase led beyond Loon Pond to Lake Assawampsett, by Pocsha and Long ponds, and thence swerved again toward Elder's, the point of starting. Lewis determined he would not leave his stand under any circumstances until the dog came in. As the sun was setting behind the distant hills and the shadows of night were falling, he heard in the distance the voice of Bose, as he was approaching in the same course that was taken by the fleeing quarry in the morning. Lewis cocked his gun and waited, on the alert for a view of the fast nearing quarry, fearing, however, that it would be too dark to see it, even if it came up as he expected. Suddenly he heard a crackling in the bushes, and saw a form approaching; and leveling his gun, he fired both barrels at once. The object fell, and, rushing in, he saw a splendid dog fox that had given Bose a chase for the entire day.

Joyfully Lewis gazed upon his game, and waited for Bose to come up, which he did not do for some little time after, and when Bose did come, he fell beside the fox utterly exhausted. Lewis had to take Bose up in his arms and carry him all the way to the wagon at the farmer's barn, and there he placed him in the bottom of the wagon and covered him with the horse blanket.

The other hunters putting in an appearance soon after, the party pursued their way home, where they arrived late in the evening, having secured no other game, but satisfied, nevertheless, with the result attained.

Bose never recovered from the effects of this chase, being lame ever afterward, for he had been previously hurt in one fore leg, and this last adventure was too much for him, as he was well along in years.

This short account is but one of several occasions where Bose distinguished himself, and deserves the fame that should come to a faithful dog as well as to an honest man.

"Ben" was a liver-colored pointer, sent to me by Charles J. Foster, then editor of Wilkes' Spirit of the Times. The first day I took him out, I did not want to miss a shot, because I feared the dog might think I was no good, and would go wild and not obey me. So, when I got up to the alder swamp, wherein I expected to find some woodcock, I kept my eyes about me and was ready to fire if anything sprang up. Sure enough, across the wood road a few rods away went an old cock, but I brought him down with a snapshot; and on my return, going into the meadows, two snipe got up before the dog, and I brought them down. Going on a little further, I found the meadows, or rather bog, very treacherous, and one was liable to go in up to his waist in some places. Presently another snipe got up—they would not lie before the dog—and made off straight away toward a group of walnuts growing on the border of the bog on high ground. Just as I was about to pull I saw a boy's head right in range, and did not dare to shoot, for fear the shot might strike him as well as the bird. The latter flew away unharmed, and I went home well satisfied with my first trial of Ben.

Some time after that I let Colonel Babbitt and a friend of his from the West take Ben to go hunting somewhere beyond Boston. I do not know what success they had after birds, but upon their return to Boston they lost the dog. He had been walking at their heels in the streets, but mysteriously disappeared. They went back and up and down various streets in search of him, but without avail. Finally they went to the police station, notified the officer there, and then went to a daily paper and put in an advertisement, offering a handsome reward for the dog, which they described with his name and collar, and stating that they could be found at the Parker House.

Nothing was heard of the dog throughout the whole day; and after dinner the Colonel and his friend went to a theatre. On their return to the hotel, the clerk told them that Ben had got there before them and was now in their room. One of the servants had seen him lying down outside the door, and, opening it, let him in. When the Colonel went up and opened the door, he found Ben asleep in the middle of the bed, and great was the rejoicing thereat, I presume, on the part of all three. Certainly I had my share when I heard their recital.

Beppo is now asleep on my coat. He signalized himself by starting a dozen rabbits in one day and not losing one of them. An adventure of his I must relate. A rabbit was started toward night in a triangular piece of woods, very thick with thousands of briers, and extending along the country road for a good mile.

I happened to be close to a wood road which runs from the country road for a long distance

PACK TRAIN RETURNING FROM A HUNT IN THE CANADIAN ROCKIES.
Photograph by Rutherford Page.

toward the railroad. While standing there, Beppo came up in the lead with a large hound, as big as a sheep, and looking like one who was traveling a good distance in the rear. For Beppo could run the fastest and would crawl under the briers just as a rabbit would do, while the big dog had to jump upon them and beat them down in order to get through. This proved a great advantage to Beppo, and as I heard him a good way ahead, I determined to scoot up the highway as fast as possible and then cut into the scrub oaks beyond, where I could hear Beppo following, and so get a shot before darkness set in, or the rabbit was holed up. I ran rapidly up the road till I came opposite the point whence Beppo's chiding could be heard, and cut in to find a spot where the rabbit might be likely to come; but I had gone in but a few rods when I saw Joe, my companion, who already had secured a position such as I wanted.

I soon heard Joe shoot, and listening, learned that the dog had got by him and was coming toward me in full cry. I threw up my gun, and in a moment the rabbit darted by, shot into the undergrowth as I fired at him, and upon going in, had the satisfaction of finding Beppo standing over his quarry, wagging his tail with intense satisfaction. Moquis.

Quail Shipment Stopped.

Oklahoma City, Okla., Feb. 25.—*Editor Forest and Stream:* I inclose you a clipping from a morning paper relative to the seizure by officers of a big shipment of quail from a town near here:

"Enid, Okla., Feb. 18.—Three hundred and ninety crates of contraband quail were seized here to-night by Game Warden Harry Eggleston and Sheriff Hume, en route to Chicago. The car was shipped from Okeene, twenty miles south of here, and contained 9,000 birds. It is the biggest shipment captured in Oklahoma in five years, and arrests are sure to follow."

The shipment was made from Okeene, the same point where a similar seizure was made a few years ago. Since the law of Oklahoma makes it illegal to ship game out of the State, even in the open season, and also makes it illegal for railroad and express companies to handle it, it will be interesting to know what the penalties meted out to all concerned will be. It is to be hoped that full justice will be done to all. W. T. Whiteford.

Accomplish Nothing.

Hendersonville, N. C., March 2.—*Editor Forest and Stream:* The representative (Ewart) from our county has introduced a bill closing the season for partridge (quail) shooting except January and February. This is one of a lot of foolish bills offered this season. I have written him requesting him to drop it and aid in the passage of the Willard bill.

These birds should be protected in January and February; and as there will be no money with which to carry out Mr. Ewart's county law, the pothunters will have shot up the coveys by Jan. 1, the remainder to be turned over to the sportsmen of this county, and also of those other counties that have then closed the season to the gun. These county game laws accomplish nothing. Ernest L. Ewbank.

Middle Texas in Winter.

Abilene, Tex., March 2.—*Editor Forest and Stream:* In the course of a journey through the Southern States I have found the idea of game protection to be more and more in favor and better carried out. The one regret is that in so many of the States this sentiment did not take hold of the people years ago. When I was a small boy and made my first visit to Florida, the variety and quantity of game were astonishing. All classes of hunters joined in the work of destruction. Along the Florida coast shooting is now largely prohibited and at Palm Beach and Rockledge the ducks fairly swarm and are so gentle that they will take food thrown to them.

This season has been a good one for game in all parts of the South; in North Carolina it has been unusually good. Currituck Sound will always remain the paradise of canvasback and redhead ducks, because of the abundance of wild celery in the shallow water. Years ago the section around Galveston, Texas, was notable for ducks, but its importance is now lessened by reason of settlement, while Currituck Sound remains almost as primitive as it was a century ago.

In Mexico I made a special visit to a hacienda containing 1,000,000 acres, on which there are three dams, which impound large areas of water for irrigation. On all of these farms there are thousand of ducks, among them a few canvasbacks and redheads and a great many mallards. Five kinds of ducks were observed in one pond, and also a number of very large gulls, which go to the ponds and tanks, in Mexico, Texas and Oklahoma.

The manager of the ranch said that the ducks give a great deal of trouble when the rice is ripe, and that a score of men with guns had to be employed to keep the ducks away from the rice. The ducks were seen not only in the ponds, but also in the fields, among the rice stubble, and there were strings of them in the air, passing and repassing all day long.

One of the odd sights on this great Mexican estate was a number of herons, large, dull-brown in color and extremely gentle, which stood very near the roadway, looking intently at our automobile, but showing no fear of it. The Mexicans consider these birds excellent for food and call them grullas, their word for crane. I have seen these birds in captivity in Cuba, often in company with domestic fowls.

Abilene is in the high hill country of middle-west Texas. All the way from this point far down to Mexico, very little rain has fallen for three years past, and there has been one of the longest and severest drouths on record. At one point on the Rio Grande River only five inches fell in 1910 and the river is so shallow that boys are wading across it, and this must make it easy to get arms over the border to the insurrectos. The drouth in the Abilene section was so severe that almost all the ponds and streams went dry and only one stream near here is running. Large-mouth black bass, white perch and other fish grow to large size and thrive amazingly.

There is fishing all winter, which does not seem like winter except for an occasional "norther." I asked the head of the weather bureau here why it is so difficult to make an accurate prediction well ahead of time. His reply was that the true reason is the scarcity of weather stations south and west of Texas. The States in the East get reports from all the Western and Southern country, but here a vast region is almost totally uncovered as to stations and reports.

The fruit trees are now in full bloom, the temperature ranges around 70 degrees every day, except perhaps a half-dozen during the winter, and the air is dry. The one thing talked about and hoped for is rain. With rain, the country is like a garden; without it, it becomes a half-desert and crops and trees are simply withered by the dryness.

Yesterday I indulged in three kinds of hunting. Prairie-dogs' holes are on every side where the ground is a little high; never in the low valleys or in the very high and rocky hills. Some people have an idea that if one of these prairie-dogs is shot while partly in his hole or burrow, which always slants downward and extends far into the ground, he can not be retrieved, but this is not true. At the first shot I killed one in just that position, and at the next shot killed one a foot from its hole, disproving another popular idea that when shot they will drag themselves to the hole and enter it. They are utterly useless, it seems, as to flesh or fur, and upon one of the specimens killed were found a great number of large fleas.

Later on an automobile tour was taken in quest of ducks. Pond after pond was visited and then a stretch of what in wet weather is a fine creek, the water now standing in pools, was searched for a mile, but without a sign of a duck, though it is generally a wonderful place for them. So beautiful is the valley through which this stream runs, so green the grass and so regular the arrangement of the mesquite trees, that it looks exactly like a beautiful orchard. It does bear a bean, of which horses and cattle are fond, but otherwise it is a pitiful sort of a tree, even under the most favorable conditions, the younger trees being set with terrible thorns, which make a bad wound. In fact, the whole vegetable world here is like a living hedge. On the ground the prickly-pear and the ball cactus, like a human head set with a thorn for every hair, menace the traveling foot, and all kinds of taller cactus, some set now with rich red pears, gives variety and color to the landscape. Though no ducks were found, a couple of jack rabbits were seen. This rabbit is built to outrun the wolves and coyotes, which are so numerous that a few nights ago, not far from the city, as the auto was coming along, a big wolf ran alongside and snarled defiance.

People in the East who are familiar with the cottontail think he can run, but when they see a jack rabbit move, they will realize what speed is. He does not seem to run, but glide. From behind a clump of thorns one of these jacks scudded, but a charge of No. 6 shot from a 16-gauge gun knocked him out. The jack is very much like the prairie-dog, for nobody wants to eat him and his skin does not seem to be in request. I would like to know what a North Carolina darkey and his hounds would think of a jack rabbit. The ears of this big jack were cut off, to be sent as a gift to Governor Kitchin, of North Carolina, who spent a year in his young manhood in Texas.

So then, after prairie-dog hunting in the morning and jack rabbit shooting in the afternoon, it was decided to try some very novel night sport with the cottontails, and after dark the auto was again taken out, the lights made as bright as could be and a very singular search began. Between the wire fences which border the wide roads the auto ran, throwing its broad belt of light now along the roadway and now right or left in the fields. Presently a cottontail made a dash alongside of the road and at a distance of sixty yards was bowled over. As the machine threw the glare of its lights on a meadow, one swung into view, going fast, was hit, but ran on, and as he reached a clump of trees, was killed at long range, No. 6 shot being used. Presently a third rabbit made a dash squarely across the road and escaped. A fourth stopped in the road one hundred yards ahead and then made a series of short rushes to the left under the mesquites, but out of range. Not a jack rabbit was seen, though some nights these are numerous and race ahead of the car, directly in the shaft of light; recently an Abilene man shot six in this way with a revolver.

At a large pond, which supplies the town with water, some fishing was done for bass and white perch and specimens of the latter were taken weighing 1¾ pounds, the color of the fish being somewhat darker and the body a little thicker through the shoulders than our Eastern perch. The best bait was minnows, though frogs and crawfish were tried. For the black bass a wood minnow set thick with hooks is the best lure. FRED. A. OLDS.

Arizona Antelope.

WASHINGTON, D. C., Feb. 27.—*Editor Forest and Stream:* The action of Congress in passing a bill, which was approved by the President, extending protection to the antelope in Arizona, is of much interest. While adequate protection has been given these animals for the past five years by the game laws of the Territory, the statute would have lapsed March 1, 1911. Delegate Cameron succeeded in having Congress incorporate in the bill for the temporary government of the Territory until Statehood is achieved, or until the Legislature convenes, a provision declaring that "every person who in the Territory of Arizona shall hunt, pursue, take, shoot, kill, destroy, wound or capture, or have in his possession an antelope at any time hereafter and prior to March 1, 1913, shall be guilty of a misdemeanor."

When the present game laws of the Territory were enacted five years ago, there were few antelope to be seen; they were thought to be almost extinct, but under the wise administration of the laws these animals are said to have greatly increased, and Arizona may now have the largest herd in the country. It is entirely probable that within the next two years and prior to the expiration of the Congressional provision for their protection, further efforts will be made in their behalf, to the end that the Federal Government may take over complete control of these antelope, placing them in the various National forest reservations for stocking purposes as well as for their protection and control along other lines which will at least insure their preservation and protection from danger and extermination.

RALEIGH RAINES.

The Use of Game.

TWENTY-FIVE or thirty years ago an excursion to the Rocky Mountains was regarded as—and in fact was—an expedition of considerable moment, even of some risk. Now many parts of the Rocky Mountains are as commonplace as Connecticut, Illinois or Nebraska. The rapid increase of population all over the United States of course tends to the destruction or driving away of the wild creatures, large and small, that inhabited the country in primitive times, and those people who are interested in the preservation of these wild creatures must obviously adapt themselves and their views to the constantly changing conditions.

To a report recently made to the club by the Boone and Crockett Club Game Preservation Committee, there were appended a number of suggestions which seem well worthy the careful attention of sportsmen everywhere. They are as follows:

SUGGESTIONS.

The trend of public opinion, as shown by legislation for the last few years, is strongly favorable to game protection. Every effort should be made to give to the public added reasons for favoring it.

In certain States careful protection has resulted in a considerable increase in the number of wild animals, and in some parts of New England great complaint has been made by farmers of the damage done to their crops and fruit trees by deer. In Western States the hungry elk have destroyed property, and in the same regions the protected beaver have flooded fields and destroyed irrigating ditches, so that the ranchmen feel that the beaver should be exterminated. It may be quite possible to push protection to a point where it will become unpopular, so that the public favor—now on the side of those who advocate game preservation—may turn from them and hostile legislation may follow. Thus, unless we act intelligently, we may have too much protection for some of these wild creatures, and they may so increase as to become an economic injury, and at last a pest.

These wild animals should be protected and grown for man's use and benefit, just as a forest is grown and protected; but they should not be turned loose to the public, so as to induce a wild scramble where each individual is engaged in the struggle to secure more of the game or the fur than his fellow-man gets.

We are disposed to suggest legislation authorizing local governments to cause to be trapped each year a reasonable proportion of the beaver, and to sell the skins of these animals for the benefit of the protective work that is being done. Such trapping, if authorized, should be retained in Government control, and should not be opened to the public.

In like manner, in certain sections, the elk may be used for economic purposes, and it might be well for States where these animals occur in greatest abundance to pass laws permitting and encouraging the domestication and sale of certain wild ruminants.

Elk, deer and perhaps wild sheep will adapt themselves to domestication, and may do well and increase under suitable conditions.

Antelope for some time would probably meet with a ready sale to stock parks and zoological gardens. It is possible that further experimentation with them may show that they will do well in the East, precisely as the white goat of the Rocky Mountains has flourished and reproduced its kind in the New York Zoological Park.

The Yellowstone Park now constitutes a reservoir of large game animal life, which should be drawn on to supply other National parks and any game refuges that may be established. Congress should make an appropriation for the capture and transfer from the Yellowstone of buffalo, elk, antelope, mule deer and mountain sheep, at least to the buffalo parks—Montana and Oklahoma—and the Glacier National Park.

Protect the Game in Iowa.

PALO, Iowa, Feb. 20.—*Editor Forest and Stream:* In 1909 Iowa's Legislature passed a universal license law which produced $108,000 the first year it was in effect, and now we ought to have a large game preserve. Iowa's sportsmen have paid $1 each a year to hunt, and yet there is no game to hunt. Iowa ought to have large hatcheries for both fish and fowl, and to have thousands and thousands of birds to turn at large every year.

It is said that Geo. A. Lincoln, our fish and game warden, has turned out various kinds of birds and fish. We know he has done so with fish, but no birds have been seen or heard of.

What the State needs is a refuge for the preservation of fish and game, and a common party to care for it. Many of our officials seem to be only after money and a good time. Game is scarce in Iowa and likely to be still scarcer unless something is done.

What we need is a common man at the head of things, someone who will have plenty of push and see that everything goes right. We want more game and more sport, and we are willing to pay for it, but if we pay we want results.

I. J. B.

Biltmore Forest School.

DARMSTADT, Germany, Feb. 15.—*Editor Forest and Stream:* Among our excursions I might mention those to Ysenburg and to Eberstadt. Both of these ranges are pine ranges, stocked with endless stands of short-leaved pine of superior quality. Here nowadays a new growth of pine is being raised from self-sown seed. At Karlsruhe, on the occasion of a visit to some very interesting coppice under standard forests, it was amazing to find that within eye shot of the spruce woods on the hills the pine woods in the valley, and the oak woods in the inundation districts, Swedish spruce, Russian pine and American oak are piled up in the lumber yards.

The second half of the month of January was spent in the heart of the Black Forest, at the Hotel Sand. During the forenoons we had the usual lecture work, while the afternoons were given to excursions into the snowy woods. The beauty of the landscape was unsurpassed. The snow was so deep that we had to use skis and snowshoes to a certain extent in going about. In the Black Forest spruce and fir are regenerated from self sown seed.

HERBERT L. SULLIVAN, Class President.

Utica Sportsmen Meet.

UTICA, N. Y., March 4.—*Editor Forest and Stream:* The Utica Fish and Game Protective Association held a special meeting at Bagg's Hotel, in this city, last night for the purpose of considering various proposed amendments to the game laws now pending in the Legislature.

F. A. Cassidy and Major H. J. Cookinham, who represented the association at the annual meeting of the New York State Fish, Game and Forest League in Syracuse this winter, stated that the two resolutions adopted by the Utica association, one regarding the season for grouse and woodcock, and the other in reference to the pollution of streams, received the endorsement of the State League.

It was announced that application had been made to the State for ring-necked pheasants to be placed in covers in Oneida county. The proposition is to place birds in six or eight towns. Application has been made for fifty birds and 400 eggs. A committee of three was appointed to act with the secretary in placing the birds and eggs.

The association has been granted 2,500 brown trout and 3,000 brook trout to be placed in Skenandoa Creek at Oriskany Falls, 3,000 brook trout for Sauquoit Creek and 3,000 brown and 2,000 rainbow trout fingerlings for Oriskany Creek, one of the best trout streams in the country. A sort of hybrid trout now inhabits its waters. The brown trout was spoken of as a better fighter than the brook trout and a good substitute.

The secretary was instructed to write to Senator Ferris and Assemblyman Manley, asking them to do all they can to defeat the Long Island wildfowl spring shooting bill.

A bill will be drafted and presented in the Legislature limiting the number of ducks which a person can kill in one day to ten, the number which can be had in possession at one time to twenty, and the number for one season to fifty. Major Cookinham was appointed to draft such a bill and see about having it introduced in the Senate and Assembly.

A motion was carried declaring it to be the sense of the association that the plumage bill is an iniquitous measure and would do away with the good work done by the Audubon Society and similar organizations for the protection of song birds and certain plumage birds, and directing the secretary to write to the Senator and Assemblyman from this district urging the defeat of the bill.

Secretary French urged the importance of protecting the song birds, speaking of their great value to the agricultural interests of the country. He called attention to the statements of scientists that if the birds were destroyed, human life could no longer exist, as the country would be overrun with insects, and every green thing would be destroyed. He said that if women would stop wearing the plumage of birds, the slaughter of song birds would cease.

The proposed amendment closing the season for grouse until 1915 was discussed, and some of the members cited instances where cutting off the shooting for a term of years had proved a failure. The opinion was expressed that one of the chief reasons for the scarcity of grouse was the lack of good cover. Some of the members thought that placing a bounty on foxes, skunks and certain hawks would do more to protect grouse than closing the season for a term of years. It was stated that skunks did a great deal of harm by breaking up the nests of grouse, and still those animals are protected by law during a portion of the year. The red squirrel was declared to be a worse enemy to the birds than foxes. It was declared to be the sense of the association that Senate bill 237, providing for a close season on grouse until 1915, should not be passed.

The association favored extending the closed season for brook trout in Oneida county from April 15 to May 1.

The president was authorized to appoint a committee of three to attend the meeting of sportsmen to be held in Albany March 9, and 10 to consider proposed game law legislation.

The association is opposed to the use of ferrets in hunting hares and rabbits. The bill, which proposes to incorporate a provision in the game laws to prohibit Sunday shooting, was briefly discussed.

The association decided to have a banquet Monday evening, March 20. W. E. WOLCOTT.

Nebraska Wildfowl.

OMAHA, Neb., Feb. 22.—*Editor Forest and Stream:* Old winter seems to be petering out pretty rapidly just now, and you can almost smell spring. The weather is bright and sunny and the winds are soft and caressing, but it is only a bluff, for February is invariably our hardest winter month. Of course the sportsmen are in a fever of expectation, for already the pintails have arrived and some larger flocks have been seen reconnoitering up and down the Platte, the Loup and the Missouri rivers. With the next wintry blast, however, they will all go to the south, but the old duck hunter is not to be fooled. The sunshine, the warm winds, the swelling maple buds and the sight of a few venturesome pintails cannot deceive him, and he will be content to linger before the fire a little longer and dream of the joys that have gone before.

Just now in these days of waiting it is next to the real thing to lounge before the open fireplace and to recall the ravishing delights of the spring shoots of the past, the days when the cares of business and the perplexities of life were laid aside and forgotten. The early rise in the clear frosty mornings, the tramp to the blind, the genial camaraderie of fellow sportsmen.

But of all my hunting days, and they have been many, none have been more pleasant or filled with life-prolonging and beautifying qualities than those spent with the venerable Jake Snider and good old Sam Richmond in their little wall tent on the romantic Loup.

The Windsor is another new sportsmen's club composed of the following well-known shooters: Frank Beard, President; Charles Battelle, Secretary and Treasurer; Wm. Simpson, John McDonald, Frank Togg, James Lynch, Chas. Izard, Jim Craig, M. F. Kunier, W. M. McKay, Wm. Dorrance, A. Reed, Grant Cleveland and W. L. Hodder. Just now they are busily engaged getting ready for the shooting at their new log lodge on the Missouri River near Herman. They have one of the finest locations on the stream for shooting and fishing and know how to appreciate it. They have built a commodious and up-to-date lodge with a large storage wing for boats, decoys and other accessories. They have a ninety-nine year lease on the grounds.

In the maples in front of my Dundee bungalow on the morning of Feb. 10 I counted eighteen bluejays and they were making life miserable for a couple of squirrels that had come down from the grove for their breakfast of nuts the boy never fails to spread for them. Cold as it has been, these jays have been here all winter, and in the midst of the late blizzard even I heard their squawking above the blast. Malapert as the jay bird is, he is one of my favorites of all our American birds. SANDY GRISWOLD.

Michigan Legislature.

ONE of our Michigan correspondents has this to say regarding the proposed legislation in his State:

"The shooters along the Detroit River and the St. Clair flats are opposed to stopping spring shooting. Many of them are pot hunters. The present law allows the killing of twenty-five ducks in a day, and one can have fifty in possession. A threat is made by the inland sportsmen that if these duck club members and Detroit River shooters will not at this time restrict by stopping spring shooting, that they will put through a bill limiting the daily bag to six and not over twenty-five in possession, and not more than fifty to be killed during the season.

"Two other bills were introduced in the Michigan Senate last week; one for the hunters' and trappers' license. It provides no change in the deer law which is, non-resident's license $25; resident license, $1.50; privilege of killing two deer. For hunting and trapping other than deer the non-resident's license is $10; a resident alien's license $10. This is to put a stop to the irresponsible foreigner who shoots our song birds for the pot. For the resident hunter an annual fee of $1. All of this money to go to the game warden's department for the propagation, protection, etc., of game and fish. The other bill is the creating of a non-partisan, honorary commission of five to be appointed by the Governor to take over the duties of the present fish commission, and the duties of the present game warden's department. To give said newly created commission a good deal of authority. For instance, it is contemplated to set aside game refuges, to create game preserves in certain portions of the public domain, to exterminate vermin, to offer bounties on the same, to appoint game keepers who will also be protectors, and who will know how to take care of game, to feed it when necessary and to plant food for it and to exterminate vermin and prevent the destruction of game covers by fire, trespass, etc."

Ducking in the West.

LOS ANGELES, Cal., March 1.—*Editor Forest and Stream:* During the shooting season now closed the prevalence of quiet weather on shooting days was brought home to returning club men by the great rafts of sleeping wildfowl that could be seen lying in acres out on the placid Pacific opposite the station where the cars are taken for home. About quitting time some of these rafts would break up, and thousands of ducks would begin moving at once, making a stirring and inspiring sight. EDWIN L. HEDDERLY.

Their Little Joke.

NED REECE and A. E. Shatford, of Columbus, Ohio, have for the past few years made it an event of annual occasion to spend several weeks' quail shooting in the South. The extensive preparations for this trip generally begin months in advance of the actual time to go, and Mr. Shatford has always taken special delight in rehearsing the various details of the trip to the different sportsmen with whom he comes in contact. Shatford surely enjoys a trip to the woodland and quail habitations about as well as any of the many admirers of the grand sport that I have ever come in contact with. This year they decided on the last week in January to start for the sunny South and were to leave Saturday about noon.

A few days before that day Mr. Shatford was taking a quiet smoke in the gun store of William Weatherholt, and had just remarked: "Well, boys, it is only two more days now until we set sail, and I can hardly wait for the hours to roll around," when the telephone bell rang and a voice asked Mr. Weatherholt if A. R. Shatford was in. Mr. Weatherholt replied that he was, and called Mr. Shatford.

The voice said: "Hello, is this Mr. Shatford?"

"Yes, sir; what's wanting?"

"Mr. Shatford, this is Sheriff Sartain talking, and we have had a very difficult time of it getting you located."

Mr. Shatford, all attention, asked: "Well, what is it, sheriff?"

The sheriff replied that Mr. Shatford had been drawn to serve on an important jury, and that he wished him to appear promptly at 9 o'clock on Monday morning for service. Shatford excitedly replied: "Why, sheriff, it will be absolutely impossible for me to serve on that jury."

"Why?"

"Because I am going on a trip South, and start day after to-morrow."

"Well, you had better not," advised the sheriff. "We get that kind of a proposition every day, and that will not excuse you," and he hung up the receiver.

Shatford turned around, quite pale, saying: "What do you think of that? Now, after waiting for months, I can't go on this trip. What do you suppose Reece will think of this?"

Fifteen minutes later Ned Reece walked into the store, and Shatford told him of the sheriff's call, saying: "I am afraid it is all up." Reece told him it was just like him, getting into something at the last minute after they had their tickets purchased and everything ready to go. As Ned knew the sheriff, he was asked to go down and see him and find out if he could not be persuaded to let Shatford off. Ned's friend, Stanley Brooks, called up the gun store later and asked for Mr. Shatford, saying: "Mr. Shatford, this is Sheriff Sartain talking. A friend of yours, Mr. Reece, has just told me of your important trip South. While I would like to help you, I simply can't do it."

"Can't you arrange it in some way to let me off, sheriff? I would greatly appreciate it."

"No, I am afraid I could not without getting in bad myself."

Shatford looked like he was going to have a spell of sickness. One of the boys suggested that he call up Attorney Atwood, who was well acquainted with the sheriff and see if he could not help him. Atwood told him he would call him up at 9:30 Saturday morning and tell him the result of his effort. Shatford was there at 8:30. Atwood told him that he had done everything he could without result. Presently the telephone bell jingled and Mr. Shatford responded. The voice was Brooks impersonating the sheriff. "Hello, Mr. Shatford. Well, Mr. Shatford, there has been great pressure brought to bear on the matter of you being excused from this jury."

"Yes, sheriff."

"Well, I have decided to excuse you."

Just then in walked Ned Reece, Stanley

THE GRAND TETON, IN WYOMING.
Photographed by G. W. Ridge, at an altitude of 11,030 ft.

Brooks and Attorney Atwood all smiling, and three fine actors they were to keep Shatford on the griddle all that time. There was much merriment before the train moved off at noon with the hunters.

FRED SHATTUCK.

In Louisiana.

Dr. A. K. Fisher, of the biological department of Washington, has been in Cameron parish with Henry Jacobs, of the game commission, in search of specimens of the blue geese and canvasback ducks. Dr. Fisher visited the lower gulf section, but owing to the hot weather and the fog, the geese were too far out in the gulf to secure specimens, but he was successful in getting several specimens of black duck, ring-neck ducks and clapper rails.

Fight with a Wildcat.

TUNICA, Miss., Feb. 28.—*Editor Forest and Stream:* Inclosed is a newspaper clipping about some antics of a wildcat:

"Information comes to the Sentinel from one of its subscribers at Friley, in Washington county, of a desperate battle that took place recently on W. F. McCormack's plantation between a large catamount and two negro women, the animal being finally killed by well-directed shots from a pistol in the hands of Mr. McCormack, but only after the cat had fatally injured a child and seriously injured two negro women.

"Shortly after sunset a number of negroes were in a field picking cotton for Mr. McCormack just across the bayou from his residence. One negro woman living about 200 yards below Mr. McCormack had come across the walk in front of his house, and as she got out in the road she turned to see where her child was. The child was standing in the yard, and the mother saw something she took to be a dog come across the walk in front of her house, and she hollered at the animal, and as she did so the animal jumped on the child, knocking it down and was biting it.

"When the mother went to the rescue of her child, the cat turned on the woman and leaped on her head, knocking her down, and split the calf of her leg with its claws, as if by a razor, and clawed and bit her hands and arms, lacerating them terribly.

"She finally grabbed the child and made her way into the house, screaming, and locked the door. Her screams attracted the attention of the men in the field, who ran for their guns. When they reached the house, the cat had gone. The men then went into the house, the cat ran across the bayou and into another negro's yard, killing a hen, and made its way to the field where the men had been, and where one negro woman was left picking cotton. As the woman raised up, the cat sprang on her, and she grabbed it by the neck and screamed for help. A hand to hand battle took place between the cat and the woman, and Mr. McCormack, attracted by the woman's screams, grabbed his pistol and went to her relief, and finally shot it twice in the head, killing it.

"The animal was viewed by a large crowd, among them some of the oldest hunters in the Delta, who declared it to be the largest cat they ever saw. The wonder is that the woman succeeded in holding her own with the beast. She was badly wounded, but the doctor, who waited on her and the other woman, sewed up the wounds and says they will both recover, but has no hope of saving the life of the child, who was seriously injured about the head."

I wrote to Mr. McCormack and asked if the report is true in all respects, and his reply, written at Friley, Miss., follows:

"I received your letter to-day in regard to the cat I killed. It is true to a word, as the Yazoo City Sentinel put it, just as near as I can describe it. I do not know why, but he was jumping on everything he passed.

"The houses are at least a half mile from the swamp. He made at everything he saw. It was the first time I ever saw a catamount. I do not know much about them, so you see I could not tell why he jumped on them."

TRIPOD.

Canadian Camp Annual Dinner.

THE annual dinner of the Canadian Camp was held Monday, March 6, at Hotel Astor, in New York. The large dining room was crowded with members and their guests. Dr. G. Lenox Curtis presided and introduced John C. Tomlinson, Sr., the toastmaster.

Among the viands served were the flesh of African buffalo and eland, recently brought over by John J. White, Jr., of Washington, who has just returned from Africa; Persian lamb chops furnished by C. J. Jones, of Les Vegas, New Mexico, and some other unusual delicacies.

Among the speakers were Charles Camsell, of Ottawa, who was born and lived most of his life in the Mackenzie Basin, and so is most familiar with the far North, of which he told; Robert H. Marshall, who showed wonderful pictures of some of our national parks, and Warner Miller, who spoke of European forestry.

The features of the evening, however, were the extraordinarily interesting moving pictures shown by C. J. Jones (Buffalo Jones), which exhibited the roping and tying of a lioness, rhinoceros, warthog, eland, giraffe and so on, and an account by John J. White, Jr., of buffalo and lion hunting in Africa. Colonel Jones' pictures were not confined to Africa. He showed a number of pictures taken in the West representing deer, elk, bears, mountain sheep and highly exciting pictures of buffalo fighting and of the capture of mountain lions, which had been run into trees by dogs.

Toward the close of the meeting Dr. J. C. Allen, of Brooklyn, introduced a resolution which was passed by the club condemning carelessness on the part of hunters who shoot men for deer or other animals.

A medal was presented to Colonel Jones by the club.

Squirrels for Central Park.

THE gray squirrel colony in Central Park, New York city, is deteriorating to such an extent that Commissioner Stover believes new blood is necessary. Several years ago FOREST AND STREAM called attention to the fact that the popular pastime of feeding these interesting little animals with peanuts was killing them, but it was not until Mrs. A. F. Smith took the matter up with Mr. Stover that efforts were made to provide hard-shelled nuts for the squirrels. Mrs. Smith has devoted a great deal of time to looking after the welfare of the little colony, and she now proposes to replenish the stock with wild squirrels from New England.

The squirrels have many enemies, chiefly human. Frequently the sly efforts of vandals to kill and pocket the squirrels, are frustrated, but the small boy with the bean-shooter is always present, and difficult to catch.

New York Legislature.

THE following bills have been introduced:

By Senator Bussey, providing that fish, including pike and pickerel, may be taken through the ice by spearing in Silver Lake from Jan. 15 to the last day of February, both inclusive.

By Senator Bayne, in relation to the sale of game. It strikes out the provision permitting the forest, fish and game commissioner to order game animals, birds or fish seized because possessed in violation of law to be sold. The commissioner is still permitted to order such confiscated game and fish to be given away for charitable purposes. The bill prohibits the sale for food purposes within this State of wild rabbits, hares and jack rabbits, squirrels of all species, deer, elk, moose and caribou. It makes a similar prohibition against the sale for food purposes of game birds and song birds belonging to any species or sub-species native to this State and protected by the law, or of any bird belonging to any family of which any species or sub-species is native to the State. These prohibitions apply in all cases whether the birds or game were killed within or without this State. The bill changes the period during which possession of deer or venison shall be presumptive evidence that it was unlawfully taken, so that this period shall extend from Nov. 5 to Sept. 15 instead of from Oct. 31 to Nov. 5.

By Assemblyman Constantine, providing that there shall be no closed season for blue pike on Lake Ontario.

By Assemblyman T. K. Smith, providing that if in accordance with the provisions of this chapter the open season commences or ends on Sunday, it shall be deemed to commence or end, as the case may be, on the Saturday immediately preceding such Sunday.

By Assemblyman Ahern, prohibiting the hunting of squirrels, hares, rabbits, partridge, grouse, pheasant, quail or woodcock by tracking them in the snow.

By Senator Burd and Assemblyman Wende, relating to whitefish and lake trout.

By Assemblyman Shea, providing that dogs and bitches may be harbored in any part of the Adirondack Park and used in the hunting of deer during the last ten days of the open season for taking deer in Essex, Warren, Franklin and Clinton counties.

Through some error this bill was sent into the Assembly library numbered 630 and was summarized as 630. The correct Assembly bill introductory number 630 is a bill by Assemblyman Shea, providing that any citizen may, upon procuring a license, hunt birds, foxes, hares and rabbits in the proper season with dogs or bitches, but not of a breed used in hunting deer. The license fee is one dollar for each dog.

By Assemblyman Shea, relating to forest preserve boundaries.

By Assemblyman Thorn, relating to pheasants in Erie county.

The Senate committee on fisheries and game has reported favorably Senator Long's bill relative to the open season for certain wildfowl on Long Island.

By Senator Griffith, relating to coarse fish in certain waters, and providing for an open season for woodducks from Sept. 16 to Nov. 5.

By Assemblyman Shortt, two bills relating to shell fisheries.

By Assemblyman Gregg, relating to tree cutting on public lands.

By Assemblyman Hoyt, relating to nets in various waters.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

A Plank.

Reprinted from FOREST AND STREAM of Feb. 3, 1894.

THIS is 1894. We have just been celebrating the four hundredth anniversary of the coming to this continent of men equipped with firearms. For four centuries, from the time of Christopher Columbus to that of Charles Delmonico, we have been killing and marketing game, destroying it as rapidly and as thoroughly as we knew how, and making no provision toward replacing the supply. The result of such a course is that for the most part the game has been blotted out from wide areas, and to-day, after four hundred years of wanton wastefulness, we are just beginning to ask one another how we may preserve the little that remains, for ourselves and our children.

With all the discussion of the subject in the columns of FOREST AND STREAM from 1873 to 1894, there has been and is a general consensus of opinion that the markets are answerable for a larger proportion of game destruction than any other agency or all other agencies combined. The practical annihilation of one species of large game from the continent, and the sweeping off of other species from vast regions formerly populated by them, have not been brought about by the settlement of the country, but by unrelenting pursuit for commercial purposes. The work of the sportsman, who hunts for the sake of hunting, has had an effect so trivial, that in comparison with that of the market hunter it need not be taken into consideration. The game paucity of to-day is due to the skin hunter, the meat killer, the market shooter.

From the beginning wild game has played an important part in the development of the country. It has supplied subsistence when there was no other food for the pioneer and the settler. Buffalo and elk and deer and grouse and quail and wild goose and wild ducks have sustained the men who first cut into the edge of the unbroken forests of the continent, who blazed the trails westward, and pushed their way, directed as mariners at sea by note of sun and stars, across the billowing prairies. Many a halt would have been made by these advancing hosts had they been compelled to depend upon sutler trains, instead of foraging on the abundant game resources of the country as they took possession of it. For generations, then, it was right and proper, and wise and profitable that game should be killed for food; that every edible creature clothed in feathers or in fur should be regarded as so much meat to be spitted or potted or panned.

But times have changed. Conditions are not what they were. Game still affords food for the dweller in the wilderness, for those who live on the outskirts; and for people in such situations venison is a cheaper commodity than beef. But for the vast and overwhelming multitude of the people of the continent, game is no longer in any sense an essential factor of the food supply. It has become a luxury, it is so regarded, and it is sold at prices which make it such. With the exception, perhaps, of rabbits or hares, the supply of wild game as marketed is not such as to reduce the cost of living to persons of mode-

SEA AND RIVER FISHING

Spring Along the Great Miami.

WHAT pleasant memories are conjured up in the mind at the first appearance of spring weather, when the long wintry days have reluctantly yielded their iron-clad grasp on nature and give way to the warm gentle rays of sunshine! True, winter has charms which cannot be denied, but still there is something sad and melancholy about it all which can only be dispelled entirely when the snow is gone and the ice melted away, and the blossoming again into life of the long dormant woods and meadows.

Tiny wild flowers begin to appear, and the forest trees are bursting into leaf with marvelous rapidity. Charlemagne very fittingly called the month of April the grass month, and the people of the Netherlands still call it grassmaand. The brown fields, no longer brown, are filled with the perfume of the flowers, and the busy little bee is already abroad prospecting for sweets. The birds, appreciating the change of temperature, have returned from the Southland and are everywhere. Robins are flitting about on lawn and in orchard, seeking a location for their nest; bluebirds are similarly engaged. The busy bluejay is seen darting from bush to bush, noisy and boastful always. Redbirds, orioles and hundreds of others once more enliven the lanes and hedge rows, so long silent and deserted. Away down among the willows along the creek a flock of crows are scolding away with all their might, and now and then the clear call of the bobwhite comes to your ear, recalling memories of sport during the crisp days of last October.

The farmer boy, busy with his spring work of plowing, fence building, etc., whistles cheerfully, but his heart is not with his work. He would much rather stroll alone in the woods, watching the birds, gathering flowers and mushrooms or better yet would he enjoy going after fish at the river. Long days ago he had hunted up his fishing tackle, and if he does not happen to own a rod, has cut himself a pole in the swamp. His outfit complete is modest and inexpensive in the extreme. A bit of line, a couple of hooks and a chunk of lead are all he need purchase. Reels are a luxury he knows little about, and the meaning of the word creel is as Greek to him. Any sort of stout cord makes him a stringer, and an old tin can a splendid receptacle for angleworms or grubs. If he wants minnows or crawfish, he catches them in his hands, placing the former in some little pool, carefully walled up with stones to prevent their escaping. The crawfish he places in the crown of his straw hat and then puts it on his head in order to have them handy —it makes my head itch yet to think of it. Envied above all other boys was the chap who was lucky enough to own a dip net.

How well I remember the joy experienced when my father used to announce that we were to take a day's fishing at the Great Miami River in Ohio. My boyhood home was three miles or more from the river and a trip to it was an event of some consequence to be excelled only by a visit to my grand parents who lived in the city of Dayton, twelve miles away. The ride to the river in the spring wagon was a journey full of joys and anticipations to me, and if you know how long it takes to drive a heavy farm horse, hitched to a big spring wagon, three miles, and how many questions the average small boy can ask to the minute, you can have some idea of what father was "up against," as the saying goes.

Arrived at the river the first thing was to rig up the fishing outfit and find some cool, shady place to tie the horse, after which we were free to try all our arts on the finny denizens of the river. There was a small creek emptying into the river where I usually fished which had a log dam built across it years before to furnish power for a sawmill. The mill was gone and the dam nearly so, but a small portion of it remained jutting out into the water, and from my perch on this, many a fine string of yellow belly catfish have I caught. I remember on one occasion when wading waist deep in this stream with a minnow net I scooped it up full of nice fish.

Another favorite fishing place was at the Franklin dam. On its broad sloping planks I have sat by the hour, chilled to the marrow in the damp air of early morning, and literally stewed later on as the sun neared the zenith, but one will endure much to catch fish. About the middle of this dam a large piece of timber projected out much further than the rest, and just above it a leak had sprung in the planking through which the water spouted with such force that it was difficult to keep your footing on the narrow platform below. Here my father and brother used to take their stand, and many a fine lot of channel cats did they pull out. Bass often bit well at this point as did eels also.

One time father sent me to shore with several big channel cats, and as I was stepping gingerly along over the rough stones and sharp mussel shells which lined the bank and made walking with bare feet unpleasant in the extreme, I met several fashionable well-dressed women and men —"big guns" I called them then—who were strolling leisurely along, seemingly endeavoring to see which could use the largest and most intricate words to convey their meaning to each other. Seeing my big fish, one of the fair ones, thinking them to be trophies of my own skill, heaped unstinted praise upon my young head until I felt much as Alexander must have felt when he realized that there were no more worlds to conquer. She called me a good boy, a brave lad and other names equally as flattering, and at last, when her store of compliments was exhausted, wound up by asking, "Where in the world did you catch them?" Did I remember my mother's oft-repeated admonition not to tell stories and truthfully tell the woman that not I but another had caught those fine fish? Not a bit of it! Big reputations have not been made by being truthful at all times since the days of George Washington, and so I answered, "I caught them up there at the dam," looked her straight in the eye, and smiled as only a towheaded, freckle-faced country boy can, and went on my way.

Down below the dam a big stone reared its head above the waters, and it was beside this stone that I caught my very first fish. I do not remember what species it belonged to—might have been a common sucker for all I know—but I do remember how proud I was of it and how carefully I kept it separated from the rest of our catch so I could eat it myself.

With my father and a neighbor boy I rowed up the river one day to Shepherd's Point, a sycamore-studded peninsula which extended out into the river a short distance, and anchored near shore. We used crawfish for bait and soon had some eighty yellow bellies in the bottom of the boat. The bait becoming exhausted, one of the men shot some frogs alongshore with his revolver, but at this juncture two men came along in a boat and gave us some balls of dough which they were using as bait for carp, and we resumed fishing. I caught one big fellow, but had no further success that day.

Carp even then were a nuisance in the river, and now they are about the only denizens of its waters. The paper mills are now casting their poisonous waste matter into the stream, and the year 1895 saw the last of the good fishing. The last day's fishing I had in this river was in company with an old schoolboy friend, and we caught carp so fast for a time that we were kept quite busy, but as it took a brave man to eat the first oyster, nothing short of a hero should tackle a big mud-flavored carp, so we threw them away.

There is a charm aside from fishing in being along a Northern river in the spring time. The kingfisher, perched on the dead limb of a tree, is noisily and tirelessly winding up his reel, and as you walk easily along the shady bank you surprise many a duck which has stopped to rest for a few days longer than his fellows on the northern flight. Out from almost under your feet a pair of snipe leap into flight with their peculiar little cry which startles you for an instant, and plunk, plunk, into the water go several water snakes which had been taking a siesta on some overhanging branch, for even the humblest of creatures are enjoying the return of the spring sunshine. C. A. V.

Coachman for Bass.

EAST ORANGE, N. J., March 1.—*Editor Forest and Stream:* Have been very much interested in Mr. Plumley's article on the coachman and also Mr. Ewbank's corroboration with his royal coachman. What they say applies to trout, and yet I can add a trifle to the coachman wight by my experience with the Delaware black bass. In fishing for them I have always had my best luck with the royal coachman; not as a dropper or a middle fly, but always the tail fly.

I can also add that in my short experience with trout, the coachman, either one, applies when they will take no other fly.

Whoever tied the first coachman, I certainly take my hat off to. A. JAY MARSH.

Trout Fishing at Chippenhook.

At the springs, where I chanced to be stopping, there came a man who professed to be an expert with the rod and reel. He was from the city and attracted a great deal of attention from the visitors at the springs by his recitals of his various piscatory experiences and triumphs in the trout streams of the neighborhood. He sallied forth one day with his beautiful store rod and tackle to try the stream of Chippenhook.

A boy of twelve observed him and his rod, and after his return on the afternoon of the same day went over the same waters to try his luck. The boy's rod was a simple birchen one, his line large enough for pickerel fishing through the ice, his hook such as old salts give you at the seaside when they do not want you to catch anything. However, he set forth, but without any bait. What was he to do? The ground was parched and dry and worms not to be found. I have generally found this to be the case at country resorts, unless you pay the porter for furnishing them. The boy's heart was as light as his bait box, but his head was not as empty.

As he traveled along through the fields he noticed the grasshoppers jumping, and occasionally one fell into the stream. But very few of these swimmers succeeded in crossing the Rubicon, because all at once there was a dimple on the water and the struggling swimmer disappeared.

"That must have been a fish," thought the boy. "Let me try the same bait." So throwing down his pole he carefully made his way through the meadows, and as the grasshoppers jumped he followed them, and banging his hat down upon them, caught without great difficulty enough to commence operations.

At the first place he threw in, there was a rapid eddy whirling around among rocks at a sharp curve of the brook, and just below was a stone wall, the dividing line of two estates, underneath which the brook swirled and tumbled as if anxious to escape from its trammels, and like some culprit in his prison cell, make a wild dash for liberty. As soon as the line struck the water and went under the bank at the boy's feet, he felt a tug, and pulled up but found nothing. The bait itself was gone. Again he affixed a grasshopper, which he had kept alive in his bait box, formerly used by his sire as a receptacle for fine cut tobacco and cast in his fortune on the line. Again after a brief period there was a strain, and he pulled out a little trout which seemed to have an appetite suited to a much larger stomach as he flounced about at a great rate, still holding the 'hopper as he was deposited in his captor's pocket.

Again up the stream, trying in many places, successful in none, the boy made his way to a spot where there was a great basin. In this basin there were numerous dace always to be seen near the bottom with their heads up stream, but never a one of them bit at that boy's bait, although he had tried them oft. "Perhaps I shall have better luck to-day," said he, "and as I have been here before and there is nothing to prevent the dace from seeing me or the shadow of my pole, I will cross the brook below the basin and see if I cannot do something on the opposite side."

So saying he crossed the brook and went directly away from it a couple of rods. Then he lay down and carefully wound up his line at the top of his pole—he had never heard of a reel—and leaving a few feet depending and renewing his bait, he crawled on his stomach until he got at a suitable distance to cast his line, having the tip of his pole at the verge of the bank and the line just long enough to strike the water beneath it. The basin, though broad, was very shoal, but under the banks the stream ran deep. "Now, here is a place for luck," said he as his bait struck the water.

No sooner had it done so than a fierce tug that bent his rod rewarded his painstaking. He threw the rod backward with the fish at the end of the line, and landed him safe within the meadow and then rapidly crawled back to examine his prize. The first glance assured him that his trophy was no ignoble dace, but a real beauty of the most beautiful and daintiest of fish, a speckled trout of a full pound weight.

"Ah," thought he, "where there is one, there are more," as the old woman said of the burglars who entered her house. Another 'hopper was affixed to the hook, and again the boy approached the brink in the same manner as before. The same result ensued thus far—the bait struck the water, a fish bit, but the boy did not get him. The bait, however, was taken.

Again he crawled back, rebaited, returned as before and cast in without result. Then there was a good one. The boy threw his pole with fish at end of line, crawled back and captured it. Again the lure was cast, but no response ensued. Finally he arose, approached the bank, looked over, and there were the innumerable dace all occupying their old positions, all with their heads up stream, fins lazily moving—evidently they were not hungry—and they never were.

Onward now the boy went, trying his line in various places, but for a long time with no result. At last he came to a pasture where there were many rocks, and where the brook ran brawly, and it looked good, for trout were among the many eddies, shoals, running waters and deep holes. In one of these likely places the lure was cast, and the effort rewarded with another victim. On again to a deep hole, a place that looked to be the finest in the whole course of the clear and transparent waters.

> "Just in the dubious point, where with the pool
> Is mixed the trembling stream, or where it boils
> Around the stone, or from the hollowed bank
> Reverted, plays in undulated flow,
> There throw, nice judging, the delusive snare,"

or some such thought came into the boy's mind.

Standing as far away as possible and screened by the sheltering arms of a gigantic maple, the boy made his cast and several of them without result. At length he put on a fresh 'hopper and cast again. And this time a good bite confirmed the fact that a dainty fish desires a dainty dish for his refection, and so out he came to find a lodging in the boy's pocket. Patience rewarded by one more capture, and then the trudge home.

"The shades of night were falling" as the boy reached a plank bridge, which afforded passage over the stream from the main road to a farmer's yard, and there the boy stopped to try his luck again. The stream was very wide at this point, as clear as crystal and quite deep. On either side was a dense growth of alders and birches, and just below the bridge was a deep hole. To the boy's surprise at the very first cast out dashed from the opposite side, under the cavernous bank of which he lay concealed, a fish that seized upon the bait with amazing voracity. He hooked himself, and the boy raised him out gently and put him upon the planks, thence into his pocket, and whistling gayly made tracks for the hotel. Here to the astonishment of all the guests he produced the seven trout, most of them fine ones, and the water he had fished over was the same as that which the city fisherman had tried in the forenoon, which goes to show that a birch rod, whether wielded in the hands of a school mistress or a boy, is better than a brightly varnished and resplendent metal-mounted one, and live bait better than artificial flies—sometimes. Piscator.

Amateurs' Expenses.

Boston, Mass., March 4.—*Editor Forest and Stream:* The Boston Herald, in announcing the time and place for holding the national casting tournament, says:

"Many anglers from Canada and Mexico are expected to compete in addition to quite a delegation from Massachusetts and Rhode Island of the Eastern States that will be represented."

The expected does not always happen. The management of the National Association has always called its tournaments "international" affairs, evidently because it hopes that some day a foreigner will compete. "National" is not sufficiently imposing, so it seems. Canadians have never taken part in any of the big tournaments, I believe, and if there are any anglers in Mexico, they are probably interested more just now in watching their little war than in practicing on their hot sands for the forthcoming international at Milwaukee. Rhode Island and Massachusetts are also unknown in these big tournaments. When the last one was held in New York city they did not take part, and the affair suffered mainly from lack of local support.

The casting clubs throughout the country should all be represented in the national meetings and tournaments. One important reason why they are not is found in the fact that few men who can spare the time can afford the necessary expense. The cost to one living 1,000 miles from Milwaukee is about $100, including railway fare, hotel bills and entrance money in the tournament.

It is an honor to be elected delegate or executive committeeman from one's home club to the National Association, and when the club elects one, it expects that he will attend. I have never heard of a case in which a club provided for the expenses of its representative, though this may be done in some cases. Some say that it is only fair that it should be done, for the club, not its representative, derives any benefit that may accrue.

Whether its representative could accept expense money is another matter, and one that, so far as I know, has not been tested. There are those who say he cannot, since he is an amateur, and that to accept expense money would be equivalent to being paid for services rendered.

Others argue that if a club wishes to contribute toward its representative's expenses, it

should do so, and that the representative is not really paid in a commercial sense, since the club's interest in his work is confined to the business meetings he attends and not to the contests of skill he may enter. If he wins, the club is proud of him, and of course wishes to see him near if not at the head of the list of all events. he enters.

These are some of the reasons why the twenty-odd clubs affiliated with the National Association are not all represented in its councils. Take the California clubs, for example. Their delegates could hardly make the journey to Milwaukee and home again for less than $200, and there are few busy men who feel that they can afford to pay so much for three days' enjoyment.

AMATEUR.

An Irish Warden at Work.

IN a recent issue of the Irish Times there is a report of a case in which one Mooney was fined $35 by the fishing conservators of the Limerick district for poaching in the Silver River near his home at Ballinacarrig. The record shows that the Irish wardens prosecute their work with vigor. The sergeant who made the arrest was publicly commended. The record follows:

The evidence of Sergeant O'Donnell was to the effect that on Boxing Day he was on plain clothes duty, and noticed the defendant on the opposite side of the bank. Mooney, whom he did not know at the time, had a four-prong spear. The sergeant concealed himself, and saw the defendant lying at full length, watching for fish, and using the spear at frequent intervals. Sergeant O'Donnell, finding it would be impossible to "capture," or even to identify, the man, he being a good distance away, jumped into the river, and swam across. However, when he got to the other side he found that the defendant had disappeared, and on looking round he saw that he had also jumped into the water and swam across to the opposite side, having discovered that the officer was on his track.

The sergeant, finding that his movements were being watched, concealed himself for a considerable time, and Mooney, thinking apparently that he had abandoned the chase, went up the river for a distance of about a quarter of a mile and resumed operations. The sergeant, however, had him under close observation all the time. He saw the defendant use the spear as if he was killing something, and then he took a large salmon from the water. "Just as he was taking up the salmon, your worships," said the sergeant, "I took a running jump into the river which was five feet deep and swam across to where Mooney was." The sergeant added that he took possession of the salmon, which weighed seven pounds.

New Britain Fish and Game Club.

AT the annual meeting, held in New Britain, Conn., the result of stocking nearby streams with trout was reported to be favorable, but a contrary report was made regarding Hungarian partridges. These officers were elected: President, Hedley P. Carter; Vice-Presidents, Franklin Bassette and Orlando Swift; Secretary, A. W. Parsons; Treasurer, R. C. Merwin.

THE TOP RAIL.

SINCE one of our consuls has vouched for the accuracy of the following statements, it is not for me to say that "water-witches" are not deserving of our faith; I have not been converted, that is all.

"Recently," says Vice-Consul General Baker, writing from Sydney of the efforts to extract water from the dry soil of Queensland, "it has become a common practice to locate subterranean water by the old-time expedient of employing a 'water diviner,' and several men who are gifted with the strange power of detecting the presence of underground streams of water are engaged in selecting suitable sites. There is a certain proportion of failures, but some of the 'water diviners' undertake to sink these wells, finding casing and everything, at a cost of $3.64 a foot, on the stipulation 'no water, no pay.' For the deeper wells the cost is $2.91 to $4.13 per foot for the first 1,000 feet, the borer finding casing and all needed material and supplies."

John Russell Bartlett says, in his "Dictionary of Americanisms," that a water-witch is "a person who pretends to have the power of discovering subterranean springs by means of the divining-rod, made once from the witch hazel, but now more commonly from the peach tree. In many parts of the country not a well is dug without a previous consultation with a water-witch; and one who attempts to run counter to the popular delusion is in danger of having his common sense doubted."

In the Southwest a boy once took me into a little arroyo, and pointing to a stake, said it marked a vein of water. I was not from Missouri, nor had the famous expression now intimately associated with that State been invented, but I was incredulous nevertheless. This angered my friend, who said his father had paid a certain person well-known in that country to locate water. This person had cut a green mountain ash sprout, clipped it so that it resembled a letter Y, and holding the twig firmly by the stem, with the forks pointing ahead of him, had walked about until the sprout, of its own accord, pointed to one side and downward, indicating water. So they drove the cedar stake and prepared to unearth the water, which the diviner said was close to the surface.

Boylike, I was interested, and agreed to help develop the vein. In the next three days I learned that dynamite is powerful; how to manipulate a drill; and finally, to put implicit faith in a saying then current in those dry mountains, "Believe nothing you hear, and only half you see with your own eyes."

With pick and shovel, drill and b'asting powder we drove a five-foot shaft about fifteen feet into the red earth and flinty stone. We cut through the dipping ledge that the diviner knew, from the surface formation, we would find, but the only water that gushed forth came from our canteens. Finally I was left alone while my companion rode home for more water. It was poor judgment on his part, and disastrous to his scheme, for while he was away I plugged all the drill holes with dynamite, touched it off and ran, hoping, in my innocence, to save ourselves much labor with pick and shovel.

It rained earth and stone and cedar trees for a long time after the blast, but no water. What had been a shaft was but a mound of earth and stone, and it was not deemed worth while to clear it out.

* * *

THE building of aeroplanes has created an important demand for the better grades of canes. Airmen have come to an appreciation of the lightness and strength of those canes which have long been favorites with anglers, and the average acroplane seems to demand a greater number of the reeds than one would at first think were needed. They have a way of bumping into fences, alighting with a jar, or fouling various objects—all of which demand repairs and more canes. All things considered, canes are not much lighter than seasoned spruce, and are not so strong, for they will buckle where spruce will stand; but in the rupture spruce splinters in long slivers that may prove dangerous. Then, too, spruce in long spars is becoming more and more costly.

In the early days of canoe sailing lateen sails were much used. While the mast was short and was made from spruce or white pine, the yard and boom were often made from whole canes, for this type of sail required very long spars, its small area considered. The canes were more or less unwieldy, however, particularly as the taper was not satisfactory, and later on clear spruce was used. These spars were tapered from the center both ways and were often bent like a bow by the wind, yet it was very rarely that one broke.

Spruce is still the standard material for canoe spars and for double paddles, though the cost has appreciated year by year. There are few varieties of wood that will outwear spruce for canoe paddles in deep waters where there are no rocks to split the blades. Along the Hudson River to-day there are paddles whose shapes proclaim them to have been made in the heyday of the Everssons; say thirty years at least.

* * *

ONE day a huge tomcat sat on a fencepost near one of my windows, expressing his views on stray cat life in his own fashion. I strung my bow and drawing an arrow nearly to the head, let it go with force enough to drive the steel head through an inch board. It struck the cat full in the forehead, but bounded up, indicating a glancing blow. As for Thomas, he sat perfectly still a moment, then looked up, suddenly collapsed, fell toward me to the ground, kicked once or twice, then lay still. Thinking that his resonant voice was silenced, I went for a spade, but when I returned the cat was nowhere in sight, and I have never seen him since.

* * *

JAMES M. NELSON, a British naturalist, en route for Florida, is living on the after deck of the City of St. Louis in a portable house. Reason, no berths vacant. Our British friends carry a lot of duffle with them to camp. Was it not Kitchener who told his officers they could not take pianos and four-post bedsteads along with them to war?

GRIZZLY KING.

YACHTING

Some News and a Little Gossip.

THERE is a possibility of Westward and Elena, Commodore Plant's new schooner, racing in these waters after all. Yachtsmen generally and Commodore Plant in particular were much disappointed when the announcement was made that the illness of Alex. S. Cochran, the owner of Westward, would not permit him to race his yacht this summer. It was known that Westward was for sale, and there has been much talk among New York Y. C. members about purchasing the yacht and bringing her to these waters. While nothing definite has yet been done, it is stated that a member of the club is seriously thinking of purchasing Westward and so helping to make the coming season a very brilliant one. Commodore Plant has tried several times to have some good racing. He has built the Ingomar, Shimna and now Elena, and each time he has found that there is nothing to race against.

The annual meeting of the Yacht Racing Association of Long Island Sound will be held at the Hotel Astor on Thursday, March 18. At this meeting the schedule will be adopted. A tentative one has been drawn and submitted to the delegates, so that agreeing on it should not be a troublesome matter. Officers, too, will be elected. Stuyvesant Wainwright of the American Y. C., has been renominated as President, James W. Alker, of the Manhasset Bay Y. C., will again serve as Secretary, and Victor I. Cumnock, of the Seawanhaka Corinthian Y. C., will be Treasurer. The nominees for members of the Executive Committee are W. Butler Duncan, Jr., Charles P. Tower, H. A. Jackson, Jr., and E. Burton Hart.

Recently formed and incorporated under the laws of New Jersey, the Farragut Sportsman's Association last week held their first annual election of officers. Their membership numbers 125 persons. Those chosen to serve for the ensuing year were Charles Elmer Smith, President; S. H. Wharton, Commodore; Walter Law, Captain; Frederick von Nieda, Recording Secretary; Harold A. Renner, Financial Secretary, and S. P. Hallowell, Treasurer.

The combined fleet of sail and power boats of the association numbers upwards of 75 craft, and is in charge of expert motor and sail boat navigators. Every Saturday during the coming season will mark some sort of event at Bear's Landing, Camden, where the association has leased a specially adapted and equipped property, and where, during the balance of the winter, sociability will have full sway.

The Eastern Y. C. and the Kaiserlicher Y. C. have agreed that white cedar is not to be used in future in the construction of boats of the Sonder type intended for international racing. This agreement does not, however, extend to boats already built or under construction. One of the three American boats selected to go to Kiel next month, Cima, is planked with white cedar; Beaver is planked with red cedar, and Bibelot with mahogany. The agreement follows what Eastern yachtsmen consider a very sportsmanlike attitude on the part of the Germans in not seeking to make an issue of the construction clause in the international agreement signed five years ago.

Against the hubbly waters of Kiel Harbor the Germans found that strong planking was necessary to stand the battering, so most of the Sonder yachts are built of red cedar or mahogany. But the Americans, accustomed to smooth seas off Marblehead, sought the lightest of wood, and by using white cedar were able to bring the weight of their yachts close to the minimum limit of 4,030 pounds. The Spanish yachts, which came to Marblehead last August, were nearly a thousand pounds heavier than the American boats, and stood very little show in light weather.

The international agreement states that the Sonder yachts shall be built of cedar or heavier wood. The Germans admitted that white cedar was real cedar, but that they never had any intention of building their yachts of such material, principally because of its poor quality, its lack of rigidity and of its porous nature.

Five Sonders are being built for this year's racing, three are from designs by W. Starling Burgess, one by Bowes & Mower, and one by E. A. Boardman.

Badger, built by the W. Starling Burgess Co. for C. H. W. Foster, was launched at Marblehead, the first of January. This boat was built from the molds of Beaver, Mr. Foster's successful racer of last year, which will be one of the American team at the Kiel races next June. The other two boats, Ellen II., owned by C. P. Curtis, and the Loring racer, are almost sister boats. The same molds, except for the three after frames were used in building the boats. Both are slightly finer than Beaver or Badger and a little longer over all. All three boats are planked with mahogany and will be finished bright. Ellen II., like Badger, is completed, while the Loring boat will be finished this week.

The Bowes & Mower Sonder racer for H. M. Sears, is building at the David Fenton Co.'s yard at Manchester. This boat is expected to be an improved Cima and Joyette, and in the shop looks very much like the Burgess boats. She is planked with cedar and nearly finished.

The other Sonder racer is the Boardman-designed boat building for Clif. A. Wood, of the Corinthian Y. C., by Lawley, at Neponset. The Wood boat is designed after Charles Francis Adams 2d's champion of 1910, Harpoon.

New York Y. C. Schedule.

AFTER experimenting with regattas through the Sound and others sailed off Newport, the New York Y. C. is coming nearer home for its racing this coming summer. It is many years since the regattas of this club attracted big fleets, and although all sorts of schemes have been tried, not one has been successful. Last year there were three starters in a three days' series sailed off Newport.

The regattas of this club are closed events, open only to members of the club. Years ago there were many members who took such an interest in yacht racing that the club's regattas were always successful. Things have changed since then. Racing yachts are costly playthings, much more costly than they used to be. It takes a large purse to maintain a first-class racing schooner or sloop, and as the cost of running these vessels increased, those who loved the sport took to racing smaller boats. The New York Y. C. does not recognize a vessel smaller than a 30-footer, and consequently with the large yachts disappearing, there has been a marked falling off in its races.

The regatta committee this year, H. de B. Parsons, C. Sherman Hoyt and L. Vaughan Clark, has arranged a tentative schedule. This shows that except for the cruise Newport will not figure in the racing. There will be regattas on the Sound off Glen Cove and Huntington. This season will open and close with races off the Glen Cove station, and in July the New York Y. C. series, which last year was sailed off Newport, will be sailed off Huntington. The Sound there is wide, so that an ideal course can be had, not as good as off Sandy Hook or Newport, but ideal for present-day yachting, and at that season of the year a fair breeze should prevail. The yachts usually make their cruising on the Sound in July, and the committee hopes that those members who have yachts will help them in their efforts to revive racing in the club.

The season of the club will open with the regatta for the spring cups sailed off Glen Cove on June 22. The series off Huntington will begin on July 6 with a regatta for the Sound cups. The Huntington cups will be sailed for on July 7, and the annual regatta and the Bennett cup races will be sailed on July 8.

The fleet will rendezvous for the annual cruise on August 3. The port has not yet been selected. The season will end with races for the autumn cups to be sailed off Glen Cove on Sept. 7.

Beverly Y. C. May Move.

THE "head" of Buzzard's Bay, famous for generations as an ideal yachting ground, a locality where memorable regattas have been fought out, is likely to be transformed into a fairway for commerce with the opening of the Cape Cod Canal, says the Boston Herald. So great are the changes likely to develop off Wing's Neck, where is situated the home of the Beverly Y. C., that members are seriously considering a new site for their station or a merger with the Sippican Y. C. at Marion.

Canal traffic—and the advent of such traffic is but a season or two distant—will sweep over the bay close to Wing's Neck, and courses that have been in use these many years will lie in the tangle of shipping that is regarded as inevitable. Tows, stretching nearly a mile from tug to sternmost barge, will monopolize deep water not far from the entrance to the dredge channel which begins southward of the neck, and the deep water beyond Bird Island will serve as an anchorage ground or approach to the canal, where commerce carriers must maneuver before undertaking the six-mile ditch passage to Massachusetts Bay.

The situation that confronts the Beverly Y. C. is disquieting, but there is ample time in which to devise a way out of the new hampering conditions that must of necessity arise in opposition to a yacht rendezvous in a vessel fairway. Should the club remove its racing ground to the westerly side of the bay and, perhaps, jointly use the courses now established in those waters, the distance from Wing's Neck to the starting line will not be prohibitive. With the southwest breezes that prevail during the summer with the tenacity of the proverbial trades, racing boats can quickly make the flight from the Cataumet shore to the other side and the same favorable wind will as easily bring them home.

Yachts Change Hands.

THE following transfers of yachts are reported through the Hollis Burgess Yacht Agency:

The 60-foot motor boat Nautilus, sold by Marcellus Coggan, of Boston, to Judge Louis M. Clark, a prominent member of the Boston and Eastern yacht clubs.

The 25-foot auxiliary yawl Cavalier, owned by Harold Robbins, sold to F. P. Valentine.

The 25-foot auxiliary yawl Al Bawa, owned by Tucker Daland, of Brookline, Mass., sold to Chas. H. Johnson, a prominent member of the Corinthian Y. C., Marblehead.

The 21-foot knockabout Carmen, owned by Chas. H. Johnson, is sold to a prominent Rhode Island yachtsman.

These are reported by Frank Bowne Jones:

The 85-foot steel gasolene cruiser Corinthia, sold by J. A. Mollenhauer to L. D. Shoenberg. Corinthia is cruising South.

The schooner yacht Loyal, sold by C. L. Dimon to George B. Campbell. Loyal will be

converted into an auxiliary, and will be immediately fitted out for a cruise to the West Indies.

The 31-foot rater Mavourneen, sold by George Lee, of Boston, to E. M. Mills, of Chicago. The yacht will be shipped west shortly and will be raced by Mr. Mills on Lake Michigan.

The New York 30-footer Minx, sold by W. H. Childs to William F. Pell, of New York.

The S Class boat Bensonhurst, sold by W. H. Childs to Rowland Smith, who will race her on the Sound next season.

An order has also been placed by Mr. William H. Briggs, of Rochester, N. Y., for a 70-foot gasolene cruiser from the designs of Mr. Morgan Barney, to be built by the Eastern Shipyard Company, of Greenport, L. I.

Transfers by Tams, Lemoine & Crane:

The steam yacht Norman has been chartered to C. K. G. Billings, N. Y. Y. C., for Willis G. McCormick, of the same club. Mr. Billings will use the Norman at Tampico and in the Gulf of Mexico, where there is good fishing.

Narragansett Bay Schedule.

The schedule committee of the Narragansett Bay Yacht Racing Association has adopted the following schedule for the coming season:

Tuesday, May 30, off Fall River—Fall River Y. C., regatta for all classes.

Saturday, June 3, off Edgewood—Edgewood Y. C., regatta for all classes.

Saturday, June 10, off East Greenwich—East Greenwich Y. C., regatta for all classes.

Saturday, June 17, off Pawtuxet—Rhode Island Y. C., regatta for all classes; ladies' day.

Saturday, June 24, off Bristol—Bristol Y. C., regatta for all classes.

Saturday, July 1, off Washington Park—Washington Park Y. C., regatta for all classes.

Tuesday, July 4, off Edgewood—Edgewood Y. C., special race for classes P-Q as one class; special race for classes D-E as one class; race for class I.

Saturday, July 8, off Edgewood—Edgewood Y. C., special race for classes P-Q as one class; special race for classes D-E as one class; race for class I.

Saturday, July 15—Open date.

Saturday, July 22, off Fall River—Weetamoe Y. C., races for classes D, E, I, X and power boats.

Saturday, July 29, about off Bristol—Bristol Y. C. ocean race.

Monday, Tuesday, Wednesday and Thursday, July 31, Aug. 1, 2 and 3, off Conanicut gas buoy—Series of races between representatives of Massachusetts Bay 18-Foot Knockabout Association and Narragansett Bay 18-Foot Knockabout Association; races to be handled by Edgewood Y. C.

RACE WEEK.

The association offers a prize plaque for the yacht in each of the classes making the best showing during race week. "Rule XIX., Prizes and Percentages," will govern the award. A yacht starting in less than five races during the race week will not be entitled to one of these association plaques.

Saturday, Aug. 5, off Edgewood—Edgewood Y. C., regatta for all classes.

Monday, Aug. 7, off Jamestown—Conanicut Y. C., regatta for all classes.

Tuesday, Aug. 8, off Potter's Cove—Rhode Island Y. C., regatta for all classes.

Wednesday, Aug. 9, off Fall River—King Philip Y. C., regatta for all classes.

Thursday, Aug. 10, off Fall River—Fall River Y. C., regatta for all classes.

Friday, Aug. 11, off Newport—Newport Y. C., regatta for all classes.

Saturday, Aug. 12, off Bristol—Bristol Y. C., regatta for all classes (end of race week).

1. Saturday, Aug. 19, off Edgewood—Edgewood Y. C., special races for classes P-Q as one class, special races for classes D-E as one class, race for class I.

2. Saturday, Aug. 19, off Dighton, Mass.—Taunton Y. C., races for classes S, X, Z, C, W and power boats.

Saturday, Aug. 26—Open date.

Saturday, Sept. 2, off Bristol—Bristol Y. C. regatta for all classes.

Monday, Sept. 4, off Edgewood—Edgewood Y. C., races for classes Q and I.

Saturday, Sept. 9, off East Greenwich—East Greenwich Y. C., races for classes D, E, I and W.

Saturday, Sept. 16—Open date.

The races counting for the championship in the respective classes will be announced later by the executive committee.

Yachting out West.

San Francisco, Cal., Feb. 27.—*Editor Forest and Stream:* While no yachting is now being enjoyed on San Francisco Bay, except by a few enthusiasts who refuse to lay up their craft for the winter months, some of the clubs are having an enjoyable season of entertainments, and meetings are being held as regularly as in the summer time. The Indoor Y. C., an association of San Francisco sportsmen which has adopted the name, manners and customs of a yacht club, attracted considerable attention recently by taking an extended cruise, but this, instead of being around the bay, was to the high sierras, where the indoor yachtmen had the time of their lives reveling in the snow. In former years trips have been made to Yosemite Valley and Truckee, but this season it was decided to visit Portola, on the line of the Western Pacific Railroad recently completed. However, the party was unable to reach the new Plumas county town, for a big landslide was encountered at Belden and the festivities were held there. The night was spent in the sierras and the return to San Francisco made next day, after a stop at Oroville. The possibilities of the country, however, were apparent to many who had never entered the Feather River country before, and next season many will make the trip there again at a time when game and fish can be secured.

J. D. Thomas, of Seattle, is having built for him, after the designs of Ted Geary, a fine new racing craft to be known as Spirit III., and it is anticipated that this yacht will prove to be one of the fastest on the coast. The yacht will be used in the International race off Victoria next July, and if she is successful in this race, as is thought likely, she will be brought south and raced against the crack craft of San Francisco and San Pedro clubs. The new boat will be of staunch construction for sailing under the universal rules, and when completed will be seaworthy enough to be able to engage in the California to Hawaii race. While efforts will be made to get the best speed possible out of Spirit III., the elements of comfort and utility have not been overlooked, features that are fast becoming paramount to the builders of new boats on the coast. A. P. B.

Motor Boating.

Echoes from the Motor Boat Show.

A motor boat enthusiast visited the recent show intent on buying the best marine motor in the market for his new craft. He spent several days at the exhibition and then announced to a friend, "I have bought the second best motor in the country."

"What on earth do you mean by that?" asked the friend.

"Just what I say, and I have the backing of five big manufacturers that I am right. When I visited the show I had in my mind the five best motors made. I visited each exhibit, and announcing that I wished to buy a motor, I always found the head man ready to pay me some attention. He carefully explained to me the attractive features of his own motor and proved conclusively that his motor was the best in the country. After telling him that I would not decide without some deliberation, I innocently asked what he considered the second best.

"'Why, there is quite a gap between ours and the next best, but I should say the Black, Blank Motor comes next.'

"This operation I repeated at the five different exhibits. I found they all agreed on the second best, and so I purchased one of that make."

It is sometimes dangerous to make exaggerated statements as the following incident, which occurred at the motor boat exhibit, shows. Among the many boats exhibited by one concern was one on which a sign read "28 feet long; 4 feet beam; 12 H.P.; 20 miles an hour." Another sign also told that with a 30-horsepower motor 35 miles could be had. Two men were leaning against the boat, discussing things generally, and one remarked, "Now that statement of speed is absolutely false."

"That statement is absolutely true," said a third man who had not been noticed, and who happened to be connected with the building firm.

"All right," replied the accuser, "we'll admit it is true. Then you have a world beater and don't know it. Several boats are being built for the British International race. They are 40 feet long, have 600 to 900 horsepower motors and their builders will be delighted with 35 to 40 miles an hour speed. If you can get 35 miles with a 30-horsepower, in a 28-foot boat you have every other builder and designer in the world beaten and you don't know it."

The builder admitted he was beaten. Does such advertising pay?

The claims of two builders caused quite some fun during the show, and there is every likelihood of a fine race being arranged. Peter Pan III., is a runabout 28 feet long fitted with a 40-horsepower A. B. motor. Edith II. is a yacht tender of the express type equipped with a motor of the same type and power as that of Peter Pan. James Simpson, of the Reliance Company, owns Peter Pan III. and A. E. Smith owns Edith II., which was built by the Electric Launch Co. Under the old rule of measurement Peter Pan III. had to allow time to Edith II., and although Peter Pan III. made faster time, Edith II. won the cups. The Edith people asserted that their boat held the record in the race to Poughkeepsie and back, which caused Mr. Simpson to get out what was called "a red pepper" circular in reply. This showed that Peter Pan III., boat for boat, was faster than Edith II., but he conceded that Edith had the cups. This year the rule has been changed. Boats are to be measured and weighed, and there will be less opportunities of builders turning out craft designed to get in under extremely favorable conditions, and the meeting of these two will be watched with much interest. Mr. Simpson says he is willing to race Peter Pan III. against Edith II. over a course from 25 to 100 miles in length. If the course is 25 miles he will allow Edith 3 minutes and if over that distance Peter Pan will allow Edith II. a mile in every 25 raced.

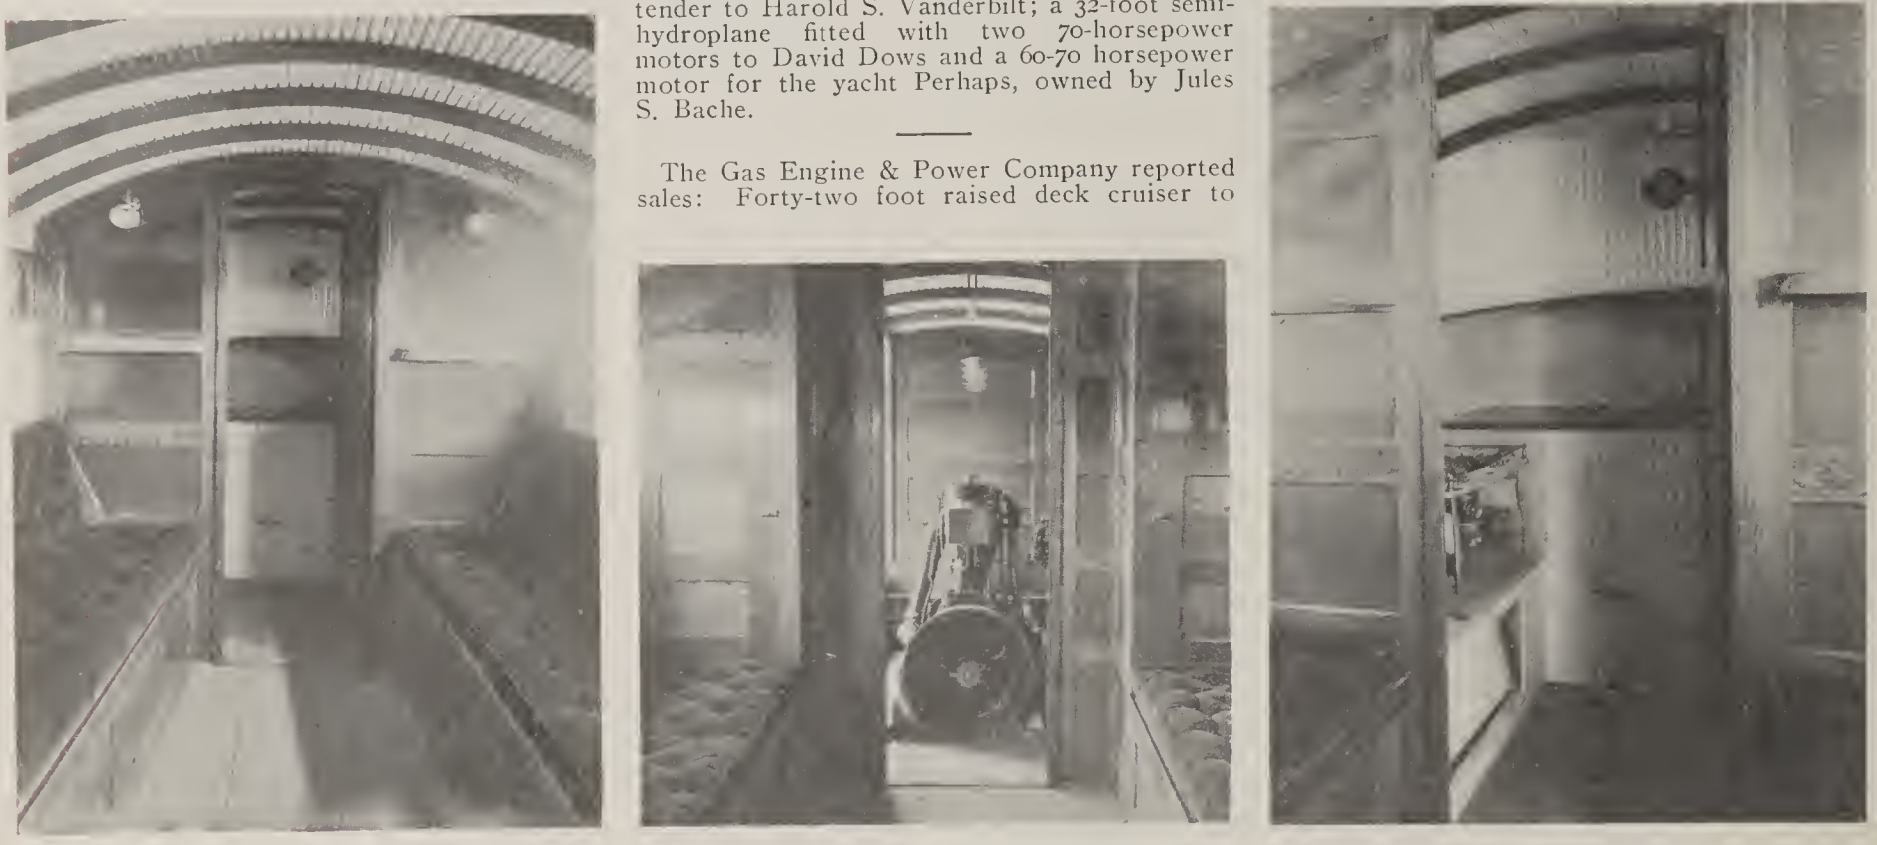
The four-cycle is growing more popular each season. It has many advantages over a two-cycle motor, but of course is much more expensive and much heavier. One manufacturer said, "If we find that a prospective customer has used a four-cycle we won't talk two-cycle to him at all." Another said, "We make a two-cycle motor, but only sell it when we have to. We don't advertise it, and we don't show it." The four-cycle motor will last longer than one of the two-cycle type. It will do more work and do it with more economy. A good two-cycle motor uses at least a pint of gasolene per horsepower hour. The Ralaco motor, one shown at the exhibition, is guaranteed by the builders not to use more than a tenth of a gallon per horsepower hour. There is a saving in cost of running and weight carrying, as a smaller tank can be fitted.

James Young, the treasurer of Madison Square Garden, said that the Motor Boat Show

is the best paying trade exhibition of the year. One reason for this is that it costs very little to fit up the Garden for the show. The boats show themselves. Much of the profit of the Automobile Show is spent in decorations. Last year the interest of the Manufacturers' Association in the Motor Boat Show amounted to $22,000, which was divided proportionately among the members who exhibited, thus cutting down their expenses. This year's show will return the association about $5,000 more than last year. During the twelve days the show was open to the public there were more than 125,000 visitors.

Of course there were many visitors of the know-it-all type who criticized freely. One of these carefully looked over the Elco de Luxe, one of the best built and best finished boats in the show, and then turning to Charles Cramp, the veteran shipbuilder, remarked, "That's an awful looking thing, isn't it; it would look well on the rocks."

"The Mauretania would look just as well," replied Mr. Cramp; "but you should know that boats are built to float in the water and not to run on rocks."



INTERIOR VIEW OF A 28-FOOT CRUISER SHOWING CABIN, ENGINE SPACE AND GALLEY.

Former Commodore Lewis Cass Ledyard was much interested in the Atlantic Company's exhibit and announced that he would get a 30-foot semi-speed Clipper launch fitted with a 15 to 18 horsepower motor for his daughter's use at Newport. This is a remarkably well finished boat and will make about 15 miles an hour. The Gurnet dories and the 30-foot raised deck cruiser attracted well and several were sold.

The Manufacturers' Association of Boat and Engine Builders held its annual meeting during the show. There were present about 125 members, and the reports showed that the motor boat industry had made great strides in the past year. It was decided to hold the annual motor boat carnival this year off Huntington during the week beginning Sept. 4. This carnival has formerly been held on the Hudson, but last year so much damage was done to the boats through floating logs in the river it was decided to make a change. Courses will be laid off for the long distance events and for the several challenge cup races. In 1913 the carnival will be held at Put-in-Bay and form part of the celebration being arranged on Lake Erie to commemorate the 100th anniversary of Commodore Perry's memorable victory.

The exhibitors were all delighted with the amount of business done at the show. Some who were timid because of business conditions had not prepared for much business. It is argued that dulness in trade in some quarters has boomed motor boating because a motor boat is not a costly luxury and a small craft will furnish lots of good healthy outdoor amusement for a comparatively small outlay. The Electric Launch Company, through Henry R. Sutphen, its manager, sold the 54-foot Elco de Luxe to T. N. McCarter, of the Public Service Corporation of New Jersey, who will use the boat off Seabright. Other boats sold were a 28-foot runabout to King C. Gillette, a 20-foot Elco Express tender to Commodore H. H. Melville; twenty runabouts to members of the Rumson Country Club; the raised deck cabin cruiser to Dr. H. H. Tinker for use at New London; a 35-foot express to W. T. Sampson for use on the Canadian Lakes; a 40-foot hydroplane to A. E. Smith; an express tender to Harold S. Vanderbilt; a 32-foot semi-hydroplane fitted with two 70-horsepower motors to David Dows and a 60-70 horsepower motor for the yacht Perhaps, owned by Jules S. Bache.

The Gas Engine & Power Company reported sales: Forty-two foot raised deck cruiser to Herbert W. Warden, of Paris, for use on Lake Geneva; 21-foot tender to Peter W. Rouss, for steamer Winchester; 40-foot racer fitted with a 6-cylinder motor, to make 34 miles, to Carl G. Fisher, of Indianapolis; 34-foot runabout to Mrs. E. V. Z. Lane, for use on Lake George; 30-foot runabout to Edward S. Woodward, of Ardsley-on-Hudson; 32-foot runabout to John C. Eaton, of Toronto, for use on the Muskoka Lakes.

George P. Spencer, of the Homes Motor Company, reported these sales: Thirty-five foot runabout, 25-25 horsepower motor, to Adolph Lewisohn, for use on Lake Saranac; 30-foot Lake Placid runabout, 20-25 horsepower motor, to F. R. Redpath; two 55-foot raised deck cabin cruisers fitted with 75-90 horsepower motors, boats designed by H. J. Gielow; a 35-foot cabin cruiser, 55-60 horsepower motor, boat designed by William Gardner; a 35-foot, 5.5-foot beam, runabout designed by M. M. Whitaker, to Stephen G. Powell for use on Lake Saranac; a similar boat built of mahogany with 17 miles' speed guaranteed to M. F. Bird; a 35-foot runabout, 20-25 horsepower motor to W. R. J. Planten; a 45-foot day cruiser designed by William Gardner fitted with a 55-60 horsepower motor for Charles Lane Poor; a 35-foot mahogany runabout fitted with a 20-25 horsepower motor for C. E. Proctor, and a 55-60 horsepower motor to a yachtsman of Montreal. All these motors are of the Holmes design.

James Simpson, of the Reliance Company reported these sales: Forty-foot cruiser for the Bermuda race fitted with a 60-horsepower Scripps motor for S. A. French; a 21-foot auto runabout fitted with a 20-horsepower motor to Lyon de Camp; a duplicate of the de Camp boat to Clarence A. Pittman for use on Lake Mahopac; a 40-foot mahogany speed boat fitted with a 100-horsepower motor to Edwin Trowbridge Hall, of Riverside, and runabouts to Albert Stern and Charles Hanson, of Brooklyn.

Cup Challenger Maple Leaf.

IN view of the many conflicting reports which have appeared in reference to the new 40-foot Thornycroft hydroplane, which is being constructed for Mr. Mackay Edgar, the following can be taken as official, says the Yachtsman:

The lines of the boat were supplied by Sir John Thornycroft after numerous tank experiments. They are similar to those of his famous Miranda IV., and are in accordance with the various patents which have been granted to him. The boat is being built at Woolston by Messrs. Dixon Bros. & Hutchinson, and the construction of the hull and details have been worked out by Mr. Hutchinson.

One of the motors which will be used was constructed for last year's Maple Leaf, but has been considerably altered by Messrs. Dixon Bros. & Hutchinson under Mr. Astell's instructions, and another similar one, which is now being finished at the above firm's works, will be installed.

From power which the engine has been giving under test and from data gained with Miranda, a phenomenal speed is confidently anticipated. The building of the boat and engines and their installation has been under the supervision of Mr. Astell, on behalf of Mr. Mackay Edgar. The boat will make its debut at the forthcoming meeting at Monaco.

AN American consul in England reports that a ferry company in his district is in the market for ten passenger motor launches of the following dimensions: Length, 45 feet; beam, 10 feet; draft 3 feet, with all appliances. For further particulars correspondence should be addressed to a person whose name is given in the report.

GASOLENE LAUNCH TARTAR.
Speed, 38½ miles per hour.

To Defend International Trophy.

THE Motor Boat Club of America has received two challenges for a race this year. They are from the Royal Motor Y. C. and the British Motor Boat Club. While these challenges were expected, as the British had said they would challenge for a race as soon as the deed of gift had been redrawn, little has been said about the defense of the cup, and local motor boat men were somewhat surprised when Commodore H. H. Melville, of the Motor Boat Club of America told the British motor boat men some weeks ago that six speed boats would be built in this country for the defense of the British International cup. Some on this side were sceptical, because in former years the Motor Boat Club has not bestirred itself until the cup was actually in danger. The lesson taught last year by the Pioneer, which was beaten through an accident, has started the members of the club hustling, and stirred up by Commodore Melville, things are being done which should mean that the cup will remain on this side of the water after the international races of next August.

Now that the challenge for a race has been received and accepted, just what has been doing this winter toward the defense of the cup is coming to light, and instead of six boats nine are now talked of, with more still in the designing stage, some of which may materialize.

Of these nine boats some are sure to be speedy, but a few may be just speculative affairs talked about to bring the builders some advertising, and until they demonstrate that they have speed and are reliable not much stock will be taken of them.

Two of the boats are being built by the Electric Launch Company. One which has been called an Elco-plane, is from designs by the company and is for A. E. Smith, owner of the fast racer Edith II. This boat will be fitted with two 300-horsepower Standard motors of special design and build. Mr. Sutphen, of the builders, and Mr. Riotte, of the engine company, are giving special attention to this craft.

The second boat is a Fauber hydroplane for J. Stuart Blackton. M. M. Whitaker is looking after the interests of this boat and it will be equipped with a high powered reliable motor.

Clinton H. Crane has designed a monoplane for a syndicate composed of Commodore H. H. Melville, Vice-Commodore F. K. Burnham and August Heckscher. The model has been thoroughly tested in the model tank at Washington and two high powered motors are to be fitted. One of these is the motor that drove the Dixie III., built by H. M. Crane, and the Crane Company is building a duplicate for the new boat.

Commodore Melville and August Heckscher last year had the Nameless built by the Atkin-Wheeler Company, which was rather unfortunate. They have commissioned that company to build another boat for them which will probably be of the hydroplane order and fitted with two high powered motors. This company is also building a new boat for T. F. Chesebrough, who last year owned the Restless, winner of the international trophy at the motor boat carnival.

Another boat is to be built by the Rice Gas Engine Co. This is for Harris Hammond, a son of John Hays Hammond. Mr. Hammond had a boat built for last year's race, but it was not finished in time. This boat is to be fitted with two 300-horsepower Rice two-stroke reversible motors, one of which attracted so much attention at the Motor Boat Show. This makes six good boats assured. It is said that H. F. Harris, of Orange, is to have a boat equipped with a motor of some power, and Commodore Pugh, a southern yachtsman, is also reported to have placed an order for another. There is still another boat about which nothing definite can be learned at present because the owner and builders are keeping it a secret.

SERVICEABLE 22-FOOT LAUNCH ARRANGED FOR COMFORT.

FOREST AND STREAM PUBLISHING CO.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE
TRAVEL, NATURE, STUDY, SHOOTING, FISHING, YACHTING

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copies, $3.00 per year; $1.50 for six months. Rates for clubs of annual subscribers:

Three Copies, $7.50. Five Copies, $12.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Canadian subscriptions, $4.00 a year, $2.00 for six months.

Foreign Subscriptions and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's. Foreign terms: $4.50 per year; $2.25 for six months.

ADVERTISEMENTS.

Inside pages, 16 cents per agate line. Special rates for three, six and twelve months. Eight words to the line, fourteen lines to one inch. Advertisements should be received by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices, seventy-five cents per line. Only advertisements of an approved character inserted.

Display Classified Advertising.

Hotels, Summer and Winter Resorts, Instruction, Schools, Colleges, etc. Railroad and Steamship Time Tables. Real Estate For Sale and To Let. Seeds and Shrubs, Taxidermists. The Kennel. Dogs, etc. Wants and Exchanges. Per agate line, per insertion, 13 cents. Three months and over, 10 cents per line.

Solid Classified Advertising.

For Sale. Kennel. Property For Sale. Real Estate For Sale or To Let. Wants and Exchanges. Per agate line, 10 cents. Absolutely no display. No advertisement of less than three lines accepted. Cash must in every case accompany order.

127 Franklin St., New York.

Palm Beach Races.

THE seventh annual regatta of the Palm Beach Power Boat Association will be held on Lake Worth March 14 to 17. The indications now are that the racing will be good, as eighteen motor boats are already entered to compete for the many prizes.

The speed contest, which will take place on Tuesday morning, March 14, will have several starters, all of which are expected to accomplish better than thirty miles an hour. Four of the contestants will be fitted with motors approximating 200 horsepower, the remaining ones ranging down to 100 horsepower. This contest will undoubtedly be one of the most spectacular of the season, as the boats are all given a flying start with instructions to cross the line together. Last year's event, in which four boats contested, was a thrilling spectacle, in fact one that will not be forgotten by those who witnessed it.

The closing event of the regatta, the endurance race, which will be held on Friday, March 17, will have a great many starters. Mr. Cochman, of Jacksonville, Fla., the winner of the first leg on the $2,500 fund, the prize for the endurance race, will start his Dewey, equipped with an 80-horsepower Sterling motor, and will also have a new boat with a 200-horsepower motor for which great speed is claimed. Three hydroplanes fitted with high power will contest in all of the events.

The schedule is given below, and any information concerning it can be obtained from the chairman of the regatta committee, Theodore D. Wells at the Royal Poinciana at Palm Beach.

Tuesday, March 14.—10:30 A. M., speed record trial, average of six trials over the mile course, Palm Beach cup; 2:30 P. M., speed contest, Florida designed and constructed boats only, no time allowance, 9 miles, the association cups; 3:30 P. M., Class A, all boats, A. P. B. A. handicap, 9 miles.

Wednesday, March 15.—10:30 A. M., Class B, contest for boats under 32 feet load waterline, 4½ miles; 11:00 A. M., Class C, contest for boats over 32 feet load waterline, 4½ miles; 11:30 A. M., Class BC, contest for all boats, 4½ miles; 3:30 P. M., Class BC, contest for boats of all lengths, 18 miles.

Thursday, March 16.—10:30 A. M., Class D, contest for boats under 17 miles speed, 4½ miles; 11:00 A. M., Class E, contest for boats over 17 miles speed, 4½ miles; 11:30 A. M., Class DE, contest for all boats over 12 miles speed, 9 miles; 3:00 P. M., speed economy test.

Friday, March 17.—9:00 A. M., endurance contest for all boats over 20 miles speed, 103.5 miles, Palm Beach grand prize. Closing event, consolation race, all boats over 12 miles speed, 4½ miles.

American Power Boat Association.

AT the annual meeting of the American Power Boat Association last week H. T. Koerner was re-elected president. Mr. Koerner is a member of the Buffalo Launch Club. In his report he showed how the association had prospered in the last year. It has grown from sixty-eight clubs to 114 clubs and its total membership from 11,000 members to 25,000. It will be even more prosperous this year. The other officers re-elected were: M. M. Whitaker, Crescent Y. C. of Watertown, Secretary; J. N. Oliphant, of the Thousand Islands Y. C., Treasurer; H. J. Gielow, Atlantic Y. C., Measurer.

Canoeing.

American Canoe Association.

WHAT IS IT?

AN association of amateur canoeists of the United States and Canada; for purposes of pleasure and health, by means of meetings, camping, cruises, paddling and sailing races. The association is composed of several divisions or sub centers, each commanded by a vice-commodore. The association is under the command of a commodore. The association finances are under the direction of a Board of Governors.

WHAT DOES THE ASSOCIATION DO?

It holds a national meet for two weeks each year, at a convenient location where the men from all divisions may camp together. Many valuable racing trophies are contested for at this meet and it is here that the commodore is elected for the coming year.

Each division holds a meeting to bring together the men who cannot attend the National Meet, and to transact division business as well as to elect the division officers.

The divisions also hold cruises, dinners, smokers, regattas and other functions to further the interests of their members. The association publishes a year book containing a full set of racing regulations which are revised from year to year and kept up to date; also a list of members with their addresses. In addition the book has an account of the various meets and other valuable and interesting information.

News of the members and official information is published from time to time. The association also encourages the publication of articles on canoeing in the best sporting magazines.

The annual executive meeting is usually held in October in the home city of the commodore. In addition to the business transacted, this is the occasion of several social functions and serves as a reunion for many members in addition to those who form the executive committee.

WHAT ARE THE ADVANTAGES OF MEMBERSHIP?

1. The year book is sent to each member. It costs from 30 to 40 cents a copy to print this book and mail it. The association will not furnish this book to any one except members and advertisers.

2. Notices of all important functions are sent to the members.

3. Sailing and paddling races are held by the various divisions and also by the association at the national meet. These are open to members of the association only. The results of these races are published in the year book and form the basis of judging the athletic ability of the various canoeists. The races promote friendly rivalry between the members of different clubs. They enable the racing man to find out where he stands relative to the best talent in the country. The results of the races are published in the year book and form a permanent record extending over 25 years. It is a great honor to the man fortunate enough to secure a place in the record.

4. The association is a growing influence for good. It stands for the best there is in athletics and takes an actual interest in promoting all that tends to improve and keep clean one of the finest sports in this country. It helps the man who belongs to develop and grow broader in relation to his fellow canoeists. It also helps him to enjoy our rivers and forests.

5. Every member is welcomed to the national and division meets held each year as well as the cruises and other social functions, and he will find himself well repaid for the time and expense involved in attending them.

Special events will be organized at the request of local members, and usually men from other sections will attend.

6. Members can use the influence of the association to abate nuisances which interfere with canoeing; also to obtain reasonable consideration from public carriers. The larger the membership, the greater the influence.

7. The members can make use of the property belonging to the association at any time by observing the proper rules.

8. The men attending the national and division meets have the opportunity to know men from other localities under the best conditions for forming friendships. These friendships last for a lifetime and, next to family ties, are worth more than anything else to a man. They materially contribute to the pleasures of life and increase in value as the years roll by. In camp each one is taken at his personal worth as a man, and not judged by artificial standards.

PROPERTY AND PRIVILEGES.

The association owns Sugar Island in the St. Lawrence, three miles east of Gananoque, Ontario, and six miles north of Clayton, New York. The island comprises thirty-five acres; it is heavily wooded and has considerable elevation. It is frequently used for the camping place of national meets and is used at other times by members camping there during their summer vacations.

The association has camping privileges on the Canoe Islands, three miles north from the head of Lake George, New York State, and on Jupiter Island, Stony Lake, Ontario, Canada.

WHO ARE ELIGIBLE FOR MEMBERSHIP?

Amateur canoeists over 18 years of age who can swim and who are in good standing in their community.

HOW TO JOIN.

If you know a member of the A. C. A. go to him and ask him to propose your name. If you are unknown to any member of the association, write to one of the officers, giving the name of your canoe club if you belong to one; state your business connection, and give one or two character references. An application blank will be mailed you to fill out, which should be returned with a check for $2.00, one dollar for initiation fee and one dollar for the year dues. All dues paid after Sept. 1 apply on the following year.

Henry D. James, Commodore, P. O. Box 3, East Pittsburg, Pa.; C. Harry Smith, Secretary, P. O. Box 92, Pittsburg, Pa.; Samuel B. Burnham, Treasurer, P. O. Box 23, Providence.

Atlantic Division A. C. A.

THE annual dinner of the Atlantic Division of the American Canoe Association will be held at Teutonia Hall, 144 East Sixteenth street (near Irving place), New York city, on Saturday evening, March 18, at 7 o'clock.

This is our annual "get together" before the season opens, and an excellent chance for old members to meet one another, and new and prospective members to become acquainted with a fine lot of good fellows.

Come, bring your friends and help us to make this a good A. C. A. pow-wow, and hear the doings for the coming year. The cost of the dinner will be $2.50 per cover. For blanks apply to Harry J. Dietrich, 23 Nassau street, New York city.

The Dinner Committee: Harry J. Dietrich, Chairman; William J. Flynn, Fred W. Baldwin, Hyatt Near.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Curtiss H. M. Patzig, 265 West 132d street, New York city, by Alfred Von Dohln; William A. Kemble, 305 Spring street; William E. Mueller, 508 West State street; Benjamin H. Margerum, 278 Bellevue avenue, all of Trenton, N. J., and William M. Johnson, Morrisville, Pa., all by Harry J. Burns.

Central Division.—Arthur J. Backer, 204 E. Jefferson street, Syracuse, N. Y., by C. H. Mattison; N. L. Somers, 819 Electric street; R. Leo Huber, 933 Taylor avenue; Edward H. Beavers, 371 No. Rebecca avenue; William G. Pearson, 516 Quincy avenue; Harry W. Reinhart, 840 Quincy avenue; Philip H. Greff, 545 Washington avenue; Kenneth R. Burnett, 4 Platte place; Robert F. Williams, 207 So. Hyde Park avenue, and Albert F. Rebhan, 321 Irving avenue, all of Scranton, Pa., and all by W. N. Brooks.

MEMBER TRANSFERRED.

5342, Harry Brevoort Zabriskie, transferred from Atlantic Division to Eastern Division.

NEW MEMBERS ELECTED.

Atlantic Division.—6169, Dayton E. Herrick, 99 Spring street, Ossining, N. Y.

Central Division.—6170, Harold D. Stephens, 800 Penn avenue, Wilkinsburg, Pa.; 6171, Elmer C. Wayne, 800 Penn avenue, Wilkinsburg, Pa.; 6166, Elmer L. Smith, Euclid avenue, Bellevue, Pa.; 6167, P. C. Schoeneck, Wabash Building, Pittsburg, Pa.

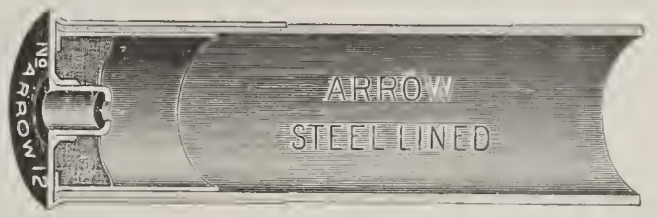
Western Division.—6168, David Dunn, 4546 Ashland avenue, Chicago, Ill.

The advanced ideas incorporated in the construction of *Remington-UMC* firearms and ammunition are reflected in these important features.

SOLID BREECH HAMMERLESS.

The solid breech is an effective safeguard against danger to face and eyes from flarebacks due to defective primers.

STEEL LINING around smokeless powder. The steel lining strengthens the shell and keeps out moisture, thus saving load from weakening in damp or rainy weather.



Remington-UMC — the perfect shooting combination.

Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.
Sept. 4-5.—Lynchburg, Va.—Virginia State tournament, under the auspices of the Lynchburg G. C. J. D. Owen, Sec'y.

DRIVERS AND TWISTERS.

The tournament of the Freehold (N. J.) Gun Club on Wednesday, March 15, will be held on the club grounds, commencing at 1 o'clock. There will be twelve 15-target events, entrance $1 each, class shooting, money divided 40, 30, 20, 10. All standard makes of shells are procurable on the grounds. Maltby W. Conover is the secretary.

The "First International Indoor Trapshooting Tournament and Sportsmen's Exhibition"—the title given it by the directors—opened at 2 o'clock on Tuesday last, the 7th, and will continue until next Monday night, the 13th. As FOREST AND STREAM goes to press on Tuesday, we will be unable to print any of the results until next issue. Manager Luther J. Squier states that the program has aroused much interest among the trapshooting fraternity, and the indications are that the championship emblem will be eagerly sought for and hotly contested. Annie Oakley will give daily exhibitions of her skill with the shotgun, at 4 and 8 P. M.

In the distance handicap shoot during 1911 of the Buffalo Gun Club there will be two valuable guns as first and second prizes. Conditions governing are: 25 target events; members to shoot in Classes A, B and C. Class A shoot from 18yds., after one win from 19yds., after two wins from 20yds., finishing contest at that distance. Class B shoot from 17yds., and Class C from 16yds., with the added handicaps as in Class A. Ties shot off same day at 25 targets at the class handicap. To be eligible, members must shoot in at least 50 per cent. of the regular shoots for the year. Entrance fee $1, exclusive of targets. Entries close May 1. Interstate Association target rules to govern. The club also provides a silver cup for each of the three classes, to be contested for in the regular shoots for the year. The classes that the members are placed in by the handicap committee on Jan. 1 shall hold good for the year. Contest at 25 targets from 16yd. mark; ties at 25 singles. Most number of wins in each class takes the cup. Interstate rules govern. The shooting dates of the club are the second and fourth Sundays of each month except July, August and September, when the shoot occurs on the fourth Sunday only.

Funeral of Bernard Waters.

THE funeral services over the remains of Bernard Waters, long shooting editor of FOREST AND STREAM, were held in New York on Wednesday, March 1, at 11 o'clock, and were attended by a large number of his old friends and associates.

Later in the day half a dozen men, including Messrs. Edward Banks and Branch, of the Du Pont Co.; Elmer E. Shaner, of the Interstate Association, and three men long associated with Mr. Waters on FOREST AND STREAM, accompanied the remains to Kensico Cemetery, and saw their old friend laid away for his last sleep.

He lies in a beautiful spot on a hilltop overlooking the winding valley of the Bronx and the wooded hills on either side, a spot where a lover of nature and the out-of-doors might well love to linger.

Audubon Gun Club.

BUFFALO, N. Y., March 5.—George N. Fish, the Lyndonville thresher, showed his superiority over the members of the Audubon Gun Club by being high gun of the day at yesterday's shoot. His shooting was simply phenomenal, taking into consideration that he used a brand new gun, taken from the store, and with no practice whatever broke 138 out of 150. Some of them were shot from the 20yd. mark in the strong wind which prevailed.

Fish won the Reed trophy and also the first leg on the challenge cup, a new contest, which was proposed by Mr. Covert and immediately started. In this event Fish broke 48 out of 50. Jack Talcott was runner-up with 43.

W. H. Smith started off like a whirlwind, breaking 39 in the first two events and winning Class A with a straight, which he needed in order to beat Hopper's 19. Dr. Burke and Imhoff were finally beaten in their respective classes, and former Field Captain Suckow did the trick in Class B, and Renn Spalding in Class C.

Preparations are already under way to hold a big open shoot on Decoration Day. Interstate rules will govern. Scores:

Targets:	20	20	20	20	Shot at.	Broke.
Geo N Fish	18	19	18	18	80	73
W F Hopper	17	19	17	18	80	71

Dupont trophy, 50 targets:

Dixon	35	Hymer	40
Britton	35	Neighbors	23
Lewis	33	Golden	32

R. R.

Columbus Gun Club.

COLUMBUS, O., March 4.—Lieut. K. A. Joyce was high gun this afternoon at the traps, breaking 81 out of 100. It was very windy and cold, hence such poor scores. Guy Smith won a point on the Dupont trophy, after tying with Joyce on the shoot-off.

The Columbus boys are wondering what has become of the bunch of 90 per cent. shooters from the City on the Lake; they promised a return match last April. Well, I suppose the team has not come out of their winter quarters yet. Hope to hear from them some time.

The program for St. Patrick's day shoot will call for 200 targets, shot in strings of 15 and 20; entrance $21 for the day on the money-back plan; purses divided 40, 30, 20, 10; all surplus divided the same way. We hope to have a team of ten men from Circleville to shoot a team race, 50 birds per man. This will decide the tie, each team having a win.

The Shepherd Gun Club, a new club, just starting up, promises to be a hummer. The club is made up of a nice lot of fellows, all from the east side. The Columbus Gun Club wishes them success.

Practice:

	Shot at.	Broke		Shot at.	Broke
Cumberland	100	78	Joyce	100	82
Penn	100	68	J H Smith	65	51
Wells	75	57	Van	50	43
G Smith	125	86	Fisher	40	35
H E Smith	65	52			

Dupont trophy, 50 targets:

Penn	33	Joyce	40
Wells	39	J H Smith	37
H Smith	43	Van	43
H E Smith	41		

Shoot-off, at 25 targets:

Joyce	21	G Smith	22

LON FISHER, Sec'y.

Meadow Springs Gun Club.

PHILADELPHIA, Feb. 26.—A fine field of gunners attended the prize shoot of the club at the grounds yesterday, with E. B. Garrett the final winner after three shoot-offs. The conditions called for 50 targets, with a distance and dead bird added handicap, with all scores of 50 or over to shoot in extra events until the winner was decided. Nine men reached the 50-bird mark, but only seven were eligible to compete for the merchandise prizes offered by the club. Scores:

Prize shoot, 50 targets:

J Emerson, 18	6	50	Menamine, 16	10	50
Fenn, 17	8	50	Keenan, 16	16	45
Soley, 18	6	48	Fish, 16	14	50
Alexander, 17	8	44	Turner, 17	8	48
Hogan, 18	6	50	E B Garrett, 16	16	50
Sloan, 19	4	50	Torpey, 18	6	41
Longbrake, 17	8	43	J P Emery, 16	16	42
Armour, 16	14	32	Coyle, 18	6	41
*George, 17	8	46	*Barr, 16	0	34
*Clegg, 18	8	50	*Shubrook, 16	0	33
C C B, 18	6	50	*Williams, 16	0	28
Gideon, 17	8	39			

*Shot for targets only.

Shoot-off, 25 targets: Emerson 24, Hogan 25, Sloan 25, Berger 23, Menamine 25, Garrett 25, C. C. B. 24.

Second shoot-off, 25 targets: Hogan 25, Sloan 25, Menamine 25, Garrett 25.

Third shoot-off, miss-and-out: Hogan 2, Sloan 1, Menamine 0, Garrett 3.

March 5.—Indications point to a record-breaking attendance at Fifty-seventh and Lancaster avenue next Saturday afternoon, March 11. On that day every devoted member of the Meadow Springs Gun Club pins his faith and ability to be on hand to help celebrate the annual shoot of the club and to participate in the banquet, which will be held in the evening at Odd Fellows' Hall, 5015 Lancaster avenue. Following the dinner, the annual election of the club will be held.

The program for the shoot is 100 targets, sliding distance and dead-bird-added handicap, with $25 donated in prizes, being divided up in five donations. At the meeting, in addition to electing new officers for the year, many new amendments to the present club's rules are to be made, adjusting of the handicaps, presentation of prizes for the year and other matters of much importance are to be acted upon.

Bergen Beach Gun Club.

A. V. SUYDAM and G. S. Remsen decided the ownership of the handsome trophy offered by Capt. H. W. Dreyer to the gunners of the Bergen Beach Gun Club yesterday. The cup was up for competition during the past month, and the two marksmen each finished the series with 86 per cent. apiece. The shoot-off was decided yesterday and was won by Suydam by the score of 83 to 80 out of a possible 100 targets. The Bergen Beach nimrods also started a new sliding distance handicap. The best work was done by J. Gaughan, who broke 98 out of a possible 100 targets. The scores:

Sliding distance handicap, 100 targets, strings of 20:

J Gaughan	18	17	18	18	18	89
P Von Boeckman	16	18	17	19	16	86
C Kline	19	17	18	16	16	86
H W Dreyer	17	17	13	20	18	85

F Weilbocker	10	7	10	5	6	33
C Hewens	9	4	3	4	9	30

Newton Gun Club.

GLOUCESTER CITY, N. J., March 4.—Two shooting matches were held to-day by the Newton Gun Club. The snowstorm interfered with the shoot. Parker won the weekly event, in which there were five participants, and each shot at 25 bluerocks. The other match was a tie. Scores:

Weekly shoot, 25 bluerocks each: Parker 14, Strain 11, W. Gingling 10, Chamberlain 8, M. Gingling 8.

Special shoot, 10 bluerocks: W. Gingling 4, Parker 4, Powell 4, M. Gingling 3, Griffin 3.

Chicago Gun Club.

CHICAGO, Feb. 22.—The weather was cloudy and dark, with plenty of wind to keep the shooters guessing where to hold. A team shoot was scheduled, composed of all the shooters on the grounds; 100 targets per man, and the losing team to pay the targets for all. MacLachlan and Barto were named as captains. MacLachlan's team led all the way, and finished up with 42 targets to the good. Fetherston led the field by scoring 93, Jay Graham being second high gun with 88; he was trying out a new gun, which probably affected his usually high scores. Barto and Taggart each landed a score of 86, while A. Marshall returned a score of 82, which is fine for the first time he ever shot on our grounds. MacLachlan was next in line with 84.

Marshall, Popp and Stuart were visiting shooters from the Clearing Gun Club, and they say they will be with us quite often in the future. Oscar Nahser brought along his friend J. G. Ostrander, to try his hand at target shooting, and although he has shot game he never had tried targets, consequently he was well pleased with his score of 60 out of 100. Mr. F. Nahser, of Grand Rapids, Mich, also tried his hand at targets for the first time, doing quite well; but the boys who have been out game shooting with him will vouch for it that very few birds get away from him once he draws a bead on them and lets drive. Keller manages to drop in every once in a while, and we would be pleased to see him oftener. Scores of the team shoot:

Team No. 1.		Team No. 2.	
A F MacLachlan	84	J B Barto	86
L M Fetherston	93	J R Graham	88
J Popp	70	C R Seelig	68
J H Shrigley	60	A Marshall	85
A Frana	69	L J Stuart	47
E B Shogren	69	C L Frank	72
J A Taggart	86	J W Keller	53
J G Ostrander	60	O Nahser	68
J R Sharp	75	C B Willard	67
E Oliver	76—742	W Mott	66—700

Practice and extra events; Nos. 4, 5 and 6 were at pairs:

Events:	1	2	3	4	5	6

Feb. 25.—Although the afternoon was bright and clear, it was the same old story with the wind man—a gale blowing from the southwest, which at times threatened to blow the shooters off the firing line, and quite did tilt them off their balance when about ready to fire at the elusive spheres.

Stannard topped the list in event No. 1, with 45 out of 50, while Sharp was second with 43.

Sharp walked away with first honors in event No. 2, at the doubles, with Shrigley taking second place.

First place in event No. 3 went to Stannard, he breaking his 25 straight—and he certainly broke some targets that tried hard to get away. Ammann came in for second with 22 in this event, while Sharp broke 21.

Sharp led the bunch in event No. 4 with a score of 24, this being his second 24 of the afternoon. Stannard and Tom Marshall divided second honors with 22.

We are pleased to announce that Mr. J. R. Sharp is the latest addition to our membership, and his good work to-day landed him high amateur for the day.

Lawson, Skidmore and Rowen have not shot at targets for many years, while Rice had never fired a gun before to-day, and was surprised himself when he scored 8. Scores:

Events:	1	2	3	4	Events:	1	2	3	4
W Stannard, 16	45	..	25	22	E Lawson, 16	9	..	7	12

Feb. 26.—We had a cloudy and dark afternoon, and quite a number of our members attending the Long Lake tournament, the number of shooters to face our traps to-day was somewhat smaller than usual for Sunday. Despite the unfavorable conditions several very excellent scores were made, and the average was better than for the past few weeks.

In the handicap event, Amman heads the list with a score of 49 out of 50 from 16yds., while Flewelling heads the amateurs with 46 from 20yds, Koester making a similar score from 16yds. Gracely in for third place with a score of 45, he making the same score in the second 50 he shot at. Cutler landed 42 from the 19yd. mark, while Shrigley made the same score from 18yds. Stannard pulled down 43 from 16yds., and Gerhardt made a 42 from 16yds.

Seelig took first honors in event No. 2 at the doubles, making a score of 26, Shrigley taking second place with 21, Crocker being next in line with 20, while Mott broke 19.

Cutler showed his mettle by winning first place in events Nos. 3 and 4, landing a 25 straight in each event. Ammann was second in event No. 3 with 24, while Flewelling, Gracely, Stannard and Koester each broke 23. Sharp and Spangler each returned a score of 21.

Flewelling took second place in event No. 4 with a score of 24, Koester made another 23, while Gracely, Sharp, Spangler, Stannard, Ammann and Gerhardt each broke 22.

Crocker did not do well enough to suit himself in the third event, so he thought a handicap might help some, and sure enough he turned the trick with 21 from 20yds. Flewelling did fine work to-day, starting in with 19 straight with some old shells he had; then he made 46 out of 50 from 20yds., and 47 out of his last 50—that's going some after his long siege with rheumatism, which he is trying hard to work out of his system. He leaves to-morrow for a week among the ducks, and is anticipating some fine sport. Seelig, Crocker, Cutler and Spangler are others who cannot resist the call of the ducks longer, and will be among them this week. Summaries:

No. 2 was at 20 pairs; No. 7, at 12 pairs:

WM. F. MERKLE, Supt.

Stamford Rod and Gun Club.

STAMFORD, Conn., March 5.—The first of a series of handicap 150 clay target shoots for a club cup was decided yesterday at the traps of the Rod and Gun Club. The member with the best average at the end of the month takes the cup. R. A. Gillespie with 95 had high score, and C. A. Voorhees, 92, was second, and Joseph Carr, scratch, with 88, was third. R. A. Gillespie also won a 25-bird sweepstakes with 24. C. A. Voorhees, 21, was second, and E. L. Hatch, 19, was third.

The Winning Combination

FRED GILBERT
AND
WINCHESTER "LEADERS"

A Reliable Man And Reliable Shells

FRED GILBERT

Reliability will usually tell. Here was old reliable Fred Gilbert shooting in the Great Western Handicap at Live Birds with reliable Winchester "Leader" Shells. He killed the 25 straight, from the 33 yard mark, tying two other shooters. Then, shooting off the tie, he killed five more straight, running ahead of his competitors. Reliable shells help to make a reliable shooter. Winchester shells have won every World's live bird and inanimate target championship and have been the year's high average winners for years.

Remember This And Shoot
WINCHESTER SHELLS

New York Athletic Club.

TRAVERS ISLAND, March 5.—Excellent weather conditions prevailed during the competition on Saturday, and some unusually fine scores were chalked up by the shooters.

The distance handicap cup, which has been competed for since December, was finally won by F. A. Hodgman, who defeated O. C. Grinnell, Jr., in the shoot-off. It required two sets of 25 targets before the tie was decided, Hodgman shooting at 21, and Grinnell at 20yds. rise. Spotts won the March cup with a full score. The principal tallies were:

Haslin cup, handicap, 25 targets:

O C Grinnell, Jr...	1	25	B M Higginson....	1	23
A J Corbett.....	1	25	F H Schauffler.....	1	23
G Lembeck	2	24	F A Hodgman.....	0	22
E A Wilson.....	2	23	Dr De Wolfe	1	21
W B Ogden.....	2	23	R L Spotts.....	0	21

Shoot-off:

O C Grinnell, Jr...	1	22	G J Corbett.....	1	20

March cup, handicap, 25 targets:

R L Spotts.....	0	23	T Lenane, Jr.....	1	22
G F Pelham.....	1	23	G M Thomson.....	3	21
B M Higginson...	1	23	O C Grinnell, Jr...	0	21
F A Hodgman.....	0	22	B E Eldred.....	0	21

Special cup, handicap, 25 targets:

W B Ogden.....	0	25	Dr De Wolfe.....	1	23
E A Wilson.....	2	25	R L Spotts.....	0	23
O C Grinnell, Jr...	1	25	F A Hodgman.....	0	23
T Lenane, Jr.....	1	23	A E Ranney.....	2	20
G Lembeck	2	23	G W Kuchler.....	2	20

Travers Island trophy, handicap, 25 targets:

W B Ogden.....	1	24	G J Corbett.....	1	22
F A Hodgman.....	0	24	O C Grinnell, Jr....	1	22
R L Spotts.....	0	24	B M Higginson....	1	21

E A Wilson.....	82		

Westley Richards gun, scratch, 10 double targets:

F H Schauffler	13	Dr De Wolfe.....	9
B E Eldred.....	11	A E Ranney.....	8

Final shoot-off, of season for distance cup:

F A Hodgman.....	21	19	F A Hodgman.....	21	19
O C Grinnell, Jr....	20	19	O C Grinnell, Jr...	20	17

DuPont Gun Club.

WILMINGTON, Del., March 5.—Owing to unfavorable weather yesterday, the attendance at the Du Pont Gun Club shoot was only ninety. Some good scores were made; 6300 targets were thrown, and the traps worked smoothly. In the tie events, ties made on the preceding Saturday, the following scores resulted:

Class A—Wm. Foord, winner, 24 out of 25.

Class B—P. J. Pape, winner, 21 out of 25.

Class C—Walker Matthewson and J. A. McMullen again tied with a score of 17 out of 25, and in the shoot-off Matthewson won with 16.

Class D—R. B. Evans, winner, 15 out of 25.

In the open events for visiting amateur shooters, Willet Ewing, of Rising Sun, Md., won the prize. Yesterday was Mr. Ewing's first visit at the club, and he expressed himself well pleased with the trip.

Blue prints of the proposed extension of the club house were on exhibition yesterday, and from the interest displayed in them and the complimentary remarks regarding them, the management feel that the addition will be pleasing to all.

An invitation to attend the weekly shoots has been sent Col. J. G. Ewing, of Washington, D. C. Col. Ewing was at one time Inspector of Rifle Practice of the Delaware State Guard, and is now actively engaged in the promotion of shooting among the school boys of America, and is one of the active workers for the best interests of the National Rifle Association of the United States. The club also hopes to have Capt. K. K. V. Casey with them next week. Capt. Casey has been spending the past two weeks in New York in attendance at the school boy shoot of the Metropolitan District at Madison Square Garden.

On next Saturday a team of ten men from the Wilmington Country Club will shoot a match with the Baltimore Country Club at Baltimore. This is to be one of two races, the second at Wilmington, to decide the championship of the two clubs. As the members of the local team are also members of the Du Pont Club, there is quite some interest being manifested.

The scores in the Coleman Du Pont merchandise event follow:

Class A, 24 out of 25: Frank Matthewson, V. du Pont 3d, Wm. Foord.

Class B, 18 out of 20: Dr. F. A. Buckmaster, Henry Winchester, Thorpe Martin, J. J. Magahern, F. Holt, G. H. Mitchell, D. Lindsay, H. H. Lukens, R. A. Vance.

Class C, 15 out of 25: E. F. Handy, H. L. Morgan, R. B. Evans, C. R. Jeffries, Jr., W. W. Baun, H. S. McComb, Dr. Bedford, S. B. Trott, E. M. Hogge.

Class D, 12 out of 25: R. S. Robinson, S. Tuchton, W. B. Smith, Jr., A. Dickerson.

The following are yesterday's scores: R. P. Choate 13, W. H. Neely 10, H. T. Reed 11, W. F. Jensen 5, J. McKelvey 23, T. B. Rogers 21, W. E. Ross 8, J. A. Kaiser 22, C. H. Simon 20, E. E. Handy 15, H. L. Morgan 15, Guy Lambert 9, Victor du Pont 24, H. J. Taggart 8, T. H. Esham 10, D. D. Poffenberger 13, S. G. Davis 20, E. H. Lambert 4, L. Evans 19, R. B. Evans 15, C. H. Simon 17, D. J. Dougherty 11, Dr. Betts 13, H. Winchester 18, J. R. Bailey 7, C. R. Jefferies, Jr., 15, L. C. Lyon 14, F. Matthewson 24, W. S. Simpson 13, C. D. Rogers 19, Thorpe Martin 18, S. J. Newman 22, J. W. Anderson, Jr., 16, P. J. Pape 21, H. L. Morgan 20, I. Turner 21, J. Magahern 18, R. L. Naudain 11, W. W. Bacon 15, F. Holt 18, R. L. Conner 16, H. P. Carlon 17, R. Hamby 12, H. S. McComb 15, J. F. Jones 16, Clyde Leedom 11, W. S. Gavan 19, J. T. Robison 20, Dr. Bedford 15, W. A. Casey 16, T. B. Wolfong 12, N. K. Smith 16, H. H. Darlington 14, H. J. Doyle 11, C. Shoemaker 6, S. B. Trott 15, Tomlinson 17, E. M. Hogge 15, D. A. Greer 13, C. L. Petze 4, J. S. Skelly 23, William Foord 24, W. Matthewson 11, Bayard John 14, J. Gregg 13, H. J. Taggart 11, W. McKenney 10, J. Monohan 6, M. Lynch 11, Wm. Johnson 7, J. Lynch 4, S. Steel 20, H. G. Mitchell 18, R. S. Robinson 12, T. W. Keithley 20, F. W. Graef 3, D. Lindsay 18, S. Tuchton 12, G. H. Shaffer 12, W. Ewing 24, D. A. Greer 19, W. B. Smith, Jr., 10, A. M. Lindsay 19, W. A. Joslyn 19, R. Ferguson 19, Wm. Coyne 16, J. A. MacMullen 17, H. H. Lukens 18, C. R. Jeffries, Sr., 11, R. A. Vance 18.

Hyde Park Gun Club.

THERE was a good attendance at the shoot on March 4, thirteen shooters being present. Over 1400 targets were trapped during the afternoon. It was a typical March day, with a cold, high wind blowing in the shooters' faces, and this caused the targets to soar badly, so that all the shooters fell below their average in more than one of the events. Johnson was high man with 127, getting 84 out of his last 100. Harris has not been over to see us for some time, but promises to be more regular hereafter. He finished in third place, and was one of the three men to break 23 in an event. Holaday shot a little too quickly to catch the climbers every time, although he did nice work in the last 100, breaking 86 and finishing second high for the day. Rhoades has kept away during the cold weather, but the approach of spring will bring him out again. To-day he broke 66 per cent., which he will improve on with a little practice. Welsh was beaten by the wind; he could not keep up the pace he set in the first event. De Mar missed only 2 in his first event, but after that he couldn't seem to connect quickly enough with the skyscrapers. Smith showed some lack of practice when he started, but improved a little in each event. Hattersley has not been at the grounds since last fall; his score of 83 in the wind was mighty good work. Eustis dropped in for a minute late in the afternoon, picked up a gun in the club house, and of course did not shoot as well as he knows how. When the weather gets warm he will be out every week, and soon be up with the leading bunch again. Frohliger's last event was his best one, the wind having moderated a little, though the targets were still hard. W. and G. Oskamp are new at this game, though both are good field shots. We hope to see them often. Zimmerman improved in the last event. He is not old at the game, and will doubtless make a better showing before the summer is over. Sam Leever was a spectator to-day—just stopped to give notice that he was going to bring down his bunch of Goshen shooters soon, and mix it up with the Hyde Parkers. He will be welcome, and Frohliger and Smith will do their best to have a team of good ones to meet him.

Johnson	21	22	21	20	23	20	127

Frontier Rod and Gun Club.

BUFFALO, N. Y., Feb. 27.—Twenty trapshooters turned up at the regular shoot of the Frontier Club yesterday. High scores were impossible on account of a strong southwest wind crossing the traps, accompanied by cloudy and rainy conditions, which kept some of the sportsmen away. Eichberg was high gun with 77 per cent. In the cup race the points were won by Eichberg, Ratcliffe and E. Biddell. Al. Suckow captured the point in the gun race. The club team race was won by Capt. Dewald's team by 10 birds out of a total 400 targets shot at. The scores, event 3 cup race; event 4, gun race:

Passaic County—Montclair.

THE long anticipated tournament between the Passaic County Gun Club and the Montclair Gun Club was held on Saturday, Feb. 25, at Clifton, and it certainly was a great success from the first shot until the finish, some 3600 targets being used in the three hours from 2:30 to 5:30. The feature was the team shoot between twelve men from each club.

The visiting gunners expressed a desire to return at an early date, as they were very much pleased with the Clifton traps. The free-for-all prize shoot was captured by Crane, of the Montclair Club; J. H. Francisco second, and Harry Sindle third. In the big match shoot, Billings excelled for the Montclair Club, breaking 48 out of a possible 50 birds and dusting the other two. Colquitt was next in line for the visitors with 46 birds, and Frazee next with 45. For the Passaic County gunners Vanderclock and Colfax tallied 47 birds; H. Sindle and S. F. Francisco next, another tie, each being credited with 45 kills. Sindle has always hung up good scores in match shoots, but the remarkably good gunning of Francisco was a delight to the local crowd.

The Montclairs, while defeated, were not crestfallen in the least, as they declared when they get the Passaic County contingent over at the Montclair traps in the return match they will make the victory total more than two points. The following are the correct scores of the club shoot, which was mentioned briefly in our last issue:

Passaic County	G. C.	Montclair	G. C.
J Doty	41	Colquitt	46
F Sindle	38	Crane	41
S Francisco	45	England	34
J Francisco	38	Boxhall	39
A Doty	34	Billings	48
C Hudson	39	W Soverel	43
Kussmaul	44	Atwater	41
Vanderclock	47	Winslow	37
H Sindle	45	Frazee	45
Colfax	47	Bush	44
Matthews	25	W Soverel	34
L Stager	43—486	Wise	32—484

The club shoot finished, the balance of the afternoon was devoted to sweepstakes, with scores as follows:

Montclair Gun Club.

MONTCLAIR, N. J., March 4.—There were fifteen contestants at the regular weekly shoot to-day, the trade being represented by Messrs. Fanning, Brown and Bob Schneider. Fanning made the highest score of the day, 24, in the third event.

In event 5, the March handicap, for members, C. L. Bush won out with a score of 23.

Among the visitors was Mr. F. A. Jackson, of the East Millstone Gun Club.

The club shoots next Saturday at North Caldwell, N. J.

Crescent Athletic Club.

BAY RIDGE, N. Y., March 5.—There was a good turnout of shooters at the club's traps yesterday, and some fine scores were made in the events on the program.

In the first shoot for the March cup at 50 targets, in two strings of 25, seventeen men took part. Excellent scores resulted. J. H. Vanderveer won, totaling 49 with his handicap of 4. Felix, with the same handicap, took second with 48.

F. B. Stephenson put up a new trophy, to be won by the man who makes best average in 500 targets for the balance of the season. Thirteen lined up for this event, the possible 25 being scored by Felix, Vanderveer, Blake and Brower.

Felix won the leg for the State trophy, the leg for the Lockwood trophy being taken by Charles Blake. W. W. Peabody captured the first prize for the J. B. James trophy, and George Brower the second prize, after a shoot-off with Vanderveer. Peabody also won the 10 pair doubles match. Blake won a trophy match with a full score. Shooting from below the elbow for the C. R. James prize, A. E. Hendrickson won with a score of 24 after a shoot-off with F. B. Stephenson. Scores:

March cup, 50 targets, handicap:

J H Vanderveer	4	49	W W Pell	10	43
G Felix	4	48	G H Piercy	0	42
C Blake	4	47	J H Hessian	0	40
J F James	6	46	J H Hendrickson	0	40
W W Peabody	4	46	G Brower	8	46
F B Stephenson	0	45	J P Fairchild	6	39
F S Hyatt	4	44	W Sykes	10	37
C R James	4	43	J S Lawson	10	27
A E Hendrickson	6	43			

F. B. Stephenson trophy, 25 targets, handicap, best average of 500 targets to win:

G Felix	2	25	F S Hyatt	2	20
J H Vanderveer	2	25	Geo Piercy	0	20
Chas Blake	2	25	W Sykes	5	20
Geo Brower	4	25	C R James	2	19
W W Peahody	2	24	J P Fairchild	3	15
A E Hendrickson	3	23	J S Lawson	5	13
J F James	3	21			

Lockwood trophy, 25 targets, handicap:

A E Hendrickson	3	25	J P Fairchild	3	22
Chas Blake	2	25	F S Hyatt	2	21
Geo Brower	4	25	J F James	3	20
F B Stephenson	0	24	Geo Piercy	0	18
J H Vanderveer	2	23	Geo Felix	2	17
C R James	2	22	W Sykes	5	17
W W Peabody	2	22			

Shoot-off: C. Blake 25, Brower 23.

J. F. James trophy, 25 targets, handicap:

W W Peahody	2	25	J P Fairchild	3	23
J H Vanderveer	2	25	C R James	2	21

Geo Felix	2	24	F S Hyatt	2	20
Chas Blake	2	24	Geo Piercy	0	19
F B Stephenson	0	23	J S Lawson	5	19

Shoot-off for second prize: Brower 25, Vanderveer 23.

C. R. James trophy, 25 targets, handicap:

F B Stephenson	0	23	F S Hyatt	2	16
A E Hendrickson	3	23	J F James	3	15
W Pell	5	22	Geo Piercy	0	15
W W Peabody	2	20	J S Lawson	5	5
Geo Felix	2	19			

Shoot-off: Hendrickson 24, Stephenson 23.

Clearview—Riverside.

ESSINGTON, Pa., March 5.—The pick of the Clearview Gun Club and the Riverside target devotees tested their marksmanship in a team race here yesterday afternoon, and after one of the most exciting races ever shot in this vicinity, the clubs wound up in a tie at 350 breaks apiece. Each shot at a total of 500 targets, averaging ten men to a team, at 50 targets per man, and while the Riversides outshot the Darby representatives for individual high scores the latter's consistency as a team carried them to a tie with their opponents.

Col. Hamlin led the entire field with 46 breaks, getting 24 on his first round and 22 on his final attempt. Warber finished second with 44, while Ferry, of Clearview ranked third with 42. Eaton, of Riverside, heat out Fisher, of Clearview, for fourth place by one bird, 41 to 40. Scores:

Team race, ten men to a team, 50 targets per man:

Clearview.		Riverside.	
Ferry	42	Hamlin	46
Fisher	40	Warber	44
Hunter	38	Eaton	41
Elwell	36	C Wiltbank	35
Bonsall	34	Steller	35
McCullough	33	Donohue	33
Bockius	33	Abrams	31
Green	33	Thompson	28
Peltz	32	Worrell	27
Paulson	29—350	Brown	30—350

The Palefaces.

BOSTON, Mass., March 1.—It sure looked like old times at the Paleface grounds to-day with seventeen shooters from all sections present, and the month of March was ushered in with bells on.

Gene and Elmer Reed made up the Manchester contingent; Wigglesworth, Lockwood, Heard and Morse from Harvard; Ordway and Russell, of Winchester;; Crane from Norfolk Country Club; these, coupled with the home bunch, of Clarke, Frank, Sibley, Dickey, Charles, Jones, etc., made a classy attendance that Boston don't often see.

The program was a varied one, and the scores show it, though in many cases the best work was done on the odd events. Kirkwood and Mayor fought it tooth and nail, the former by a lucky run in the pair event, winning out by a length. Gene had the honors of these two on singles, though Dickey was the real shooter with only 6 down. Dick's pairs, however, proved his stumbling block, and prevented high average coming his way.

In the added target race Charles did the trick, leading by 2 targets at the finish, with Crane in second position, one target better than third place.

Walter Clarke at scratch, and Frank looked out of it with their scores, but next time some one will pay for it, as is usually the case.

Sibley and Kirkwood were busy getting recruits for their shoot. May 6, which, at this date, bids fair to be the best ever held in New England. Scores. Nos. 1 and 4 were at 16yds. each; No. 2 at 18yds.; No. 3 at 15 pairs:

Events:	1	2	3	4	Han-	
Targets:	25	20	30	25	dicap.	Total.
Charles	23	15	18	20	16	92
Crane	21	15	20	22	12	90
Dickey	24	17	17	23	8	89
Kirkwood	21	18	26	19	4	88
Mayor	23	18	22	20	4	87
Sibley	17	17	20	25	8	87
Reed	23	15	18	19	12	87

Heard	20	18	..	20	..	..

Larchmont Scores.

LARCHMONT, N. Y., March 6.—The trapshooting contingent of the Larchmont Yacht Club held their regular Sunday shoot yesterday, and high scores were the order of the day. The weather, unfavorable at the start, gradually favored the shooters. Ralph L. Spotts was the star performer of the day, as shown by the scores:

Commodore's cup, handicap, 25 targets:

G L Bready	4	25	Dr Brown	0	20
J R Collins	4	24	T Lenane	3	23
E L Robbins	3	24	K R Hooker	2	21
R L Spotts	1	22	E G Unitt	5	21
L A Wilson	2	23	W J Elias	3	23
G H Abbott	3	24	W D Hinds	0	20
J Fanning	0	23	J Henry	1	24
W E Bemis	4	17	J G Batterson	3	21

Sauer gun, handicap, 25 targets:

T Lenane	3	25	E G Unitt	5	21
R L Spotts	1	25	K R Hooker	2	22
E L Robbins	3	24	G L Bready	3	23
W J Elias	3	25	W E Bemis	4	23
G H Abbott	3	25	J Fanning	0	22
J G Batterson	3	23	E A Wilson	2	23
J Henry	1	22	Dr Brown	0	16
W D Hinds	0	23			

Tie won by Mr. Elias on shoot-off.

March cup, handicap, 25 targets:

W J Elias	3	25	E A Wilson	2	25
J Henry	1	25	R L Spotts	1	24
G L Bready	3	25	E L Robbins	2	23
K R Hooker	2	25	T Lenane	3	24
W F Bemis	4	25	J G Batterson	3	23
J Fanning	0	25	W D Hinds	0	21
G H Abbott	3	25	E G Unitt	5	20

Special trophy shoot, handicap, 125 targets:

R L Spotts	3	120	J Fanning	0	109
G H Abbott	10	117	K R Hooker	7	110
W J Elias	10	116	G L Bready	6	110

E L Robbins	9	110	W E Bemis	5	103

High gun prize, scratch, 125 targets:

R L Spotts	117	W D Hinds	102
J Henry	111	E L Robbins	101
J Fanning	109	E A Wilson	103
G H Abbott	107	W E Bemis	98
W J Elias	106	G L Bready	99
T Lenane	104	J G Batterson	95
K R Hooker	103	E G Unitt	76

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., March 1.—At the weekly shoot on the Speedway traps yesterday, Phil Coffin was high gun of the day, smashing 21 1-6 clay birds out of each 20 shot at. Louis Colquitt was second with 21 1-3, while Carl von Lengerke was third with 20 3-8.

In the 25-bird match between the three men, Coffin and Colquitt were tied for first with 24 each. In the shoot-off Coffin won, smashing 24 to Colquitt's 21.

In the one-barrel walking match between Fred Macaulay and B. M. Shanley, Jr., the former won in the first 25 shot at, breaking 14 to Shanley's 10.

The latter turned the tables in the second set, however, breaking 15, while Macaulay succeeded in killing only 10 The most interesting shoot of the day was that between William Stengel, of the Macaulays, and Jack Davis, of the Smith Gun Club. Stengel was the winner. Another match between these men will be shot off at the Smith Club Saturday afternoon. A team match between the Macaulay Club and the Smith Gun Club was also arranged. It will take place next week. The scores:

B M Shanley, Jr.	16	10	15	6	..	..	..	..	..	
Fred Macaulay	12	14	10	9	17	..	..	..	..	
Louis Colquitt	20	21	23	21	21	21	20	24	21

I Castle	18	..	..	..	..	..	..	..	..	
A Castle	17	..	..	..	..	..	..	..	..	
Wm Stengel	9	11	15	17	..	..	..	..	..	

SMOKELESS.

Brandywine—Ludlam.

WILMINGTON, Del., March 5.—A very interesting shoot was held yesterday afternoon at the Brandywine Springs Gun Club. The scores were very close and a large attendance witnessed the shoot. The scores follow:

Team shoot, 25 targets each man:

Brandywine Springs Club.		Ludlam Gun Club.	
A Hickman	22	J Smith	14
P Guest	18	L O Porter	16
E Springer	22	A Dubb	13
S C Robinson	18	A Richards	18
R W Cranston	8	G Blackston	12
M Smith	20	D Ludlam	20
O Melson	18	J Clemens	17
W M Nelson	13	R Chase	21
G Hauber	14	J Barnes	19
A Hickman	22—175	L Pike	19—169

There was also a five-man team shoot, 30 targets each man, which resulted as follows:

Brandywine Springs Club.		Ludlam Gun Club.	
A Hickman	25	R Chase	23
E Springer	24	A Richards	21
P Guest	21	D Ludlam	20
C Robinson	22	F O Porter	22
M Smith	21—113	J Burns	25—111

Trap at Palm Beach.

PALM BEACH, Feb. 25.—Eight faced the score to shoot for the handsome cup presented by Mr. F. K. Burnham, of New York City. The conditions were 25 birds, handicap, $10 entrance. E. H. Fitler, of New York, standing at 28yds., shot extremely well, and won with 24 kills, missing only his 25th bird. H. Brokaw and T. D. Potts, of New York, divided second and third money, both tying with 23 kills. Carruthers killed 22, Bratt 21, both standing at 30yds. Burnham and Phipps, shooting from the 28yd. mark, each killed 20. Waterbury at 27yds., killed 20. A good crowd was in attendance. Referee Wm. Dietsch.

PALM BEACH, Fla., March 4.—A large gathering of trapshooters was in evidence at the Florida Gun Club's shoot to-day, when two events were run off. A. F. Potts, of Lakewood, won the cup offered by J. A. Carruthers, of Montreal. It was a 10-bird handicap, and in the first round each man killed 10 straight. In the shoot-off, miss-and-out, Carruthers won. E. H. Fitler, of Philadelphia, took third money, winning in the shoot-off from Roy C. Bragg, of Detroit. Howard Brokaw was next, with 8 kills, and F. K. Burnham and J. P. Knapp, each of New York, had 7 kills each. In the next event E. H. Fitler, with 5 straight kills, won first money.

Essex County Country Club.

ORANGE, N. J., March 4.—The competitions at the traps to-day were most spirited, and a number of good scores were recorded. D. W. Granberry was high man in the Daly trophy shoot, and also won in the sweepstakes handicap. Scores:

Daly trophy:					
D W Granberry	3	21	Dr Fleck	4	16
C Feigenspan	0	20	H T Schreiber	2	16
C H Daly	0	19	L Ross	8	15
A Colgate	6	18	P Ross, Jr.	8	15
A O Headley	5	18			
Taylor cup.					
C Feigenspan	0	21	Dr Fleck	4	19
H T Schreiber	2	20	Peter Ross	8	16
J A Hart	0	19	A O Headley	5	16
C H Daly	0	19	L Ross	8	16
D W Granberry	3	19			
Sweepstake handicap:					
D W Granberry	4	22	A O Headley	5	19
J A Hart	0	21	Peter Hauch	8	18
C Feigenspan	0	20	L Ross	8	16
C H Daly	0	20			

Registered Tournaments.

PITTSBURG, Pa.—Tournaments registered with the Interstate Association during the week ending March 4, are as follows:

April 27-29.—Hutchinson, Kans.—Kansas State tournament, under the auspices of the Hutchinson G. C. C. T. Rankin, Sec'y.

April 29.—Glens Falls, N. Y.—Hudson Valley R. and G. C. John A. Norton, Sec'y.

May 30.—New Haven, Conn.—Western Connecticut Trapshooters' League, under the auspices of the New Haven G. C. E. H. Bailey, Pres. W. C. T. S. L.

May 30.—Clinton (Mass.) G. C. W. J. Tedford, Sec'y.

June 9.—Pottsville (Pa.) G. and F. A. E. I. Elliott, Sec.

June 15-16.—Marshall (Mo.) G. C. E. W. Brown, Sec'y.

June 17.—Newmanstown, (Pa.) G. C. F. S. Rader, Sec'y.

June 29-30.—Cape Girardeau (Mo.) G. C. J. A. Kinder, Sec'y.

Aug. 24-25.—Bradford (Pa.) G. C. A. W. Vernon, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Shoot for a Double Barrel Gun.

GLOUCESTER CITY, N. J., March 4.—There were forty participants in a shooting match for a double-barreled gun, held at the Ben Martel Gun Club grounds this afternoon, and the winner proved to be William Wakeman, of Woodbury, who broke 5 straight. Eight shot at 5 bluerocks and some of the marksmen missing on the first or second round, took another chance. Ben Martel defeated William Blensinger in a match shoot, and Frank Butler won a sweepstake. Wakeman also won a sweepstake shoot.

Peters—98.38%

ANOTHER WONDERFUL RECORD.

Mr. J. S. Day, winner of the 1910 Amateur Trap Shooting Average by a **percentage never equalled,** established another and even **more remarkable record.** In his last 2100 targets, from August 8 to 18, 1910 (regulation targets at registered tournaments at Midland, Big Springs, Cisco, Gorman and Walnut Springs, Texas), he **lost but 34, scoring 2066,** making an average **never equalled or approached** by an amateur, **98.38%.** This is **more than ½% higher** than the average of the winner of the 1910 High Professional honors at 2000 targets.

Mr. Day bought his loads from dealers where tournaments were held, and they were regular **PETERS** factory goods—not special in any sense. Any one can buy **PETERS** Shells of this same quality, and they don't have to be used in any special gun to make high scores.

The Indeterminate "12-Bore."

UNLIKE rifle and pistol calibers, the internal diameters of shotgun barrels are based on dimensions that have been handed down from generation to generation. When the fowling-piece was first utilized to fire shot, the barrels seem to have been made to sizes determined by the diameters of musket balls. No doubt shot and ball would both be fired from the same smooth-bore guns. In any case, the musket sizes provided a rough and ready made standard convenient to work to at a time when accurate measurements of internal diameters, expressed in decimals, were not available. Bullets had to be got into the tubes, so some kind of relationship between the two had, by hook or crook, to be established. A suitable basis was found ready to hand. Spherical bullets of identical weight, made of the same material and under the same conditions, must necessarily be of identical dimensions. In practice, the spherical leaden bullets, made of metal of indeterminate specific gravity and cast as spheroids, prolate or oblate, or both, would be apt to vary widely. Also the internal diameters of the barrel would be produced with a very liberal margin for "working toleration." When an extra large bullet had to be forced down an extra small tube, there would be difficulties, but for ordinary purposes the method worked well enough. To the soldier in warfare the difficulties might at times prove intolerable, unless he used his musket as a club. In the case of shotguns exact adherence to specific sizes was, in the muzzle-loading days, of minor importance. The relationship of weight and diameter in leaden spheres afforded a convenient and sufficient basis for the numeration of the bores. Twelve-bore is that caliber which takes a leaden bullet weighing one-twelfth of a pound; 20-bore takes twenty bullets to the pound; 8-bore, eight, and so on.

For tubes used with shot, these sizes were as good as any other sizes that could have been devised. They afforded ample gradations. A pound of lead could be divided into any reasonable number of equal parts. If a pure lead bullet could be cast into a perfect sphere of exactly the weight required, the caliber would at once be determined. With muzzle-loading shot tubes there was no great need to insist with great particularity upon accuracy of size. The numbered bores supplied a suitable standard to which to work. It was accordingly adopted for that purpose, and continues in use.

In order to keep within bounds, it will be well here to confine attention exclusively to the 12-bore size. That is the most widely used of all sizes, and it affords an example which in many respects is typical. Going back to the first half of the nineteenth century, we find that the weight of the ball fired was officially regarded as the proper standard for determining caliber. We may reasonably suppose, and we should be right, that gunmakers in their workshops had some kind of gauge, in the form of plugs, to measure the internal diameters of the coiled tubes they used. These plugs would represent, as accurately as circumstances permitted, the conventional size fixed by the diameter of the ball, although the size does not seem to have been expressed arithmetically. When the Birmingham Proof House was established in 1813, a scale of proofs was inserted in the act of Parliament passed in that year. Under the heading "Number of Balls to a Pound" were stated sizes from 1 to 25, but there was no more definite information about the dimensions. Probably the practice of the ancient proof house in London was followed, but that is only a conjecture. The scale was declared to be "equal to the proofs of the Honorable Board of Ordnance." In 1815 another proof act was passed. In this the old scale was retained. Recognition of the existence of revolvers and breechloading guns led in 1855 to the passing of a third proof act. In this more elaborate scales were provided, and arithmetical equivalents for the various gauge were established. They were retained in the existing act of 1868, to which was appended a "scale for proofs of small-arms of every description except rifled small arms." There were sixty-three different "numbers," or bores, given, and with each was provided the "diameter of bore by calculation." The "numbers" were letters of the alphabet from A (2 inches) down to P, and figures from 1 (1.669 inches) down to 50 (.453 inch). The 12-bore size is definitely and uncompromisingly stated as .729 inch. The next larger size is 11-bore (.751 inch), and the next smaller size 13-bore (.710 inch). Accordingly, the 11-bore is .22 inch larger than the 12, and the 13-bore .19 inch smaller. [This is an error. It should read .022 and .019.—Editor.] Under the act, power was given from time to time to alter the scales and regulations for proof. This was fortunate, for in the past forty years it has been very necessary to make changes. Without attempting to recapitulate all the stages, the accepted definition of the 12-bore under the proof rules of 1896, and the present rules of 1904 may be stated as under. These apply to breechloaders, the size .729 being retained for muzzle-loaders without any sub-divisions:

1896 Rules.		1904 Rules.		
		Nominal Sizes of Proof		
Bore.	Diameter.	Ctgs. Gauges		Diam.
12/1	.740	12	12/1	.740
12	.729	12	12	.729
13/1	.719	12	13/1	.719
13	.910	12	13	.710

The nearest definition that could be given off-hand of a 12-bore seems to be that it is a gun chambered for, and intended to take, 12-bore cartridges. The tube is required to be something under the size of an 11-bore (.751) and something over the size of a 14/1-bore (.701). The gauge size is always marked on the barrels in proof, but 12/1, 12, 13/1, 13, would all come under this elastic definition of "12-bore." It is understandable that in practice gunmakers prefer to have their 12-bore guns marked with the figure 12 in the gauge mark. Users of the weapons, if they investigate such things for themselves, are apt to think it queer if a 12-bore is marked as 13/1. The figure 12/1, which may indicate a tube .011 over the conventional 12-bore diameter of .729, looks much more convincing than 13/1, which indicates .010 under .729. The variations either way are considered allowable, but the size to which a 12-bore breechloader is usually expected to conform is that fixed for the muzzleloader of corresponding size, namely, .729 inch.

The sub-divisions of the arithmetical equivalents of the 1855 scale are to be explained by considerations of expediency. If a muzzleloader intended for a 12 is over or under size it can be called an 11 or a 13. No harm is done. But if breechloading cartridges had had to be produced for each one of the sixty or so sizes denoted by letters or numbers, endless confusion would have resulted, while no good purpose whatever would have been served. Apart altogether from the manufacturing expense, sizes of cartridges differing just enough to make the ammunition for one gun unusable in another would have caused no end of trouble. Again, on the gunmaker's side, there was the consideration that between 11 and 12, and between 12 and 13, there was a fairly wide margin. Rigid insistence on exactitude to three places of decimals was not customary when muzzleloaders were bored. The size would be there or thereabouts. The division into half sizes gives us 11-bore .751 (which has not got a cartridge and would take 10-bore ammunition), and then 12/1, (.740) .11 [.011] smaller, with the real 12 .729 .11 [.011] smaller again. Below 12 there is 13/1, .1 [.010] smaller, and 13 (which still takes the 12-bore cartridge) another .1 [.010] reduction. The margin between the old gauge sizes has merely been sub-divided, so that the limits can be shown by the gauge marks with approximate accuracy.

To sum up, the 12-bore gun, with a chamber which, since the standard sizes were adopted, should be perfectly proportioned to take a 12-bore cartridge, may nevertheless have a barrel varying in diameter from .740 to .710. The designations by numbered bores, as an equivalent for calibers, was probably at all times an indefinite kind of method. It is equally indefinite now, although the gauge marks, if referred to, bring the approximation within narrower bounds. If an attempt were made to substitute definite measurements for arbitrary numbers, it is practically certain that it would not succeed. Whether any particular benefit would result if it did succeed is extremely doubtful. There are, nevertheless, drawbacks to this indeterminate system of nomenclature. On another occasion an instance or so may be referred to.—County Gentleman.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Philadelphia Trapshooters' League.

PHILANELPHIA, Pa., March 5.—The Highlanders from Edge Hill continue to lead the way in the contest for the Philadelphia Trapshooters' League championship. While the Highlanders were winning the much coveted three points from the Whites and Meadow Springs at Holmesburg Junction yesterday, South End, of Camden, by defeating Haddonfield in the match shot on Jersey soil, kept in the running for the pennant. Highland has a 3 point lead and 74 more broken targets to its total than the Jerseymen, but as there are two events yet to be contested, it is possible for South End to finish in front.

Harry Buckwalter, of the Highland Club, set a new mark for individual scores yesterday by breaking 49 out of 50, the first time the score has been made this season. The points scored and targets broken follow:

	Points.	Total.
Highland	12	1781
South End	10	1707
S. S. White	9	1671
Haddonfield	8	1601
Meadow Springs	5	1654

The Highland gunners increased their lead in the League by outshooting the S. S. Whites and Meadow Springs at Holmesburg Junction yesterday afternoon in the fourth series of the championship race. The delegates from Edge Hill shot at a fast clip, winning the match by a total score of 437 out of their 500 targets. The Whites finished second with 429, while Meadow Springs broke just 4 over their 400 mark. Scores:

Highland.		S. S. White.	
Buckwalter	49	Griffith	46
W H Wolstencroft	47	Wilson	46
Tansey	46	Severn	45
Anderson	45	Newcomb	45

Haddonfield—Bennett 38, Albertson 38, Dungan 38, Stafford 38, Heiss, Jr., 38, Heiss, Sr., 38, Pierce 36, K. Peacock 36, S. Bergen 35, Pedloe 35, Jas. Logan 35, John Logan 34, Cousins 33, Shreve 32, Jamison 30, Humphrey 26, Lichstenstein 24, Bozarth 23, Blensinger 20, Lye 20, Webster 19.

Northern Kentucky Gun Club.

THE weather on March 5 was very threatening in the afternoon, and the attendance at the weekly shoot was very small in consequence. Holaday was high gun with 87 out of 100. Schreck did the best work of the afternoon, shooting a 96 per cent. gait and breaking straight in his last event. Gould was late in reaching the grounds and had to shoot alone. He put up a pretty good score in the event, and after some banter got up a match with Holaday at 25 targets, the latter to stand at 18yds., and Gould at 16. Gould missed but one target in the first 19, and then dropped 4 in the last 6 targets, going out with 20, and beating Holaday by 2 targets. An effort will be made to inaugurate a series of team matches with the local clubs, and nothing more calculated to revive the interest in the sport in this vicinity could be done. The club will hold its annual meeting for the election of officers on March 14.

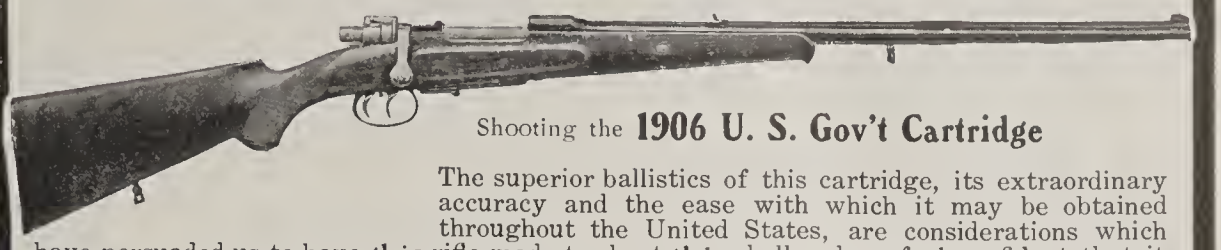
SAUER MAUSER RIFLES



Shooting the **1906 U. S. Gov't Cartridge**

The superior ballistics of this cartridge, its extraordinary accuracy and the ease with which it may be obtained throughout the United States, are considerations which have persuaded us to have **this** rifle made to shoot **this** shell and we feel confident that it will supply something for which sportsmen have expressed an urgent desire—**a sporting, bolt-action rifle, shooting the same cartridge as used by the United States Army and Navy.**

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

ANGLING MEMORIES

Seasonable Books for the Sportsman's Library

MEN I HAVE FISHED WITH MY ANGLING FRIENDS

Both by FRED MATHER

These two volumes are a source of endless delight to the fisherman. They deal with every phase of the gentle sport from bent pins and willow poles to salmon flies and special rods—with every kind of fish as well.

They are full of a quaint philosophy, written with a rare appreciation of human nature, and comprising sketches of angling "characters" as well as well-known men who were Mr. Mather's brethren of the angle. Much of other sport and adventure beside fishing will be found between the covers of these books. These two large, splendidly bound, splendidly printed, and richly illustrated volumes of 400 pages each regularly sell for $2 each. While they last we offer

Both together, postpaid, for $3.00

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

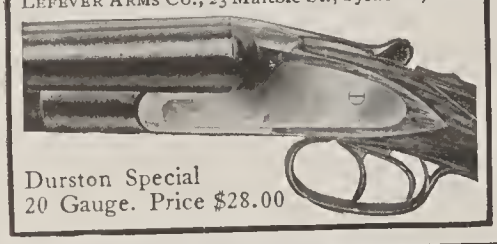
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00

Ithaca *Guns*

DON'T COUNT LOCK PARTS UNTIL YOU SEE THEM IN THE GUN READY FOR ACTION.

Compare our lock, set up, ready for action with any other make—if we haven't the simplest lock we'll give you the gun—let the gun talk for itself.

If you see more than one hole in a hammer, look out for toggles or stirrups not shown.

Our hammer is all in one piece, only one hole, no toggles or stirrups attached. Coil main springs guaranteed forever.

Beautiful catalog FREE; 18 grades, $17 75 up.

Our little 5 1-4 lb. 20 bore is a howling success.

For Night Driving, Hunting, Fishing, etc. Is adjustable to any kind of dash or vehicle. Send stamp for Illustrated Catalogue and address all orders Lamp Department.

A Problem's Solution

LOG CABINS & COTTAGES;

How to Build and Furnish Them.

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth profusely illustrated, $1.50 postpaid.

FOREST AND STREAM PUBLISHING COMPANY

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the uathor uses. A good index completes the volume.

FOREST AND STREAM PUBLISHING COMPANY

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING COMPANY

SAM LOVEL'S BOY

Sam Lovel's Boy is the fifth of the series of Danvis books. No one has pictured the New Englander with so much insight as has Mr. Robinson. Sam Lovel and Huldah are two of the characters of the earlier books in the series, and the boy is young Sam, their son, who grows up under the tuition of the coterie of friends that we know so well, becomes a man just at the time of the Civil War, and carries a musket in defense of what he believes to be the right.

FOREST AND STREAM PUBLISHING COMPANY

Cincinnati Gun Club.

WITH the approach of spring, things are beginning to liven up a bit at the club grounds, and the prospects are good for a revival of interest among the members. At the weekly shoot on March 5, there were seven shooters who took part in the sport, and the scores made were very good. Hammersmith, who has not been shooting for many months, is getting enthused again, and gave evidence that he can come back, by breaking 93 out of 100, and taking first place. Ralph Trimble, the well-known professional, was also present, and shot well up to his mark, starting off with 25 straight, and finishing with 92. Hellman is one of the new generation of shooters, and has made steady progress toward the top since he started in, about a year ago. To-day he got in third place with 90, and he can be depended upon to this score or better. Connelly did not strike his gait until the last event, when he only missed 2. Heile generally does some better work than he did to-day, but he improved with each event. Harrington has not been shooting very long, and is likely to surprise some of them before the season is over. The club has some good G. A. H. material, and will be well represented at that event next June. The scores:

Targets:	25	25	25	25	Total.
Hammersmith	22	24	24	23	92
Trimble	25	22	23	22	92
Hellman	21	23	24	22	90

Connelly	10	11	15	23	59
Harrington	13	17	16	..	46
Heile	11	13	19	..	43

Mineral Spring Gun Club.

WILLOW GROVE, Pa., March 4.—Splendid scores were made at the monthly shoot of the Mineral Spring Gun Club, on their range at this placce. Berk, Haas, Cooper and Hiltebeitel tied with 99 breaks for the monthly shoot trophy. In the shoot-off at 25 targets, Hiltebeitel won on number of actual breaks, but with the added handicap, Haas had the chance to tie for a second time. Berk and Cooper lost out on the second shoot-off and the standing tie between Haas and Hiltebeitel will be shot off at the next meet. Summaries:

Events:	1	2	3	4	Total.

†The best League score recorded to date.

J. B. CRABTREE, Sec'y-Treas. U. S. R. A.

Columbia University Rifle Club.

NEW YORK, Feb. 28.—The following scores were shot by the Columbia team in their match against the North Georgia Agricultural College rifle team for the week ending March 4. The total score is poor, as the team seems to have struck a bad mid-season slump. Strangely enough, the slump is confined to the offshoulder shooting as only 21 points were dropped by the ten men at the prone position. The team is now in third place in the League, with one defeat and seven victories. Iowa and Massachusetts Agricultural are tied for first place with eight straight victories. However, Columbia stands at the head of the list of non-military colleges, and stands an excellent chance of winning the non-military intercollegiate championship. The scores follow:

	Standing.	Prone.	Total.
A P Lane	93	98	191
J A Baker, Jr., captain	92	99	191
W J Krefeld	88	99	187
A A Leach, Jr.	87	98	185
M J Cohen	86	98	184
H Saalberg	85	98	183
W Stembruch	81	98	179
A J Hauke	81	97	178
J R Guiteras	78	98	176
L Siff	76	96	172
	847	979	1826

League Shooting.

WASHINGTON, March 4.—The close of the eighth week of the Intercollegiate Rifle Shooting League matches finds the State University of Iowa and Massachusetts Agricultural College tied for the leadership. Both teams have a record of eight victories and no defeats. Matches for the week resulted as follows: Columbia defeated North Georgia, 1826 to 1623; Iowa defeated California, 1873 to 0 (by default); Massachusetts defeated Princeton, 1836 to 1695; Washington defeated Louisiana, 1797 to 0 (by default); Cornell defeated New Hampshire, 1801 to 1712; Missouri defeated Dartmouth, 1773 to 1741; Purdue defeated Minnesota, 1746 to 1709, and Rhode Island defeated Arizona, 1656 to 1533.

With only two matches of the series remaining to be decided, the New Haven team leads the Interclub Rifle Shooting League in the Eastern Division, with a clean record of eleven wins. Savannah foots the list with eleven defeats. Edward Sweeting, of the Warren, Pa., team, made the possible score 200 in this week's match.

Results this week were: New Haven defeated Erie, 983 to 957; Warren, Pa., defeated Savannah, 981 to 862; Bangor defeated Providence, 977 to 923; Portland, Me., defeated Birmingham, 968 to 965; Pittsburg defeated Bridgeport, 959 to 955; Butler, Pa., defeated New York city, 947 to 0 (by default), and Washington defeated Atlantic City, 934 to 835.

The Philadelphia Rifle Association.

PHILADELPHIA, Pa., Feb. 23.—An all-day competition of this Association was shot Feb. 22 on the Arlington range. Five members, two of them new ones, showed up, in spite of a snowy walk and a strong, cold wind. Dill got some nice scores on the military. Forbes used a .30-30 on the German ring target, and Schnerring and Williams tackled the offhand match.

Rifle, 200yds., offhand: Geo. Schnerring 214, 210, 208, 203, 200, 199; Williams 215, 211, 208, 203, 203, 201.

Record match: Forbes 156.

Honor target, 3 shots: Williamson 63.

Military match: H. A. Dill 45, 45, 44, 44, 42, 41, 40.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

A Wonderful Victory For THE PARKER GUN

At the Great Western Handicap, held at Kansas City, Mo., Friday, Feb. 17, Mr. Fred Gilbert won the event by the magnificent score of 25 straight, and 5 straight in the shoot-off of the tie, standing at the extreme handicap mark of 33 yards. Mr. Fred Cockerel at 30 yards and Mr. H. Dunnell, at 31 yards, made scores of 25 straight. These three gentlemen were the only ones to tie, and were shooting the **"Old Reliable" Parker Gun.** Mr. Gilbert at this tournament shot at 475 targets, losing but 21,—thereby winning first average for the tournament.

PARKER BROS.

New York Salesrooms: 32 Warren St. **Meriden, Conn.**

New Model 27 **Marlin** *Repeating Rifle*

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working *"pump" action;* the wear-resisting *Special Smokeless Steel* barrel; the modern *solid-top* and *side ejector* for rapid, accurate firing, increased safety and convenience. It has *take down* construction and *Ivory Bead* front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full *Marlin* line. Sent for three stamps postage. Write for it.

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

Cincinnati Police Revolver Club.

THE third of the series of matches for the Roll-Crawford-Brandemour trophy was shot at the City Hall range on March 3. There was a small attendance of members, a number being prevented from taking part by their official duties. At the close of the slow fire rounds, P. L. Curlis was in the lead with 160, R. Ruck a close second with 157, and it looked like the former would finish in the lead and thereby win the match for the third time, and take the trophy. But the rapid fire round proved his undoing, as he fell down badly, while Ruck made high score in this round, 32, and finished with a total of 189, 15 points in the lead. Curlis made the high 5-shot scores slow fire, getting 45 in his first and 44 in his third round. Sergt. Williams was second high in the rapid fire with 29.

Trophy event, 20 shots slow, and 5 shots rapid fire (20 seconds), possible total 250; 20yds., Standard American target, .38cal. revolver, full service ammunition:

Rifle and Revolver at Wilmington.

WILMINGTON, Del., March 5.—In the rifle division, at yesterday's Du Pont Club shoot, E. G. Ackart did the best work, and his scores with both pistol and rifle deserve especial mention. The club is having prepared a drawing, and estimates covering the construction of a 200yd. range, which will be most unique in design and construction. The plans call for an extensive addition to the rifle division, and will have the hearty approval of the long-range enthusiasts.

Fifty-yard revolver and pistol qualification scores: F. B. Harkins 81, 81, 81, 80, 80, 77, 77, 72, 70; F. G. Roblen 72, 69, 61.

Fifty-yard revolver and pistol qualification scores: E. G. Ackart 83, 81; F. B. Harkins 82, 73, 71; S. B. Trott 20; J. C. Wood 12.

Fifty-yard rifle practice scores, (.22cal.): E. G. Ackart 84, 70; C. H. Shepard 75, 68, 64; J. T. Birch 67; H. F. Reed 64, 54, 48, 46; C. D. Rogers 63, 63; G. E. Lambert 63, 50, 68; J. I. On the Seventh Regiment Rifle Range.

AT the armory ranges of the Seventh Regiment, Park avenue and Sixty-seventh street, some excellent scores were made on Friday night, March 3. Eighty marksmen participated in the first competitions for the trophies in the final class rifle match of the regimental club indoor series, and many new names were found among the leaders at the end of the night's shooting. The men shot in three classes—expert, sharpshooter and novice. The summaries:

Leaders in class cup match No. 4 expert class:

	200yds.	500yds.	Total.
Pvt J K Boles, Co. I	34	35	69
Pvt A Scholz, Co. A	34	35	69

SECRETARY.

PUBLISHERS' DEPARTMENT.

At Columbus, O., Feb. 22 and 23, Wm. Webster won second amateur average, and Mr. C. A. Young second general average, both by a score of 282 out of 300, and both using Peters factory loaded shells. Mr. H. W. Cadwallader, of Decatur, using Peters factory loaded shells, won high general average at Chillicothe, Ill., Feb. 22, score 163 out of 190. Mr. C. A. Young, shooting Peters factory loaded shells, won high general average at Enon, O., Feb. 21; score 95 out of 100. At Tampa, Kans., Feb. 22, Mr. Ed. O'Brien won high general average, 127 out of 150, and Geo. W. Lewis, second general average, 120 out of 150, both using Peters factory loaded shells. At Lancaster, Pa., Feb. 22, Mr. Neaf Apgar, shooting Peters factory loaded shells, won high general average, 110 out of 125. He was also high professional at Phillipsburg, N. J., Feb. 25, 132 out of 140, using Peters shells.

At the recent shoot of the Whitemars Gun Club, Foot Side Inn, St. Thomas, Pa., the high amateur score was obtained by Morris A. Freed, who broke 258 clay birds out of a possible 310. Frank A. Zeigler, with a score of 257 birds out of 310, was second high amateur. Third high amateur was W. Clegg, who broke 255 birds out of 310. This was a two days' shoot, widely attended and the results are interesting from the fact that the three high score men were all equipped with Stevens repeating shotguns.

The simplicity of the locks in the Ithaca gun appeals to many gun buyers, and the handsome little 20-gauge Ithaca guns are in high favor with men who prefer lightweight guns. Send to Ithaca Gun Co., Box 25, Ithaca, N. Y., for illustrated catalogue.

Some of the Milam reels made more than a half century ago are still in use and in good condition. And B. C. Milam & Son are still making these excellent reels at Frankfort, Ky.

New York's Great Pennsylvania Station.

One of the greatest works of modern times was the construction of the concrete-lined steel tubes under the Hudson and East Rivers, the tunneling of Manhattan Island, and the erection of the magnificent Pennsylvania Station at Seventh avenue and Thirty-second street, New York, bringing the through trains of the Pennsylvania Railroad into the heart of New York city.

An illustrated booklet describing this great work and telling what it means to the New York passenger, has been issued by the Pennsylvania Railroad, and will be sent postpaid to any address by George W. Boyd, General Passenger Agent, Broad Street station, Philadelphia, Pa., on receipt of a two-cent stamp. Send for it.

A PLANK.

Continued from page 378.

rate means. The day of wild game as an economic factor in the food supply of the country has gone by. In these four hundred years we have so reduced the game and so improved and developed the other resources of the country that we can now supply food with the plow and reaper and the cattle ranges cheaper than it can be furnished with the rifle and the shotgun. In short, as a civilized people we are no longer in any degree dependent for our sustenance upon the resources and the methods of primitive man. No plea of necessity, of economy, of value as food, demands the marketing of game. If every market stall were to be swept of its game today, there would be no appreciable effect upon the food supply of the country.

Well, then, why not recognize this, and direct our efforts, in line with such a recognition, toward the utter abolition of the sale of game? Why should we not adopt as a plank in the sportsman's platform a declaration to this end—*That the sale of game should be forbidden at all seasons?* To share and express the sentiment is one thing; to put it into execution is quite another. Perhaps the time is not ripe for such stringent measures. Yet this very rule of no game traffic holds in certain county laws in this State; and one of these days it will hold in every State, East and West, North and South. It may not be brought about in our day, but the present moment is none too soon to adopt the plank as a working principle and to work for it.

That which stands in the way of the present prohibition of the sale of game in the larger cities is the magnitude of the commercial interests involved. The traffic is one of large proportions, much capital is invested, and the business not one which would readily be sacrificed. No one of these considerations, however, can withstand a campaign of education and the creation of a public sentiment which will surely follow when that education shall have taught the community the true place of wild game in the economy of the civilization of the present.

The FOREST AND STREAM *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

SMITH GUNS HUNTER ONE-TRIGGER

In the brush or at the traps you want to feel *sure* of your gun. A second's loss of time means the loss of your bird or a failure to score in the competition. The strongest insurance policy the world over for sportsmen is a Hammerless Smith Gun with the Hunter One-Trigger attachment.

THE HUNTER ONE-TRIGGER gives a pull, short, clean and quick. There's no creep or drag. The speed of the mechanism far exceeds the speed of the trigger finger. The aim is not disturbed because there is no relaxing, no regripping, no accommodating yourself to the different lengths of the stock—but just a firm, steady grip and pull.

The very newest Hammerless Smith Gun is the *20-Gauge Hunter One-Trigger*—and it's a beauty. Weighs only 5¾ to 7 lbs. Just the finest gun that can be made at the price—simply *all gun and no frills.* Be sure to ask your dealer about it.

Write today for handsomely lithographed Catalogue—it is free.

THE HUNTER ARMS CO., 90 Hubbard Street, Fulton, N. Y.

PLANNING A HOUSEBOAT

Will be a leisure-hour occupation in many a family this winter. Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

HOUSEBOATS AND HOUSEBOATING

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, $3.34

A Classic for Sportsmen

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

PORK RIND FOR BLACK BASS.

"I have been fishing for black bass for years," said a New York angler in the Sun, "and I rather flattered myself that I knew the game pretty well until last winter when I spent several weeks in Florida. Within a radius of ten miles of the little hotel where I was stopping there were a hundred fresh water lakes, some of them little more than ponds, to be sure, but all containing big mouth bass.

"In the climate of Florida these fellows keep on growing all the year round, with plenty to eat, and the consequence is they attain a size unheard of in the lakes of the North. A ten pounder is by no means uncommon, and I have seen them weighing up to eighteen pounds; great, big sluggish fellows.

"In the inland lakes of Florida the guides use for bait a live shiner anywhere from nine to twelve inches long. Just why I don't know, but they say it is impossible to get these shiners in bait seines, and all have to be caught first with hook and line. Dough mixed with cotton is the favorite lure for them. My guide employed a couple of boys, who fished all day long for his shiners, which, added to his own charge and carriage hire, made a day's fishing somewhat of a luxury.

"The accepted method of fishing for bass in these waters is to troll with a big float. The water is of a uniform depth, about four feet, and you adjust your float accordingly, so that the bait can't quite reach the weeds on the bottom.

"When you get a strike you just sit and wait till you think the fish has had time to gorge your big bait, paying out line if you think it necessary. And when you strike him you've got to strike mighty hard to drive the hook home, for you'll find that big float, coming as it does to break the connection between you and your fish, makes a lot of difference. I broke a $25 Bethabara rod in three pieces striking a bass that when I pulled him in hand over hand I found wasn't much larger than the bait he had been trying to swallow. I used a heavier rod after that and caught some weighing over ten pounds.

"In these lakes, just out of curiosity, I tried various methods I had frequently used in the North, but either the conditions were different or the fish were educated only to the one way of fishing. At any rate I had little luck, except with the live shiners and the big float trolled slowly after a rowboat.

"From Lakeland I went to Ponce Park, on the east coast, where it's all salt water fishing. At this point Spruce Creek empties into Turnbull Bay, and my guide told me one day there were plenty of black bass up there. We waited for a day when the tide was right and made the fifteen mile trip up the creek, getting a glimpse of several alligators on the way.

"My favorite method of bass fishing is to cast a strip of pork rind with a slit half way up, which with a little motion of the rod in retrieving the bait gives it the appearance of a frog swimming. I use a rod with the reel below the hand built on the lines of a fly rod except that it is heavy enough to cast a frog. I strip the line in by hand, coiling it in the bottom of the boat, scarcely using the reel at all. It is necessary to use the finest quality braided silk line for this, otherwise it is apt to kink.

"When we reached the fresh water my guide shut off the power of the boat and began to paddle. The stream was about a hundred feet wide, with overhanging water birches and cypress trees, and under the shadow of this foliage I began casting close up to either bank. Old Deacon Jones was my guide, and this sort of bass fishing was quite foreign to his ideas. But how those bass did jump at that pork rind.

"We only had about four hours of fishing, and when at 2 o'clock we counted our catch and found we had forty-two bass, the largest weighing a trifle over nine pounds, I was quite ready to quit. The deacon had a profound respect for me after that, and during my stay at Ponce Park we made several trips up Spruce Creek, but never exceeded our first day's catch."

For Sale.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

FOREST AND STREAM PUBLISHING CO.

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness. Out-of-Sorts Dam. Puppies. Diet. Other Foods. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Treble Wedge Fast Action.—Many methods of uniting the top of the standing Breech and upper portion of the gun barrels have been introduced, but none are so strong and thorough as the Greener Treble Wedge Fast Cross Bolt, which has been proved by actual experiment to add enormously to the safety and wear of a gun.

At the famous London *Field* explosive trials of 1878, a special experimental gun was prepared by the editor of the *Field*, and the following extracts from his report are a remarkable testimony to the strength and efficiency of this device.

"to this action we had a little apparatus fixed as shown in this sketch, by this arrangement a piece of silver paper can be strained between the hook and the screw clip, attached to the barrels so that when any separation takes place during an explosion the paper breaks. We found that in Mr Greener's action no breakage occurred, using any charge of powder which the cartridge case could be made to hold with the bolt in position the paper remained intact up to the last"

In these experiments a charge of 65 grains of Schultze powder and 2 ounces of shot was used without causing the breech to "give" in the slightest degree

See that your new gun carries the Greener guarantee—Life-long satisfaction.

ACCURACY

The key note of successful target shooting, as far as the rifle is concerned is—accuracy.

The rifling of the Stevens barrels is one of the things that has helped make American firearms famous. That's a big statement, but the proof is the International Victories in Great Britain; the International Victories in South and Western Australia; and the fact that a majority of RIFLE TOURNAMENT TROPHIES IN THE UNITED STATES is held by owners of Stevens Rifles.

The same accuracy which characterizes the manufacture of the Ideal barrels applies to the Stevens Rifle Telescopes, which are made in the Stevens Optical Laboratory.

What subject do you wish us to cover with our literature?

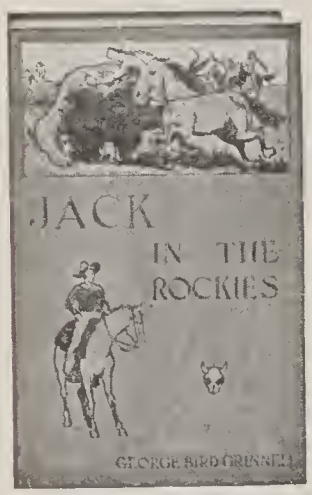
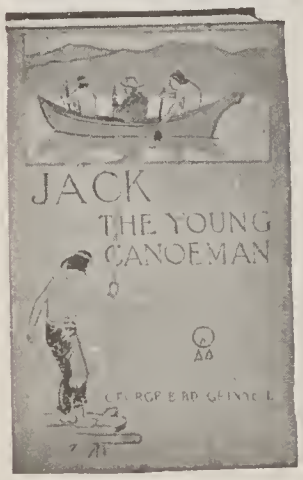
THE JACK SERIES





Best Books For Boys

By GEORGE BIRD GRINNELL

THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

AN ACADIAN MOOSE HUNT.

It was raining when we crossed the boundary between New Brunswick and Nova Scotia, it was raining at Truro, and when the Intercolonial train in which we were traveling dropped us at a little wayside station in the heart of the woods cataracts of water were pouring down from a melancholy sky on a yet more melancholy earth. Our guides, who met us on the platform, feeling that some apology for the weather was necessary, made haste to assure us that the season was quite exceptionally pluvial, and so, indeed, it was. As a rule, clear, bright days and starlit nights characterize the Acadian autumn, and only about once in ten years does persistent bad weather place the hunter at a disadvantage. We were unfortunate in having hit the exception rather than the rule; but, in spite of meteorological drawbacks, our stay in the province was enjoyable and from the sportsman's point of view successful, for the variety of game it provides Nova Scotia is a veritable hunter's paradise. A country less than half the size of England that yields annually from 500 to 800 moose might reasonably expect to rank high in the favor of British Nimrods; but, curiously enough, Nova Scotia has always been rather a terra incognita to the average English sportsman, who, in ignorance of what may be found there, has gone further afield, to work harder and likely enough, fare worse. Consequently the moose grounds of the counties of Annapolis, Cumberland, Digby, Guysborough, Halifax, Lunenburg, Queens, Shelburne and Yarmouth are still practically unworked. Moreover, the heads obtained are usually of good size and of quality, some of the most symmetrical moose antlers in existence having been secured in Acadie. The cost, too, of acquiring a trophy there averages not much more than half the expense of a shooting expedition in the famous forests of New Brunswick, which is the only province where the chance of killing a moose approximates to the certainty of shooting one in Nova Scotia. Were these facts more widely known among British sportsmen, the land of Evangeline would not want for those to sing her praise as a sporting country.

We spent the night at the house of Sandy, one of the guides, and in the morning, the weather having cleared, Sandy's son drove us eighteen miles back into the woods over a trail that, as they say in those parts, presently turned itself into a rabbit track and ran under a stump. This does not sound like getting very close to the primitive heart of nature, but in Nova Scotia remoteness is often a matter of inaccessibility rather than of distance, and the scene of our hunt was one of the most difficult spots to reach in the whole province. Owing to this fact only a few native woodsmen had ever hunted there, and they but seldom, for it is characteristic of indigenous hunters that they travel by preference along the line of least resistance, leaving avoidable hardships to be conquered in a spirit of sport by those to whom hunting is not a means of gaining a livelihood. Game was therefore exceptionally abundant in our chosen locality, and while we were packing over the last four miles, where horse transportation was out of the question, the signs of both moose and bear were frequently in evidence. Just before we reached our camping site Mr. Keeling, who as a boy had been an expert knife thrower, hurled his hunting knife at a grouse sitting close up against the bole of a tree, and actually nailed the bird to the trunk, so that he was obliged to remove his pack and climb up to release it.

Our first night in camp was most uncomfortable. Rain fell heavily till near daybreak, and, lying on our bed of fir tips under a canvas lean-to, we bewailed the lack of a telescoping principle in the human anatomy that would admit of drawing one's legs in out of the wet. But the morning dawned clear, and the day promised to be fine. The air became rapidly keener, the sun went into a cloud, and before breakfast was over a "sleepy" snow was falling. By nine o'clock there was as pretty a tracking

ANGLING MEMORIES

Seasonable Books for the Sportsman's Library

MEN I HAVE FISHED WITH — **MY ANGLING FRIENDS**

Both by FRED MATHER

These two volumes are a source of endless delight to the fisherman. They deal with every phase of the gentle sport from bent pins and willow poles to salmon flies and special rods—with every kind of fish as well.

They are full of a quaint philosophy, written with a rare appreciation of human nature, and comprising sketches of angling "characters" as well as well-known men who were Mr. Mather's brethren of the angle. Much of other sport and adventure beside fishing will be found between the covers of these books. These two large, splendidly bound, splendidly printed, and richly illustrated volumes of 400 pages each regularly sell for $2 each. While they last we offer

Both together, postpaid, for $3.00

A Classic for Sportsmen

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy. Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Book Catalogue Free on Application.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evening and dull outdoor days "to swap lies." Cloth. 187 pages. Price, $1.25.

Sam Lovel's Camps.

Rowland E. Robinson. Another charming story of life in innermost Yankeeland. Quaint and delightful stories of a delightful life. A splendid book for boys and scarcely less pleasing to their elders. Cloth. Illustrated. Postpaid, $1.00.

American Big-Game Hunting.

The Book of the Boone and Crockett Club. Theodore Roosevelt and George Bird Grinnell, editors. Narratives of white goat hunting, elk hunting, old times in the Black Hills, prong-buck coursing, nights with the grizzlies, buffalo days, blacktails in the Bad Lands, notes on forest reservations and game refuges. Contributors: Theodore Roosevelt, George Bird Grinnell, Owen Wister, Winthrop Chanler, Col. Geo. S. Anderson, Col. Roger D. Williams, Archibald Rogers, F. C. Crocker, Dean Sage, and others. Cloth. Illustrated. Postpaid, $2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people. Cloth, 353 pages. Price, $2.50.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. This is a fourth and by far the largest and handsomest of the club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiak Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics. 490 pages and 46 full-page illustrations. Price, $2.50.

American Duck Shooting.

George Bird Grinnell. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Cloth, 630 pages. Price, $3.50. Edition de luxe, price, $5.00.

The Art of Shooting.

Charles Lancaster. An illustrated treatise on the art of shooting. Illustrated. Cloth. Price, $1.25.

The Gun and Its Development.

W. W. Greener. With Notes on Shooting, Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Choke-boring, Gun Trials, Theories and Experiments. "The Gun and Its Development" is the standard work of the age on projectiles and all relating to them. Fully illustrated. Cloth. 770 pages. New edition. Price, $4.00.

Domesticated Trout.

Livingstone Stone. Contents: Trout Breeding Works, Ponds, Buildings, Hatching Apparatus. The Nursery, Taking the Eggs, Hatching, Care of Alevins, Rearing the Fry, Growing the Large Trout, General Observations. Cloth. Illustrated. Postpaid, $2.50.

Modern Fishculture in Fresh and Salt Water.

Fred Mather, author of "Men I Have Fished With." with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chaper on the Pike-Perch by James Nevin. Illustrated. Price, $2.00.

Familiar Fish and How to Catch Them.

Eugene McCarthy. A Practical Book on Fresh-Water Game Fish. With an introduction by Dr. David Starr Jordan, President of Leland Stanford Junior University, and numerous illustrations. Price, $1.50.

Training the Hunting Dog for the Field and Field Trials.

B. Waters. This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority. Cloth. 281 pages. Price, $1.50.

Log Cabins and Cottages.

William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, $1.50.

Pocket Kennel Record.

A handy book for immediate record of all events and transactions, relieving the owner from risk of forgetting important kennel matters by trusting to memory. Morocco. Postpaid, 50 cents.

Diseases of the Dog.

By Hugh Dalziel. A handbook for amateurs. Treats of the causes of disease in dogs, symptoms and treatment, modes of administering medicine, treatment in cases of poisoning, etc. Paper. Postpaid, 40 cents.

The Spaniel and Its Training.

F. H. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Pheasants; Their Natural History and Practical Management.

W. B. Tegetmeier. New, enlarged edition. 16 plates. Cloth. 237 pages. Price, $3.50.

Woodcraft.

Nessmuk. No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm. Cloth. 200 pages. Illustrated. Postpaid, $1.00.

Houseboats and Houseboating.

Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is $3.00 net. Postage, 34 cents.

How to Build a Motor Launch from Plans.

Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty, stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, $1.50.

Manual of the Canvas Canoe.

F. R. Webb ("Commodore"). Many illustrations of designs and plans of canvas canoes and their parts. Two large, full-sized working (24x38) drawings in a pocket in a cover. Cloth, 115 pages. Price, $1.25.

Canoe and Boat Building.

W. P. Stephens. Contains plan and comprehensive directions for the construction of canoes, row and sail boats and hunting craft, directions that the amateur with tools can follow. Fifty plates and working drawings in separate envelope. Cloth. Illustrated. 264 pages. Postpaid, $2.00.

Canvas Canoes and How to Build Them.

Parker B. Field. The book gives very precise instructions by which a man with ordinary mechanical bent may build a serviceable canoe at slight cost—a plan and all working directions. Paper. Postpaid, 50 cents.

KEEPING POSTED

1. As you read Forest and Stream through each week, you are frequently reminded of one thing or another that you desire to purchase. Such and such must be supplied to make your Shooting, Fishing, Camping or Cruising outfit complete.
2. Possibly you need waterproof shoes, or waterproof clothing. Or a new tent? It is your intention to take a much longer trip this time, than usual. And you may be located where you do not have access to sporting goods houses where all of your wants can be filled. In fact, even the best of us are often in doubt when it comes to knowing **where** to get the **thing** we want at the **right** price. You wish you had a friend at your elbow to suggest.
3. **Our** experts are right at your elbow. It does not cost you a penny (except your postage) to take advantage of their knowledge. They know **where** to **buy** and **how**. It is their business —and your advantage.
4. Glance carefully over our advertising columns. If you don't see what you want, write in to our Information Department. You will receive a full detailed reply—post haste—we're always on the job.

Isn't this worth while, if for no other reason than to get the **right** information on **how** to reach your destination by the quickest and surest routes—what railroads or steamship lines to take?

Don't put this off. Co-operate with us by telling your relatives and friends, what we can do for them.

Keep posted. Write to

Life and Sport in Labrador

NAPOLEON A. COMEAU.

In "Life and Sport on the North Shore of the Lower St. Lawrence and Gulf," Mr. Comeau has made a valuable addition to the literature of rod and rifle and more. It is a book of engrossing personal interest to the sportsman or general reader, and of rare value to the student of wild life.

The author describes the events and experiences of fifty years, spent in the cause of humanity and science in one of the most interesting and least known sections of Canada. He writes as one sportsman to his fellows, detailing his experiences with the wild things of wood, shore and sea, with plenty of stirring experiences with big game and gamy fish.

Illustrated, 450 pages. Paper. Postpaid, $2.50.
FOREST AND STREAM PUBLISHING CO.

snow as man could desire. That so good an opportunity should be wasted in Sabbath sloth seemed hard to us, but Sandy and Joe, the guides, accepted the situation philosophically. Sandy announcing his intention of doing some overdue laundry work.

In the afternoon, tiring of camp, I went for a stroll, taking my rifle, just for the feel of the iron. I was out three hours, and during that time I saw fresh signs of moose and wildcat, about thirty grouse, and the partly devoured carcass of a moose calf, evidently killed early that morning by a bear. A short distance beyond this spot, as daylight was fading, I struck across the segment of my semi-circle in a bee line for camp, reaching it just as the camp fire began to glow ruddily among the trees. Hot biscuits and tea, with sundry heavier comestibles, a pipe or two, yarns by the guides, plans for the morrow, sleepy yawns, then blankets and bough bed, and the "long day" of the woods was ended.

We were astir betimes. More snow had fallen during the night and the woods were fairyland, but the air was far too calm for ideal still-hunting. For sheer joy of being in the wilds, however, I never knew a day to beat it, and the fifteen-mile tramp accomplished between sunrise and sunset was full of delightful impressions. Although both Mr. Keeling and I crossed not a few fresh moose tracks, we saw none worth following; but he had the good luck to shoot a bear, which blundered upon him as he sat on a "blow-down" etating his lunch of doughnuts and cheese. This was the only bear we saw during the trip. Signs of others were abundant, however, and I feel certain that anyone with a liking for bear hunting could find some excellent and exceedingly cheap sport in that section, if assisted by a good guide and a well-trained hound. He would also, in all probability, pick up a wildcat or two, these animals, which sometimes weigh 40 pounds, being very numerous and affording a most exciting chase.

Tuesday was a gray day—the sort of day when one feels that hunting is work, if not drudgery, albeit there is ever an underlying fascination that keeps one pegging along. I walked quite twenty miles over rough country, and sighted two cows and one bull moose, which, however, had a small head for his bodily development. Mr. Keeling had better success in getting within forty yards of a big head after a long stalk; but he returned to camp looking very glum, for, owing to a defective cartridge, he had failed to score. He brought back the cartridge with him, and after supper we interested ourselves in filing it open. Curiously enough, the shell, though supposed to have been filled by a reputable maker, contained no powder!

Two days later, at three o'clock in the afternoon, Mr. Keeling, hunting on a hardwood ridge a few miles west of our camp, brought down a large bull moose with a medium-sized but very symmetrical head, and at 3.15, while hunting east of the camp, I shot a smaller bull bearing a head of twenty-four points, with 14 inch palms and a spread of 52 inches. We arrived back at camp simultaneously, each prepared to be graciously consoling to the other, but our self-complacent feelings underwent a swift change when we discovered the true state of affairs.

To the sportsman whose chief desire is to hunt moose cheaply or not at all, Nova Scotia offers every inducement to tarry within its confines. The expense, even of the most ambitious trip, is a mere bagatelle. Apart from shipping and railway fares, hotel charges, and the cost of supplies, which can be bought to best advantage in the province, the unavoidable and irreducible expenditure is as follows: License, $30; guide, $2 per day; canoe or horsed vehicle, 50 cents or $2 per day respectively. Some of the guides have complete outfits, others are rather badly off in this respect; but, for the benefit of sportsmen who are unfamiliar with hunting conditions in Canada, I may say that the universal custom is for the guide to provide his own blankets, of which three per man are usually taken.—Lincoln Wilbar, in The Field.

A Problem's Solution

LOG CABINS & COTTAGES;
How to Build and Furnish Them.

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth profusely illustrated, $1.50 postpaid.
FOREST AND STREAM PUBLISHING COMPANY

HITTING *vs.* MISSING
By S. T. Hammond ("Shadow").
Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.
—FOREST AND STREAM, Aug. 14, 1873.

MONTANA'S GAME REFUGES.

THE establishment by the State of Montana of three game refuges shows that at last the game refuge idea is taking hold in the West, where there is still left some game to protect.

Hidden away among the rough bad lands along the Missouri River are still to be found a few mountain sheep—scattered survivors of the old herds that thirty years ago used to be seen by those who were passing up and down the river resting on the points of the bluffs in bands which sometimes numbered seventy-five. So, too, in these bad lands, browsing on the uplands and daily going down to the river to drink, are a few mule deer and even a few antelope.

Not far from this country many years ago the last of the wild buffalo of Montana were destroyed. It was here that Dr. Hornaday collected for the Smithsonian Institution a series of wild buffalo, and the few that were left after this hunting expedition—and that for the American Museum of Natural History which followed it—were for some years carefully guarded by the cowboys and range riders of the Dry Fork and Porcupine country and considerably increased. One year, however, the halfbreed Crees which had escaped from Canada, just after the Riel rebellion, made an incursion into the country and are supposed to have destroyed all these buffalo, though it was said that later still one or two were killed by non-professional hunters. These Crees used also to sweep the Missouri River bottom with men and dogs killing—so it was said—the whitetail deer, and in fact everything found there.

At that time it was urged that Montana should set aside a section of this country—of which the only possible available portion is the actual bottom of the great river—as a game preserve, but the idea came too soon to receive favorable consideration.

The Pryor Mountain Game Preserve lies west of the Big-Horn River and includes a considerable area of rough bad land country excellently adapted to game preserve purposes, and not very distant from the Big-Horn Mountains of Wyoming which that State purposes to stock with game of various sorts.

TO REGULATE COLD STORAGE.

THE New York Assembly passed last week the Brennan cold storage bill which regulates the length of time food may be kept in cold storage warehouses. It provides that goods on being delivered at cold storage warehouses must be stamped with the date, and that it shall be unlawful to keep food in cold storage for more than six months, except with the consent of the Commissioner of Health, and that in no event may it be kept for more than one year. The Commissioner of Health is to have power to inspect all cold storage warehouses and to condemn and destroy food if he deems it unfit for use.

This bill should become the law, as should also a similar bill now under discussion in the Legislature of New Jersey. It is gratifying to see that these bills are supported by some of the prominent cold storage warehouse men in Jersey City and in New York.

Cases of poisoning by cold storage food are not very unusual, and it is only two or three years since the town of Lockport, N. Y., received a wholesale shock of this sort, four families and 125 members of a club being poisoned, it was believed, by cold storage turkeys.

The passage of a law such as this is not only a needed safeguard to the public health, but it is also a strong game protective measure. It is now too often the custom for dealers in game to buy up large quantities of game birds at the close of the season, and to put them in cold storage to be retained there until the opening of another season. If these bills shall become law in New York and New Jersey, it will undoubtedly save many upland birds, and especially great numbers of wildfowl. The measure deserves hearty support.

BREAKING ILLINOIS' LAW.

THE Illinois law limits the number of wildfowl that may be taken by a gunner in a day. How far this law is enforced we do not know, but we are told that in some places it is deliberately violated by certain members of ducking clubs, who go out with their punters, or boatmen, taking along an extra gun for the punter, and then themselves shoot—if they can—the limit for themselves and for the punter.

This is a contemptible method of breaking the law, and becomes doubly an evil when practiced by club members who are supposed to be well to do people and many of them well brought up. A man who is a member of a gunning club takes on himself certain special responsibilities and ought to be especially scrupulous so to carry himself as to be an example to his less fortunate fellows who may not be club members.

Such disregard of the law by the idle and wealthy not only tends to make the clubs to which they belong unpopular, but stimulates the residents of the surrounding regions to violations of the law. These residents feel, naturally, that if club members can do this, they may do the same. Moreover, not a few such men, envious of the success of the club member, will do everything in their power to destroy the fowl.

If, in their actions with regard to game and game protection, men—rich and poor—would try to put aside the natural selfishness which is inherent in all of us, they could work together single-heartedly and accomplish great things.

Now that the attention of the public is centered in Mexico, the story, "Boregas and Tanakas," begun in this issue, will be of unusual interest to readers. The author is a big-game hunter of note, and the narrative is enlivened with a few of the many fine photographs made by him on his Mexican journey. The region visited is now the scene of no little activity by Federals and insurrectos, but readers of the story will readily understand that the scarcity of water, and not the nature of the country, regulates the range of both game and fighters. Throughout the dry country of the Southwest the presence of tanakas, as the pools of rainwater are called, is of more importance than mineral deposits. These are often potholes in the bedrock of dry watercourses. Following a downpour of rain the water roars down these drains for a short time, then subsides, leaving the tanks filled. Here at nightfall gather horsemen, cattle, game, doves in hordes, and other furred and feathered creatures, to slake their thirst.

ATTEMPTS to repeal good protective laws and to enact bad ones continue at Albany. Assemblyman A. J. Levy has introduced a bill which, if passed, would have the effect of practically repealing the Shea law forbidding the use of bird plumage in decoration. The Levy bill should be opposed by everyone interested in the protection of birds, and this means all the agriculturalists of the country. Senator Baynes' bill to prohibit the sale of game should receive favorable action by the New York Legislature, and it is interesting to see that at the meeting of sportsmen at Albany last week this measure was unanimously approved by representatives of not less than thirty-eight associations of sportsmen and game preserves.

DR. ARTHUR W. BOOTH has ordered from the State 6,000 trees which are to be planted under his direction by the school children of Elmira, N. Y., on Arbor Day. Last year and in 1909 12,000 trees were planted on lands near the city, permission being gladly given by the owners. Glens Falls school children are also planting several thousand trees each year.

THE SPORTSMAN TOURIST

Boregas and Tanakas

I.—A Mountain Sheep Hunt in Lower California —Getting Under Way

By DOUBLE BARREL

ON the morning of Oct. 22, J. G. M. and I swung off the train at Yuma, Arizona, thus completing the first stage of our journey to that far famed paradise of sheep-hunters, Lower California. For months we had been in correspondence with the Mexican Government concerning the necessary permits. These had finally been given us, and now, burdened with rifles and baggage, we left the main line of the railway in order to take a little branch line to Calexico, Cal., where our outfit under Captain Funcke was to meet us.

As we had at least five hours in Yuma, and it was early morning, we wandered up into the business quarter of that historic post. A certain savor of the frontier still hung around the streets. The population was of every breed, white, Indian, negro, greaser and Chinese, with a liberal sprinkling of blends of all of these. There were a large number of cow ponies, a few of the typical cowboys of the magazine story, and also two or three Indians who still clung to long hair and a dash of paint for decoration. But, alas for romance, the blank walls of the historic town of Fort Yuma were gay with huge posters, which announced that in a short time Buffalo Bill's Wild West would display its wonders and give the inhabitants their fill of Indians and stage robbers. When Buffalo Bill plays to crowds on the frontier of Arizona, the old West is gone indeed!

Noon saw us off from Yuma in a combination freight and passenger train bound for Calexico. The road ran through Mexico and then returned into the United States at Calexico, and at the border we were stopped by the Mexican customs officials. It seemed that our permit was to cross the line at Mexica'i, near Calexico, and here we were crossing at another point with several firearms which were strictly forbidden entry into Lower California. At last, after much discussion in Spanish between the Mexican officials and an officer of the railway company and much examination of permits, our guns were sealed and we were allowed to proceed. For three hours the train chugged its way through the dust of the desert and finally drew into Mexicali.

There we were greeted by a small wiry man with one eye, and that the brightest that ever shone in a human face. He introduced himself as Captain Funcke, our guide, outfitter and friend for the next four weeks. He at once bundled our traps in a wagon, we all climbed in and drove to the Mexican custom house. A Mexican of much dignity was in charge, and

A DECAPITATED BISNAGA.

though he received us with cordiality, he finally told us that it was too late on Saturday to clear our guns that evening and we would have to wait until Monday. Sunday in Calexico and Mexicali failed to appeal to us; therefore I had the interpreter tell the señor to keep his clerks as late as necessary and we would pay them for their trouble. At once the impossible became possible. A couple of clerks began to bang like mad on American typewriters, and we were told to return after supper.

We again mounted our wagon, and driving a couple of hundred yards through the adobe huts of Mexicali, we crossed the international boundary and drew up before a good sized brick building, the hotel in Calexico. There was not a little packing to be done before we could leave in the morning, and we determined to complete the clearing of the guns that evening.

Captain Funcke and I met the customs officer at seven, I signed various mysterious Spanish documents, paid the duty on the cartridges, plus the promised bonus. Thereupon the señor and his retainers led us into an inner room where we were served refreshments.

A start with a packtrain is a slow thing at best, and our start from Calexico next morning was particularly so, as Captain Funcke had his packs and burros at a ranch five miles outside Calexico, and we had to ride to the ranch on our horses with our supplies accompanying us in a wagon, and then pack and start from there. The ranch is an irrigated farm of several hundred acres owned by some Americans. We lunched there, and started finally at one-thirty in good order, the guide and the two hunters leading, then five pack animals, of which four were burros with packs. The rear guard consisted of Elmo, a gaunt Mexican, nearly pure Indian, and Louis Jackson, the negro cook. We all looked prepared for the desert except Louis, who was clad in low tan shoes, green socks, light flannel trousers and a gay shirt. He was by far the most stylish member of the party.

Our rifles Captain Funcke examined with much interest. I carried a new double hammerless ejector rifle weighing seven pounds, made in Strassburg. It takes a very powerful 8 m.m. cartridge loaded with 45 grains of high velocity smokeless powder and a 200-grain soft-nose bullet. I had previously killed much big game with a double rifle, but this was a new acquisition built to meet all my ideas. In workmanship, finish and engraving it is a thing of beauty, but owing to delays in the custom house, I had had no chance to try it. J. G. M.'s gun was more out of the ordinary. It was the original German game getter, having three barrels—a pair of rifle barrels above and a twelve-gauge shot barrel below. The rifle barrels take a .405 cartridge, and the gun weighs only 8½ pounds and is as pretty and handy a weapon as anyone could wish for. It was a present from a friend in Germany and had already proved itself a weapon of great reliability and accuracy. Besides these, we had my shotgun and a spare rifle.

As I had already killed some good rams in the North, while J. G. M. had never hunted sheep, we planned that he should hunt with Captain Funcke, while I would hunt with Eleno. It appalled me to think that I could speak no Spanish, while Eleno was equally ignorant of

English. Had we been about to hunt in any other country, I would have tried it alone, but when I thought of the chances of rattlesnake bite without help at hand—and considered also that if one got lost he would probably die from lack of water, I was thankful for Eleno. Besides that, in sheep hunting there is always a chance for a nasty fall and a broken bone, so that a companion may be more than welcome.

From Little's Ranch we traveled for three miles along a large irrigating ditch, and then, after watering all our horses, struck straight across the absolutely bare desert toward a pass in the mountains, twelve miles away. We expected to reach the foot of the pass that night, and there to make a dry camp. We had about a dozen canteens filled with water, so that there was plenty for the party, while the horses and burros were obliged to get along without drinking till morning. The Captain told us that beyond the pass was a lagoon of brackish water, which would do for the horses, though it was not suitable for us.

By the time we had crossed the desert and arrived at the foot of the mountain, darkness had settled down, and we made our first camp in Lower California. There was none of the formality which marks a camp in the North. We simply took the packs off the animals, set up some folding cots, put the blankets on them and started fire for supper. At first I had looked rather scornfully at the cots, but when I saw that we had camped in an arroyo full of sharp broken stones, without a clear space on which a person might make a bed, I was very thankful to be able to set up a cot, which would keep me off the ground.

Louis Jackson, the negro cook, was a new acquisition to Captain Funcke's outfit. The cook that he usually employed was already in the mountains with two hunters, who were just starting in, and had picked up Louis to take care of us until we should meet the other outfit. He proved to be an excellent cook, but bitterly opposed to making camp and getting supper in the dark, and on this first night he objected violently, though without effect, as there was no other alternative.

The night was warm and clear, we were up at the first signs of light in the morning, and by seven o'clock had breakfast, packed the animals and started over the pass. After an hour's travel, we came to the southern slope and could look off over the valley where we were to journey for the next few days. In front of us was a lake extending southeast for sixty-five miles, connecting with the Gulf of California. It is five to ten miles wide and is known as the Laguna Salada. Strange to say, this great body of water has not been marked on any map of Lower California that I have seen.

We were on the north side of the lake, just crossing through a pass in the Cocopah Mountains. Captain Funcke pointed out our route to us. We were to go around the northern end of the lake and then travel 65 miles along the further side. Across the end of the Laguna between the lake and the mountains, we could see a bare strip of desert along which our trail lay, and at the further end of the lake, a blue haze marked the Sierra de Tanaka, where we expected to camp and hunt. The view was an exceedingly beautiful one, and in the cool of the morning it looked like an ideal journey.

We at once pushed down the pass to the end of the Laguna, where the horses drank greedily, as they had not tasted water since the previous afternoon. We tried the water of the Laguna at this point, and it was slightly brackish, though not so salt that it would have been impossible to drink it.

In the desert of Lower California, all life of every kind seems to gather near the water. We had hardly watered the animals when we discovered a flock of quail. I got out my gun and started after them, with the intention of doing some wing shooting. Fifteen minutes' trial gave me enough of that. The way those quail ran was a revelation. I never succeeded in getting them up where I could see them. Their system seemed to be to run till they got behind a bush and then drop and run again. At last, after considerable labor, J. G. M. and I each killed two birds running, and I finally had the luck to start one and kill him on the wing.

On the way back I jumped and shot a cottontail rabbit. I had not expected to get a cottontail in this country, but my performance was eclipsed almost immediately by J. G. M., who shot at a flock of ducks that were swinging over the Laguna, at what I firmly believe to be one hundred yards away. I thought that he was mad to shoot at them at all with No. 8 quail shot and was very much surprised to see the leader of the flock crumple up and fall stone dead on the beach. When we picked it up, we found that a single shot had gone through the back of the head. We then returned to the pack train with our mixed bag, and I saw a large hawk sitting on a dead bush a couple of hundred yards out in the Laguna. Taking my heavy rifle, I went out to the edge of the water, and sitting down, took a very careful aim and shot at the hawk. He rose at the report, while one of his large wing feathers floated off in the air. While I was watching him to see whether he would settle again, I heard a great commotion among the horses behind me, and turning, saw the horses shying and plunging at something in the sand and Eleno gesticulating to J. G. M. and pointing. I felt sure that it must be a snake but could not see why J. G. M. did not get off his horse and shoot it. However, as nobody else seemed to take any interest in the subject, I began running toward the horses, and when I got closer, saw an enormous rattlesnake crawling across the sand toward a thicket of brush. I fired both barrels at him just as he went into the bush, but it was impossible to say what happened in the thicket and nobody cared to go in and investigate. J. G. M. had not seen the snake, he having been misled by Eleno's over-eloquent Spanish and gestures into looking everywhere but the right place.

CAMP AT LAS PALMITAS.

AN OCATILLA.

The firing of the heavy rifle among the pack train had disorganized the animals, but we finally rounded them up and started into the desert on the south side of the Laguna. We certainly had had an exciting experience in our first few minutes in the desert of Lower California, having encountered quail, ducks, rabbits, hawks and a rattlesnake within the first hour of our arrival; but just as soon as we left the vicinity of the water all life ceased, with one notable exception. No sooner had we started into the desert than we were surrounded by gnats. They were almost invisible, but hung around our heads in swarms and, as we soon found, were capable of biting savagely. The sun, too, came out exceedingly hot. We could feel the force of its rays in a way that is never felt in the North. For four hours we plodded along at about three miles an hour through the sand and greasewood of the desert, with nothing to distract our minds from the heat and the gnats, but at noon we struck some stunted ironwood trees and a little grass, and taking off the packs and saddles, we turned the animals loose, made a fire, boiled tea and had lunch.

The water in the canteens was hopelessly warm by this time, but fortunately we had a couple of canvas water bags with us, which kept the water cool through constant evaporation. Our water supply, however, was getting very low, and it was necessary to have more fresh water that evening, so as soon as we had packed up and started on our afternoon's march, we gave all the empty canteens to Eleno and sent him ahead to a spring at the foot of the mountain range on the southern side of the Laguna. Meantime we pushed straight on to reach a point where the arm of the Laguna stretched back into the desert. There we could camp and the horses would have plenty of water to drink.

From our camp in the pass it was twenty-six miles to the campsite at the arm of the lake, and in spite of all we could do, it was again long after dark when we reached camp. Fortunately the midges stopped operations as soon as darkness came on, permitting us to camp and have supper in peace. We were all through before Eleno turned up, and he was welcome, as we had entirely exhausted our fresh water by that time.

It was decided to lie over one day and rest both ourselves and the animals. I was very glad to have a day out of the saddle and spent the time bathing in the lake and chasing blue quail up and down the little sand ridges back of the water, but with all my pot-hunting, I did not materially reduce the number of quail and would not have secured enough for supper for the party had I not jumped and killed a jack rabbit. Late in the afternoon the Captain went to the spring in the mountains to get a new supply of water, and Eleno, J. G. M. and I took a ride into the foothills in the hope of seeing a deer, but we had no success, not even seeing a thoroughly fresh track.

In the morning we again packed up and started through the desert. As soon as we left the water, it was the same monotonus desert, with no sign of wild life. At noon we struck back to the edge of the Laguna again to water the stock, and on getting to the water's edge, found a miserable half-wild cow mired down. J. G. M. said the last thing he expected to see in Lower California was a cow stuck in the mud. It was fortunate for the poor creature that we appeared when we did, as she had evidently been there several days and the buzzards had begun to gather and even to pick at her while she was still alive. Captain Funcke, J. G. M. and I were unable to get her out, so we waited for the pack train, which had fallen a couple of miles behind. Before it arrived I had made another addition to the bag we secured in Lower California by killing a huge plover. It was a gray bird with a white band across its wings and was at least three times the size of any plover I had ever seen before. Its wing spread was enormous, as when I held the tip of one wing in the fingers of my outstretched arm, the tip of the other wing stretched beyond my shoulder.

Soon after I secured the plover, the pack train came up and we went to work to extricate the cow. At first we tried to pull her out with ropes around her neck, but she was so firmly set that we might have pulled her head off, but we would never have dragged her loose. Finally we were forced to dig out her legs from the mud, and then Eleno and Louis got hold of her tail and Captain Funcke and I got hold of the rope around her neck and we dragged her out on to firm ground. For about twenty minutes she was too cramped to get up, but at last we were relieved to see her get to her feet and walk off through the sand.

All the time that we had been rescuing the cow we were cursing the necessity that kept us inactive. We had a long day before us and the hour and a half that we wasted was more than valuable, but there was no help for it and we could only keep on and do our best to make as good time as possible.

About two o'clock we struck some grass, where we let the animals graze while we had lunch and then we pushed straight across the desert again. Night came on but we still pushed on, as Captain Funcke had in mind a place where he thought the horses could feed well on some bunch grass that grew in certain places in the desert. Luckily for us, however, J. G. M. told the Captain that he thought the pack train had got so far behind that we had better wait for it. We therefore stopped and made a fire and in about twenty minutes Eleno and Louis came up with the pack animals.

They certainly were not a pleasant party. Louis was mad all the way through at having to get supper again in the dark, and he said his mule had fallen on him in stepping in the hole of a kangaroo rat. Eleno, too, had a bad case of sulks. He had killed a young hawk with a stone during the afternoon trip which he sullenly cooked, informing Louis that there was nothing else fit to eat and therefore he had to eat the hawk. It was so dark that I never discovered whether he really ate it or not, and therefore I do not know whether he did this seriously or as an insult to the bacon and beans on which we were subsisting. They were an unhappy party that evening, and I would not have been surprised if either Jackson or Eleno had quit. Doubtless they would have done so had it not been for the seventy miles of desert that lay between us and civilization. But the night's rest put everybody in a better humor and we started out early for our first camp in the sheep country, which lay in the Sierra de Tanaka, in front of us.

These mountains now showed plainly about twenty miles away, being a low range of red volcanic rocks, none of them more than three thousand feet high. Sierra de Tanaka might be translated into the cistern mountains, as they derive their name from the fact that in many places in these mountains the rock forms natural cisterns. During the rainy season these are filled with rain water from the cliffs above, and in many cases, the water remains there during the entire year, especially where the tank lies in the bottom of a deep arroyo, so that the sun very rarely gets to the water. Most of the tanks in the mountains cannot be reached by horses, but there are several which are accessible to stock, and at these Captain Funcke expected to camp.

About one o'clock we reached the mountains and camped a quarter of a mile below Valdez Tanaka. This tank is the largest in the mountains, being situated in the bottom of a cañon, and holding several thousand gallons. It was a beautiful dark pool, surrounded on every side but one with nearly perpendicular cliffs. The trail ran up the cañon to the lower side of the tank, and here we again watered the horses and turned them out. The tank was full of pure cold water, and from the worn appearance of the trail and the rocks, it was evidently a famous camping ground. The tank and also the high peak of Valdez Mountain immediately behind it, were named for an outlaw who had discovered the tank about fifty years ago and long made it his headquarters. Captain Funcke said there was good sheep country all around Valdez and we expected to hunt there for at least two days. We also expected at this point to meet the other outfit belonging to Captain Funcke, who were supposed to be on their way out. They had with them Captain Funcke's regular cook and Eleno's brother. The Captain had been with them the first part of the trip, but when they wanted to stay a little longer, he left them to come out and meet us.

Our first day in the sheep country was clear and fine. Not that this was a particularly noticeable occurrence, as every day in Lower California is almost sure to be beautiful and sunny. Early in the morning Eleno and I ascended Valdez Mountain. When we reached the top we had to get over the steep rim rock. I did not mind going up, but I thought that I would not like to come down a worse place in the dark, and I was completely at a loss to communicate my ideas to Eleno. Finally I remembered that in a magazine story, a Mexican had spoken of a bull as a "Mucho malo toro," so I picked out the steepest place I could find, and by pointing at it and saying "mucho malo," shaking my head and saying "nocte," over and over again, I finally got him to understand that I did not want to go down any very steep places in the dark. I knew that Eleno got my idea all right, as he motioned that we would go around the other side of the mountain and come down another way, where it was "bueno" —good.

The top of Valdez Mountain, I found, was a broad almost flat tableland, cut up with a large number of small gulches. As we looked across the mesa, it seemed as if it would be easy to cross it, but we soon found that the arroyos

were steep and so numerous that it was almost impossible to cover much country. The entire country was of red volcanic rock formation, covered with a scanty growth of vegetation consisting of sparse grass and a large number of ironwood and palo verde trees. In the North these would have been classed as bushes rather than trees, but they served as food for the sheep and also afforded a certain amount of cover for the game. Throughout the sheep country also, there were a large number of bisnagas, the well known barrel cactus, which grows like a small, very thin keg, being as large around as a telegraph pole and from one to five feet high. The outside is covered with a network of long and very sharp spines, looking and feeling very much like surgeon's needles. The inside is a hard green pulp and is often eaten by the sheep for the sake of the moisture in contains. On Valdez we found a number of places where the bisnaga had been almost eaten up. Captain Funcke said that this had been done by the rams, which smash the bisnaga with their horns and then eat out the inside. Later on we had this confirmed by finding the spines of the bisnaga buried in the cracks of the horns of the large rams.

After examining two or three bisnagas which had been eaten by sheep, we started across the mesa and went down into one of the gulches, and were traversing a narrow ribbon of sand which lay at the bottom, when just as Eleno was about to step over a stick, he started and jumped back, saying something in Spanish. I knew at once that it must be a snake, and looked over the stick at the sand but saw nothing. Eleno pointed again, and I then saw a large rattlesnake, lying asleep in the sand, where I had been looking. He looked so much like the sand that I had not seen him even when I looked right at him, and if I had been in front I would certainly have stepped on that snake. Eleno tapped my rifle barrel and said, "Boom, boom," with a note of inquiry in his voice. "No boom, boom." I replied; "borego vamose." So Eleno cut a long ironwood stick, sharpened one end to a fine point, and then poising it exactly over the center of the rattlesnake's head, drove it down and pinned the snake to the ground. The reptile immeditely sounded its rattle with full force, but it was too late, and in a minute or two it ceased. I cut the rattles and put them in my pocket, and we continued down the cañon.

This was certainly a disturbing experience, as

THE RED TANAKA.

Eleno had come within an ace of stepping on the snake. Before that I had had confidence that if I looked for a snake I would not step on one, but after seeing the way that rattler matched the sand, I felt no certainty about anything. About a mile beyond we climbed up out of the gulch and at once saw half a dozen mountain sheep feeding on the mesa a quarter of a mile away. We examined them carefully with the glass, but they proved to be ewes.

Eleno was very anxious to have me kill one of them for meat, as we had no fresh meat in camp, but I refused, as it seemed to me that the killing of a ewe of a species so rare as the mountain sheep was inexcusable. Eleno could see no sense in this whatever, and as he later explained to Louis, who translated it to me, ewe meat was just as good as ram meat, and that was all there was to it. I think throughout the rest of the trip he regarded me as a mild and harmless lunatic. However, as I would not shoot a ewe, there was no help for it and Eleno was forced to do without his fresh meat for the time being. We sat down under a small palo verde tree to get in the shade, ate lunch and drank most of the water in the canteens which we carried. Presently the sheep caught sight of us and trotted off across the mesa, which took them straight away from our camp, and after they disappeared we struck across the top of Valdez Mountain, climbed down to the desert below and got into camp about four o'clock. J. G. M. and Captain Funcke were already in, having seen nothing during their hunt. We had supper and turned in soon after six o'clock.

About eight o'clock, being unable to sleep, I was lying on my back watching the stars, when I heard the tinkle of a bell coming from the desert, and soon after Captain Funcke's other outfit came in. It consisted of two sportsmen, a cook called Mr. Dunne and Eleno's brother José. They had been out for six weeks and had secured five rams, though none of them was very large and two of them were so small that they should not have been shot. They had also killed two or three ewes. One of their rams was a very small one and had been killed only a couple of days before, so that they gave us some fresh meat. They also took letters out for us, which we were very glad to have a chance to send. Under the circumstances, therefore, I do not feel that I have a right to give their names, though I have very little respect for so-called sportsmen who will shoot ewes. They were going the next morning, and Eleno and I got breakfast and left camp by seven o'clock, long before they were prepared to start.

NATURAL HISTORY

Perhaps a Pileated Woodpecker.

Roanoke, Va., March 8.—*Editor Forest and Stream:* I notice in Forest and Stream for March 4 a note on the ivory-billed woodpecker, taken from the Sun and quoting Graham Burnham, who says in part: "It is the largest type of the woodpecker species in the world, etc., and is now found only in eastern Oklahoma and remote portions of Florida." His description tallies exactly with what I have always known in years past as Indian hen, woodcock, squaw hen. He is mistaken when he says it is only found in Oklahoma and Florida. I live about twelve miles west of the Blue Ridge Mountains in Roanoke county, Virginia, and have always lived in the county. Have seen lots of these birds in my past life. On my home place in my boyhood days and up to fifteen or eighteen years ago, I believe I have averaged seeing one or two, two or three times a week. Since then the timber has nearly all been cut around my home, and of course the Indian hen has disappeared from that section. Since then, hunting the mountains from four to ten miles west of my home for pheasants and turkeys, I have several times heard and seen them and believe they are quite as plentiful as ever. I killed one or two long ago, but would not think of doing so now, but am sure I could get one, although they are the shyest of all the woodpecker family.

Mr. Burnham's description fits the squaw hen, or woodcock, correctly, but I never knew the name was ivory-billed woodpecker until quite recently.

Last fall, while hunting the mountains west of my home, I saw one of the squaw hens, but as usual, it was a long way off; it was flying at the time and its red-crested head showed brilliant in the morning sun. If it would be of interest to you, I will very gladly drop you a

postal on the date and place I see the next squaw hen. J. W. Beshong.

[The birds seen by our correspondent was probably the pileated woodpecker, since at the present day the ivory-billed woodpecker is believed to be confined to the lower Mississippi valley and to be extremely local in its distribution. This is one of the birds that is almost extinct in the United States. We hope he will let us hear from him as suggested.—Editor.]

Two Queer Occurrences.

One very dry summer, a number of years ago, water had become a scarcity at our place, and so I set about digging for it near the creek bed, thinking that the most likely place. Unexpectedly, I found an abundance of it, so that the shallow well filled to the brim before we began curbing it with stone.

Evidently the scarcity had been felt by the bird creation, for the place had no more than filled with water than English sparrows came and sat on the bank and drank. Soon I noticed a few dead birds floating on the water with their necks girdled of feathers. I soon saw how this had occurred. Frogs, which were resting in the water with their heads out, had captured some of the sparrows while drinking and dragged them under water to drown them. Unable to swallow the birds, they had given them up, after girdling their necks.

Another queer thing occurred in a wet season. A swampy piece of ground of a neighbor had growing on it a lot of cattail flags. At their base water stood at least a foot deep. My two little boys were wading in this water, when one of them discovered a mouse nest in an old bird's nest, a foot or more above the water. The nest contained the old mouse and several young ones. Instinct had taught the old mouse that, located on or near the ground, the nest would be covered by water, so she sought the branches of the flag. She must have swam to and fro.

Clark M. Drake.

[Frogs are quite ready to eat birds if they can. Many years ago a friend going down to the beach to shoot shore birds crossed the salt meadows and thoughtlessly shot a chimney swift that flew by him. When the gunner went forward to recover his bird, he saw that it must have fallen in a shallow pool of water, and looking for it, saw what seemed to be two horns sticking up out of the water. Inspection showed the head of a huge bullfrog just above the surface and from the two corners of the mouth of this frog projected the ends of the chimney swift's wings. The bird had fallen in the water near the frog and had been promptly swallowed by it. There was no way of getting hold of the frog, on account of the very soft mud of the pool. Mouse nets in old birds' nests are not very uncommon. Old marsh wrens' nests in the cattails are often so occupied.—Editor.]

Woodpecker Carpentry.

Lufkin, Texas, Feb. 9.—*Editor Forest and Stream:* The article on the pileated woodpecker (*Picus pileatus*) in the Jan. 21 issue of your journal recalls some observations I have made on the sagacity of this member of the red-headed family.

About twenty years ago, when a resident of Marshall—one of our best East Texas towns—I owned a piece of timber land located on the shore of Lake Caddo. I preserved all the timber on the property except the little spot where I erected a small house to be used as a home while fishing and shooting. The care of the timber not only kept the little property in its primeval state, but made a homelike and an inviting place for all bird life, especially the members of the red-head family.

Something like twenty feet from the house stood a nice post oak tree, left close by for shade purposes. So far as a close external examination could be made, the tree seemed perfectly sound and in fine health. The largest part of the trunk was near fifteen inches in diameter. Arriving at the place about noon one day after an interval of two weeks—for that was about as long as I could stay away from that little rest spot—I found a pair of pileated woodpeckers in the act of finishing a fine piece of work and enjoying a good dinner of ant eggs.

They had chiseled three holes nearly as large as their bodies through about four inches of green oak. The first hole was about eight feet from the ground; the second one was about four feet nearer the ground, and the last one was between the first and second. It was an easy matter to tell the age of their work by the color and dryness of the oak where they had chiseled it. To look at their work would make you think they used judgment and lots of it. The first hole missed because it was too high up; the next was too low down, so they chiseled a hole between the two and found the nest.

How could they tell that tree was not sound, and how could they tell it contained the ant nest and how could they locate the nest so exactly?

J. L. Phillips.

Sea Elephants on Exhibition.

The sea elephant, or elephant seal, has long been supposed to be extinct in California, and nearly or quite so in Lower California. Formerly it was abundant in many places on the Southern California coast where it was persistently hunted—to extermination. On a few occasions young specimens have been captured and have been on exhibition, as for example in San Francisco, and at the Zoological Gardens in Philadelphia.

On March 13, six young specimens of the sea elephant were received by the New York Zoological Society at the Aquarium, where they will remain for the present. These specimens were captured by Dr. Chas. H. Townsend, the Director of the New York Aquarium, who is in charge of the expedition sent to California by the Museum of Natural History and the New York Zoological Society, which started some weeks ago on the United States Fish Commission steamship Albatross, with the general purpose of studying the coast of the peninsula of Lower California on the Pacific and on the Gulf side.

These young sea elephants were captured on Guadalupe Island off the coast of Southern California, and were shipped in crates by express from San Diego, Cal. During their six days' journey they were of course all the time out of water, yet they reached the Aquarium apparently in good condition. They are what a cattleman would call short yearling, having been born about nine months ago, and so are small, the largest weighing 300 pounds and the smallest over 150 pounds.

The sea elephant is the largest of the earless seals, and Captain Scammon reports one that he captured which measured twenty feet in length, while some authors have assigned them a still greater length. Like the other earless seals, the sea elephant probably feeds on fish, but after all comparatively little is known about their habits, although for centuries they have been killed for their oil on the Pacific coast, and in the Antarctic, where there are still some colonies of them, though these are kept down to a very low ebb by the constant pursuit of the sealers. The name borne by this animal has reference to the long proboscis of the male, which is lacking in the females and young.

In the year 1882 Forest and Stream printed a long and entertaining account of a vessel from New Bedford after sea elephants which was cast away on Heard's Island of the Kerguelen Archipelago, where the crew lived for more than a year before being finally rescued by a United States war vessel.

Barren Ground Caribou Far South.

According to reports from the North, barren ground caribou during the past winter have pushed much further south than usual. Edward Wiley, who has lived all his life in the North, is reported in the Edmonton Bulletin as saying that never within memory have the caribou come so far south and so close to civilization. He says that often they come to within thirty or forty miles of the Athabasca Lake, but that this year they have come up close to the settlement on its shores so that every one has been out hunting and laying in a supply of caribou meat. They are not especially shy and can often be closely approached.

The migration of the vast herds of caribou from their summer to their winter feeding grounds is one of the picturesque features of the North and is graphically described in Warburton Pike's book, "The Barren Grounds of Northern Canada." In the summer the herds separate, the females moving far out on to the barren grounds; as far, sometimes, as the Arctic Ocean, where the young are born. As autumn approaches, the mother and young move south, and joined by the males, gather in immense herds of hundreds of thousands, bound for the timber that stretches for two or three hundred miles north and east of Lake Athabasca and Great Slave Lake. Here they find shelter from the fierce winds that blow over the unprotected barren lands off the Aretic Ocean. As the cold intensifies, they move further south into denser timber to find protection from the cold. It is altogether likely that the excessive cold of this winter has forced the herds into the thick timber that fringes the north shore of Lake Athabasca, thereby bringing caribou venison in plenty to the larders of Chipewyan.

Mr. Wylie, in company with George Loutit and R. J. McLennan, left Chipewyan on Jan. 12, reaching Edmonton in twenty days. They traveled with dog teams as far as Lac La Biche, where they left their teams, driving in to the landing with wagons.

The winter was very fine in the North up to Christmas, when the cold weather first set in.

GAME BAG AND GUN

In the Tallahatchie Swamps.

THAT there exists such a thing as luck will probably never be granted by many city dwellers and those "learned in the law." To us of FOREST AND STREAM the proofs have been many and convincing. Two successive seasons had I journeyed into the land of venison and antlers. Morning and evening, for fifteen expectant days, did I keep patient vigil beside well used trails, but never a shot, while from time to time one more fortunate would come to camp for men and ropes, and there would follow much feasting and rejoicing in the tribe, yet withal my heart was sad.

Again the next year, after fifty weeks of patient waiting, our white dwellings were again pitched in great cheerfulness and hope on almost the same spot, and there were other fifteen —yes, twenty days of emptiness. Deer were plenty, as tracks. scrapes, horned bushes spoke proof. Others saw the bucks. First one and then another came in for the men and ropes. Even the tenderfoot killed a little deer that came near and considerately did target duty. At the third shot the tenderfoot bethought him that the rifle had a sight. He aimed and killed the deer, which had stood pensively through the first two shots and the aiming of the third.

Much feasting in the tribe did not lift the weight. One there was who was heavy-hearted, for he had been wont to bring in good provision of meat.

So stood the score when, on a snappy morning in December, Washburn and I left marks for a tramp into the wilderness which borders Little Tallahatchie River. The pack containing tent, blankets and extra clothing weighed thirty-five pounds, while the knapsack, with four days' rations, weighed about twenty-five pounds. Before proceeding more than half a mile we were overtaken by two wagons going to a sawmill which was on our route and were glad to transfer the packs to one of the wagons. We were then more free to explore, and, leaving the road, made a detour first east, then south, looking for turkey and deer sign. Very little deer and no turkey sign was found during the morning, and at noon we reached the mill and were invited to dine in answer to our fond hopes and empty vests.

Washburn knew that there had been turkeys in this locality within two years past before the mill was built, and as the manager of the mill told us that turkeys had been seen recently in the vicinity, we decided to camp on a bayou about a mile further east. It was about 2:30 o'clock when we began building the shanty tent on a slightly rounded knoll, with a large log conveniently located in front for a back log, with good bayou water forty feet away and plenty of dry wood handy.

Our tent is the Nessmuk shanty tent described in "Woodcraft." It is five feet wide, eight feet long, and the height is five and a half feet at front and two feet at back. It is made of bleached domestic sheeting and was dipped in Nessmuk's waterproofing solution. This however, like Br'er Johnsing's baptizin' "didn't tuk de fus' time," and the tent leaked on the first test. We had then provided a 7½ by 9, eight-ounce army duck fly, mildew proofed, and with this over the tent, we kept dry during a hard all night rain.

In the shanty tent with open front and a good fire against a big Quitman county backlog, two hunters found themselves very comfortable. When camp was finished there remained an

OSBORN CARIBOU ON TELERGAPH CREEK, CASSIAR, B. C.
Courtesy of the British Columbia Bureau of Provincial Information.

hour of daylight, so we went out to try to "roost" some turkeys. Whether his habits are the same elsewhere I do not know, but in the Mississippi swamps the wild turkey nearly always roosts over water or in the tall cypress trees along the margin of a lake or bayou.

As the surrounding country was very dry at the time, the chance that any turkeys ranging in that immediate section would roost somewhere along the bayou on which we were camped was sufficiently strong to justify some hope of at least locating them that evening. One of us went up and the other down the bayou.

When less than half a mile from camp I had the pleasure—and disappointment—of seeing a flock of four or six turkeys take wing when fully 300 yards away, and fly in a course somewhat down the bayou. Continuing cautiously along the bank, I saw a large bird perched on a limb a little beyond where the turkeys had gotten up. He did not look quite natural for a turkey, yet circumstantial evidence was against him. Watching him closely for some minutes, I "took a tree" on him, and, after some patient manipulation, had a nearer view. He still looked a little like a turkey, and yet he did not. Thereupon followed this mental discussion of the situation: "No turkey has fallen to this trusty rifle for four long years. That may be a turkey. It is a good shot if he is. He looks a little like a turkey. Yet he does not look altogether like a turkey. He looks a little like a buzzard. Is it more honorable to lose a turkey or to kill a buzzard? Washburn would hear the shot. What then? Either lie and carry a conscience with too much ballast during the rest of the hunt, or do the Geo. W. act and go through life the one held in derision by all true woodsmen."

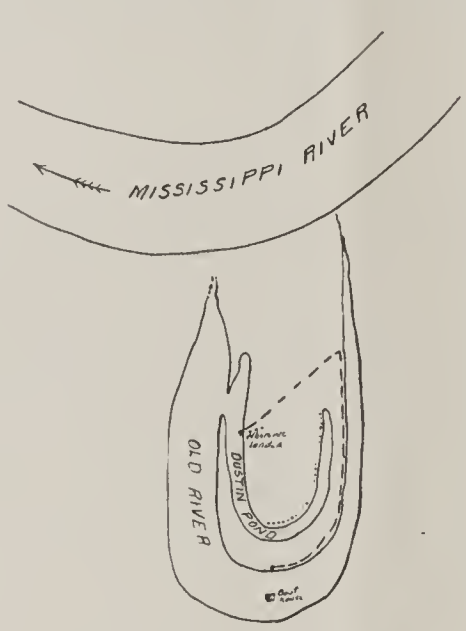
The gun was reluctantly lowered, the hunter tried to creep nearer for a better view and the buzzard flew away.

A quarter of a mile further down the bayou I heard a stick crack in the bushes on the opposite bank, and stopped by a large oak tree to listen and wait. The walking and scratching in the leaves sounded like turkeys, but the stick had sounded too large to be broken by a turkey. After a wait of probably twenty minutes, the noise in the leaves still continuing, the reward came. With more or less vocal sounds and stirring of leaves, an able-bodied turkey rose from the ground and flew to one of the larger limbs of a cypress tree fifty yards away. I was partly behind the oak tree from him, and slowly leaned and sidled until entirely out of sight. Safely concealed, there was then plenty of time to get ready. First the right glove came off, and next the hat. The other glove might be a handicap, and it came off, too. Next I tried the sight against the sky, and it became evident that a head would be hard to draw in the failing light. However, it would not get any lighter, and I leaned out from ambush far enough to see the turkey, but could not decide where it was turkey and where it was cypress limb, so dim had the daylight become. While trying to solve this difficulty I heard other wings and four more turkeys flew up, one alighting on a smaller limb in a nearer tree. Trying several times to draw a bead on him far enough aft not to spoil the breast, I had to give it up, and drawing down until the sight blurred, Mrs. Washburn had a large hen for Christmas dinner, and the breast was not spoiled, either.

When Washburn came into camp I asked him to hand me something from the log at the back of the tent, and his eye fell on the turkey. "Well, I'll be ———!" said he.

Washburn can cook three things at once without burning them up and without any profanity, so he was cheerfully elected chief cook, while I undertook to boil the coffee, keep up a supply of water and wash dishes. Thus the evening passed pleasantly.

Next morning the first dawn found us where the turkeys were expected to fly down, but the yelper would not bring them. Not knowing the range, we had gotten on the wrong side of a heavy canebrake, and the turkeys had gone down on the other side of it. He made a detour of half a mile one way, and I went through the cane at a point lower down the bayou and flushed the turkeys, again fully 300 yards away. Working through underbrush and cane in the direction they had flown, I found several fairly well marked deer trails and a few fresh tracks.



HOW THE DOCTOR LOST HIS WAY.

It would be an accident if the turkeys were found again, but with a slight chance for a deer I worked along carefully, stopping frequently to look and listen. About 9 o'clock, having stood for perhaps five minutes in one place, I heard what was unmistakably a deer walking. There was a good deal of underbrush, but a fairly open place of seventy yards diameter just ahead of me, and there was barely time to drop to one knee when the deer walked into this opening. It evidently saw something suspicious, for it stopped and turned quartering toward me, about when I was on the point of stopping it by bleating or whistling. The head had not been clearly seen and I thought it was a doe and questioned whether to let it pass and hope for a buck to follow, but quickly decided on securing what was in sight, if possible. At the shot it turned and ran in a labored way, but with its tail slanting high up. A hundred yards away it was lost to view, and was supposed to have crouched and sneaked off. Waiting motionless for about ten minutes I then crept cautiously toward the place where he had disappeared, and found a dead buck with a fairly good head.

The soft-nosed .30-30 bullet had entered at the point of one shoulder, torn a large hole through the heart and stopped under the skin about the middle of the opposite side.

While I skinned and cut up the deer, Washburn brought a wagon from the mill and we sent the meat to town.

Next day, after a fruitless effort for more turkeys, we broke camp at noon and carried the packs to the mill, where we were disappointed to find that the wagon we had counted on had gone an hour before, and as the mill had shut down for Christmas, no other wagon would go in for a week. The road was muddy and slippery from a rain the night before, but we managed to make the six miles from the mill to town in about three hours, frequently resting and changing packs.

The following week, on an invitation from a friend to occupy his houseboat on Old River, the doctor and I with a refilled knapsack, drove twelve miles one afternoon and had plenty of time to cook supper and clean up, and then an hour to spare before bed time. This was something of a "gentleman's" outing. J. has a gasolene launch on Old River, and a boathouse built on thirty-six oil barrels, for its housing. In one end of the boathouse is a room about 16 by 16, with cots and bedding, a small cook stove, plenty of utensils, dishes and enough groceries to run a hotel. The launch was not working, but there were several canoes and rowboats of which we could have our pick.

Turkeys had been seen about two miles down the lake or Old River that evening, and we went to the spot early next morning. There was plenty of sign, and I got one or two indifferent yelps, but saw no turkeys until, about 11 o'clock, Doctor not having returned to the appointed place, I had started out to try to find him, and was entirely off guard when a turkey flushed and flew across a body of water.

The reason that the Doctor did not get back to the meeting place is worth relating. The sketch shows the situation. Neither of us knew the ground well. He took the course shown by the dash line, thinking, until he came in sight of the boathouse, that he was returning along Dustin Pond, as the dotted line runs.

At 12:30 I got in the canoe and returned to the boathouse, expecting to get all the negroes on J.'s plantation, if necessary, to find Doctor, We had never hunted together and I did not know whether he was a woodsman or not. The day was cloudy and he had no compass. Rounding the bend just west of the boathouse, I heard signal guns and agonizing shouts from the woods opposite, and soon rescued the Doctor from the end of the dash line, where he was marooned.

As we touched the boathouse and I stepped forward in the canoe, something happened—just how, no one will ever know. I felt myself falling backward over the gunwale, and in a flash realized that to try to save myself meant to turn over the entire craft with the Doctor and two good guns in fifteen or twenty feet of water. I gave a slight "boost" with both feet and made a backward plunge well clear of the boat. In perhaps two seconds I was "righted up" and the Doctor says my head came up through the same hole that it made going in. The water was icy cold, but time must be taken to go hand over hand along the gunwale of the canoe and pull up by the boathouse, as it again meant a capsize if I tried to climb into the canoe. An abject being got inside and "shucked off."

In the afternoon we went to where my turkey of the forenoon was last seen and waited de-

velopments, each giving a few yelps occasionally. We were about one-fourth of a mile apart on the south side of Dustin Pond. At early roosting time a turkey flew to roost about 200 yards south of me, and by taking trees on him I got within about 125 yards, though he twice shifted to other trees. There was no cover to get behind for approaching nearer. It was a very dark afternoon, and there were plenty of chances of missing, but conditions would not get better, and I should never get him without shooting. Creeping forward six or eight yards I got a rest in the fork of a sapling and several times tried to see a bead, but the sight would always blur before the bead came. Finally, as it was rapidly getting darker, I averaged things up as best I could, drew down to the blur, raised that to the middle of the turkey, and, as Sam Lovell says, "onhitched."

The turkey flew, slanting down, about fifty yards, and I did some sprinting, for fear the turkey would "hit the ground a-running." He did not. He died in the three seconds between the time of his and my arrival. The bullet hole was about his middle. This fellow proved to be a fine gobbler.

Ten minutes later the Doctor shot, and when he came up he had a turkey hen that had crossed the pond to his call, alighting almost over his head. He was using a shotgun.

The deer and two turkeys stood for the only three shots fired on the two hunts, except signal shots fired for the Doctor when he was misplaced.

There is such a thing as luck (with trimmings). TRIPOD.

General George S. Anderson.

THE President has appointed Colonel George S. Anderson, Ninth Cavalry, to the rank of Brigadier General.

To most readers of FOREST AND STREAM General Anderson is best known for the extraordinarily effective work he did years ago while acting superintendent in charge of the Yellowstone National Park. Capt. Anderson took charge in February, 1891, and remained there for seven years. It was during his term of service and by the scout Burgess—sent out to do this very thing—that Howell, the buffalo killer, was arrested in March 1894, surrounded by the bodies of seven freshly killed bison. This capture led to the passage by Congress of the act of May 7, 1894, which provided a government for the park. Since that time poaching within the park has been but little known.

At the outbreak of the Spanish War, Captain Anderson was ordered to Cuba and did good service there. Later promoted to be a Colonel, he took command of a regiment recruited largely from Tennessee, Kentucky and Missouri, and when the regiment was ordered to the Philippines, he and the young giants of his command did most effective work in subduing and pacifying portions of those islands which had previously been the scene of insurrection and much bloodshed.

It is reported that General Anderson will be ordered to the Philippines again.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Encroaching on the Principal.

BENNINGTON, Vt., Feb. 16.—*Editor Forest and Stream:* I have been particularly interested of late in the articles in FOREST AND STREAM by Sandy Griswold in reference to the decrease in rabbits, wildfowl and other game in his section of the country, and in numerous other letters from your correspondents in various parts of the United States which all point in one direction and tend to show most convincingly, and prove to the most skeptical that the game of this country is disappearing considerably faster than it can reproduce its species.

While in conversation with a friend the other day the conditions he mentioned seemed to illustrate the game situation so aptly that I am tempted to call the attention of FOREST AND STREAM readers to it. This friend is a retired business man. Some years ago his health failed him, but he was able to retire from active work and live well upon the interest and income from his accumulated property. He has a large family which of late he complains has grown very extravagant.

"These are indeed extravagant times," he said. "People nowadays seem to take no thought of the future whatever. Several years ago when I retired from business I estimated that my family and myself could get along comfortably upon the interest from my investments, and we did so nicely. I watched the matter for several years and all went well, so after that I did not bother about balancing up accounts each year. Of late, however, I have been figuring again, and the result has compelled me to sit up and take notice. Out of pure thoughtlessness, carelessness and extravagance I find we have become wasteful and are not only using up our interest each year, but are making serious inroads upon the principal. As the principal is consumed, of course the interest decreases rapidly and reduces the net income surprisingly fast. The other day I was almost shocked to find by figuring that in a very few years at this rate I will be reduced to poverty and will be compelled to start all over again."

"But you are getting along in years," said I, "and what can you do when your fortune is wasted?"

"I have thought of that," he said. "Certainly I cannot recover again if I lose all I have. Logically, the thing I must do is to stop this wasteful extravagance at once and confine myself and family solely to the interest and income again—even though we are compelled to curtail our pleasures very much and get along on a reduced allowance."

What can better illustrate the game situation than this? If, by thoughtlessness, carelessness and the work of pot and market hunters, we not only kill off the normal annual increase of our wild life from year to year, but take the breeding stock as well, we are reducing both our principal and interest, and it is only a matter of a surprisingly short time to us, if we are indifferent to the outcome, when our game will be totally exterminated. Certainly then we cannot recover our principal when once it is lost, for it is known that most of our native birds and animals cannot be propagated in captivity, and all that will remain to the general public will be to stand by and see wealthy men who have been provident of the supply by establishing private game preserves, enjoying all the sports of gun and rod.

Logically, then, we must stop our wastefulness at once before it is too late, even though we are compelled to get along upon a reduced allowance until our breeding stock has ample time to make up the loss and replenish the covers. Complacently we note and preach about how the buffalo was exterminated, how the passenger pigeon has disappeared, how the elk, antelope, wild turkey, prairie chicken, caribou and certain wildfowl have passed forever from their former haunts, and how the grouse and rabbits are decreasing rapidly, and yet are we making a real, practical effort to save what is left? That question is up to every sportsman in America.

Attempting to replace native species of game and birds by importation of exotic species is acknowledged to be a failure, and such proceedings appear to me—when there are any native birds left—to be the efforts of selfish men, for they do not wish to curtail their own pleasures if they can avoid it by wholesale importations. In this we are only making frantic efforts to recover our principal by the wrong method, and we will not succeed. We must save what remains by wise game laws, well and unselfishly observed by the real sportsmen and rigidly enforced against the unwilling ones.

HARRY CHASE.

A Little of Everything.

MILFORD, Conn., March 4.—*Editor Forest and Stream:* The Milford Fish and Game Association has a membership of sixty-five, two of whom are ladies. The gun club under the same head has fine shooting grounds equipped with up-to-date improvements and up-to-date shooters also. Feb. 22, at the regular shoot, E. C. Stiltz won the Dupont powder trophy, and J. L. Miles the Stevens Favorite rifle.

Besides shooting for prizes, we shoot at foxes. So far thirteen have fallen to gun and hound. Eight of these were run by Al. Weiderman's hound—a good one. I shall not forget the day I stood behind a chestnut tree and heard that melodious sound coming through the swamp. Then came the fox sneaking along an old stone wall, down a wood path, across a wood road where I was standing. Just then I almost had buck fever, but I got the fox just the same. The hound came up rushing through the bushes and put the finishing touches on the incident.

The club has been feeding birds during the winter, and now will protect them by getting rid of some of their enemies—foxes, hawks and crows.

Of crows there are thousands on our shores at the present time, feeding there during the days and roosting in the nearby woods at night. They keep up a continuous flight all day. Last Friday three of us went to the shore and shot twenty-three in less than three hours, and if we had not run out of shells, double that number might have been killed.

George S. Clark, a member of the club and representative to Hartford, has introduced a bill to offer a bounty on crows, as they have done so much damage to farm crops, young birds and birds' eggs. I believe they destroy more game and other birds than the hawks.

F. S. DOWNS.

Game Legislation of the 61st Congress

WASHINGTON, D. C., March 11.—*Editor Forest and Stream:* The record of the sixty-first Congress is chiefly interesting on account of the large number of bills introduced and the comparatively small number of general laws enacted. During the three sessions about 45,000 measures were under consideration, including 33,015 House bills, 10,906 Senate bills, and more than 1,000 resolutions.

In this avalanche of bills it is by no means easy to find the very small number which relate to game protection. The record of those introduced in the first two sessions has already been given (FOREST AND STREAM, Vol. LXXV., p. 136, July 23, 1910), and of the nine bills enumerated in this list as in committee at the close of the second session none apparently received favorable consideration.

BILLS WHICH PASSED.

Of the nearly 8,000 bills which were introduced during the third session which adjourned March 4, apparently only eight can properly be considered game bills and only three of these became laws. The most important one was the so-called Appalachian Park bill, entitled " An act to enable any State to co-operate with any other State * * * for the protection of the watersheds of navigable streams," etc. (Public No. 435) finally approved March 1, 1911. This act opens the way for the acquirement of National forests in the White Mountains and in the Southern Alleghenies in which it is hoped National game refuges may some time be established. The other two bills are of minor importance, affecting antelope in Arizona and game birds in Alaska. The former is entitled "An act providing for the levying of taxes by the tax officials of Arizona" (Public No. 379), but contains a section extending the territorial law of Arizona protecting antelope at all seasons until March 1, 1913. The latter entitled "An act for the protection of game in Alaska" (Public No. 520) merely corrects a defect in the law of 1908 by establishing an open season for game birds in Northern Alaska between Sept. 1 and March 1, and thus making the game birds season uniform throughout the Territory.

APPROPRIATIONS.

The items in the appropriation bills for 1912 are of more interest than usual, as they contain several substantial increases and authorize work in new directions. The agricultural appropriation bill (Public No. 478) includes several appropriations for game protection under the Biological Survey. The amount provided for the enforcement of the so-called Lacey Act was increased from $9,420 to $12,000; that for the maintenance of the bison range and bird reservations from $7,000 to $14,500, of which amount $2,500 is available for the purchase and transfer of game to Federal reservations. An emergency appropriation of $20,000, immediately available, was also made for the feeding and transportation of elk in Jackson Hole, Wyo. The Sundry Civil Bill (Public No. 525) carries an increase of $5,000 in the item of game warden service in Alaska, making the amount available for this purpose $15,000.

The total appropriations for game protection made by Congress for the ensuing year are as follows:

Agricultural Appropriation Bill:		
Administration	$10,200	
Enforcement of Lacey Act	12,000	
Maintenance bison range & reservations.	14,500	
Elk in Jackson's Hole, Wyoming	20,000	
Wichita Nat'l Forest & Game Preserve..	11,978	
		$68,678
Sundry Civil Bill:		
Game warden service in Alaska	$15,000	
Maintenance of buffalo in Yellowstone Pk	3,000	
		$18,000
Grand total for game protection		$86,678

When it is remembered that at the time of the passage of the Lacey Act in 1900 not a dollar was specifically appropriated for game protection, and that the first appropriation of this kind seems to have been that in 1902, for the purchase of the buffalo herd for the Yellowstone Park, the appropriations for 1912 are very gratifying, notwithstanding the fact that they are still inadequate and relatively small in comparison with the amounts provided for protection of game in several of the States.

BILLS WHICH FAILED TO PASS.

Among the bills which failed to pass were the following:

S. 9959. A bill to amend an act entitled "An act to protect the seal fisheries of Alaska, and for other purposes," approved April 21, 1910. (Prohibits killing of fur seals on the Pribilof Islands for five years.)

S. 9969. A bill to establish a Bureau of National Parks and for other purposes.

H. R. 28628. A bill for the protection of game in Alaska and for other purposes. (Replaced by H. R. 32170, which became a law—Public No. 520.)

H. R. 30572. A bill to protect certain migratory wild birds during their spring migration. (Lacey modification of the Weeks bill.)

H. R. 32316. A bill to authorize the establishing of a National park in the Territory of Hawaii.

Examination of the bills which failed to pass shows that most of them naturally fall into two groups, those relating to refuges and National parks, and those relating to Federal protection of migratory birds. The Weeks bill (H. R. 10276 attracted much attention, and the Lacey modification (H. R. 30572) forms the subject of an article by the author, Hon. John F. Lacey in the current number of Field and Stream (March, 1911, pp. 1024-1025). Notwithstanding the widespread interest in both subjects, none of the bills made any substantial progress or were even reported by the committees to which they had been referred. T. S. PALMER.

Connecticut Legislative Prospects.

REPORTS from Connecticut as to changes in the game laws are confined at present to rumors which are more or less vague.

It is believed that a bill will be reported from committee, opening the season for deer for four days in November, and limiting the take to one buck per individual to be killed with a shotgun. There was an effort made in the hearing before the committee to prohibit the carrying of arms by aliens in the woods, and it is possible that in some form or other such a provision may be incorporated in the law.

On March 8 there was a hearing on the duck bill, the question of spring shooting being discussed at length. It seems possible, if not probable, that the law will be so changed as to close the month of September and open the month of January, leaving the length of time during which ducks may be shot the same as at present. It is possible on the other hand that there will be no change. It is reported that an article recently published in FOREST AND STREAM on the shooting of ducks in Connecticut, and the taking of 800 at the mouth of the Connecticut River, prevented a delegation from the river from attending the hearing. It is said that they were afraid that someone would ask them how many birds they had killed during the past season.

An effort has been made to oblige persons having licenses to collect birds and eggs for scientific purposes and to report on the birds and eggs they take. There are about thirty-five permits in the State, and no one knows what the collectors have done or are doing.

The Use of Game.

ALBANY, N. Y., March 11.—*Editor Forest and Stream:* I have read with interest the suggestions appended to the report recently made by the Game Preservation Committee of the Boone and Crockett Club. The suggestions are sound and are made from a broad viewpoint.

We people interested in game protection are apt to be too dogmatic. I have never been an enthusiast in game protection solely for the sake of protection. I believe in protection which serves some beneficial economic purpose. Game protection by all means should be based on common sense motives.

I do not believe any species should be protected when there is no public necessity for such protection. When the supply is in danger and more protection is required, the season for taking may be shortened or the more destructive methods prohibited. But there should be no continuous protection for any wild species which has increased to the extent of becoming a nuisance, when such protection is not required.

As a general proposition it is better to thus limit the taking of the game rather than to resort to close seasons running over a period of years. I believe it extremely unwise to make laws where there is no public necessity for them. The game protector has his work cut out to enforce the vital protective measures, and he should not be burdened with unnecessary law enforcement. Not only this, but laws which are not demanded by public necessity are bound to meet with public disapproval. The game protector has no option other than to enforce them to the best of his ability, and the result is sure to create bad feeling against game laws.

The game protector groans in spirit over some of the measures rushed through State Legislatures. He knows that the sentiment he has worked patiently to build up in favor of game protection will be endangered by an ill advised message, and that hostility will be awakened, making it difficult or impossible to procure convictions of violators, not only of the law in question, but also of the older fundamental laws. No one comes more closely in touch with the people than the game protector who enforces the law, and his opinion as to the necessity for any particular measure of legislation should have weight.

JOHN B. BURNHAM,
Deputy Commissioner.

The Sportsmen's Show.

By comparison with any sportsmen's show that has been held at the Madison Square Garden in recent years, that of 1911 shines out pre-eminent. The show held at the Grand Central Palace in 1907-08 was a real Sportsmen's Show and was appreciated by real sportsmen, but many of the sportsmen's shows of late years have too closely resembled country fairs, where there was a heterogeneous mass of everything that would take the fancy of men, women and children, but very little that appealed to the practical, serious side of the sportsman. This show has a different aspect and has in it a very great deal that is of real interest. Arms, ammunition, tackle, canoes, cameras, snowshoes, are things that the sportsman uses when he is out of doors; the trophies which he brings back from his excursion are preserved by the taxidermist as shown in Madison Square Garlen, while in the long winter evenings he may read the books offered at one of the stands, and while he hopes for joys to come may dream over happy memories of joys that are past.

It is no new thing for the interior of Madison Square Garden to be made to look like anything but what it is, and this year the decorations of evergreens usually seen at the sportsmen's show are as attractive and sweet smelling as ever. The eastern end of the Garden being devoted to the sport of trapshooting makes the space available for exhibits on the ground floor somewhat less, and the spaces smaller than usual, but there is a great deal gathered here, and one no sooner steps within the entrance doors than he finds himself with really too much to look at.

To the right of the door is the great exhibition of Fred Sauter, the taxidermist of New York city, who shows among other things a dozen big buffalo heads and a number of other heads of American game. Walter D. Hinds, of Portland, Me., and the Nova Scotia Guides' Association, of Halifax, N. S., show a lot of fine and well mounted specimens. An exceedingly interesting fact which strikes one who looks over the taxidermists' exhibition is that nowadays almost half the material is of African animals, while a few years ago such heads and skins were almost unknown.

The Old Town Canoe Company's exhibit is close to the door, and from there going around to the right the visitor finds himself constantly confronted with fishing tackles, guns, rifles. All the spaces seem interesting to visitors to the show, and the persons in charge are constantly busy explaining the different implements and tools. The J. Stevens Arms and Tool Company, of Chicopee Falls, Mass.; H. Tauscher, of 320 Broadway, New York; the Fox Gun Company, of Philadelphia, Pa.; the Savage Arms Co., of Utica, N. Y.; the Du Pont Powder Co., of Wilmington, Del.; all have exhibits, and all of them claim the close attention of gunner or big-game hunter.

A wider field is occupied by concerns which do a more general retail business and do not confine themselves wholly to guns. Schoverling, Daly & Gales have a large space containing most things needed by gunner, angler or camper. So it is with the New York Sporting Goods Co., Abercrombie & Fitch Co., David T. Abercrombie Co. and R. H. Macy & Co.

A number of clubs exhibit here, and of these the Boys' Camp exhibit is one of the most interesting. The boys of to-day, who will be the men of to-morrow, ought to be taught how to camp and camp properly. They might learn something from the Camp-Fire Club of America, the Megantic Club, of Maine, and the Anglers' Club of New York, while the Guides' Associations of Halifax, N. S., and St. Johns, N. B., contain a lot of veterans whose knowledge of camps and camping is by no means confined to the vacation time of summer.

Interesting exhibits are the portable houses shown here, such as those of R. L. Kenyon Co., Waukesha, Wis., and the E. F. Hodgson Co., of Boston, Mass., while the Rustic Mfg. Co. and H. L. Pinckney are no doubt in shape to put up buildings of a more permanent character. Useful is the lubricating oil shown by the Vertex Company.

Clothing is offered by all the general outfitting concerns, but the Bird, Jones and Kenyon Co., manufacturers of Utica, N. Y., show their cloths—Duxbak, Kampit—which the experience of a great number of gunners has shown to be among the very best and most durable articles for sportsmen's clothing.

Some of the things referred to are in the gallery which runs about the Garden, where there is plenty of room and where things are well displayed. Here at the Hall Camera Co.'s space you may borrow a camera, carry it over to the rail, take a picture of a trapshooter, take it back and presumably have it developed while you wait. It is chiefly in the gallery that the various food products are exhibited by the American Kitchen Products Co., the Washington Coffee Refining Co. and some others, but Park & Tilford's large exhibit of candies and other things is on the ground floor.

All day long, since the show opened, the guns have been cracking and the targets breaking, and unquestionably this has given to the show a peculiar interest for all trapshooters.

There are other forms of entertainment for those who are not expert at the traps, and of these one of the most interesting is the show of ornamental birds exhibited by G. D. Tilley, of Darien, Conn. Of these there are a great many and most of them in the pink of condition, but unfortunately they have but little space. Swans, geese and ducks from the four quarters of the globe are crowded together, and as one looks at them and admires their beauty, he cannot but rejoice that the show is soon over. Then there are golden and silver pheasants from Asia, cranes and storks, and the much talked of European or Hungarian partridge, for which the sportsmen of America have spent so much money with so little result.

Once or twice every day Ambrose Means, the cow puncher, who went to Africa with Buffalo Jones and put his string on a multitude of strange animals there, takes a ride down a mountain trail, unpacks his animals and makes camp. It is an interesting exhibition.

Annie Oakley gives a daily shooting exhibition, but, most interesting of all, every day are given the motion pictures of Buffalo Jones and his men roping and riding in Africa, where they performed the wonderful feats of catching rhinoceros and lions, to say nothing of giraffes, elands and zebras and throwing them all except the rhino. These pictures FOREST AND STREAM has described more than once, and they are so well worth seeing that no one who has an opportunity to view them should by any means miss it.

Those who attended the Sportsmen's Show that has just closed may feel that they got the worth of their money. It was not one of the catch-penny things that of late years have more than once imposed on the public.

Quebec Association Meeting.

An excellent illustration of the effective work being done by the Province of Quebec Association for the Protection of Fish and Game was furnished at their annual meeting, says the Montreal Gazette, when it was reported that only that day Game Warden Griffith, of Montreal, had seized two bales of furs valued at $2,500. These had been gathered at various points in the Province by agents for a New York firm, and comprised a big variety of furs, including many beaver pelts. It was on account of the beaver skins that the consignment was seized, it being illegal to trap or even skin beavers. The skins were put in storage and will be kept until the Provincial authorities deal with the matter, when if the confiscation is upheld they will be auctioned off by the Government in the usual way.

There was a fairly good attendance at the meeting, at which Mr. W. L. Maltby was elected president. The reports for the year showed that a good deal of activity had been displayed in the way of protecting game from illegal slaughter. Several changes in the game laws were approved for presentation to the Government, these including the raising of the fine for hounding deer out of season from $5 to $20, the imposition of a gun license, and the reduction of the fine on hares. It was stated that as a result of the association's activity partridge in this Province had increased greatly in numbers, while the protection given to song birds was having a splendid effect.

The following officers were elected: President, W. L. Maltby; Vice-President, Chas. Meredith; Hon. Treasurer, D. Robertson; Secretary, J. R. Innes; Committee—Rene Bauset, A. Bergerson, Geo. Boulter, L. A. Boyer, E. T. D. Chambers, I. M. Craig, A. J. Dawes, O. A. Dostaler, H. G. Elliott, Lieut.-Col. W. H. Evans, Dr. J. T. Finnie, Geo. H. Ham, W. B. Hope, H. R. Ives, J. H. Jacobs, W. L. Maltby, Chas. Meredith, W. H. Parker, D. Robertson, A. W. Shewan, J. B. Sparrow, J. H. Stearns, Guy Tombs, and J. L. Wanklyn.

The report of the year's work shows that 123 convictions had been secured as follows: Partridges, 6; muskrat, 16; deer, 3; hares, 4; beaver, 2; honnding, 1; spearing, 5; dore, 13; trout, 12; bass, 8; sturgeon, 3; netting, 2; song birds, 45; night lines, 3.

Three test cases taken to court were dismissed and twenty-seven other offenders for slight evasion of the game laws were let go with a warning, as were also a number of boys.

The treasurer's report showed a balance on the right side, and while a great deal of money had been expended it was considered that the results warranted it.

Sportsmen Talk at Albany.

ON Thursday, March 9, a discussion was had among members of the legislative committee at Albany, Forest Fish and Game Commissioner Osborne and a large number of sportsmen on proposed amendments to the fish and game laws. Among those present were: Dr. W. T. Hornaday, of New York; Isaiah Perkins, of Mason Lock, Hamilton Co.; Julge Boire, of Plattsburg, and Andrew D. Meloy, President of the New York State Fish, Game and Forest League; Marshall McLean, of New York; T. Gilbert Pearson, of the Audubon Society, and others. The question of licensing bird dogs in the Adirondacks was discussed at considerable length, as was also the proposition to renew the hounding of deer. On this subject a vote was taken and the proposition to permit the use of dogs was lost. A large number of sportsmen favored the lengthening of the deer season from Oct. 31 to Nov. 15, and to permit the killing of bucks only.

Very active interest was displayed in the proposition to prohibit the sale of all game no matter where it comes from. The usual arguments pro and con were brought up, and the weight given to these arguments depended somewhat on the views of the listeners. It was declared that ducks brought into New York State from the South are the same birds which, if not killed by the market gunners, would next season furnish sport for the gunners of this State, and it was shown that the permission to sell game within the State, which has been taken outside of the State, furnishes a blind for the sale of game taken in the State.

A delegation of fur buyers was present to urge an amendment to the law making a close season on raccoons. The increase in value of all furs has been so great that some fur-bearing animals like the raccoon are now almost extinct in New York.

An effort was made to secure action on a law to prohibit the use of ferrets in hunting rabbits, but this was bitterly opposed by the representative of vine growers' associations and vineyard men who favor the complete extermination of the rabbit.

Increasing the minimum length limit of trout from six to seven inches was also discussed, as was also the proposition to permit the raising of trout in private hatcheries for the market. The pollution of streams was fully discussed.

New York Legislature.

BILLS have been introduced as follows:

By Assemblyman Evans, changing the deer season in parts of the Catskills to the first half of November.

By Assemblyman Evans, permitting the propagation of skunks in captivity when licensed by the State commission. The license fee in the first instance is $10 and $5 for renewals. The applicant for a license must give a bond in the sum of $500.

By Senator T. D. Sullivan, a bill amending the penal law (Section 2145) by permitting fishing, playing and outdoor athletic sports and games on Sunday.

By Assemblyman Cheney, Cattaraugus county, prohibiting the taking by any person of more than five squirrels in one day in Cattaraugus county.

By Senator Roosevelt, providing that there shall be no open season for quail in Dutchess and Ulster counties until 1916.

By Assemblyman Brereton, relating to fires to clear land.

By Assemblyman Jones, amending the tax law by inserting a new section (16) providing that lands to the extent of one or more acres planted for forestry purposes with trees to the number of not less than 800 to the acre shall be exempted for thirty years from taxation.

By Assemblyman Pierce, relating to fishing through the ice in Silver Lake.

By Senator Burns, relating to whitefish and lake trout in Lakes Ontario and Erie.

By Senator Saxe, prohibiting the use of automatic and repeating shotguns in hunting birds.

The Senate has advanced to third reading Senator Long's bill in relation to the open season for certain wildfowl on Long Island.

The Boone and Crockett Antelope.

CACHE, Okla., March 6.—*Editor Forest and Stream:* In all there were eleven head of antelope shipped here from the Yellowstone Park. One male was dead in the crate when it arrived, and there were three others, two males and one female that died from injuries which they received in transit. We were very sorry to lose them, but since the antelope is perhaps the most timid animal we have to handle and ship, I consider we were lucky to not lose more of them. We have seven left, one male and six females, and I am glad to inform you that they are all feeling fine and doing well on shelled oats and alfalfa hay. Some of them are two years old and others are older. At present we have them in a small inclosure of about four acres made especially for them. I do not know just when they will be turned out in the buffalo park, which is fenced with a woven wire fence about ninety inches high and contains about 8,000 acres, which was once the home of the buffalo, elk, deer and antelope. At present we have twenty-three head of buffalo, eleven of which were born here. There are ten males and thirteen females all in good condition and doing well. About four or five buffalo calves are expected this year.

Inside of the buffalo park there are about forty head of whitetail deer which are natives of this country.

At present we only have one elk, a bull which was presented to the Government by the city of Wichita, Kansas.

FRANK RUSH,
Game Warden in Charge.

W. C. Allison.

CUSTER, S. D., March 6.—*Editor Forest and Stream:* We have the sad duty of informing you that W. C. Allison has joined "the silent majority."

"He hears not the moan of the night winds now
Or the sighing of those who weep;
The pallor of death is upon his brow,
He sleeps the eternal sleep."

D. N. ALLISON.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

New Game Preserves in Montana.

BY what was well nigh the most rapid work on record, the State of Montana has created a new game preserve of noteworthy magnitude. Governor Edwin L. Norris, Senator McCone and the Legislature of Montana have drawn, introduced and enacted into a State law—all since Jan. 20—a measure that converts the famous "Hell Creek Bad Lands" country into a State game preserve. Primarily it is for the benefit of the remnant of prong-horned antelope, mule deer and mountain sheep still surviving in that wild and picturesque region, but it is reasonably certain also that in the future a nucleus of American bison will be added.

The region fronts on the Missouri River, and it lies about 100 miles north by west of Miles City. The total area of the preserve is about 100 square miles. About three-fourths of it consists of very deep and rugged bad lands, made by the waters of Snow Creek, Hell Creek and other streams. There is a good showing of cedar and pine timber in the gulches and arroyos, and hard wood on the bottom land of Snow Creek.

The remaining one-fourth of the tract contains some high level grass lands that can support a herd of perhaps a thousand bison. In the eastern side of the preserve lies the fossil region, now known widely as the Hell Creek formation discovered in 1902 by W. T. Hornaday and L. A. Huffman, and turned over to the American Museum of Natural History. Out of that region have come the great tyrant lizard (*Tyranosaurus rex*) and the giant three-horned dinosaur (*Triceratops brevicornis*).

The new preserve contains even at this late day a small band of mountain sheep. Beyond question it will in a few years be teeming with wild life, and will form a feature of great interest to the American people.

The sudden move for the creation of the Snow Creek Game Preserve was precipitated by news sent late in January to W. T. Hornaday by W. R. Felton, a civil engineer of Miles City to the effect that a new line of railway is about to be constructed within fifteen miles of the region.

It was apparent that if the preserve were to be created at all, it must be done immediately. At once a campaign was started by L. A. Huffman, of Miles City, and pushed with the utmost vigor. Senator McCone introduced the necessary bill, Governor Norris heartily favored and promoted it, and in the end so many strong men became interested that in spite of the lateness of its introduction it passed both houses of the Legislature, and on March 6 became a law. It is the intention of Mr. Hornaday eventually to ask Congress to make Snow Creek a National preserve.

Besides the above, the Legislature has provided for two other game preserves, one in Gallatin county, and one in Carbon county.

The Gallatin county preserve averages four miles in width and twenty miles in length, and is intended to offer a winter range for the elk which come down at that season out of the Yellowstone National Park.

The Pryor Mountain preserve includes a region formerly within the boundaries of the Crow Indian Reservation.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

ELCO EXPRESS LAUNCH, 35 FEET; 24 MILES

New 18-Footers.

THE summer of 1911 will be a busy season for the 18-foot knockabouts wherever the class is raced, for besides the championship racing there are two important matches that are likely to take place, according to the Boston Globe.

The dates for one of these, that between the Massachusetts boats and the Narragansett Bay boats have been arranged. The other for the La Belle cup, postponed from last summer, will be sailed probably this summer. This latter match is to be between the champion of the lakes and the Massachusetts Bay champion.

Of all the restricted classes that were brought out between 1890 and 1905 the 18-footers are the only boats that will be raced as a class in 1911. This class was originated in 1900 and reached its greatest popularity in Massachusetts Bay in 1904, when the class numbered more than twenty racers. Since that year, although a very few boats have been built for the local racing, the class has spread out to other yachting localities. In 1907 several of the eastern boats were bought by Cleveland yachtsmen and the class was started on the lakes. The following year their champion sailed a match off Marblehead in which the Massachusetts Association boat was defeated. A return match was sailed in 1909 on the lakes and the local champion, Dorchen II., easily defeated the home boat.

This same year, 1909, the Narragansett Bay 18-Foot Knockabout Association was formed, with a class composed of former Massachusetts Bay racers. This naturally produced rivalry between the two associations and resulted in a match off Marblehead last summer. The Massachusetts team, composed of Dorchen II., Aurora and Kittiwake V., defeated the visiting team, Bat, Arrow and Hugi. As the racing was very close throughout the match, the match this summer which will be sailed on Narragansett Bay July 31, Aug. 1, 2 and 3, will be for blood.

The Narragansett Bay yachtsmen will have two new boats for the class, the first to be built for those waters. Both of these racers are completed and only await warmer weather to be tried out. One of these boats has been built in home waters by the Narragansett Bay yacht yard, while the other is the production of Massachusetts design and build. This racer, for Fred D. Wood, is from the designs of John F. Small, who has had a number of very successful boats in the class.

A couple of years ago John Small retired from yacht designing, giving up his office in Boston and removing to South Harwich on Cape Cod. This 18-footer, which has been named Dorothy, is the first racer that Small has designed since leaving Boston. Dorothy, which White, of Manchester, has built, is very much like Dorchen II. and Hayseed, designed by Small, two winners of championships. She is double planked with cedar and appears to have finer ends than either Hayseed or Dorchen.

In the local fleet of 18-footers there will probably be two additions to the class, both of which are old boats. Cheroot, a Boardman-designed boat, which has not been in the active racing for a number of seasons, was purchased last fall by H. L. Bloomfield, who later bought Moslem II. This latter boat, also designed by Boardman, and built in 1904, is the yacht that Mr. Bloomfield probably will race this summer, as she is rather an unknown quantity, never having been raced actively by any of her former owners.

Some Hints on Calking.

So many boatists ruin their craft by recalking them too often, and generally too hard, that a few hints on the subject given in the Washington Star might be of some help to the "first-timer."

After the old paint has either been entirely burned off or smoothed down to a good, clean surface, examine the seams from bow to stern, and mark every soft spot that might need recalking or fresh putty, with a bit of black chalk. A putty knife is a handy thing with which to test a seam, and where the old cotton shows signs of rot or hangs out in places so that the blade sinks well into the spot, it is time to recalk, but if the cotton has any life left in it, it is only necessary to work a little putty into the seam and go over it with a flat knife, as the seams will swell when the boat goes overboard.

But it is usually unnecessary to recalk a boat every spring, and if the wood has not dried out too much, most of the seams will be hard and a little putty will suffice.

To recalk thoroughly it is best to get all the old cotton out, cleaning the seams well with a knife.

If you find that the seams are too tight to receive the blade of the knife, the old cotton may either be pushed through with an iron and a mallet or a calker's wheel be pressed into service. For any craft under 35 feet, with planking averaging ½ to ⅜ of an inch in thickness, cotton is preferable to oakum, as the latter is too coarse.

To do the calking, you must have a mallet and two calk irons or a small calking wheel made of brass or steel set in the end of an oak handle. Better results will be obtained with the old-fashioned iron, as the more modern wheel is apt to do indifferent work. Drive the cotton in well at the start and keep twisting it as you work along the seam. For small boats cotton calking can be bought in ball form and is handier to use than the ordinary twist. If the seams are small and uniform, a small thread of cotton may be twisted and laid along them with a wheel until it is about a quarter of an inch below the surface of the planking. But if the seams are large in places, a thin iron must be used, and the cotton, instead of lying in a straight line, should be drawn back at intervals to form little loops, so that more of it may be forced into the seam.

Drive it in at several places two or three inches apart along the seam and finish up by driving it all along.

Last of all, put plenty of thin paint on the cotton to keep the water from it and then either pay all seams with white lead putty or with a good quality of marine glue. The latter has been used with remarkable success on several local yachts.

Motor Boating.

Bermuda Race Conditions.

THE special committee of the Motor Boat Club of America, F. K. Burnham, Charles P. Tower, H. R. Sutphen and James Craig. Secretary F. N. Morley and Thomas Fleming Day representing the Royal Bermuda Y. C., have reframed the conditions to govern the annual motor boat race from New York to Bermuda. This race will be started on Saturday, June 17, and this year is open to boats 40 to 100 feet over all length. This change in the conditions which enables good sized boats to compete is a wise one. While there has been no serious accident in former races it is rather hazardous to allow boats under 40 feet in length to race over such a course as that from New York to Bermuda, which takes the boats out of the course of steamers and across the treacherous Gulf Stream. The new conditions are as follows:

Race.—From a starting line established in Gravesend Bay, New York, to a stake boat off St. David's Head, Bermuda, placed by the Royal Bermuda Y. C.

Prizes.—The possession of the James Gordon Bennett challenge cup to the boat finishing first and $1,000 in cash. A second prize if three or more boats start, and a third prize if five or more boats start.

Boats.—Open to seaworthy boats not over 100 feet over all nor under 40 feet over all. A seaworthy boat is a substantially built, full decked vessel, having engine and living accomodations housed in and being equipped with all

WHIRLWIND, CRUISER; 111 FEET LONG.

the tackle and appliances necessary to enable her to perform a long passage in open water.

Rating.—Will be calculated under the 1911 rule of the American Power Boat Association, modified as follows: The midship section to be expressed in square feet and to be obtained in this manner—with the boat in the same trim as when being measured for load waterline length, divide the load waterline length into five (5) equal parts or stations. At each of these points obtain the area of the section in the following manner: Divide the beam (B) into five (5) equal parts or stations, and at the first inboard station from either end measure perpendicular from the water surface down to the under side of the boat's planking (C). C x B will give the area of the section. Integrate the areas thus obtained by Simpson's rule, obtaining the volume of displacement in cubic feet. The result, multiplied by 64 for salt water, will give the displacement in pounds. Then the midship section shall be calculated by multiplying the displacement in pounds by a constant (C) and dividing the product by the load waterline length in feet.

$$M S = \frac{W \times C}{L.W.L.}$$

The constant for salt water is .0284.

Time Allowance—Shall be figured according to the American Power Boat Association time allowance, the distance for computation for allowance to be on a basis of 670 nautical miles.

Propelling Power.—Any form of internal combustion engine may be employed for propulsion purposes.

Fuel.—The Race Committee, comprehending that those entering the race have a thorough knowledge of the fuel necessary to make the passage, does not specify any quantity, but the same must be sufficient to complete a distance of at least one and one-half times the distance between New York and Bermuda. No ingredient shall be used to increase the power of fuel.

Sails.—Boats must be equipped with suitable spars and rigging to carry sufficient sail to give them steerage-way in a moderate breeze. This sail may be spread in any shape, but the total area of canvas must not exceed in square feet the square of the over all length of the vessel divided by eight as a constant. This sail may be carried at all times.

Stores and Water.—Stores and water sufficient for thirty days must be carried. This will be strictly enforced.

Crew.—No boat will be allowed to start with less than six men aboard, one of whom shall be a practical navigator, one a practical engineer, and at least half of each crew must be amateurs.

The rule regarding amateurs (or Corinthians) is as follows: "No person who follows the sea as a means of livelihood, or who has accepted remuneration for services rendered in handling or serving on a yacht, shall be considered a Corinthian."

Equipment.—A boat or life-raft must be carried of sufficient buoyancy to salve the whole crew, or else two boats or a boat and raft. Also a ring buoy or lifejacket for each member of the crew. A full set of navigating instruments, a spare compass, sea anchor, oil bag, and at least one gallon of crude petroleum or other oil, and fire extinguishers must be carried. Suitable arrangements for fitting an emergency tiller must be made. An assortment of spare parts and gear to the satisfaction of the committee must be carried. All boats must be equipped with the fittings and appliances prescribed by the Government.

Tanks.—Fuel must be carried in at least two distinct and fixed tanks permanently piped and connected. Fuel for lighting or cooking purposes may be carried in separate tanks. The carrying of fuel in cans or other temporary receptacles is forbidden.

Water must be carried in at least two separate tanks, all tanks to be securely fitted and fastened to the hull of the vessel to the satisfaction of the committee.

Entries.—Entries will be received up to one week before the start of the race. There will be no entrance fee.

Measurement and Inspection.—All contestants must be measured by the official measurer not later than one week previous to the start. All contestants must report to the Race Committee and official measurer for the purposes of inspection and measurement at a time and place to be announced hereafter.

Protests.—Protests covering violations of sailing rules must be made in writing within twenty-four hours after finish of race. Protests regarding ratings must be filed in writing with the Race Committee previous to the start of the race.

Start.—The start will be made Saturday, June 17, at 2 P. M., from a point in Gravesend Bay to be announced hereafter.

Note.—The committee reserves the right to reject any entry if, in its judgment, the boat is unseaworthy or unsuitable for long-distance racing, or is deficient in any particular.

The committee will require strict compliance with the letter and spirit of the conditions as above stated, and will be pleased at any time to inspect plans or boats under construction.

The James Gordon Bennett challenge cup is a trophy presented for annual competition and must be won three times by the same owner before awarded permanently.

The first race for this trophy was held in 1908 and was won by Ailsa Craig, of the Motor Boat Club of America. The second race, in 1909, was won by Heather, of the Shelter Island Y. C. Third race, in 1910, was won by Eronel, of the Bensonhurst Y. C.

Cruiser for C. D. Silcox, Jr.

Charles D. Silcox, Jr., of Philadelphia, has ordered a 57-foot cabin cruiser to be built from designs by J. Murray Watts, which will be used on the Delaware and Chesapeake Bay. The boat, which will be 57 feet long, 12 feet beam and 3 feet draft, will have a large deck. The steering will be done from the bridge forward, and the whole boat covered with awnings. Her head room is extremely high, being 6 feet 0 inches throughout. This gives a chance to use very large glass windows in the main cabin. She has a large storage capacity for ice under the after deck, besides the usual refrigerator opening into the galley. In the hot weather most of the cooking will be done on an alcohol stove in the pantry. When, however, the ducking season begins and it gets raw and cold even on the Chesapeake, there is a big coal stove provided in the galley and also a yacht type of tile stove in the main saloon.

In hot weather the helmsman takes refuge in the pilot house, which is an unusual feature in so small a boat, but which has proved itself a most useful convenience, especially on wet nights, as not only is the helmsman protected, but navigation is made much easier, having the chart and instruments and especially the night glasses kept dry. To give head room in this pilot house a well is sunk about two feet deep. This is so arranged that head room is kept all around the engines and a clear passage fore and aft in the boat. The entrance into the pilot house is on the starboard side.

On the port side, the deck extends in two feet into the pilot house, and in top of this deck a long cushion is laid, making a very pleasant lounge. The engine room is directly under the pilot house and engine controls are fitted to both steering positions.

There are two 25-horsepower Hall engines installed, with a separate 6-horsepower engine for driving the dynamo and pumps. The engines are arranged to exhaust under water with a relief pipe up the stack, which also contains the galley pipe and the stove pipe from the main cabin.

The arrangement of the boat below decks is a departure from the usual cramped accommodations on a boat of this size. The main saloon is 17 feet by 11 feet, with a large floor space for tables and chairs. Four Pullman berths are fitted. There is a large tiled toilet room and a pantry. The owner's stateroom is forward of the engine compartment and forward of that is another room fitted with a toilet which can be used as a dressing room. It is, however, sufficiently large so that it may be changed into another stateroom should the owner desire more accommodations in the future.

The general appearance of the boat is along the lines of a small steamer with a big flare at the bows, and ship stern, which gives a large amount of deck room. A mast is carried forward to take the running light and for signaling purposes. It is also designed to carry a storm trysail and staysail to steady the boat in a sea way.

New York to Camden Race.

A motor boat race will be held this year from New York to Camden. It will be under the auspices of the Camden Motor Boat Club. Thomas Fleming Day offers the first prize, and the Camden Club offers as well a silver trophy for the fastest time over the course. The conditions are:

Race for cruising boats of not less than 30 feet over all length, and not exceeding in the greatest length 50 feet over all, and with a waterline breadth of not less than one-fifth of the waterline length, and enrolled in any recognized club. A cruising boat is one built and used for cruising, having cabin house and self-bailing cockpit. Cabin must contain sleeping, cooking and general living accommodations for crew.

Course.—Which shall be figured at 225 nautical miles, will be from New York Motor Boat Club, New York, to Camden Motor Boat Club, Camden, N. J., via the "Outside Route."

Start and Finish Lines.—Start will be made from stake boat off club house of New York Motor Boat Club. Finish will be at stake boat off club house at Camden Motor Boat Club.

Time of Start.—Warning signal, one gun, 9:50 A. M., Aug. 4, 1911; preparatory signal, two guns, 9:55 A. M., Aug. 4, 1911; starting signal, one gun, 10 A. M., Aug. 4, 1911.

Time of Finish.—All boats must finish within 48 hours after start, when race will be called off.

Entries.—Entries must be made in writing to the regatta committee of either club by July 22, 1911. All boats entered must report to the regatta committee at New York Motor Boat Club not later than 6 P. M., Aug. 3, 1911. The committee reserves the right to reject any entry.

Rating.—All boats will race as one class, and be rated under the 1910 A. P. B. A. rules. No unrated boat will be allowed to start.

Crew.—Only amateurs will be allowed on the boats during the race. In the event of the owner not being on board during the race, he must be represented by a member of a recognized club. A list of the names and vocations of all the members of the crews must be given the committee before the start of the race.

Propelling Power.—An explosive engine or engines operated by either gasolene, kerosene or alcohol. Any ingredient to increase the power of the fuel will not be allowed.

Equipment.—All boats must be equipped to comply with the Federal regulations. Each boat must carry on deck or in tow a tender or raft capable of carrying the entire crew. Anchors and ropes, charts, compass, head line, etc., must also be carried.

Anchoring.—Boats may stop at any place for supplies or repairs, but any boat proceeding except under its own power will be disqualified.

Sails.—Boats carrying sails of any description must have them sealed by the committee before the start of the race, and seals must be intact at finish of the race.

Log.—Each captain must keep a log giving the time of passing prominent points. The log must be handed to the committee within 12 hours after finishing.

Protests.—Protests must be given in writing and delivered to the committee within 48 hours after the first boat finishes.

The officers of the Camden Club are as follows: Commodore, E. Claude Headley; Vice-Commodore, Howard J. Dudley; Fleet Captain, Charles P. Johnston; Measurer, John G. Vanderslice; Treasurer, Austin M. Clark; Secretary, Joseph M. Magee; Financial Secretary, George W. Johnston, Jr.

Own A Racine-Muskegon Cruiser This Year

You Can Afford It

FIFTY boat wise people were made glad last year with the ownership of the marvelous **36-ft. raised-deck Racine Cruiser.** Four times that number were disappointed—they came too late. We can build only a like number of these beautiful boats this year—just fifty, that's all. 36 feet over all she measures,—her beam is 8 ft. 6 in. She will go anywhere there is two feet six inches of water, and you can take your friends on this boat with cruising accommodations for eight: toilet room, folding lavatory and mirror, owner's stateroom, and cockpit holding ten. The galley is big, fresh water tanks for salt water cruising, ice box, sink, surplus storage and all—a real home on water, independent of all the hotels on earth.

Save $2,500 On This Boat

And the price—other builders with limited capacity and old fashioned methods would have to ask $3,500 to $5,000 but our price is $2,500 for the whole outfit. Every detail of hull and fittings is up to the regular Racine standard, nothing scrimped, no pains of labor or material spared just to make the price low.

Everything that goes with a boat is included, dinghey and davits, lights, screens, standing top, cushions, curtains, flags, signal mast and fittings, power whistle, fog bell, life preservers, boat hook, stove, removable table, etc. Powerful motor of the latest type four cylinder, 4-cycle; self-starting—developing 25 to 30 H. P.—with double ignition system, including gear driven magneto, *all so simple that even a novice will have no trouble.* Complete electric light plant, with dynamo. Sounds like a marine catalogue, doesn't it? You will find no extras to buy on this boat.

You can afford to own this boat and run it yourself. You will require no crew. It's a 'one man' boat, in the sense that you can handle it all by yourself, if you wish, and go anywhere.

We will gladly tell you about this sturdy member of the Racine family as well as the other boats we make. Send today for the story of "The Cruise of the Bonita," which will help you select the boat you need.

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

Halifax Race Conditions.

CHAIRMAN BENTLEY of the regatta committee of the Brooklyn Y. C. has made the following announcement about the motor boat race from Gravesend Bay to Halifax for which Commodore Hearst has offered the prize:

"The Brooklyn Y. C. contemplates holding a gasolene power boat race from its clubhouse, Bensonhurst, N. Y., to Halifax, N. S. (distance about 600 miles), on July 22, 1911, provided there are sufficient entries.

"Boats measuring between 45 and 80 feet, over all measurement, will be eligible to start. If there are sufficient entries the starters will be divided into two classes. Boats measuring between 45 and 60 feet, over all measurement, will race in one class and between 60 and 80 feet, over all measurement, in another class. If there are less than four starters in each division all boats will race in one class.

"The course will either be direct to Halifax (outside) or else through Long Island Sound to Provincetown, Mass., where a stop will be made of sufficient time for boats to take on gasolene and stores and thence proceed to Halifax.

"Valuable prizes to be donated by Commodore William Randolph Hearst will be offered.

"There will be offered a first prize, consisting of a valuable trophy in each class, and a cash prize of $1,000 to the winner. If there are five starters which finish there will be a second prize and for seven or more starters which finish a third prize. Each boat starting and finishing will receive a handsome prize for having completed the course.

"The regatta committee will be glad to receive suggestions on any questions pertaining to the race, and will give such suggestions its best consideration.

"As this race will probably be one long to be remembered, and the committee already has assurances of a large number of entries, it urgently requests replies and entries as early as possible."

Motor Boat and Aeroplane.

ONE of the novelties shown at the Motor Boat Show was a motor boat and aeroplane combined which can make sixty-five miles an hour, so it is said. The boat is the invention of Frederick E. Wadsworth, of Detroit, and is pronounced by students of aviation to be a reduction to a practical basis of the idea of carrying passengers in aeroplanes as a commercial enterprise. Its name is the Flying Fish. It has been tested, or rather a model has, and has been found practical.

The plane cannot rise from land; no flights over land will be undertaken with it. Instead of the customary racing sulky apparatus with which aeroplanes ordinarily are built, its lower part is an airtight aluminum boat body, five feet six inches in width, with a square bow, convex on the under side, and adjusted to the plane in such a manner that it slants slightly upward from the water. This tank has a sustaining power in the water of about a ton.

Extending back of it is a hickory framework, a simple oblong with a cross board at the further end. The purpose of this is to check the speed of the plane when it is desired to alight. It touches the water first and acts as a drag. The length over-all of the aluminum boat and the framework is only seven feet six inches. About six feet is added to the length of the entire machine by the horizontal rudder post attached to the framework of the aeroplane.

It is a three-passenger boat. Mr. Wadsworth states that he can build them large enough to carry eight or ten passengers.

The aeroplane part of the machine is similar to the Curtiss and Wright planes. The engine and propeller are forward. The propeller is a single piece of hickory. The engine rests on top of the airtight boat. Above it is the gasolene tank. This tank carries fuel sufficient for one hundred miles, but when the projected flight to Cleveland is undertaken, another tank of equal size will be installed, giving ample power to go to Cleveland. There is room for four or five of these tanks, which will make it easily possible to fly to Buffalo.

CABIN CRUISER ELMO II., WINNER OF MANY LONG RACES.

Farragut Association Dates.

THE newly organized Farragut Sportsmen's Association, of Camden, has arranged the following program for the season, races open for all:

Decoration Day, May 30.—Motor and sailboat races, canoe and swimming races.

Independence Day, July 4.—Motor and sailboat races, skiff, canoe and swimming races and shooting match. In the evening fireworks and moving pictures.

Aug. 12.—Motor and sailboat races, canoe, skiff and swimming races.

Sept. 23.—Field Day of Farragut Sportsmen's Association. Motor and sailboats, canoe, swimming and skiff racing. Motor boat races for members only.

June 17, July 15, and Aug. 26.—Association championship for 1911. Best in three races, or if three different winners, they to compete in a fourth race.

Oct. 7 (subject to change).—Sailboat races for members only.

June 18, July 16 and Aug. 27.—Association championship for 1911.

Oct. 8 (subject to change).

Association runs, all motor boats to take part:

June 11.—Burlington Island Park.
June 25.—Rancocas Creek Farm.
July 23.—Pensauken Grove.
Aug. 6.—Andalusia Shore.
Aug. 13.—Timber Creek Farm.
Sept. 3.—Billingsport.
Oct. 1.—National Park.

To Keep the Bilges Dry.

A POWER boat with a dry bilge is about as rare as a winter thunder squall, and when bound down stream with everything working nicely and prospects of a fine cruise ahead of you, it is a very easy matter to overlook a trifling leak that might bring the bilge water up level with the floor if not attended to at regular intervals. One of the most ingenious arrangements for giving warning of an excess of leakage was installed on the Wanderer, Horace C. Chandlee, owner, last season, and it proved to be a remarkable success, says the Washington Star. Mr. Chandlee explained that his reason for adopting the device was a narrow escape from sinking which he experienced with a friend on board his first gasolene yacht during the summer of 1909. They were anchored just below Alexandria one fine night in July, and happening to get out of his bunk during the night he was rather surprised to step in water about six inches deep. That meant that the actual depth of the water in the boat from the bottom to the surface on which his shoes, socks and a cuspidor were serenely floating, was about one foot, an alarming amount for a craft that only required about four inches more of water to make a graceful plunge to the mud. Arousing his companion, they both worked on the pumps until the welcome suck was heard, but sleep was out of the question the rest of that night.

That is an experience which is apt to be entered on the log of any motor boat, but the matter of preventing it is as simple as descending the proverbial log.

Provide yourself with a float such as is used in a closet tank, and fasten it to a timber of your boat, so that the copper bulb will rise and fall with the ebb and flow of the bilge water.

An ordinary electric bell outfit is the next requisite, and the method of wiring up is merely to connect one strand with the handle of the float and place the other above the copper bulb, so that a 4-inch rise of water will make the connection, which, of course, rings the alarm. On the same principle as a doorbell button, you see, and no more intricate.

On Mr. Chandlee's craft, which is up-to-date in every particular, the moment the gong in the cabin rings the man at the wheel turns a cock which transfers the suck of the circulating pump on the engine to the water in the bottom of the boat, and in less than five minutes the Wanderer is as dry as a bone inside.

Sparks.

THE little 21-footer purchased by Lyon de Camp, of the Reliance Company, at the recent Motor Boat Show, was tried on the Hudson River early this week over the measured mile course. This boat is 21 feet over all and 4 feet beam. She can accommodate six passengers in chairs in her cockpit and is driven by a 4-cylinder Reliance motor 3¾ inches bore by 4 inches stroke of 20 horsepower. On the trial she showed 18 miles, which is remarkably fast for a boat of her size. She turned up 1,150 revolutions a minute, threw a butterfly wave similar to the Peter Pan III., and was remarkably dry. Mr. de Camp intends using the boat, which he has not named yet, on the Fulton Chain Lakes in the Adirondacks. She will be raced.

The Motor Boat Club of America has notified the British challenging clubs that the series of races for the British International trophy will begin at Huntington on Saturday, Aug. 26.

The first annual meeting and election of officers of the newly organized Fulton Motor Boat Club was held at the club house at 138th street and North River. The officers elected for the ensuing year are: J. D. Bunting, Commodore; W. J. Welty, Vice-Commodore; Dr. F. Kristella, Rear-Commodore; John Kellner, Treasurer; Roman Leslie, Secretary. The Board of Governors elected for the ensuing year are Charles Frelloehr, H. C. S. Stimpson, F. A. Sanford and L. Amberg.

The Western Power Boat Association is planning to give under the auspices of the Illinois Valley Y. C. their third annual regatta at Peoria, Ill., Aug. 8 and 9. This will be one of the biggest power boat regattas ever held in inland waters. It will be open to boats owned by members of any recognized yacht club, and those interested in power boat racing should address Thomas H. Webb, racing manager, Peoria, Ill., for full particulars. There will be four classes, 40-foot, 32-foot, 26-foot and 20-foot for which, in addition to valuable silver cups, prizes in cash from $750 to $50 will be offered.

The Venice to Rome cruise, which is probably the biggest event of its kind ever contemplated, appears to be arousing considerable interest all the world over, if one may judge from the list of entries. These have been received from no fewer than ten different countries: Italy, France, Belgium, Germany, Austria, Greece, Turkey, Egypt, the Principality of Monaco, and Great Britain. The entries from England are seven in number: The Duke of Westminster, the Owen Motor Co., the Wolseley Tool and Motor Co., the British Motor Boat Co., Capt. Beckett, Mr. Dudley M. Stone (who was a competitor in last year's Dover to Brussels "raid"), and Mrs. M. G. Thornton, owner of the auxiliary yacht Modwena.

The prizes in this race amount to $30,000, and American boat owners have been invited to take part.

Walter T. Reed, recently elected vice-commodore of the Seaside Y. C., of Atlantic City, and owner of the motor boat Vanish, is having that craft thoroughly overhauled and expects to have her bow close to the starting line in the various contests in which she will be entered during the coming summer racing season.

Vanish has to her credit the remarkable record of winning eight first prizes, two seconds and one third prize in the twelve races in which she ran during the season of 1910. In the other race the boat was disabled by striking a log in the Hudson River. Vanish has raced at every club along the South Jersey Coast from Beach Haven to Cape May, with the exception of Sea Isle City.

Canoeing.

Eastern Division Dinner.

THE Eastern Division, A. C. A., has not held a dinner for some time and we want to run one Saturday evening, March 25, at the American House, Boston, Mass.

The dinner will be $2 per plate, and we must know at once just how many will be there. If you will be able to come, kindly notify undersigned as soon as you can and state how many tickets you want. If any of your club members or friends, who are not A. C. A. men, would like to come, bring them along and we will try to give them a good time and get them interested in the Association.

Let us have a good bunch out for this dinner so we can get acquainted before the season opens and talk over the coming meet so we can have one of the best camps in the history of the Eastern Division.

Yours fraternally,
JACK HOWARD.
Vice-Commodore, E. D., A. C. A.

STEEL LINED SHOT SHELLS

Most shooters prefer the shells that have won every Interstate Handicap for two years straight!

Remington-UMC Arrow and Nitro Club shot shells are made with a steel lining around the powder charge.

This steel lining gives added strength to the shell—makes it shoot better and hit harder.

It saves the load from weakening in rainy weather by excluding all moisture.

It's logical, isn't it, to expect shooters to prefer Remington-UMC Steel Lined Shells and to insist upon getting them when this improvement doesn't cost any more?

Sept. 4-5.—Lynchburg, Va.—Virginia State tournament, under the auspices of the Lynchburg G. C. J. D. Owen, Sec'y.
Sept. 5-6.—Charleston (Mo.) G. C. J. A. Howlett, Sec.
Sept. 13-14.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.
Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.

DRIVERS AND TWISTERS.

The Hercules Gun Club, of Temple, Pa., will hold a target shoot on its grounds, "Cotopaxi Swamp," on March 18. Eight events will be run off: One 10-target, entrance 60 cents; six 15-target, entrance $1.15, and one 25-target event, entrance $1.50. Money divided 40, 30, 20 and 10 per cent. All shoot from 16yds. Targets thrown about 50yds., at one cent in amateur events. No shooting up after fourth event. Professionals and trade representatives can shoot for price of targets, 2 cents each. Events 6, 7 and 8 (45 targets) will constitute the trophy contest, entrance 50 cents, and first, second and third high guns will be awarded the Parker, Hunter and Western trophy, respectively.

Secretary J. A. Norton, of the Hudson Valley Rod and Gun Club, Glens Falls, N. Y., writes: "On Saturday, April 29, the club will hold its fifth annual registered trapshooting tournament, at its grounds between Glens Falls and Hudson Falls. The tournament will be conducted under the rules of the Interstate Association, the Squier money-back system being employed. Programs will be mailed shortly to all vicinity sportsmen, or will be sent on request. The club is affiliated with the New York State Sportsmen's Association and the National Rifle Association of America. The rifle range at Glens Falls will open as early as the weather permits for weekly practice."

The various trapshooting clubs of San Francisco and the Bay towns are preparing for the opening of the season at an early date, and will shortly be able to make public the schedules for the coming year. Most of the San Francisco trapshooters are now compelled to come across the Bay to enjoy this sport, as their former grounds in the Ingleside district have become too valuable to be retained for this purpose. New grounds were established at Stege last year, and these will be in fine shape for the coming season. The live-bird shooters also hold their tournaments across the Bay, and are preparing for an active season. Great interest is now being shown in the local trapshooting clubs, and membership is growing rapidly, many joining in anticipation of great sport during the Panama-Pacific International Exposition in 1915, when some great meets will probably be arranged.

Executive Committeeman Reginald H. Sayre writes: "The indoor championships of the United States Revolver Association will be held in this city on the evenings of March 22, 23, 24, and 25, beginning at 8 o'clock, in the gallery recently opened at 205 Lexington avenue. This gallery is a vast improvement on anything which has yet been offered to the shooting public in this country, an old stable having heen altered so as to provide eight ranges level with the street, with a mezzanine gallery containing seven firing points, and locker room, and meeting room for clubs which use the building, and administration offices. Being situated within two blocks of the crosstown cars at Thirty-fourth street, and a block from the Subway at Thirty-third street, the location is extremely convenient, and I trust that the gallery will receive the encouragement of all who are interested in revolver shooting."

Regrets for Mr. Waters.

TORONTO, Ont., March 8.—*Editor Forest and Stream:* We are enclosing you two copies of a resolution passed at a meeting of the Canadian Indians, held here last Saturday night. It is with deepest regret that we heard that Bernard Waters had been taken from our midst, and we feel sure that you will miss the services of this great friend of the trapshooters of all parts of the American continent.

Will you please insert this resolution in your paper and also forward a copy to the relatives of our late friend. COURT THOMPSON,

High Scribe Chief of Wampum, the Canadian Indians.

RESOLUTION.

The Canadian Indians, who, in special conclave assembled in Toronto on Saturday night, March 4, having heard of the untimely death of their friend, Mr. Bernard Waters, editor of the Trap Department, desire to place on record their sincere sympathy with the relatives and friends of the deceased.

New York Athletic Club.

TRAVERS ISLAND, March 11.—Another beautiful day for trapshooting greeted the gunners of the New York Athletic Club, and the experts present enjoyed it to the full. G. W. Kuchler scored in the Haslin cup handicap, and C. W. Billings in the March cup event after shooting off a tie with D. McMahon. The latter also made the winning total in the high gun prize shoot at 100 targets after a tie with Schauffler. Corbett outshot McMahon in the Travers Island trophy event; Schauffler took both the Spotts cup and distance handicap. The scores:

Haslin cup, handicap, 25 targets:

G W Kuchler	2	25	G Lembeck	2	22
G L Lyon	0	24	J G Batterson	2	22
F H Schauffler	1	24	O C Grinnell	1	21
G F Pelham	1	23	D McMahon	4	21
G J Corbett	1	23	B M Higginson	1	21
E A Wilson	2	23	R L Spotts	0	21
R R Debacher	5	23	B E Eldred	0	20
C W Billings	1	22	T Lenane, Jr.	1	19
G Brandreth	0	22	W B Ogden	0	19
Dr De Wolfe	1	22	M V Lenane	1	18

March cup, handicap, 25 targets:

C W Billings	1	25	W B Ogden	0	21
D McMahon	4	25	G L Lyon	0	23
F H Schauffler	1	24	M V Lenane	1	22
G Brandreth	0	24	G Lembeck	2	20
O C Grinnell	1	22	J G Batterson	2	23
B E Eldred	0	23	R L Spotts	0	23
J F Pelham	1	23	Dr De Wolfe	1	19
G J Corbett	1	23	R R Debacher	5	17
E A Wilson	2	22	G W Kuchler	1	17
B M Higginson	1	22	T Lenane, Jr.	1	15

Tie won by Billings.

Spotts cup, handicap, 25 targets:

F H Schauffler	1	24	T Lenane, Jr.	1	18
C W Billings	0	24	G J Corbett	1	23
M V Lenane	1	24	E A Wilson	2	20
O C Grinnell	1	22	Dr De Wolfe	1	17
B E Eldred	0	20	B M Higginson	1	23
G Brandreth	0	21	W B Ogden	0	22
D McMahon	4	23	G L Lyon	0	23
G F Pelham	1	23	G W Kuchler	1	17

Tie won by Schauffler on shoot-off.

Travers Island trophy, handicap, 25 targets:

G J Corbett	1	25	Dr De Wolfe	1	18
D McMahon	4	25	B M Higginson	1	24
C W Billings	0	24	G L Lyon	0	24
O C Grinnell	1	23	M V Lenane	1	23
F H Schauffler	0	24	G Lembeck	2	24
B E Eldred	0	19	J G Batterson	2	23
G Brandreth	0	21	R L Spotts	0	22
G F Pelham	1	19	R R Debacher	5	22
T Lenane, Jr.	1	22	G W Kuchler	1	18
E A Wilson	2	22	W B Ogden	0	17

Tie won by Corbett on shoot-off.

Distance handicap shoot, 25 targets:

F H Schauffler	21	23	G W Kuchler	20	18
C W Billings	21	22	J G Batterson	19	18
D McMahon	17	21	B M Higginson	20	18
G F Pelham	20	21	Dr De Wolfe	20	18
G L Lyon	21	21	G J Corbett	21	18
E A Wilson	19	20	B E Eldred	21	16
G Lembeck	19	20	E S Brandreth	21	16
O C Grinnell	20	19	T Lenane, Jr.	20	16
M V Lenane	20	19	W B Ogden	21	17
R L Spotts	21	19	R R Debacher	16	13

High gun prize, scratch, 100 targets:

G L Lyon	94	G Lembeck	82
C W Billings	93	B E Eldred	82
F H Schauffler	93	O C Grinnell	84
G J Corbett	91	E A Wilson	70
G Brandreth	88	Dr De Wolfe	72
B M Higginson	86	T Lenane, Jr.	70
R L Spotts	89	D McMahon	78
J G Batterson	84	G W Kuchler	72
M V Lenane	83	R R Debacher	63
G F Pelham	84		

Shoot-off won by C. W. Billings.

Los Angeles Gun Club.

SPORTSMEN of Los Angeles, Cal., finally have gotten together and organized what promises to be the liveliest trapshooting club in the Southwest. For several years inanimate target shooting has been moribund in the Southern California metropolis, but through the efforts of A. W. Bruner, some 125 charter members were pledged to the formation of a club. The organization meeting found most of these shooters present, and it was observed they were recruited mostly from men whose names are new to the sport in the southwest, although many of them were celebrated exponents of the gentle art in the East. A. W. Bruner was elected President; Dr. C. P. Thomas, Vice-President; C. Walter Clement, Secretary, and Sam. R. Smith, Treasurer. Bruner and Smith are old Los Angeles Gun Club men, and so is Charles Van Valkenburg, a director, who was for years the secretary of the old club. Besides the men named, H. H. West, H. G. Krohn and C. Modini Wood are directors.

Grounds were secured at Venice, where a large ten-acre athletic park, fitted with club house, grand-stands, and completely enclosed with an 8-foot board fence, offered ideal arrangements. Two traps will be installed behind cement bulkheads, sloping back to the score, exposed to the northeast. The grounds will be ready for occupancy immediately. Birds will be thrown to members at 1¼ cent each, with 2 cents charged non-members. The grounds are right on the car line. Good service is available, the grounds being about twenty-five minutes' ride from town.

The club is affiliated with the Interstate Association and expects to pull off the Pacific Coast Handicap this season. This fixture already has heen applied for.

EDWIN L. HEDDERLY.

Trap at Palm Beach.

PALM BEACH, Fla., March 8.—Lynford Biddle, of Philadelphia, won the E. H. Fitler cup at the Florida Gun Club to-day with 15 straight kills at 29yds. rise. The event was a 15-bird handicap. L. B. Hutchinson, New York, 27yds., was second with 14, and Roy C. Brahb, Detroit, 28yds., third with 13. Other scores were: E. H. Fitler, Philadelphia, 30yds., 12; J. P. Knapp, New York, 32yds., 12; F. A. Potts, Lakewood, 32yds., 11; A. W. Church, New York, 27yds., 12, and Jay Cooke 3d, Philadelphia, 27yds., 12.

March 10.—Live-bird shooting was the order of the day. Messrs. Lawrence Waterbury, of New York, and Lynford Biddle, of Philadelphia, each presented a cup for competition. Howard Brokaw, of New York, won the Biddle trophy. The latter is a 25-bird handicap, and the scores were: Brokaw (31yds.) 24, Biddle (30) 23, J. P. Knapp (30) 22, E. H. Fitler (30) 22, R. C. Brabb (29) 21, Waterbury (22) 21.

The Waterbury trophy was for 15 birds, and both Messrs. Waterbury and Biddle tied on 15. Both continued with perfect scores through two shoot-offs of 3 birds each, and the match was then called by the referee because of darkness.

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., March 8.—B. F. Shanley, Jr., was high average gunner at the Fred Macaulay Business Men's Gun Club meeting at the Speedway traps yesterday. Fred Macaulay was second high average, and Joseph J. Quinn was third. The snow, mud and slush made it impossible almost to reach the traps of the shooting grounds without an automobile or a rig of some kind. Those who ventured, however, had a very enjoyable afternoon. The wind blew a gale across the traps, making the white fliers do some funny stunts, and making accurate shooting impossible.

The club is making preparations for a fox chase, if it is possible at all to procure a wild fox, for next Tuesday's shoot, after which there will be a big sweepstake shoot, and March 17 (St. Patrick's day) a shoot for a number of prizes donated by members of the club, will be shot for.

A meeting of the club members will be held at the Speedway Inn, Tuesday night, and all members have heen requested to attend. It will be just one year next Tuesday since the organization of the club.

SMOKELESS.

Meadow Springs Gun Club Tournament.

PHILADELPHIA, Pa., March 12. The final target shoot of the season's series arranged by the Meadow Springs Gun Club was held yesterday at Fifty-seventh and Lancaster avenue, and attracted one of the largest crowds of gunners that has taken part in a club event on these grounds. Forty members participated in the main event at 100 targets, distance and target handicaps being awarded and five prizes offered.

Excellent weather, with not a breath of wind, and fine, easy-sailing targets was a flattering incentive for every gunner to make high scores, and the majority certainly took quick advantage of old Dame Nature's pleasant mood and most perfect working of the traps. It required mighty fine shooting to get up with the prize winners, for C. C. Beyer and Clegg finished the event with a score of 86 out of their 100. No targets were allowed these men, and Clegg had the advantage of one yard on Beyer. Overbaugh, with a score of 85, with no handicap, finished next, and Sloan and Garrett finished with 83, Garrett being allowed the liberal handicap of 20 targets.

It being too late to shoot off the ties, the prize winners were decided by tossing coins. Beyer was the lucky man for first prize, second going to Clegg. Overbaugh won third and Garrett won the toss with Sloan, the latter getting the consolation prize. Garrett led the members in the yearly series, with a score of 14 points, and won a gold watch fob. W. A. Murdock won a silver-trimmed cigar box, with 13 points. John Emerson's 11 points won a silver fob, and Sloan and Soley were presented with special prizes for their tie scores 10 points. Following the shoot the club held its annual banquet. The scores:

One hundred targets handicap, dead bird added handicap:

						Hcp.	Total.
Beyer, 18	17	15	18	18	12	0	86
Clegg, 18	17	16	19	17	17	0	86

Independent Gun Club.

HOLMESBURG JUNCTION, Pa., March 12.—Honors were well divided at the monthly shoot of the Independent Gun Club yesterday at Holmesburg Junction, and from a large and classy turnout, those who earned the prizes had to go some. The main trophy was for high gross score in 100 targets, distance handicap and added birds, and it was well on toward dark before the winner was decided. When the totals were footed up it was found that Howard P. Wilson, Thomas Tansey, Henry L. Appleton and Howard George were tied with perfect scores. In the first shoot-off of 25 targets Wilson and Tansey were eliminated, they smashing 21 and 20 respectively, while George and Appleton again tied with 25, including their handicap. In the second shoot-off George won the trophy after a keen contest, and then only by reason of having the best handicap of added targets. The runner-up spoon resulted in a tie between J. H. Anderson and Dr. W. J. Westcott, but the latter secured the prize, as Anderson had left the grounds. The spoon for high actual score was won by Thomas Tansey, who broke 96, while the class dippers went to Joel Davis in Class A, with 99; Jesse Griffith in Class B, with 80, and S. Norris in Class C, who eraeked 54. The scores:

					Hcp.	Total.
Anderson, 16	21	22	21	22	12	98
Rowland, 16	16	19	18	21	20	94
Davis, 16	17	17	19	17	20	90

CAST IRON MEDAL

The Historic Cast Iron Medal

This emblem of the Live Bird Championship of America is still held by J. A. R. Elliott. He won it several years ago with

WINCHESTER

Shells and Repeating Shotgun

and no one has yet been able to wrest it from him. Mr. Elliott has always shot and continues to shoot Winchester guns and shells exclusively. There is in this a note of confidence which is illuminating.

No shooter can expect to win any great success unless he has entire confidence in his gun and shells. Mr. Elliott's work shows that Winchester guns and shells can be depended upon thoroughly.

J. A. R. ELLIOTT

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Philadelphia Y. C. Gunners Win.

PHILADELPHIA, Pa., March 12. The gunners of the Philadelphia Yacht Club defeated a team from the Whitemarsh Country Club in a match shoot at targets yesterday, at Tinicum. The teams were composed of seven men each, and each man shot at 50 targets. The final score was: Philadelphia Y. C. 275; Whitemarsh 268.

Walter N. Stevenson, of the yacht club team, led the field for high score, breaking 46 out of 50 targets, and Frank Cantrell led the Whitemarsh gunners for individual honors with a score of 44, beating Dr. Crooks by one target.

This was the sixth match shoot of the series. Each team has won three events, and will shoot off the tie on some future date on neutral grounds, to be selected later. The Whitemarsh gunners were entertained at dinner following the shoot. The scores:

Philadelphia Y. C.			Whitemarsh C. C.		
W N Stevenson	46		F Cantrell	44	
J Stinger	41		Dr Crooks	43	
J Morrison	38		W Edson	40	
E Hallowell	38		R Bowers	39	
F Maeklin	38		Dr Muller	37	
J A Ross	37		J Ulmstead	34	
J McAvoy	37	275	H L David	31	268

Crescent A. C. Handicap Shoot.

BAY RIDGE, March 9.—The 100-target handicap event of the Crescent A. C., which was shot on the club's grounds yesterday, was one of the most successful amateur shoots held in this vicinity this season. Sixty experts from New Jersey, Long Island and lower New York counties made up the field of participants, and it required some six hours of constant activity for completion. A. Corlies, of the Crescent Club, with a handicap of 12, won the chief prize with a score of 94. Second prize was taken by Dr. Griffith, of the Bergen Beach Gun Club, and the third trophy was won by J. Jarvis, of the New York Athletic Club. In addition to the prizes offered by the club, Capt. H. W. Dreyer put up a cup for the marksman who made the best straight run. It was taken by J. H. Hendrickson, of the Bergen Beach Gun Club, who broke 41 straight. The gunners shot in strings of 25.

Several present and former champions were among the contestants, and one of them, John H. Hendrickson, national title holder four years ago, returned the best scratch score of the shoot, breaking 88 clays out of 100. He was closely pressed for scratch honors by G. K. Kouwenhoven, champion of Long Island, who turned in a card of 87. Mr. Hendrickson added another trophy to his collection by breaking 41 successive targets, the best performance of the day. The scores:

Hyde Park Gun Club.

MARCH 11 was a perfect spring day, and the pleasant weather brought out a nice bunch of shooters, fourteen taking part in the sport. Over 1100 targets were thrown during the afternoon, and that's going some for this part of the State. Keplinger has been tied down to business for many weeks, but the "call of the clay" was too strong for him to-day, and he ran out just to shoot a few. Of course, he was heartily welcomed, and of course he shot at 100, making a nice score for one who was out of practice. Hammersmith is with us again, and has not forgotten how. He was high man in the last 100, and the only one to go straight in any of the 25 target events. He has his eye on the Kentucky State championship, which is shot on May 25, his birthday, so that all the signs seem favorable, especially as he is good for a place in the nineties. Rugg came out for a breath of fresh air, and incidentally got 47 out of 50, which is about the gait he used to travel when he was one of the regulars. De Mar was not in shooting form to-day, or fewer targets would have escaped. Johnson shot at more targets than any one, but didn't really strike his gait until the last 50, when he scored 92 per cent. Holaday went out with a lower percent than usual. Dr. Leighner left his shooting eye at home to-day. It is very seldom he drops so many as he did this time. Welsh was trying a new gun; his score of 92 per cent. in the last 50 would indicate that it is about what he needs. Payne was not doing his best, his attention was divided between the traps and revolver range, which may have had something to do with his poor showing. Rhodes did very good work in the last two events, considering that he has little practice, but he'll do better before the summer is over. Jones will bear watching, he shot in only one event and broke all but the last target. Williams shoots so little that he cannot get ahead very much. We would be glad to see him every week, and are sure he would get nearer the head of the list. Smith and Frohliger are generally so busy looking after the details of the shoot that they cannot do themselves justice. When they have this taken off their hands, their scores are very much better.

Atlantic City Gun Club.

ATLANTIC CITY, N. J., March 10.—The week-end shoot of the Atlantic City Gun Club was well attended. The wind blew an 80-mile gale, and made targets go about 80yds. in all directions and styles, consequently scores were not up to the ordinary. Scores:

No. 9 was for the Du Pont trophy; No. 10, the Western trophy.

Events:	1	2	3	4	5	6	7	8	9		10		
Targets:	25	25	25	25	25	25	25	25	H.	Tl.	H.	Tl.	Pts.
H B Cook	21	21	20	22	23	15	21	20	6	43	1	38	0
Smith	15	18	22	17	17	21	19	20	3	37	3	37	0
Watson	17	21	20	15	20	20	..	..	4	39	1	36	0
Westcott	13	13	22	16	18	..	..	..	0	34	2	36	0
Gladney	19	15	20	17	19	..	..	..	12	49	12	49	3
Harrison	12	15	19	19	..	..	..	..	5	43	9	47	2
Howell	12	19	16	17	..	..	..	..	11	46	9	44	1
Reed	18	21	8	17	..	..	..	..	4	43	5	44	1
Powers	22	20	23	..	..	..	..	..	0	42	0	42	0
Deemer	16	18	16	..	..	..	..	..	5	39	7	41	0
Plum	13	16	13	..	..	..	..	..	..	..	..	..	..
Sheppard	17	11	..	..	..	..	..	..	4	32	2	30	0
Adams	3	..	..	..	..	..	..	..	..	..	..	..	..

Gladney was high on both the Du Pont trophies; he is shooting in great form for a beginner. Deemer had a slump. Billy Smith, from Philadelphia, was down, but the wind had its effect on him. Cook came out with a surprise for the crowd, a new pump gun, and the way he powdered up targets with it in the gale was marvelous. In the challenge race Howell had a walkover on Sheppard, breaking 31 to 28, and had a handicap of 8, which he did not have to use. Shep ran 14 out of the first 15, and then 14 out of the next 35. Something went wrong, I guess.

SECRETARY.

Registered Tournaments.

PITTSBURG, Pa.—Tournaments registered with the Interstate Association during the week ending March 11 are as follows:

April 26-28.—Detroit, Mich.—Memorial G. C. Frank H. Patton, Sec'y.
May 4-5.—Camden (Ark.) G. C. J. P. Wright, Mgr.
May 13.—Bethel, Conn.—Western Connecticut T. S. L. tournament, under the auspices of Bethel G. C. E. H. Bailey, Pres. W. C. T. S. L.
May 23-24.—Paragould (Ark.) G. C. C. W. Stedman, Sec.
June 1-2.—Newton (Ill.) G. C. C. M. Frank, Sec'y.
June 3.—West Chester (Pa.) G. C. F. H. Eachus, Sec'y.
June 1-3.—Newark, N. J.—Jersey State tournament, under the auspices of the Smith Gun Club. Chas. T. Day, Sec'y-Treas. State Association.
June 9-10.—Redfield (S. D.) G. C. Dr. E. E. Giltner Pres.
June 10-11.—Milwaukee, Wis.—Wisconsin State tournament, under the auspices of the Badger G. C. Ed. F. Leidel, Sec'y.
June 14-15.—Nebraska City (Neb.) G. C. F. C. Nicholson, Sec'y.
June 15-17.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.
June 28-29.—Huntingdon, Pa.—United Sportsmen of Pennsylvania. J. F. Meehan, Mgr.
July 22.—Western Connecticut T. S. L. tournament, under the auspices of the Pahquioque G. C. E. H. Bailey, Pres. W. C. T. S. L.
July 26-27.—Hannibal (Mo.) G. C. Geo. H. Carter, Pres.
Aug. 10.—Berwick (Pa.) R. and G. C. W. I. Shrader, Sec'y.
Aug. 15-17.—Charlotte, N. C.—North Carolina State tournament, under the auspices of the Charlotte G. C. J. E. Crayton, Pres.
Aug. 26.—Bridgeport, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Seaside G. C. E. H. Bailey, Pres. W. C. T. S. L.
Sept. 4.—Waterbury, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Mattatuck R. and G. C. E. H. Bailey, Pres. W. C. T. S. L.
Sept. 5-6.—Charleston (Mo.) G. C. J. A. Howlett, Sec.
Sept. 13-14.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Hudson Valley Rod and Gun Club.

The Hudson Valley Rod and Gun Club, of Glens Falls, N. Y., at its recent annual meeting, elected the following officers for the ensuing year: President, F. B. Chapman; Vice-President, in charge of fish and game department, William L. Sherrill; Vice-President, in charge of traps and rifle range, C. Fay Newell; Treasurer, H. T. Brown; Secretary, J. A. Norton; Assistant Secretary-Treasurer, W. Harold Adamson. The present membership of the club numbers forty-nine, and everything is in an exceedingly flourishing condition.

Hudson Gun Club.

JERSEY CITY, N. J., March 12.—There was some noise at the traps of the Hudson Gun Club this morning, when the members assembled to indulge in their favorite pastime at the regular bi-monthly shoot; seven and a half cases of shells and 3750 bluerocks were disposed of before the trapper boys were told to lower the Stars and Stripes and close up shop for the day, and when Billy Emmons finished the totaling of scores, it was found that L. Schorty, with 86 per cent., was the best shot for the morning, D. D. Engle being the runner up with an average of 85, and W. Emmons just one bird shy, finishing with 84 per cent.

Event No. 3 was the club prize event, the winners being H. Pape, A. P. Lane and J. Putney, who each scored 6 points. Henry Pape was also the lucky shooter to win the Gillie trophy, he winning it from J. Putney, who had tied him for it, but lost out on a shoot-off miss-and-out.

At the next shoot of the club, on March 26, the series for the Du Pont and Western Cartridge Co. trophies will commence. These will be handicap affairs, and all wishing to compete for them are requested to attend the next shoot; entrance for this event will he the price of targets.

C. Durkee and H. Burlington had arranged to shoot a return match this morning, but Clarence did not show up; he must have seen some of the scores that Harry made at the Sportsmen's Show in Madison Square Garden last week.

Doc Groll has gone in the gunsmith business; he carries a bag full of tools to the grounds on every shooting day.

D. B., the club chef, had his hair parted in the middle this morning, and looked real cute until he went to the traps and missed 4 straight.

We hold our next shoot on March 26. Come and see us, and if you like the game, you are welcome to shoot along. Targets are trapped at one cent each to everybody.

Pahquioque Rod and Gun Club.

DANBURY, Conn., March 6.—The first of the series of monthly shoots of the season under the auspices of the Pahquioque Gun Club were held at the Tamarack traps Saturday afternoon. The weather conditions were not of the best, as the glare of the sun interfered considerably with the shooters and a cold wind, which blew directly into their faces, was not conducive to high scores either. There were three principal events during the day, the team race between the Danbury and Bethel clubs' five-man teams, the first leg in the Daley challenge cup and the beginning of the third leg in the Du Pont 1910 trophy.

The scores in the Daly challenge cup contest were unusually close up to the end of the first 30 targets, when W. E. Day was high with 25, and H. Judd had 24, C. K. Bailey 23, and William Thompson 22, while W. G. Olmstead and F. Clark had 21 each.

When the shooters took their places for the final 20 birds of the contest, H. Judd rapidly forced to the lead and made his score 42, winning the first leg for the cup. As soon as the scores were announced, Mr. Judd was challenged by W. G. Olmstead, W. E. Day and R. H. Bennett to shoot for the trophy at the next shoot.

The team race between the Danbury and Bethel teams was an unusually close one, the result being in doubt until the last, when the Pahquioque team won out by six targets. The scores in the team shoot follow, 50 targets each:

Pahquioque.		Bethel.	
W E Day	38	H M Judd	42
W G Olmstead	37	C K Bailey	39
E H Bailey	34	R H Bennett	29
F Clark	34	W B Judd	29
W Thompson	31—174	E Fay	29—168

The Du Pont trophy contest, at 100 targets, for those who have shot two legs, is as follows, with the handicap:

W E Day	88	F Clark	81
E H Bailey	86	R H Bennett	80
W B Judd	85	J Plancon	80
W G Olmstead	83	J Osborn	78
W S Thompson	83		

E. H. BAILEY, Sec'y.

Chicago Gun Club.

CHICAGO, Ill., March 4.—With the wind blowing a gale from the northeast, only a few shooters concluded to come out to the park and test their skill in stopping the flight of the targets. MacLachlan made a walkaway of it in each event except No. 3, when Barto tried a string of 25 with a gun which was new to him, and after missing his first target, he broke the next 24 without a miss. Carter was second in both event No. 1 and No. 2, while Taggart landed in third place in both events.

Event No. 5 was a match between MacLachlan and Taggart, in which they laid their guns down at the 16yd. mark, went back to 23yds., called pull and then ran and picked up the gun and shot. MacLachlan broke 10 to Taggart's 9, some of the targets being broken when almost down over the hill. They then shot a string from 23yds., in which they tied on 20, and as Taggart had enough shooting for one day, Mac tried another string from 23yds., again breaking 20, which was good shooting considering the way the wind was blowing.

Carter has not been out for some time, and did well after about four months' lay off.

Miss Sullivan is slowly but surely gaining and improving her scores.

Events:	1	2	3	4	5	6	7
Targets:	50	40	25	25	25	25	25
A F MacLachlan, 18	43	25	19	20	10	20	20
F M Carter, 16	39	17	12	19	..	..	..
J A Taggart, 16	37	16	..	19	9	20	..
J H Shrigley, 18	26	..	..	..	..	..	..
J B Barto, 16	..	..	24	..	..	..	..
Miss J V Sullivan, 16	17	..	14	..	..	..	..

March 5.—Weather conditions were about the same as yesterday, with the addition of a drizzling rain, which the strong wind drove into the faces of the shooters, and made it quite disagreeable.

First honors in the handicap event went to Ward Burton by scoring 45 from the 16yd. mark, Dr. Robb getting high amateur score in this event by scoring 44 out of 50 from 16yds. Taggart broke 42 from the same mark, while Flewelling scored 41 from the 20yd. mark. Eck was next in line with 40 from 19yds., Thwaite making the same score from 18yds. Walsh and McGary also scored 40 from 16yds.

Fetherston took first honors in event No. 2 at the doubles by breaking 31 out of 40 from 17yds., Burton tying him from the 16yd. mark.

Mott is coming along fast on the doubles, breaking 27, while Eck scored 26.

Flewelling took first place in event No. 3 with 23 out of 25. Miller and Thwaite each scored 22, while Eck and Crocker were next with 20.

Event No. 4 brought out the only straight frame scored during the afternoon, Burton going through without a miss. Flewelling was hot after him by breaking 24 out of 25, while Thwaite made another 23, of which he had three, also securing two 22s during the afternoon.

Dr. Robb did well in an extra event at doubles, scoring 16 out of 10 pairs. Taggart taking second place with a score of 15, while McGary broke 14.

We are in hopes of getting some better weather soon, when we will not only have a good big attendance, but will also give the shooters a chance to show what kind of scores they can make when conditions are favorable.

Events:	1	2	3	4	5	6	7	8	9

WM. F. MERKLE, Supt.

Red Lion G. C. Wins DuPont Trophy.

YORK, Pa., March 4.—Shooting under conditions admittedly difficult, the team representing the Red Lion Gun Club—Archie Davy, Dr. J. N. Yeagle, Grant Raab, Harry Neff and I. H. LaMotte—yesterday scored its second victory over the New York and McSherrytown teams and won the Du Pont trophy by a margin of 22 targets.

The third and deciding shoot was held on the grounds of the York City Gun Club yesterday afternoon. A gale blowing over the traps during the greater part of the contest made good scores almost impossible. At Red Lion three weeks ago, when the second shooot in the team race was held, the conditions were even worse than they were yesterday, and at the first shoot in McSherrystown early in January they were equally as bad as yesterday's.

I. H. LaMotte, of the Red Lion team made the only straight score in yesterday's shoot. Miller, of the McSherrystown team, led the field in the number of targets broken, by breaking 81 out of 100.

It is but fair to state that members of the York team in each of the three shoots shot from the 18yd. mark, while all the other shooters stood at 16yds. Another shoot, to decide the individual winner of the Du Pont trophy, a handsome gold watch fob, will be held on the grounds of the Red Lion Gun Club in the near future.

The team race just concluded was one of the most popular contests in the history of trapshooting in this section, and did much to stimulate interest in the sport in Red Lion, McSherrystown and York.

The scores in yesterday's team race follow:

Red Lion Team.

Davy	11	17	10	15	15—68
Yeagle	13	12	9	17	14—65
Neff	13	15	14	15	16—73
I H LaMotte	14	15	14	20	17—80
Raab	16	13	12	13	15—69—355

York Team.

McSherry	15	11	13	13	18—70
E Zinn	11	15	15	14	16—71
Glassick	15	13	15	13	15—71
Grove	9	13	13	9	15—59
Mac Miller	11	12	15	12	10—64—335

McSherrystown Team.

Shirk	17	9	13	9	18—66
C Miller	18	13	16	17	17—81
Moul	7	10	5	5	8—35
Gulden	14	11	11	19	17—72
Smith	15	10	9	8	16—58—312

The total scores for each team for the three shoots are as follows:

	At McSherrystown.	At Lion.	At York.	Total
Red Lion	278	332	355	965
York	302	306	335	943
McSherrystown	302	306	312	920

Trap at Larchmont.

THE trapshooting members of the Larchmont Yacht Club indulged in their usual Sunday pastime on the 12th, and despite the bad light and generally unfavorable weather conditions, some excellent scores were put on record. G. L. Bready surprised all by his remarkable form, breaking 115 out of 125, and winning the special 10-target, gun trophy, Sauer gun, and 125-target handicap events. He tied in the March cup shoot with Dr. Short and J. R. Collins, and probably would have annexed that also, had not darkness prevented the shoot-off. The scores:

Special shoot, scratch, 10 targets:

G L Bready	10	T Bryan	9
Dr Brown	10	R L Spotts	9
J G Batterson	8	E A Wilson	8
Dr W B Short	9	B Durham	9
W E Bemis	6	W D Hinds	9
G H Abbott	9	T Lenane, Jr.	6
W J Elias	8	J R Collins	7

Tie won by Bready on shoot-off.

Special shoot, scratch, 15 targets:

Dr Brown	15	W D Hinds	11
B Durham	15	W J Elias	11
E A Wilson	14	Dr W B Short	9
R L Spotts	14	W E Bemis	9
J G Batterson	14	T Lenane, Jr	10
G L Bready	13	J R Collins	10
G H Abbott	12		

Won by Dr. Brown on shoot-off.

Gun trophy, handicap, 25 targets:

G L Bready	3	25	W J Elias	2	23
E A Wilson	2	25	T Bryan	0	21
E L C Robins	2	25	D Durham	0	22
Dr W B Short	3	24	Dr Brown	0	18
R L Spotts	1	24	W D Hinds	0	18
J G Batterson	3	20	T Lenane, Jr.	2	19
W E Bemis	4	21	J R Collins	4	20
G H Abbott	3	21	T Jones	4	17

Won by Bready on shoot-off.

Commodore's cup, handicap, 25 targets:

G H Abbott	3	25	W D Hinds	0	22
T Lenane, Jr	2	25	R L Spotts	1	22
G L Bready	2	24	J G Batterson	3	19
E A Wilson	2	24	Dr W B Short	3	21
E L C Robins	2	23	W E Bemis	4	21
J R Collins	4	23	W J Elias	2	21
B Durham	0	23	T Jones	4	20
Dr Brown	0	22	T Bryan	0	21

Won by Abbott on shoot-off.

Sauer gun, handicap, 25 targets:

G L Bready	2	25	T Lenane, Jr.	2	23
T Bryan	2	25	B Durham	0	23
G H Abbott	3	25	R L Spotts	0	23
W D Hinds	0	25	J G Batterson	3	22
J R Collins	4	25	W E Bemis	4	19
E A Wilson	2	25	W J Elias	2	17
Dr W B Short	3	23	Dr Brown	0	17
E L C Robins	2	22	T Jones	4	16

Won by Bready on shoot-off.

March cup, handicap, 25 targets:

Dr W B Short	3	24	J G Batterson	3	22
G L Bready	1	24	G H Abbott	2	17
J R Collins	4	24	T Bryan	0	22
W J Elias	2	23	E A Wilson	2	19
R L Spotts	1	23	Dr Brown	0	13
W D Hinds	0	23	T Lenane, Jr.	2	19
B Durham	0	23	E L C Robins	2	19

Tie between Dr. Short, G. L. Bready and J. R. Collins too late for shoot-off.

Special trophy shoot, handicap, 125 targets:

G L Bready	6	121	W D Hinds	0	108
R L Spotts	4	115	G H Abbott	10	109
B Durham	0	114	J G Batterson	12	105
E A Wilson	8	115	W J Elias	8	103
T Bryan	1	110	T Lenane, Jr.	8	101
W B Short	12	110	Dr Brown	0	95
J R Collins	16	109			

High gun, scratch, 125 targets:

G L Bready	115	G H Abbott	99
B Durham	114	Dr W B Short	98
R L Spotts	111	Dr Brown	95
T Bryan	109	W J Elias	95
W D Hinds	108	J G Batterson	93
E A Wilson	107	T Lenane, Jr	93

Crescent Athletic Club.

BAY RIDGE, N. Y., March 11.—Some twenty gunners faced the traps on the club grounds this afternoon under ideal weather conditions. F. B. Stephenson broke 48 to win the leg on the monthly cup; Felix made a full score of 25 (handicap 2) to acquire a claim on the Lockwood trophy; Vanderveer won on shoot-off in the S. F. James trophy, and Pell took a leg in the C. R. James trophy event. Some 3000 targets were smashed, and scores were as follows:

Monthly cup, 50 targets, handicap:

F B Stephenson	0	48	C H Pulis	6	41
W W Peabody, Jr.	4	47	A Blake	4	41
I H Vanderveer	4	42	C Blake	4	40
J F James	6	41	G Felix	4	40
G Brower	8	42	W W Pell	10	37
F S Hyatt	4	41	C R James	4	34
J S Lamson	10	41	A E Hendrickson	6	34
M Stiner	4	41	R C Williams	8	31
C A Lockwood	6	41	C A Atkinson	10	29

Stephenson wins leg.

Stephenson cup, 25 targets, handicap:

W W Peabody	2	22	C Blake	2	18
George Felix	2	22	R C Williams	4	18
F S Hyatt	2	21	J H Vanderveer	2	18
A Blake	2	21	C A Lockwood	3	18
J F James	3	20	George Brower	4	18
G G Stephenson	3	20	A E Hendrickson	3	17
M Stiner	5	20	C H Pulis	3	16
W W Pell	5	19	C R James	2	16

Lockwood trophy, 25 targets, handicap:

George Felix	2	25	G G Stephenson	3	21
F B Stephenson	0	24	C H Pulis	3	21
J H Vanderveer	2	24	George Brower	4	21
W W Peabody	2	24	A E Hendrickson	3	20
F S Hyatt	2	23	W W Pell	5	20
C A Lockwood	3	23	C Blake	2	19
C R James	2	22	R C Williams	4	19
J F James	3	21	J S Lawson	5	15

Leg won by Felix.

S. F. James trophy, 25 targets, handicap:

C R James	2	25	A Blake	2	22
F B Stephenson	3	25	F B Stephenson	0	21
J H Vanderveer	2	25	R C Williams	4	21
J S Lawson	5	24	C H Pulis	3	21
Geo Felix, Jr.	2	24	C Blake	2	19
W W Peabody	2	20	C A Lockwood	3	19
F S Hyatt	2	22	W W Pell	5	19
M Stiner	2	22	A E Hendrickson	3	16
Geo Brower	4	22	Dr Atkinson	5	16

Shoot-off won by Vanderveer, 24.

C. R. James trophy, 25 targets, handicap:

W W Pell	5	23	M Stiner	3	18
F B Stephenson	0	21	A E Hendrickson	3	17
C H Pulis	3	21	J S Lawson	5	16
J F James	3	20	George Brower	4	15
R C Williams	4	20	F S Hyatt	2	12
W W Peahody	2	20	C A Lockwood	3	11
George Felix	2	19			

Leg won by Pell.

Stiner trophy, 25 targets, handicap:

J H Vanderveer	2	25	C H Pulis	3	19
W W Peabody	2	25	F S Hyatt	3	18
W W Pell	5	25	A E Hendrickson	3	18
J F James	3	24	C A Lockwood	3	16
Geo Felix, Jr.	2	24	C R James	2	15
R C Williams	4	23	N Blake	2	15
C Blake	2	22	G G Stephenson	3	14
F B Stephenson	0	20	J S Lawson	5	12

Sweepstakes, 25 targets, handicap:

F B Stephenson	0	25	F S Hyatt	2	21
George Felix	2	25	G G Stephenson	3	21
C R James	2	24	A E Hendrickson	3	21
J S Lawson	5	24	C Blake	2	20
W W Peahody	2	23	A Blake	2	20
C H Pulis	3	22	C A Lockwood	3	19
J F James	3	21	W W Pell	5	18

Won by F. B. Stephenson.

The Palefaces.

BOSTON, Mass., March 8.—Another dandy little affair was the universal opinion of the Paleface shoot, held to-day, fourteen shooters trying their luck with the varied program. Mixing up doubles, singles and 18yd. shooting seemed to have the Jinx on all, Kirkwood alone being in the honor class on average, with Frank second, 8 targets away. Crane, with 79, captured third position, with President Charles and Burnes tied for the fourth honor. In the handicap match the scratch shooter was again high, but Paleface rules allow only one prize to a shooter, leaving Crane and Charles tied for first place with 91 each. Naturally, the shoot-off was a most interesting one, though Crane started in bad with 3 lost of his first 5. After that, however, he sure did shoot, but Charles was also delivering the goods, and won out with a clean lead of 3 targets. Frank, with his new single trigger gun, finished second, and after the double event proved the trigger o.k.—no other for him now. Scores:

Nos. 1 and 4 were at 16yds.; No. 2 18yds.; No. 3, pairs.

Events:	1	2	3	4		
Targets:	25	20	15	25	Hcp.	Total.
Kirkwood	25	17	25	23	4	94
Charles	19	14	23	19	16	91
Crane	25	14	21	19	12	91
Frank	22	16	23	21	8	90

Peters—98.38%

ANOTHER WONDERFUL RECORD.

Mr. J. S. Day, winner of the 1910 Amateur Trap Shooting Average by a **percentage never equalled,** established another and even **more remarkable record.** In his last 2100 targets, from August 8 to 18, 1910 (regulation targets at registered tournaments at Midland, Big Springs, Cisco, Gorman and Walnut Springs, Texas), he **lost but 34, scoring 2066,** making an average **never equalled or approached** by an amateur, **98.38%.** This is **more than ½% higher** than the average of the winner of the 1910 High Professional honors at 2000 targets.

J. S. DAY.

Mr. Day bought his loads from dealers where tournaments were held, and they were regular **PETERS** factory goods—not special in any sense. Any one can buy **PETERS** Shells of this same quality, and they don't have to be used in any special gun to make high scores.

Trapshooting at the Sportsmen's Show.

AT the Sportsmen's Show, held at the Madison Square Garden, New York, from March 7 to 13, the trapshooting feature was one of the best drawing cards on the program. This year the arena floor was the scene of the shooting, the traps being arranged on the Fourth avenue side of the amphitheater. There have been many sportsmen's shows in the past in the big Garden, but in none have the scenic effects come so close to reproducing the natural surroundings of the wild creatures. One could close his eyes and smell of the pine balsam and the crack of the shotgun commingle to bring up a vision of the distant forests. Amid these environments the shooters enjoyed the daily sessions, and the Garden has been crowded to its capacity during the continuance of the show. The management throughout was of the best, and it is stated that Madison Square Garden has already been engaged for another Sportsmen's Exhibition, to open Tuesday, March 5, 1912, and to continue for seven or eight days. We give the program as it developed day by day:

Tuesday, March 7.—The trapshooters had a number of practice events to-day, preliminary to qualifying for the championship, with the following results:

Amateurs:	Shot at.	Broke		Shot at.	Broke
F E Butler.....	20	15	C Von Lengerke	20	12
Geo Pennell, Jr.	30	25	P Osborne	20	14
W Simonson ...	28	40	G Loomis	30	14
Harry Lee	40	25	G H Pumpelly..	30	23
Bob Schneider..	10	6	B Coffin	40	36
E F Slear.....	20	14	B Bedell	20	13
S O'Brien	20	10	C G Blandford..	20	17
W J Wright.....	30	19			
Professionals.					
J Fanning	10	10	L S German....	20	15
N Apgar	50	42	John Hessian ..	60	42
G L Lyon.....	50	37	T H Keller.....	10	7
H H Stevens...	30	25	J T Skelly.....	50	40

Wednesday, March 8.—Sixty amateurs faced the traps this afternoon, and good scores were made by many contestants, the highest recorded being that of F. D. Kelsey, of East Aurora, N. Y. Many of his shots were remarkable, and he was applauded when his total of 48 out of 50 was announced, and he received the prize for the best score of the day.

The scores of the professional marksmen were excellent, but no one of them surpassed the record made by the amateur. Their contest resulted as follows: Neaf Apgar 48, L. S. German 45, J. T. Skelly 44, J. S. Fanning 38, T. H. Keller, Sr., 35, G. R. Schneider 43, J. A. R. Elliott 45, H. H. Stevens 47, G. L. Lyon 36.

Thursday, March 9.—Lester German to-day made the first clear break so far of 50 targets. The gunners appear now to be getting the knack of the speedy indoor traps, and the performances in to-day's preliminaries to the championship were better on the average than any previous marks.

Ninety-six individual scores were turned in to-day. The best were: F. Stephenson 46, E. D. Reed 44, E. D. Borden 43, C. Howard Daly 43, H. A. Grosbeck, Jr., 43, G. L. Lyon 42, H. J. Burlington 43, F. D. Kelsey 42, F. G. Clark 42, W. U. Howell 42, Thomas Duke 41, L. C. Wilson 41, J. Williams 40, M. Harvey 40, J. S. Speer 40, F. G. South 39, L. A. Morford 39, J. M. Carr 39, E. A. Gunther 39, P. E. Osborn 38, W. Olmstead 38, W. D. Hinds 37, W. E. Skidmore 37, R. H. Smith 37, H. S. Sindle 36, C. W. Stevens 36, E. W. Down 33, Dr. Bishop 36, Charles Sherwood 35, E. M. Funk 35, M. B. Baldwin 35, H. B. Williams 35.

Friday, March 10.—The Van Allen cup, the trophy which the trapshooters are trying for in the indoor shooting event, to be decided next Monday evening, was made a perpetual prize to-day, when the donor provided the means for its being competed for yearly by the establishment of a fund, through a trust company. The cup is a beautiful piece of the silversmith's art, and is to be presented to the amateur who makes the highest score in any one of the events at 50 targets during the week of the Sportsmen's Show. At the present time Lester German has the best chance of capturing the prize, with his clean score of 50 made two days ago.

Miss Annie Ricker, of Lancaster, Pa., was an entrant in the trapshooting tourney to-day, and she made the excellent showing of 39 breaks out of a possible 50. It was her first experience at indoor shooting, and she intends taking more practice in order to qualify for the finals. Miss Ricker recently won a 100-bird shoot at the traps of the Eastern Gun Club, with a score of 87, against John Wheaton with 85.

The scores made to-day, all shooting at 50 targets, were as follows: F. D. Kelsey 48, F. Stephenson 46, W. T. Smith 45, E. D. Reed 44, E. D. Borden, C. H. Daly, F. Grosbeck, H. Burlington, A. Betti and E. G. Southey all recorded 43; G. Pompelly 42, G. L. Lyon 41, J. S. Fanning 41, Edward Viffett 41, G. F. Hamlin 41, G. H. King 40, E. A. Wilson 40, C. Von Lengerke 40, Geo. Piercy 39. Eighty individual scores were recorded in the preliminaries of the day for the amateur and champion finals on Monday.

A program of special three-man team events was inaugurated to-day, and will be a feature to-morrow. The results were as follows:

Danbury Team.		Jersey City Team.	
C H Daly.....	43	H J Burlington....	37
C W Stevens.....	36	H H Shannon.....	37
F T Clark.....	42—121	E Hallinger	29—103
Bridgeport Team.		North Caldwell Team.	
E Southey	39	G G Francisco.....	33
C Sherwood	35	L Stager	33
C Vanstone	32—106	W Kussmaul	38—104
New Haven Team.			
W Rice	29	Dr Bishop	36—100
Dr Funk	35		

Saturday, March 11.—Visitors to the Sportsmen's Show saw some high scores made by both amateurs and professionals in their various matches to-day. One of the features was the unusual interest shown by women, and Miss Annie Reiker, of Lancaster, Pa., had many admirers when she qualified for the finals.

The professionals have each shot 200 targets, and with but 50 more to go to determine the championship, the score is: Neaf Apgar 191, L. S. German 185, H. H. Stevens 172, J. S. Fanning 169.

The leading scores among the amateurs at the close to-day were: F. Stephenson 49, F. D. Kelsey 48, C. L. Frantz 48, J. S. Speer 46, W. Simonson 46, W. T. Smith 45, E. E. Reed 45, H. P. Herman 45, H. M. Judd 45, Miss Reiker 44, C. de Quillfeldt 44, E. L. Warren 44, G. H. Pumpelly, 44, H. A. Groesbeck 43, E. D. Borden 42, C. H. Daly 43, H. J. Burlington 43, E. A. Gunther 43, A. Betts 43, E. G. Southey 43, W. D. Hinds 43, W. Wolstencroft 43, A. L. Burns 43, H. B. Williams 43.

The results of the three-man team race were:

Philadelphia Team.		Jersey City Team.	
H P Hermann.....	42	Geo Piercy	32
W Wolstencroft....	43	H J Burlington...	32
H Landis	35—120	H H Shannon.....	35— 99

Twelve hundred targets were shot from the traps in one hour, making a record. Eight hundred is regarded as a good total for outdoor work.

Monday, March 13.—The most successful sportsmen's exhibition ever held at Madison Square Garden closed to-night. The feature events of the day were the fine records of Neaf Apgar and F. B. Stephenson in the International Trapshooting Tournament. Frank B. Stephenson, of the Crescent Athletic Club, won the amateur indoor championship by breaking 96 out of the 100 he shot at. He was in fine form, and his time was perfect. He took the lead in the first string of 25, breaking 23. In his second string he broke 25. J. S. Speer also broke 25 in his second string, so that the match to that point was close, Stephenson leading by 2. In his third string Stephenson broke 23, still having a fair lead, and in his last string he broke 25 again. Speer, who did well in his first 50, fell off toward the end. There were ten in the final shoot, and they shot in squads of five, alternating in strings of 25 targets. F. D. Kelsey won second prize with a score of 90. C. L. Frantz and H. P. Herrman tied for third place with 88 each, and in a shoot-off at 25 targets, Herrmann broke 24 to Frantz's 22. The scores of the others in the final were: J. S. Speer 84, L. de Quilfeldt 83, W. Simonson 81, Miss Annie Reiker 77, G. H. Pumpelly 77, and J. R. Hendrickson 75.

Neaf Apgar won the professional championship. He broke in all, 240 targets out of 250, shooting at 50 each day. Lester German was second with a score of 233; Jack Fanning was third with 211, and H. H. Stevens fourth with 205.

The light in the Garden is not the best to shoot under, and the boundary is so short (16yds.) that the marksmen have to shoot much faster than they do in out-of-door contests. While the shooting was on to-day, there was quite a gallery, and each man was heartily applauded for good work. Miss Reiker started off well, but the strain told on her toward the finish.

In the shooting tournament during the six days the show has been open to the public, 256 individual shooters have taken part in the different events, and more than 35,000 rounds were fired. The school for novices was well patronized.

Northern Kentucky Gun Club.

THERE was a very good attendance at the regular shoot of the club on March 12, eleven men in all taking their places on the firing line during the afternoon. The day was warm and spring-like, and but for the threatening aspect of the weather, more shooters would have been on hand. A light haze, which hung over the grounds, made it very difficult to see the targets and caused some of the misses. Late in the afternoon a strong cross-wind sprung up, which affected the flight of the targets badly. Holaday, Jr., shot in something like his old form before he got to shifting guns, and he finished in first place with 93. His nearest competitor was J. B. C., who shot well up to his average, scoring 81. Keefer was out of practice, but will make some of the boys go a little before the season is very far advanced. Dameron has not been doing any shooting for several weeks owing to ill health. To-day he tried a few just to see how he could stand it, and found that he was not yet all right. McArdle has just returned from a trip in the south, and has not quite got the hang of it yet after his rest. A few more weeks and he will be going once more The most interesting part of the day's sport was the match at doubles between Holaday, Jr., and John. This was at 12 pairs, and resulted in a tie on 20, Holaday breaking his last 8 pairs straight. The shoot-off was at 13 pairs, and when it came to the last pair, John was one bird to the good. Holaday broke his last 2, and John missed 1, making another tie, 17 each; total 37 each out of 25 pairs. The club will begin a series of events on March 19, which it is hoped will result in an increased interest, and larger attendance. The match will be at 50 targets per man, shot in two strings of 15 and two of 10 targets each, and a handicap of added targets will be given. The winner of each weekly event will be presented with a handsome trophy. The annual meeting of the club for the election of officers will be held on March 14.

DuPont Gun Club.

WILMINGTON, Del., March 12.—In spite of the fact that the Du Pont Gun Club had sent a team to Baltimore, representing the Country Club, and that the Wilmington Club had its opening shoot, there was a large attendance at the shoot at New Bridge yesterday afternoon. Eighty-two were out, and about 5000 targets were thrown.

H. W. Bush broke 24 out of 25 targets, taking first place in Class A, of the T. Coleman du Pont merchandise event.

J. W. Mathews, S. G. David, F. Holt, F. Mathewson and T. B. Rogers tied at 18 out of 25 for Class B.

Stanley Steele, R. W. Smith and G. H. Mitchell tied for Class C, breaking 15 out of 25.

In Class D, J. B. Owens, W. E. Ross, H. T. Reed, G. J. Bacon and F. F. Lofland were tied at 11 out of 25.

The results of the ties of March 4, which were shot off yesterday afternoon, were: Class A— Won by Wm. Foord, 22. Class B—Tied for by Dr. F. A. Buckmaster, Henry Winchester and H. H. Luckens, 21. Class C—Won by E. M. Hogue, 22. Class D—Won by S. Tuchton, 23.

The scores in detail were: J. W. Mathews, 18 out of 25, W. H. Neely 8, L. Evans 21, W. Vandegrift 17, R. B. Evans 14, W. E. Husbands 19, E. E. Handy 9, H. L. Morgan 17, H. J. Taggart 13, W. S. Simpson 17, H. W. Bush 24, F. Mathewson 20, J. McKelvey 23, W. S. Gavan 22, S. Steele 15, E. H. Lambert 16, J. W. Cann 21, Dr. Bullock 13, J. A. Kaiser 16, E. P. Ewing 13, E. M. Hogge 22, D. J. Dougherty 17, Dr. H. H. Darlington 6, C. Shumacher 4, R. W. Smith 15, R. L. Naudain 14, J. W. Anderson, Jr., 9, F. H. Megaw 7, Wm. Foord 22, R. L. Conner 10, H. P. Carlon 19, W. SAUER MAUSER RIFLES

Shooting the **1906 U. S. Gov't Cartridge**

The superior ballistics of this cartridge, its extraordinary accuracy and the ease with which it may be obtained throughout the United States, are considerations which have persuaded us to have **this** rifle made to shoot **this** shell and we feel confident that it will supply something for which sportsmen have expressed an urgent desire—**a sporting, bolt-action rifle, shooting the same cartridge as used by the United States Army and Navy.**

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid. $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

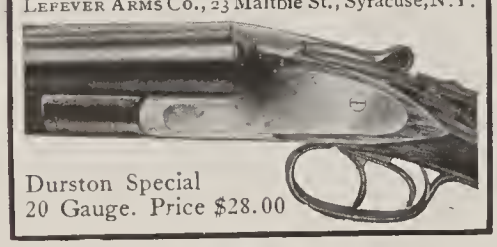
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00

FOR GUNS

"3 in One" Oil Has No Equal

for oiling trigger, lock, every action part. Does not dry out quickly like heavier oils, gum, harden or collect dust no matter how long gun stands. "3 in One" cleans out the residue of burnt powder (black or smokeless) after shooting, leaving the barrel clean and shiny. It actually penetrates the pores of the metal, forming a delicate permanent protecting coat that is absolutely impervious to water or weather. No acid.

Free A test will tell. Write for sample bottle. 3-IN-ONE OIL CO., 112 New Street, New York City

UNCLE LISHA'S SHOP

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth. 187 pages. Price, $1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days "to swap lies."

SAM LOVEL'S CAMPS

A Sequel to "Uncle Lisha's Shop." By Rowland E. Robinson. Cloth. Price, $1.00.

FOREST AND STREAM PUBLISHING CO.

North Caldwell—Montclair.

NORTH CALDWELL, N. J., March 11.—At our shoot today, the home team defeated the Montclair gunners by the close score of 412 to 411. Each man shot at 50 targets, in two strings of 25. The boys from Montclair certainly put up a good fight, and it was a pleasure to beat such a fine lot of boys. Wm. Dutcher, of Passaic County Gun Club, was referee, and was on the job at all times. We go to Montclair some time next month.

Team race:

On Saturday, April 22, we hold a Squier money-back registered tournament, when we will have two sets of traps working, and in case of rain, we will shoot under canvas.

T. A. QUACKENBUSH, Sec'y.

Eagle Gun Club.

MANOA, Pa., March 12.—The gunners who faced the traps at Manoa yesterday afternoon to participate in the weekly event of the Eagle Gun Club drew the hardest lot of birds which have been sprung this season. Almost every other pigeon let loose was of the screamer variety, and the scores in consequence fell like a declining stock market. Only two of the ten men managed to get all of their birds—Sharon and Bivens—who divided the high gun cash.

Veteran Jack Brewer was also a possible straight, but he drew a "whizzer" on his last round and that spoiled his record. Murphy also got a 9 score, losing his first bird.

In addition to the mid-weekly shoot on Wednesday, there will also be a 50-bird match between W. Bivens and W. Steller. Scores:

Sharon, 29	2111222222—10	Knowles, 29	0002212022— 6
Bivens, 29	2111222222—10	Staley, 30	2022222000— 6
Brewer, 30	1111112220— 9	Lohrmiller,28	0022211000— 5
Murphy, 30	0111221111— 9	Mack, 28	0001200110— 4
Fisher, 30	1022022222— 8	Greener, 29	0012011200— 5

Stock Exchange Championship.

GUNNERS of the New York Stock Exchange who had finished among the first ten in the Exchange championship event on Feb. 25, competed in two special shoots on the grounds of the Westchester Country Club on Saturday, March 11. The conditions were 200 targets in each event, the first open to the five leading men in the championship, and the other for those in the second five. Stuart Scott, with a total of 178, proved an easy winner in the first shoot, leading by 19 points. The second division high gun was Howard Whitney, who broke 160.

Scores; first shoot:

S Scott	88 90—178	N L Carpender	72 70—142
H H Benkard	81 78—159	G S McAlpin	70 70—140
E Roesler	76 78—154		

Second shoot:

H Whitney	77 83—160	P Kellogg	60 65—125
Le Roy Frost	69 80—149	A Corlies	46 68—114
L Crawford	79 61—140		

Mountain View Gun Club.

BETHLEHEM, March 11.—The Mountain View Gun Club, of Pen Argyl, to-day downed the Lehigh Rod and Gun Club in a live-bird match, 41 to 38.

Pen Argyl.		Bethlehem.	
Parry	9	Miller	7
Frome	8	Sobers	5
Parsons	8	Smith	9
Gilbert	8	Hartzell	9
Hambleton	8—41	Ketchledge	8—38

Cincinnati Gun Club.

THERE was not as large an attendance at the shoot on March 12 as had been promised, but the weather was dubious, and some were kept away on this account. As it was, only seven men were present, but they kept things moving most of the afternoon. Hammersmith was high gun with 93; he is getting back into the game, and his long rest has not lessened his skill with the scatter gun. R. Trimble was present, and of course put up a good score, as he always does, getting in second place with 91. J. Schreck did pretty well, but not such work as he often does. Bird was in better trim than at the previous week's shoot.

A special effort will be made to get out a crowd on March 19, but it will amount to little for the officers to try and push things unless they have the backing of the members, and that means that every one who cares to shoot should attend on the regular club days.

Targets:	15	15	20	15	15	20	25	25	Total.

Manhasset Bay Y. C.

PORT WASHINGTON, L. I., March 12.—The regular weekly shoot of the Manhasset Bay Yacht Club was held to-day. A high wind was blowing, and a poor light caused some poor scores:

Ten birds, scratch: J. W. Alker 10, H. L. Hoyt, Jr., 8, D. Tomlinson 8, C. M. Gould 8, B. G. Loomis 7, E. P. Acker 6, R. A. Jones 6, H. Sierck 5, H. Jewett 5.

Fifteen birds, scratch: E. P. Alker 13, H. L. Hoyt, Jr., 11, D. Tomlinson 10, J. W. Alker 10, B. G. Loomis 9, H. Jewett 8, H. Sierck 7.

Sweepstakes, 25 birds, handicap: E. P. Alker (3) 25, J. W. Alker (4) 24, H. Sierck (7) 22, D. Tomlinson (0) 21, H. Jewett (7) 20, C. M. Gould (4) 20, B. G. Loomis (3) 20, H. L. Hoyt, Jr. (0) 20.

Hoyt cup, 25 birds, handicap: J. W. Alker (4) 25, E. P. Alker (3) 24, C. M. Gould (4) 23, D. Tomlinson (0) 22, H. Jewett (7) 21, H. Sierck (7) 20, H. L. Hoyt, Jr., (0) 20, R. A. Jones (6) 18.

Yearly prize, 25 birds, handicap: J. W. Alker (4) 25, E. P. Alker (3) 23, H. L. Hoyt, Jr., (0) 23, D. Tomlinson (0) 22, C. M. Gould (4) 21, H. Sierck (7) 20, H. Jewett (7) 18, R. A. Jones (7) 14.

Special prize, 100 birds, scratch: J. W. Alker 92, H. L. Hoyt, Jr., 88, E. P. Alker 86, D. Tomlinson 85, B. G. Loomis 76, C. M. Gould 69.

Ten double targets: H. L. Hoyt, Jr., 14, B. G. Loomis 12, D. Tomlinson 12, C. M. Gould 8.

Linden Gun Club.

GLOUCESTER CITY, N. J., March 11.—The weekly shoot of the Linden Gun Clubwas held this afternoon. There were six different events and fairly good scores were made in each. The first event was for the Du Pont trophy. There were seven members participating, and John Mealey, the winner, received three points. Alexander Powell defeated Murray in a match shoot by breaking 10 bluerocks. Bowe won two of the sweepstake shoots. Scores:

Weekly shoot, 15 bluerocks each, Du Pont trophy: John Mealy 13, Bowe 11, Gibbons 10, McQuaid 9, Wiedemeyer 7, Howarth 7, Shubert 5.

Sweepstake, 10 bluerocks each: Bowe 9, S. Powell 8, A. Powell 7, B. Bottling 6, W. Powell 5, B. Powell 4, T. Murray 3, Burkett 3.

Sweepstake, 5 bluerocks: James Mealey 5, Wiedemeyer 4, Gibbons 4, Shubert 3, Howarth 3, Ashton 3, John Mealey 2, Phillips 1.

Three-cornered shoot, 10 bluerocks: Bowe 8, Hill 5, Ashton 4.

Match shoot, 10 bluerocks: A. Powell 10, Murray 7.

Sweepstakes, 5 bluerocks: Hill 5, A. Powell 4, Bowe 4, S. Powell 3, Ashton 2, Murray 2, B. Bottling 2, B. Powell 1, L. Powell 1, Burkett 0.

Rodan Gun Club's Turkey Shoot.

GLOUCESTER CITY, March 11.—There were thirty-eight participants in a shooting mtch at bluerocks this afternoon at the old race track, the prize of which was a 26-pound turkey. Each shot at 5 bluerocks, and at the end of the fifth round Benjamin Martel, Frank Butler, Frank Bennett and Emmet Black were tied, each having hit 5 straight. In the shoot-off Martel won, making the fourth prize which he has won out of five shoots in as many weeks. The following were the scores:

Weekly shoot, prize 26lb. turkey, 5 bluerocks each: Martel 5, Frank Butler 5, Bennett 5, E. Black 5, Martin 4, J. Healey 4, T. Owens 4, J. Rodan 4, E. Brown 3, A. Dasch 3, J. McLaughlin 3, H. Clark 3, J. Lee 2, Bennett 2, S. Prickett 2, Murray 1, Black 1, Barnes 1, M. Monohan 1, Hess 1, Burtstrass 1, Prickett 1, Merrion 1, Butler 1, L. Groves 1, Fitzgerald 1. The others missed all.

Siwanoy Country Club.

MT. VERNON, N. Y., March 11.—We had a practice shoot to-day, and scores ran as follows:

	Shot at.	Broke.	Percentage.
C B Holmes	140	85	60.7
W Thorpe	130	75	57.6
C G Stone	60	24	40.0
W W Thorpe	60	41	68.3
Geo A Wylie	75	55	73.3

C. G. STONE, Sec'y.

Wilmington Gun Club.

THE Wilmington Gun Club held its first shoot since its reorganization, on the new grounds at Lobdell's, Saturday afternoon, March 11. New traps have been installed and the grounds have been put in fine condition. J. W. Remington, a trade representative, gave an exhibition of revolver shooting. Next Saturday afternoon the shoot for the cup offered by Theodore B. Rogers will be held. The result of the shoot yesterday is as follows:

	Shot at.	Broke		Shot at.	Broke
I Turner	100	89	R Ferguson	50	34
J Hendrix	60	37	G Godwin	60	34
J Davis	100	56	J T Alford	25	9

N Smith	200	128			

Trap at Baltimore.

BALTIMORE, Md., March 12.—The Wilmington Country Club's trapshooting team lost to the Baltimore Country Club, at Baltimore, yesterday afternoon by 15 targets. Baltimore broke 855 out of 1000, Wilmington getting but 840. The Wilmingtons put up a good fight, however, and made two good records. James T. Skelly had a run of 55 straight breaks, the best of the day, and Eugene du Pont was high man of the shoot with 95 breaks out of 100. Twelve men shot on each team, each at 100 targets, the ten best scores to count. The scores were:

Wilmington.		Baltimore.	
T E Doremus	82	Raisin	92
Alexis du Pont	77	Gill	90
A Lindsay	79	Nelson	82
J Warner	78	Mallory	93
J T Skelly	93	Gosnell	88
E E du Pont	83	Matthai	89
T B Rogers	89	Bartlett	88
Eugene du Pont	95	Smith	83
H Winchester	85	Goldsboro	78
V du Pont, 3d	79—840	Bidwell	72—855

The four men whose scores didn't count were: For Wilmington—Major Wm. G. Ramsey 68, E. M. Hopes, Jr., 61. For Baltimore—Wagner 70, Price 70.

A return match is to be shot at the grounds of the Wilmington Country Club within two or three weeks.

Ludlam Gun Glub.

WILMINGTON, Del., March 12.—Twenty-six contestants shot for honors at the weekly Saturday shoot of the Ludlam Gun Club yesterday afternoon. B. Chase took the first place. The scores:

	Shot at.	Broke		Shot at.	Broke
G Bernard	50	14	T Hawke	25	14
J Borden	25	12	A Johnson	75	35
R Bradbury	15	11	J Gintch	25	10
G Blackston	25	12	J Kellmer	75	40
B Chase	50	37	D Ludlam	75	38
E Clark	100	65	M Moore	75	34
J Clark	25	10	H Manuel	50	32
J Clemens	40	20	E Peffer	10	6
A Dulb	100	51	L Pike	25	10
G Denis	75	28	J Smith	50	19
G Fenton	50	29	J Sheperd	25	12
J Fagen	25	13	D Wilhelm	25	13
C Henderer	50	27	M Valentine	25	14

Eastlake Gun Club.

WILMINGTON, Del., March 12.—K. Davis got first place at the Eastlake Gun Club shoot yesterday afternoon at the club grounds, Thirty-fifth and Monroe streets. He broke 54 out of 75 shot at. The scores made were:

	Shot at.	Broke		Shot at.	Broke
W Jones	50	33	J Mason	30	7
K Davis	75	54	C Haverbeck	15	8
H Black	60	25	A Mason	10	3

G Sterling	25	10	E Potter	20	15
G Quigley	25	15	C Wilkins	5	3
F Mason	10	3	T Shellaby	35	11
B Gray	20	14			

Rifle Range and Gallery.

Fixtures.

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

Columbia University Rifle Club.

A revolver and pistol match was shot between Yale and Columbia universities on March 6 and 7. The conditions called for teams of five men, each shooting 25 shots under a time limit of 25 minutes. The usual Standard American targets were used at 20yds., the Columbia team shooting on the new range at 205 Lexington avenue, New York city. The conditions are identical with the Interclub League matches, so that an accurate comparison of scores may be made. G. E. Dimock, Jr., the high man on the Yale team is the

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

REPEATING RIFLE

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

Necessary for qualification as sharpshooter, at least 65 out of the maximum of 70.

PUBLISHERS' DEPARTMENT.

At Trenton, O., March 2, Mr. C. A. Young, shooting Peters' factory loaded shells, gave a fine exhibition of target shooting by breaking 147 out of 150. It is hardly necessary to say that the other shooters present, as well as the spectators, were much impressed with the shooting qualities of Mr. Young's loads. At Xenia, O., March 9, Mr. C. A. Young, shooting Peters' factory loaded shells, broke every target on the program, 100 straight. At Peoria, Ill., March 7, Mr. H. W. Cadwallader won high professional average, 133 out of 150, with Peters' shells, and Mr. E. K. Crothers, of Bloomington, Ill., was high amateur with the same score and with Peters shells.

Preserve owners and individuals who wish to provide for better trout fishing in their favorite waters, should write to the Plymouth Rock Trout Company, Plymouth, Mass., for its little booklet, "Concerning Brook and Rainbow Trout." It is replete with brief, concise information on all the subjects related to trout planting and raising, and is one of the results of the long experience of this company in raising trout for sale.

Among motor boat enthusiasts the popularity of the cabin cruiser seems to be increasing every year. In this class the 36ft. raised deck Racine cruiser seems to have struck the keynote for convenience, comfort and ease of handling. The builders make a specialty furnishing, with the boat, a complete outfit, so that no extras are required by the purchaser.

New York's Great Pennsylvania Station.

ONE of the greatest works of modern times was the construction of the concrete-lined steel tubes under the Hudson and East Rivers, the tunneling of Manhattan Island, and the erection of the magnificent Pennsylvania Station at Seventh avenue and Thirty-second street, New York, bringing the through trains of the Pennsylvania Railroad into the heart of New York City.

An illustrated booklet describing this great work and telling what it means to the New York passenger, has been issued by the Pennsylvania Railroad, and will be sent postpaid to any address by George W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia, Pa., on receipt of a two-cent stamp. Send for it.

WHALES IN THE HUDSON RIVER.

ACCORDING to early records of New York fish and fishing engaged the attention of citizens of the town to no small degree. Von der Donk, the early historian, relates that the waters about New Netherlands abounded in lobsters, and not only in lobsters, but in specimens of their kind that would make a fish stall of to-day unsafe to approach save by a man with an ax or a harpoon, for they were "from 5 to 6 feet long."

It is recorded in 1753 the oyster trade of New York was worth £10,000 a year, and that "shad were exceedingly plentiful," so plentiful, in fact, that the New York Gazette of April 13, 1756, says that "on Tuesday last 5,751 shad were caught at one draught on the west side of Long Island."

Yet only a few years later fishing seems to have fallen into such unpopularity that a fish famine existed in New York, and at last, in 1773, the general assembly offered a bounty "for the encouragement of a fishery on the coast for the better supplying of the markets of this city with fish. The bounty to be distributed was £200 per annum for five years.

The New York Chamber of Commerce likewise took the matter up, and added a premium of £150 to the most successful fisherman, whereupon one Peter Parks went out and from the adjacent waters brought in 800 live cod—this is July, 1774—and put them on the market. The catch won the premium, and a bonus of £20 was given one Robert Heartshorne for bringing in a catch of 450 sheepshead.

All this was years after whales were no longer taken in the "Hudsons River" and off the city in the harbor. There is the authority of Von der Donk for the statement that in March, 1647, "at time of a great freshet," two whales of ordinary size swam up the Hudson. "One pro-

Why do you go Hunting?

One of the reasons is, you like to try your luck and skill against Nature's protection of game. You like to feel the pride of personal accomplishment. One of the chief necessities for a satisfactory day's sport must be good ammunition. In your load of powder you must have confidence in its efficiency, and to point the gun right, you must not fear recoil. Use

Dead Shot Smokeless

and you will have the necessary confidence and you will not feel the recoil.

Any ammunition loaded with this popular powder gives uniform velocity, uniform pattern and uniform light recoil. Nearly all dealers can supply you with ammunition loaded with Dead Shot.

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for referenc. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Facile Princeps Action.—"Facile Princeps" is a Latin phrase meaning **'Easily First,'** and no better name could have been chosen for a gun that has been winning the principal shooting events of the World for three generations. The 'Facile Princeps' is easily first for strength, reliability and simplicity. The lockwork consists of a hammer, a scear, a lifter and a spring, the weight of the barrel cocks the tumbler, everything works smoothly with the minimum of friction, and the striker is just a fraction of a second quicker in its blow than any other type of mechanism; this point alone should be sufficient to secure its adoption by the man who knows.

Have you ever calculated how fast a bird travels? If instead of being able to pull the trigger (*i.e.* fire the cartridge) in 1-200th of a second, you need 3-100ths of a second, the bird will have flown 16 inches further. Think this over, it may account for some of those 'lost' birds.

The "Box" action of the "Facile Princeps" gun is perfectly watertight, yet easily get-at-able for cleaning purposes, only one screw has to be removed to expose the lock mechanism.

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

FOREST AND STREAM PUBLISHING COMPANY

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $1.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the uathor uses. A good index completes the volume.

FOREST AND STREAM PUBLISHING COMPANY

PLANNING A HOUSEBOAT

Will be a leisure-hour occupation in many a family this winter. Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

HOUSEBOATS AND HOUSEBOATING

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, $3.34

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

ceeded only 40 miles up stream, when it returned and ran aground at Staten Island, where it lay stranded and was slaughtered." The other whale seems to have been of a more exploring bent than its companion, for it "ran up the river and grounded near the great Chahoos (Cohoes) Falls."

Whether whales habitually traveled up the Hudson River between the cruise of those two and 1707 there appears to be no record, but some one wrote to the Boston News Letter from New York on February 24, 1707, that "last week a whale about 40 feet long struck a few miles to the eastward of this city, and afterward passed through the harbor and was killed in the Hudson River and brought down hither, where she is exposed to view."

A whale 45 feet long, so says a contemporary chronicle, ran ashore "at Van Buskirk's Point, at the entrance of the Kills, on December 11, 1752, and was killed by some Staten Islanders." A few years later a whale 60 feet long was killed in the bay, "in the course of the Brooklyn ferry." This whale having been purchased by Samuel Waldron for £20, he obtained 70 barrels of oil from it.

Coming down to later times, New York waters continued to provide material for entertaining and edifying stories of fish and things. For instance, "a striped bass weighing 49 pounds was taken day before yesterday," an item in a New York newspaper of October 25, 1821, records, "by a colored servant living with Benjamin Bailey, Esq., on the banks of the Harlem River, just below the bridge."

"The fish was discovered by the man from the end of the dock, which projected some distance into the river. At times he would sail gently along past the dock into the shoal water. No net, no hook, and no bait was at hand, and as the golden opportunity might not last long our hero quickly resolved to encounter him single-handed in his native element, and at a favorable moment he leaped from the dock directly on his back.

"The affrighted fish darted from under him as though a shark was in pursuit, and as luck would have it took a direction for the shore and ran up nearly high and dry into the mud. Before he could get fairly afloat again and have plenty of sea room to make his escape, the colored man seized him by the gills, dragged him upon the beach and secured his prize."

In newspapers of various dates in October and November of that year are the following items:

"Thirty thousand horse mackerel were taken in a net at one haul a few days since a little above the dry dock."

"On Saturday (November 9) a turtle weighing 1,600 pounds was stranded high and dry in a piece of meadow land near Mr. Baretto's place on the East River just above Hell Gate. The American Museum bought it for $500."

"On Monday (November 21) one of the sentinels on Blackwell's Island was walking his rounds and he discovered an eagle hovering in the air over the river intent, doubtless, upon plunging upon some one of the many fishes that dwell there. It was a tempting mark. The musket was loaded with one bullet. The sentinel fired. The bird's head was hit and scalped with Red Jacket skill. The eagle fell and was taken to the hospital and placed, under the care of a physician and is doing as well as could be expected."—Hartford Globe.

NOT FOR WILLIE.

A COUNTRY woman and her little boy were visiting the city and while seeing the sights of the place the mother's eyes was attracted by the showy display of stuffed animals in a taxidermist's shop window.

"Let's go in here and see what we can get for you, Willie," said the mother.

"Sure, ma, and"—— His eye fell upon a sign over the door which read, "Let us tan your hides."

"Oh, no, no, ma; let's don't go in there. I get 'nuff of that at home," he cried excitedly, and they passed up the taxidermist's shop.—National Monthly.

A., care forest and Stream. tf

FOR SALE.

500 acres wild forest land, surrounding trout lake of 200 acres in Adirondack Park. Log cabin, ice house, boat house. Very accessible. OWNER, care of Forest and Stream.

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness. Out-of-Sorts Dam. Puppies. Diet. Other Food. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin. Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

THE ROCKFISHER.

No matter what day of the week it may be, there are always men fishing off the rocks. Some of them work at night, and spend their spare daytime that way. Others do not work at all. They used to, but were failures. Having no affairs, they took to rock-fishing, because it offered comparative isolation from the busy world. How they live is a mystery. A few perhaps have small private incomes; others are married. All are poor men and, with few exceptions, good fellows.

These are the "regulars."

The "casuals," they who spend their days at the sport, usually take it up because they are men of quiet habit, to whom more strenuous sports make no appeal.

To the rockfisher with the sport at heart it matters not if he has cast his line at one particular spot half a lifetime, nor what repetition of creatures he may have caught there, his anticipatory job of yet another day at the same old spot is always keen.

The evening before an outing his favorite author lies neglected. The only topics of conversation that interests him are the sport and the weather. Will it be fine to-morrow? Will the sea be calm? The wind light? A dozen times he runs out to look at the sky. A spot of rain depresses him, but with the passing of the cloud and a clear sky his spirits rise again.

He takes his battered old fishing-bag out of the cupboard. It smells of salt water and stale bait. Out come the contents into the lamplight. A rusty old warrior of a knife. It has drunk the life blood of many a marine creature. A rusty hook with the remnant of an ancient bait still clinging to it. He is reminded of some incident that occurred last time. A battered sinker or two, odd lengths of broken line, fish scales. He handles them like a lover the trinkets of some old love affair. Each one is a link in the chain of his fishing reminiscence. And the lines. He considers them. The white, the brown, the green. His choice is made, a hook and sinker selected. He "snoods" them on more or less expertly. All is now ready for to-morrow's operation. But stay, how about that tangle. He meant to take it out the night of that last excursion, but somehow or other he forgot. He always does. It is a large tangle, what is known in the vernacular as a "bunch of grapes." He gazes at it ruefully, and then sets to with the help of a pin, undoing what was the work of an instant. It takes him till bedtime. How fortunate are those fishers whose wives like taking out tangles.

The day dawns clear. Not a cloud in the sky. He can hardly wait to light his after-breakfast pipe before hurrying off to catch a train shoreward.

"How is the sea to-day?" He hangs on the guard's answer.

"Calm as a lake," says the guard.

Good, his luck is in then. Walking quickly down the rocks he passes a man reading the paper. The man looks up. What a dull way to spend a morning. Very possible the thought is mutual.

More luck. His favorite rock is unoccupied. He looks upon this rock as his own private property. "My rock," he calls it, and feels annoyed if anyone has dared to get there before him. No other rock suits him quite as well as this one.

It is to be doubted whether even the people who make it, experience the peculiar joy of the rock-fisher in unwinding a thin, sensitive thread, the laying of the graceful coils with meticulous care upon the cleanest parts of the rock, where no limpets or seaweed will catch and tangle them as they flash up on after the other to follow the sinker as it speeds out into the blue. When the hook has been baited cunningly with a crab, a piece of fish, or any other substance dear to the finny stomach, there is the exhilaration of swinging the sinker round and round the head till it has gathered sufficient momentum to carry the line out to where the fish are, or where one thinks they are.

Really only an instant or two, it seems long

WOODCRAFT

By "Nessmuk." Cloth, 160 pages. Illustrated. Price, $1.00.

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English.

FOREST AND STREAM PUBLISHING CO., NEW YORK

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

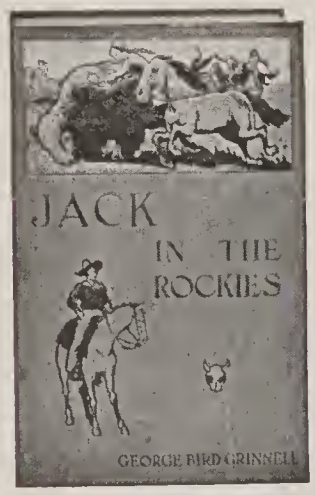
The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

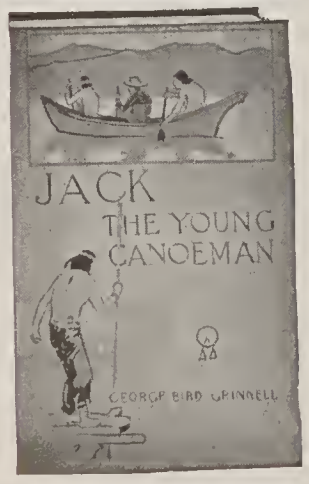
Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

THE JACK SERIES





Best Books For Boys

By GEORGE BIRD GRINNELL

THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

$1.25 per volume, postpaid. $7.50 per set

FOREST AND STREAM PUBLISHING COMPANY

before the sinker strikes the bottom. In what kind of territory has it landed? Does it lie in a miniature mountain range, or at the bottom of some ghostly semi-dark cavern, inhabitated by slimy demoniacal sea creatures, a nightmare place, or has it fallen down amid a forest of giant kelp, sponges, gorgeous anemones, swaying rhythmically in the current? Perhaps the rolling of the sinker will be felt. It has fallen, then, on a sloping plain. The rolling stops. The line draws taut. The leaden explorer may have fallen down a crevasse, or be detained by some groping tentacle. What tales of adventure could the sinker tell had it a voice. Adventures as strange and grim as those of Jason, Perseus, the Minuai, all those fabled wanderers, those great ones of legendary Greece.. The sinker's adventures can only be speculated upon by the dents and scratches it gathers in its journeys to the sea-bottom.

Every tremor of the thread between the fingers of the experienced rock-fisher has a meaning for him. He takes but little heed of the tug, tug, tugs of the small fry worrying the bait like a lot of puppies round a large bone. He can almost see them in his mind's eye. But with strange abruptness the tugs cease, the line lies motionless. It is evident that something has happened. Has the bait yielded at last to the incessant attack, or have the small fry fled in terror before the approach of a large fish, or has some fearsome monster been aroused from his gloomy cavern by their squabbling? It may be that the beating of the fisher's heart will quicken a little, as he feels a mighty irresistible grip upon the line, as of some herculean hand and arm. He strains the line to breaking point, but his effort is vain, as though it were fast to the sandstone cliff. The monster withdraws to his cavern, or back underneath a ledge to meditate on the hook and sinker, and there is nothing left to the fisher but to strain the line till it breaks at its weakest part. The monster may have been an octopus, a great green eel, but who can say what it is at the bottom of the sea?

The fisher fixes another hook and sinker to his line; there is none so persistent as he. This time, perchance, he will be fortunate and receive a spirited, honest tug on the line. Quick as thought he has driven the hook into his quarry, and experiences of joy of the hunting as the stricken fish rushes hither and thither, backward and forward. If it is essentially a rock-fish it will invariably endeavor to dive down and wedge itself among the rock mazes. If a deep-sea variety it will make for the open sea as soon as hooked. Perchance Atergatis, queen of the fishes, will rescue her subject by causing the line to foul a rock excrescence, or a large wave will come along at a critical moment and bring about the fisherman's discomfiture. There is many a slip between the fish and the frying-pay, and none know this better than the rock-fisher. The greater, therefore, is his exultation as he surveys the prize safely landed at last, gasping and flapping in the vain hope of so preserving itself.

Success, however, although a satisfaction to him, is by no means essential to the rock-fisher's happiness. Fishing serves him as an excuse for spending a day on the rocks. If he can show a return for his day, a profit without which to the many a day spent is a day wasted, some one, no doubt, will be the better satisfied. As for the fisher himself, he is content to be about the rocks all day. And what more could one desire on a sunny, blue day than to listen to the gurgle and glucking of the tide among the rocks. To gaze into deep crystal-clear pools at the life of their inhabitants; to cool one's arm in them above the elbow; to chase cunning crabs from their concealment, where they hoped to escape being used for bait.

There is a fascination for the rock-fisher, too, in standing close above great green depths, and starting down to where, at the bottom, formless shapes can be discerned. He feels the mystery of it, and gazes fascinated as, deep down, some great white ghostlike shape moves silently past, or a large blue groper drifts lazily along the rock-face in search for crabs or molluscs. It is with a half fear that he feels his sinker touch bottom in those mysterious depths, big with unseen possibility.

No tea tastes quite the same to the rock-fisher as the product he quaffs from a mellowed billy down on the rocks. He gleans the water from some spring or rain pool, and boils it over a fire of aromatic scrub.

In his eyes the prospect of sea and sky and blue headland is never wearisome, an satisfying. It fills him with a calm content, and before the vastness, the great peace of it, his troubles fall into insignificance and are forgotten.—Sydney (Australia) Herald.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE FIGHT OVER SPRING SHOOTING.

IN three of the Eastern States a notable fight by sportsmen and game protectors is being carried this winter to hold the gains made in recents years for good methods in sport, and for the preservation of our wildfowl.

In New York—although the great majority of gunners are wholly opposed to the practice of spring shooting—the Senate has already passed the bill to repeal the law which forbids the killing of wildfowl in spring, on Long Island, and no one knows very clearly what action the Assembly will take in the matter.

In Connecticut the question is still in abeyance. Many shore gunners wish the season opened in spring as it used to be, but a majority, we believe, are earnest that the law shall stand as it is, or that if any concession be made, it shall not be in the nature of a lengthening of the season, but rather in the moving forward for a month the date of opening and closing the season. Such a change would deprive Connecticut shooters of much of their black duck shooting and all the shooting of bluewing teal. In exchange it would give them some coot and old squaw shooting in winter.

In the Massachusetts Legislature a very hot fight is going on. All the naturalists—such familiar names as William Brewster, C. F. Batchelder, C. W. Townsend, E. H. Forbush, C. J. Maynard and many others—are opposed to spring shooting as are all the natural history associations. Colonel Theodore Roosevelt has written to the Boston Society of Natural History, saying:

"I heartily approve of the law prohibiting the shooting of ducks and geese between Jan. 1 and Sept. 15. I wish it were universal. I think it will be a real misfortune if Massachusetts, a State to which we have been accustomed to look for guidance in these matters, takes a backward step."

A number of gunners of the Cape ask the Legislature to permit the shooting of coots, whistlers, sheldrake and brant after Jan. 1, and the friends of protection are fighting the three bills proposed to bring this about.

The folly of spring shooting and the damage wrought by it are shown in the protest brought forward by the Boston Natural History Society confirmed by the testimony of other naturalists. This shows that two important lines of bird migration cross each other at Cape Cod, and that for this reason the shooting there should be limited—because the birds may more easily be killed there than elsewhere. Some of the evidence as to the decrease of the wildfowl is given by men whose testimony cannot be ignored. Thus Henry B. Bigelow, naturalist at the Agassiz Museum, is quoted as saying, what is well known to many gunners, that the brant are decreasing at an alarming rate:

"Twelve years ago brant were very common in winter in the salt bays of the eastern shore of Virginia near Cobb's Island and Cape Charles, and over nearly the whole of Pamlico Sound. Near Cobb's Island they have decreased very much in the last five or six years, and in Pamlico they now winter plentifully only in the neighborhood of Ocracoke and Hatteras. They used to be the most abundant waterfowl near Pea Island, some forty miles north of Hatteras; now but few are seen there."

Walter H. Rich, of Maine, author of an admirable book on shooting, "Feathered Game of the Northeast," declares that in the last ten years the coots have diminished 50 per cent.

Frank M. Chapman, of the American Museum of Natural History of New York, and E. W. Nelson, president of the American Ornithologists' Union, both urge that spring shooting shall be given up everywhere. Since the law forbidding spring shooting was passed, there has been a notable increase in local wildfowl in Massachusetts. Black ducks have returned to that State to breed as they have in Connecticut. S. Prescott Fay told of a visit made a year ago to Duxbury where he found the harbor full of black ducks. Similar observations have been made by Gardner G. Hammond on the Vineyard and by members of the Old Colony Natural History Society of Plymouth. A like story comes from Connecticut.

The situation seems to be that all the experts wish to have the present law remain unchanged, while a few Cape gunners wish to have it repealed so that they may shoot when they like.

THE bill to license resident shooters in Pennsylvania has been killed in committee. It was urged by the Game Commission as a means to raise funds for game preservation, but was so vigorously opposed by the press and by various interests that further consideration of the measure was postponed indefinitely.

TENNESSEE sportsmen are urging the passage of the resident license measure now before the Legislature. The Tennessee Game Commission has practically no funds to prosecute its work, and cannot, therefore, employ many competent wardens.

CONNECTICUT GAME PROPAGATION.

THE announcement some time ago that the State ornithologist of Connecticut intended to establish one or more stations for the rearing of game birds awakened much interest in that State. Individual sportsmen and protective clubs are considering the subject, and much discussion and correspondence are being had about it.

The State Agricultural College and the Commissioners of Fisheries and Game have ranged themselves on the side of Mr. Job and purpose to help him, so far as is possible. The State Game Commission has made a preliminary appropriation, and has authorized the ornithologist to begin what may become, if successful, a State Game Park. A tract of land at Storrs, on the premises of the Connecticut Agricultural College, will be used, and the earliest experiments will be made with quail. At the place of Geo. D. Tilley, Darien, similar experiments will be carried on in a small way with quail, ruffed grouse and various wildfowl.

Should the effort to raise quail be successful, the first surplus birds reared will probably be distributed to individual experimenters, with careful instruction as to methods and with any needed supervision. For the present the quail problem will be the chief one to be attacked.

Not a few people in the State, among them sportsmen of much experience, who, in view of the depletion of the stock of quail in that State, have for years refrained from shooting quail, are now anxious to try to rear birds in confinement, not to be shot, but to be turned out for the general good.

In addition to all this it is announced that a New York man, T. A. Howell, has purchased a large section of land—about four square miles—in the town of Hartland, Connecticut, where he purposes to construct artificial lakes and to experiment in the wholesale propagation of native wildfowl.

The State of Connecticut seems thoroughly aroused and high hopes are entertained of the results which may follow these experiments. If only a portion of the money which has been expended in the purchase of foreign gallinaceous birds can be put into the work of experimenting under proper conditions with native wildfowl, grouse and quail, it is believed that the outcome will be such as to astonish the experimenters and to offer an object lesson of great value to the country at large.

REPRESENTATIVES of the Areadia Country Club appeared before the Missouri Legislature a fortnight ago and asked that its 3,000-acre preserve in St. François and Iron counties be accepted by the State as a game and fish reserve. A bill to this end has been introduced in the Legislature and favorably reported out of committee. It is planned to maintain the park with a portion of the license fee fund.

Boregas and Tanakas

II.—A Mountain Sheep Hunt in Lower California —Unexpected Success

By DOUBLE BARREL

IF this were a romance, I would feel very much inclined to omit the account of this day's hunting, as there was nothing in it to my credit. We cut around the shoulder of Valdez Mountain without going out of the desert until after about six miles traveling, when we struck into the mountains at the rear of Valdez through a large arroyo. We went down this for an hour, and then took lunch at a beautiful little tank, which we found in the bottom of the arroyo. Afterward we continued down the arroyo for two or three miles, striking several tanks, some of them of considerable size. The walking was very bad, as the arroyo was filled with huge boulders over which we had to scramble as best we could. All these tanks were so situated that it would have been impossible to get a horse within miles of them, so that they were no use for camping purposes.

About half-past two in the afternoon we decided to climb up to the tableland on one side. We started, and as it was a long climb, we stopped about half way up and sat down on a rock. Eleno took out the glasses and began to examine the scenery. He was using a very powerful pair of glasses I had brought with me, the most powerful prism binoculars made, and after a short time he suddenly ejaculated, "Boregos." I could not see anything, but he indicated where they were in the arroyo, and when I took the glasses I could see half a dozen sheep, including one ram, watching us from the other side of the arroyo near the bottom and about 400 yards away. It was a wonderful example of the protective coloring of the sheep that we had not seen them without the glasses, for even after we knew sheep were there, we could hardly distinguish them with the naked eye. The whole bunch was watching us, and it seemed like a perfectly hopeless position.

If I could have explained my idea to Eleno I would have given up the sheep and gone off the way we came, and then tried to get back to them later. That would have probably meant spending the night away from camp, and this I was perfectly willing to do, as the nights were very warm. Unfortunately, there was no way of explaining this to Eleno, and after we had sat still for fifteen minutes he tapped my rifle and indicated that he wanted me to shoot. The ram head was not one that I particularly cared for, but under the circumstances I thought that I was justified in taking a shot at him, and I was further strengthened by the feeling that if

A CHOLLA.

the ram got away it would not be an irreparable loss. I therefore put up the sights on my rifle and fired at the ram, striking just under him. He at once started running up the further side of the arroyo away from us. My second shot struck just over him, and then as fast as I could reload my double barrel, I fired a number of times more as he went up the side. The shots seemed to strike very close to him, but finally I saw him vanish over the top, entirely unhurt.

I was very much chagrined at being unable to stop him, even at that range, with such a fair chance to get one shot home, but the worst was yet to come, for before we could move from the rock, a truly enormous ram that we had not seen before came to the top of the other side of the arroyo and stood looking down at us. He was fully half a mile away and there was no use shooting at him at that range. After a few minutes' inspection he walked away from the skyline and we at once started down the arroyo and went up the other side to where he had been, but when we reached the top there were no sheep in sight in any direction. Evidently the big ram had been off by himself somewhere, and when he heard the shooting he had come and looked over to see what had become of the rest of the sheep, and soon afterward finding them gone he had made off himself. The only consoling thought in the whole proposition was that the sheep seemed to have been driven down the range toward where we would next camp.

There was nothing to do but to hurry home, and it was long after 5 o'clock and darkness had settled down by the time we reached camp. J. G. M. and Captain Funcke were already in after a very short day. They had waited to see the other outfit off and had then gone out for a couple of hours without seeing anything. Louis Jackson, too, was gone with the other party. It was certainly hard on Louis, for he had no sooner got into the country and had a day's rest than he had to turn round and go out. The captain had changed him for Mr. Dunne, because the latter, although not so good a cook, was an experienced packer, knew the country, and was also more willing to take the hardships of the trip without feeling abused. We were sorry to lose Louis, but Mr. Dunne proved to be equally genial. He had been born forty-five years before in Elkhart, Ind., had graduated from an agricultural school in Kansas, and had done everything in the line of mining, farming and cooking for the last twenty-five years.

There did not seem to be any use in hunting sheep at Valdez Mountain, so we packed up and crossed the desert about fifteen miles to another tank, which lay in a valley in the mountains. This was the Tanaka Colorado, or Red Tanaka, so-called from the setting of red rocks in which it lay. It was in a much more desolate part of the mountains than Valdez Tanaka, and the wildness of the surrounding country seemed to be better adapted for successful sheep hunting.

We got to bed early that night and were up at the first streak of dawn, had breakfast and were off before 7 o'clock. Eleno and I climbed to a high peak a couple of miles from camp, and there had a long inspection of the country through the glasses, and not seeing any sheep, we crossed an arroyo to another peak, and there Eleno finally located one large ram lying down a long distance away. He tried to point to me

where the ram was, but there was such a succession of ridges and arroyos before us that I was unable to find him, and finally had to take Eleno's word for it, and we started out.

After we had crossed three or four precipitous cañons we got near the place where the ram was supposed to be, and for the next mile spent our time in going very slowly and trying to keep quiet. It was nearly a hopeless proposition, as the entire footing was loose rock, so that in spite of ourselves we made considerable noise. When we reached a point where we could see at close range the ram's position, he had disappeared, and on climbing up to the spot where Eleno had first seen him, we found the marks where he had lain and some tracks leading to an almost sheer precipice down which the ram had climbed. He seemed to have gone slowly, and it looked as though he might be somewhere directly under us. We chose a place where it seemed to be possible to get down and started after him. The mountain fell off in a series of steps. As we got to the edge of each one we could see a little further into the gulfs below.

It was fearfully bad going, the whole surface of the mountain seemed to be rotten and the rocks broke under our feet and fell away in our hands. At last we reached the bottom without accident, only to find that the ram had evidently heard or smelt us, as in the sand at the bottom we saw where he had suddenly started off on the run. Behind us were the cliffs we had descended, and before us lay a flat-topped mountain surrounded on all sides by an arroyo. We started down the arroyo, looking for sheep on all sides, and soon located one ewe standing against the skyline a couple of miles away to the north. We had about decided to hunt up that way and see if there were not some rams with her when, on looking back to the ridge which lay in front of the cliffs we had descended, we saw a ram looking over at us. He was on a sort of an isolated mountain with a cañon all around him. On three sides this was very broad, and on the fourth, where we came down, it was merely a small gulch.

After much consulting in the sign language we finally walked down the cañon, then swung around and came back into the gulch where we had first descended from the cliffs. There we sat down and had lunch. It was about noon and there was evidently no use in rushing matters, as our only hope of getting the ram would be to let him quiet down for a couple of hours and then try to stalk him. Our position also had this advantage, that if the ram tried to get on to any of the other mountains, we were in the place where he would naturally cross, unless he went down into the big open cañon where he had last seen us.

While we were having lunch I succeeded in asking Eleno, by the use of a few Spanish words and many signs, whether he thought he could get a shot at the ram in the afternoon. He was evidently very much discouraged, as he shook his head and made signs that the wind came from every direction, and that macho had both seen and heard us, and he ended up by saying: "Mui malo chance." There was evidently no hurry, so we finished our lunch of bread and bacon and beans and drank almost all our water. Eleno then got out a cigarette and lit it and sat down for a smoke. It seemed to me that it was perfectly hopeless to get a shot at a ram at any reasonable distance in this country. It was so broken the wind blew among the gulches from every direction and shifted every five minutes. The footing was so rocky that it was almost impossible to go without noise, and I sympathized considerably with a remark that one of the other party had made to me. He said that he was tired seeing the white rumps of the sheep go over the mountain in front of him day after day.

I did not feel much like smoking, so I took the glasses and leaving my rifle explained by signs to Eleno that I was going up the other side of the gulch to see if I could locate any sheep. I got a couple of hundred feet from where Eleno was sitting, and was just about to use the glasses when I heard a rock roll, and looking down the gulch I saw its whole side covered with sheep, evidently just in the act of crossing over to the cliffs where we had first seen the ram. I turned and ran as fast as I could back to Eleno, and snatching up my rifle,

THE AUTHOR'S MOUNTAIN SHEEP.

WHERE THE RAMS WERE BAGGED.

stepped out into the bottom of the gulch. As I did so I saw a big ram just at the top of a little point about 150 yards away and I at once fired both barrels at him, the first a side shot and the second at his rump as he turned.

The ram disappeared at the shot and I followed, reloading my rifle as I ran. I scrambled up the side of the gulch where the ram had gone and reached the top in a few seconds. Before me was a long flat piece of country lying at the base of the mountains, and in front of me a band of sheep were running with the big ram in advance. I fired four times at him and saw him fall to the ground at the fourth shot. Another part of the band were running in the other direction and I ran after them, hoping to get a second ram. By the time I came to a place where I could get a shot they had disappeared, and as there were no more sheep in sight I turned and ran back to where the ram fell.

As I came up, a very remarkable sight met my eyes. A ram with an enormous head was standing up amid the ocatilla and greasewood bushes, evidently badly hurt. Eleno was about twenty feet away from him, with his sheath knife out, and every time he would advance toward the ram the latter would lower his head and walk toward Eleno, evidently quite ready to fight it out with him. It at once struck me what a remarkable picture this would make, and I cried out "Camera" to Eleno. He knew what the word meant and motioned that the camera was back in the lunch sack where we had been eating. The ram was evidently badly hurt and suffering. I was out of breath, and I knew that it would take me some time to get the camera and come back. So, much as I wanted the picture, it seemed to me a cruel thing to let the animal suffer for five or ten minutes while I made preparations to photograph him, and after a moment's consideration raised my rifle and killed him by a shot through the neck.

I went up to him and looked at the size of his horns with astonishment. He was a magnificent specimen with tremendously long horns, which seemed to grow bigger as they left the base. Eleno and I were both much excited over the size of the ram, and we slapped each other on the back and he talked Spanish and I talked English for some time without caring how much the other understood. I gathered from Eleno's Spanish, however, that it was a "muy grande macho," and that he was well satisfied with my shooting. Then when our jubilation was over, Eleno took me by the wrist and led me over a little ridge, and there on the further side, about fifty yards away, another ram was lying dead. He also had a very large head, though not so big as the first one. I was very much surprised, as I had up to that minute thought all my shooting had been done at one ram.

On comparing the two I found that they represented the two types of heads which the mountain sheep seem to produce. The horns of the first ram were very large and heavy, curling around his head and somewhat injured at the points. The head of the second ram, however, was perfect, with a long slender curl decreasing steadily from the measurement at the base. I had no tape measure with me, and therefore could not measure the heads until next day, but I had seen enough sheep heads to realize that I had two uncommonly beautiful specimens. This was especially pleasing, as I had told Captain Funcke that I wanted no heads unless they were bigger than those I had got in the North, and these were both bigger than my British Columbia heads.

Though the heads were very large, the bodies were comparatively small, and the animals seemed to me to be much more lightly built than the sheep in the North. The sheep of British Columbia surprised me by their large and heavy set legs and bodies, but the sheep of Lower California looked more as I had always supposed mountain sheep should look. Both of the rams were rather thin, but their stomachs were full of the little twigs of the brittle bush on which they had been feeding.

It was too late to hope to get the rams in that evening, so we cleaned them and then stretched them out in a little hollow in the rocks and piled ocatilla stems over them to protect them. The ocatilla has long straight stalks, covered with numberless thorns, and before we were through, I felt that the heads were secure from any marauders during the night. We then tied our red bandannas on nearby bushes to mark the place.

I could not help thinking what a remarkable example this was of luck in big-game shooting. Within a few minutes of the time that Eleno and I had decided there was no possible chance for a shot, I had been successful in killing two especially large rams.

It was a long hard pull back to camp, and we were badly tortured with thirst, but about half way in we found a little tank in the rocks where we had a good drink and refilled our canteens. We got in, at last, a little before dark to receive the congratulations of the captain and J. G. M. The latter unfortunately had spent another day without seeing sheep. We at once decided that both Eleno and Captain Funcke would go with me the next day to bring in the heads and meat, and that J. G. M. should take a day off around the camp.

The next morning we started off on horses, leading two burros with pack saddles, and by making a long circle through the mountains and keeping mostly to the arroyos, we got the horses within a mile and a half of where the rams were. We then tied the horses, and leading the burros succeeded in working around to the place where the rams lay. They had not been disturbed during the night and we got them out, photographed them and measured the horns with the tape. The big ram's horns measured: Base, 15½ inches; one foot from base, 14½ inches; 19½ inches from base, 13¾ inches; 7 inches in diameter at the point, 39 inches in length and 24½ inches spread. On account of the way the horns flattened as they curved, it seemed as though the horn was smaller at the base than it was half way out, but this did not prove to be the case.

The smaller ram had 15 inches base, 12 inches half way out and was 36 inches on the curve with 24 inches spread.

We took off the heads carefully and cut up and skinned out the animals and cut off most of the meat. On examination we found that the first ram had been shot straight through the center of the body with my first bullet, the shot being a little bit too far back to kill him instantly. The second bullet had struck him in the center of the rump and tore through his body, but in some way without killing him. There was also the third shot through the neck made at close quarters, and which had killed him instantly. The second ram at which I had shot four times had three bullet holes through him, the first one having smashed a fore shoulder, the other going through the fleshy part of the hind leg and the third shot, which killed him, being straight through the heart. This made a score of five hits out of six attempts, and I felt that I had somewhat redeemed myself from my previous bad shooting.

When we had cut up the rams we went down to the place where Eleno and I had eaten lunch the previous day. On the way I noticed the place where the ram had stood when I had first shot him. There was the little palo verde tree which had partially covered his forequarters; there was a splash of blood on the rocks where he had been struck, and on walking down to where we had taken lunch I saw the two empty shells lying where I had thrown them out of the gun and the place where I had stood behind a big rock and shot at the ram. It at once struck me that here was a chance to really determine the range at which I had done the shooting, so I got out my fifty foot tape, and the captain and I staked the distance from the bottom of the arroyo. It proved to be just 427 feet.

A comparison of the distances showed that the second ram was killed at what seemed to be a little longer range, though the ground was so broken there that it was impossible to take an accurate measurement. I was very glad for once to know the exact distance at which shooting was done, and as I looked over the ground I felt that it would probably generally appear in a story as a 200 to 250 yard shot.

When we had eaten our lunch we packed the heads and meat on the burros and started back for camp. The burros did wonderfully well, climbing up places that were difficult going for a man, aand we finally got them down to the horses without accident, though I thought at times that there was at least an even chance of serious trouble. We were back in camp again by dark, and J. G. M. was duly impressed with the size of the heads.

On our way we killed another big rattler, the last we saw on the trip. This made a total of four, as we had killed a very small one in the fire wood at Valdez camp. We also saw a number of tarantulas during the trip, all of which we killed. Some of them were small, though one which we saw at Valdez was the grandfather of all the spiders, with a body as big as a grown mouse and a spread of at least six inches between his feet as he stood on the desert. We photographed him, then he too met his end under a boot heel.

This day's work ended my sheep shooting for the trip, for though our permit allowed us to kill six rams, yet I had no use for more heads and did not feel justified in shooting the animals. Neither did I want to disturb the sheep country as long as J. G. M. had not yet secured his head. The presence of sheep in the neighborhood made me feel very confident that J. G. M. would finally get a shot, though he was somewhat discouraged, as he had not yet had the luck to even see a sheep of any kind.

For the next two days I loafed around the camp at the Red Tanaka, occasionally climbing

to the top of some nearby mountain to view the scenery, which was wonderful. From every point there was a magnificent view of red mountains, white desert and blue laguna, while above all hung the still bluer sky of the South. Every day was the perfect June day, and every night we went to sleep under the stars, waking up once or twice to see how near we were to dawn by the position of the dipper, and at last getting out of bed at daylight to drink coffee and smoke till breakfast was ready.

The ironwood trees around the camp were connected with ropes festooned with strips of sheep meat, drying in the sun. In two days it was dry and hard as oak and mighty poor eating. I was lucky enough to nickname the jerked venison eagle meat, which was translated into Spanish as "carne de gavalan." It rejoiced Eleno, the captain and Mr. Dunne very much, and I believe will remain long after all memories of me are forgotten.

Though camping was ideal, yet we were cursed with J. G. M.'s bad luck. He was my senior by twenty-five years, yet he hunted hard and long and with no success. During the next two days he saw two bunches of sheep, but one had no rams in it, and the other was seen so late in the day and at such long range that it was never located again. Worst of all, we found on investigation that the two tanks beyond the Red Tanaka where we expected to camp were so low that we could not camp near them, so that on the third day we were forced to pack up and cross from the Sierra de Tanaka into the foothills of the Sierra Gigantica. This was the range of mountains along the base of which we had come in our journey from Calexico, and we now camped at a spring called Las Palmitas, which lay in the foothills of the range. The spring was a pool of muddy water which never dries. It had at one time been surrounded by palms, which had been cut down.

Near the Red Tanaka we had seen some shallow caves in the rocks with old fire-places in front of them, which we were told were old Indian camps, and between the Red Tanaka and Las Palmitas on the hard stony flats of the desert we found old Indian trails from one waterhole to another. They ran wonderfully straight from point to point and their appearance testified to many years of barefooted or moccasined travelers. At Las Palmitas, too, there were many flat stones worn into hollows by the Indians who had used them for grinding the beans of the mesquite tree. And everywhere through the desert we saw many pieces of rough pottery which had once been the water jars of the natives. The captain said that at one time the peninsula had supported large tribes of Indians, but that the twin scourges of smallpox and measles had partially exterminated them. There was something inexpressibly pathetic in these traces of a vanished race. It seemed that when a people had been able to win a living from such a desolate land, that Providence might have left them in peace. But the plagues of the white man have destroyed all but a scattered remnant.

There were a couple of families of San Catarina Indians located a few miles from Las Palmitas. Two or three of the men came over to our camp and developed into that most objectionable of all beings, the camp loafer. They wore cotton shirts, and shoes and overalls, so they had no virtue of being picturesque, while their undoubted propensity as sneak thieves kept us always more or less on our guard. They also had one or two wild goose chases on which they would have liked to have enlisted Eleno, as he was now a capitalist by dint of having two months' wages coming to him.

One of these concerned a lost mine. The discoverer was an Indian who undertook to lead a party of other Indians to it and give them untold wealth. Unfortunately, just as the party reached the proper arroyo, the guide shot himself through the stomach with his rifle, and the others, thinking this was caused by evil spirits, had incontinently fled, so that the mine was still undiscovered. The other tale was even wilder. It concerned a lost mission which had been

FILLING A CANTEEN.

established by the Spanish priests and deserted and lost when the Indians were carried off by the pestilence. This had become an established legend and the bells of the mission were supposed to be pure gold and silver, so that wealth would come to any discoverer of the lost mission of Santa Isabel. One of our loafing friends was sure he could find it if backed by proper resources. They talked much on the subject to Eleno, and I had a clear view of the promoters living high on the supplies furnished by the investor, Eleno, while the whole party wandered for several months through the mountains looking for wonderful mines and romantic lost missions.

There is nothing more disagreeable than camp loafers, but in spite of them the days at Las Palmitas were very pleasant. There were plenty of quail and rabbits, and also a large number of the banded Arizona pigeon. These are beautiful birds of a bluish gray with a white band across the wings and tails. We killed a few for the table, but for the most part left them undisturbed. Coyotes howled all night long around our camp, but we never got a shot, and our attempts to take them in some traps of the captain's were unsuccessful. Whether this was caused by the intelligence of the coyotes or the poor quality of our attempts to outwit them will always remain in doubt.

I had much leisure at Las Palmitas and amused myself as I pleased. I had often heard that the interior of the bisnaga would supply water to the thirsty, so one day I set out to try out this theory. I worked at a bisnaga for a long time with a heavy sheath knife, and after cutting all round, took the butt of my shotgun and tried to knock off the top with a light tap. This did not affect the bisnaga, but it cracked my shotgun stock in a dozen places. The wood must have become very rotten and brittle with age. At any rate, it kept me busy for a long time repairing it with some wire and a pair of pliers. I did a fearful and wonderful job, but in spite of its appearance I continued to use it effectively for the rest of the trip. Later I went back with a hatchet and beheaded the bisnaga, and found an interior of very hard green pulp with considerable moisture in it. Any wanderer expecting to use bisnagas for drinking purposes should have either a hatchet, a sword or still better a good cross-cut saw. If he wishes to be fully prepared, he should always have a cider press with him. On the whole, it is easier to carry an extra large canteen.

THE TOP RAIL.

About the time when arc lights were first installed by towns in the West, wild geese were abundant. One town turned on its new street lights in autumn, and as a large river was nearby, on almost every night that autumn and the following spring when there was fog, geese could be heard overhead. At first the excited honking of the birds was novel and the people craned their necks, thinking the geese could be seen, they were so close; but in time there were those who got tired of the clamor and claimed it kept them awake. They were not the sportsmen of the town. The sportsmen were kept awake by the geese; no doubt of that. We all suffer from the shooting fever at times, but it is seldom that our favorite game comes to us to torment us still more.

I was fortunate. A particular friend was in charge of the local daily paper, and his night's work ended about 3 o'clock. When the conditions were favorable, I turned my key over to him, and the next morning he entered my room very quietly for a heavy man clad in shooting gear. My own preparations made, we crept down to the kitchen and breakfasted on the good things old black Mandy had placed for us the night before, drank our coffee and slipped away to the river and our boat. I have never prepared for a day's shooting with less fuss and preparation, and there was always enough time to put out the decoys, dig our sand-hole blinds, and have a smoke before day dawned.

My companion had but one eye, but it was worth fifty ordinary eyes in locating game, and backed by his ten-bore gun, it was fatal to the geese that came within range. I wonder where Johnnie Healy is now, and whether he really was the originator of his favorite expression, "I would rather fish than eat, and I would rather shoot than fish." So far as I know he never declined an invitation to do either one.

Grizzly King.

NATURAL HISTORY

The Prairie Wolf in Iowa.

In 1867, Dr. J. A. Allen wrote concerning the coyote in Iowa: "This species was formerly quite numerous, much more so even than the common wolf (*Canis lupus*), but now, like that species, it is in some sections nearly extirpated. I was informed that it was still common in the southern part of Guthrie county, where it not unfrequently was destructive to the lambs. It is said to far exceed the common fox in boldness and cunning."

During Dr. Allen's stay, he visited nine counties, including Audubon, which adjoins my home county on the north, and Guthrie, which corners with it to the northeast. At that time the railroad had not as yet been built, and only a small portion of the country was settled. From that time on until about 1890 coyotes steadily decreased in numbers, until, apparently, they were all but exterminated. The survivors were extremely cunning, and an adult was seldom presented for bounty. During the last few years a marked change is taking place. The country is now thickly settled and there seems little shelter for such large animals as wolves, yet the coyotes are increasing in numbers. They are very prolific, seldom giving birth to less than six young in a litter, and often about ten. Fourteen is the largest litter that has ever come to my notice. More than ten at a birth, I think, is unusual. They seem to take to the open country rather than to seek shelter in the small belts of woodland along the streams. A sheep breeder living about five miles north of Atlantic tells me that he has suffered considerable loss from these animals during the past few years, the lambs being taken from the lot at night and probably from the pasture during the day. While visiting there not long since, a coyote crossed the field in broad daylight, in plain view of the farmer and his son. Notwithstanding the fact that the sheep owner has a large bore rifle kept for the purpose, and has offered to double the bounty paid by the county, only one mature coyote, to my knowledge, has been killed in that vicinity for several years.

It is easy to see that the later generation of prairie wolves have developed greater cunning in avoiding danger, or that the present generation of hunters is not so skillful in pursuing them. Probably both may be true.

Although our county paid bounties for the destruction of forty-four wolves last year, only three were adults, the rest being pups taken from the dens. As the dens are usually shallow, it is easy to capture the helpless youngsters if they can be found. A grown wolf is seldom taken, unless it be a mother with her young. I presume that similar conditions prevail in the prairie regions to the west, as D. E. Lantz writes that more than nineteen thousand coyotes were killed in Kansas in the year ending June 30, 1904, but makes no mention of the proportion of young and old specimens. The accompanying photographs show some of the litters taken in Cass county last year. One is especially interesting, for it shows the new born young.

I have suggested to farmers suffering from the depredations of coyotes that they corral their sheep in enclosures with high fences, but have been informed that a lighted lantern is about the only safeguard, unless it be a floored enclosure. From Lantz's "Mammals of Kansas," above quoted, I find the following statement which is to the same effect:

"Some ranchmen have told me that lambs and poultry in an enclosure made by a fence five feet high are absolutely safe from its attacks. Others have said that while the animals will not jump over such a fence, they will dig under it readily, and that the only safety is in a tight and floored enclosure."

Aside from the complaints of sheep owners, little is heard about damage from coyotes in this locality. Occasionally, if the door is left open, one will enter a hen roost or will catch hens or turkeys that are allowed to range far afield in daytime. Last August the Council Bluffs (Ia.) Nonpareil mentioned the fact that a man had frightened a coyote away from his hen house, near the high school in that city, the night before. The incident aroused the valor of all the small boys in the neighborhood, with the result that with all sorts of missiles and accompanied by all kinds of dogs, they spent much of the following day scouring the bluffs in search of the wolf. It is hardly necessary to add that the hunt was without result, other than tired legs.

The poultry keeper who suffers from coyotes in this section is entitled to little sympathy, for with the exception of turkeys, all farm poultry thrives much better if kept in enclosures, and not allowed to range long distances in search of food. I think that it is extremely doubtful whether these animals will ever dig under a building, or will try to enter when the door is shut.

Beside sheep and poultry, it is quite probable that young pigs are taken at times, although one seldom hears of it here.

The bounty system of reducing animal pests has come into such general use that the public seems to think it neeeessary. There is serious question in my mind whether it should ever be resorted to, excepting as a very temporary expedient. At times it might be well to offer sufficiently large bounties to interest a large number of hunters in the chase for a short time, but a moderate bounty constantly in force is a useless expense and of little service. In this county a bounty of five dollars for each mature wolf, and two dollars each for pups has been in force for years. There is nothing to be made by hunting wolves for the bounty, and no one does so. The dens found by accident afford the finder some easy spending money. To my mind the bounty paid from the public treasury is a mistake. If the persons whose interests are at stake will not take the trouble to rid their localities of such animals, it will not be done even though the public pay a bounty.

Although wolves have done serious injury to sheep owners in this State, the worthless dogs that roam freely about the country have done ten times more. A bounty placed on the head of every dog not wearing a collar with his owner's name on it, and a bond to make every dog owner responsible for his mischief, would do more for the local sheep industry than anything else that could be mentioned.

Coyotes unquestionably do much good in ridding the country of field mice, rabbits, spermophiles, gophers, etc. So while they become a serious menace to the range stockman, it is a question in my mind whether it would be desirable, even though possible, to exterminate them in farming regions like this.

Frank C. Pellett.

[A long article entitled "Wolves and Wolf Nature," printed in Trail and Camp-Fire, p. 152, deals at length with the gray wolf and coyote alike, and is of interest in this connection.—Editor.]

Deserves Investigation.

The letter printed below was addressed March 15 to the National Association of Audubon Societies of New York city, by Herbert Wheaton Congdon.

It will be extraordinary if it is shown that an instructor in a respected and important school like the Pratt Institute has given such misinformation to any pupil. That the Pratt Institute itself approves such a statement is not to be believed for a moment, since we are confident that many of the trustees of that institution are well informed as to the economic injury done in the procuring of aigrettes, to say nothing of the suffering inflicted on animal life. Mr. Congdon's letter reads:

"I learned last night in conversation with a young girl, who is taking a course in millinery in Pratt Institute, that they use aigrettes, and that the instructor in answer to the protest of one of the girls said that the old-fashioned idea that any injury was done in obtaining these aigrettes was exploded in these days of greater knowledge.

"It seems to me that no institution of learning of the standing of Pratt Institute should encourage or even make use of any form of plumage that is obtained from the destruction of beneficial wild animals. Surely, the campaign of education has been sufficiently widespread so that there is no excuse for such a statement as this instructor is reported to have made. Of course, I cannot be responsible for the accuracy of the statements of the young lady who was my informant, but I think that the matter is well worthy of investigation."

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

Flying Squirrels and Muskrats.

IN the Proceedings of the Washington Academy of Sciences, issued Feb. 15, last, Dr. Barton Warren Evermann and Howard Walton Clark published an interesting paper on the mammals of the Lake Maxinkuckee Region. A short time ago we printed Dr. Evermann's paper on the feeding habits of ducks and coots, as observed at this lake. There are included in the mammals paper notes on thirty-one species of mammals, of which several are now regarded as extinct for the region.

The lake, which is about 2¾ miles long and 1½ wide, lies in the glacier region of Indiana among low hills, and the lowland of the region is more or less swampy. Remains of elk, especially the horns, are still occasionally found in the peat bogs of Marshall county, but have no doubt been extinct for a long time. Deer were formerly common but have not been seen for some years. Squirrels and ground-inhabiting rodents are abundant, and the flying squirrel is especially so. So little is known about this species that we quote what the authors have to say:

"Wherever there are, about the lake, large old trees with hollow trunks or limbs, one or more pairs of flying squirrels are likely to be found. Striking such trees with an ax or maul will often induce the squirrels to come out, especially if the tree is of proper size and springy enough to vibrate well in response to blows. When striking the tree is stopped, the squirrels usually return quickly to their nest. By such devices as this, one is apt to discover that the flying squirrel is a much more common animal in the neighborhood than the number seen otherwise would indicate. On account of its quiet unobtrusive ways and its nocturnal habits it is not often seen except by those who know its ways.

"These squirrels usually make their nests in holes in old dead or decaying trees; they may utilize a hollow limb, a decayed and hollowed-out portion of the trunk or a deserted woodpecker hole. Late in the fall, after the cottagers have left the lake and the cottages have been closed for the winter, these resourceful little animals sometimes take up their residence in the loft, cupboard or some suitable box in the cottages. There they build their nests and dwell cosily until the warm days of returning spring tempt them to return to a hole in some scraggy old oak nearby, where they will spend the summer.

BEFORE THEIR EYES WERE OPEN.

"Occasionally, in the evening twilight or on moonlight nights, a flying squirrel may be seen sailing in a gentle downward curve from one tree to another, the start being made from well toward the top of one tree and the place of alighting at a much lower point on the other. There is something ghost-like in this gliding flight; it is so unlike that of any other of our native creatures. There is not only an entire absence of fluttering wings, but perfect silence.

COYOTES JUST AFTER BIRTH.

"While in their nests these squirrels do more or less squeaking. On the night of Sept. 21, 1903, one or more were heard in trees in the Arlington Hotel grounds. On Nov. 27, 1904, the accidental burning of two cottages on Long Point ignited some of the surrounding trees, one of which contained a family of flying squirrels. They did not leave their nest until fatally burned, when they leaped to the ground. On Aug. 19, 1906, while riding along a road west of the lake a squeaking sound attracted attention to the base of a small scrub oak at the roadside. On examining the place four young flying squirrels were discovered. They were quite small and wholly naked. A storm had probably blown them from their nest which was a large, globular affair, made of fibrous material, situated in a crotch of a tree. While we were only a few feet away, one of the parent squirrels, presumably the mother, came down the tree, and, taking the young in her mouth, carried them, one at a time, back to the nest.

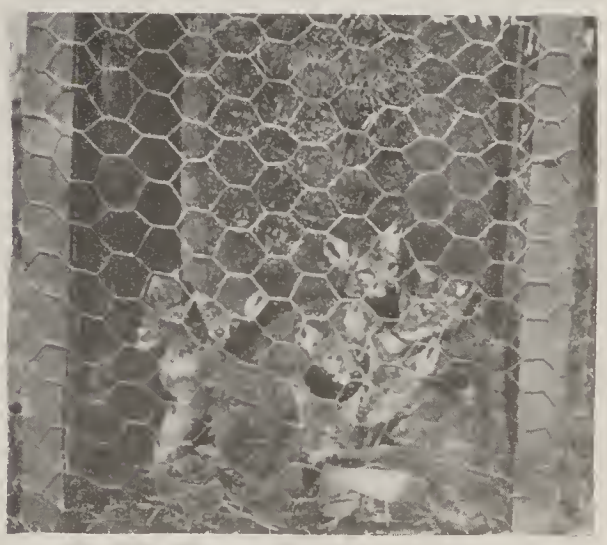
On April 16, 1890, one of us found a nest containing two young flying squirrels, south of Terre Haute. The nest was in a woodpecker's hole about twenty feet from the ground in a maple. Upon striking the tree the mother squirrel came out of the hole and flew to another tree nearby, where she remained watching. Breaking the snag at the hole, the two young were removed and placed on the ground. After a litt'e time the old squirrel flew back to the snag and seemed much disturbed by the changed appearance of things. She looked all about, and, finally discovering the young on the ground, she came down, and taking one in her mouth, carried it to the top of the snag from which she then flew with the young in her mouth to another tree about thirty feet away. She ran up that tree to a height of about fifty feet, where she found a knot-hole in which she placed the little one. In a moment she reappeared and flew back to the snag for the other. In the meantime I had stationed myself near the young. After several advances and retreats she finally came and seized the young in her mouth when I caught her in my hand. When released she returned to the knot-hole with the young squirrel. These dates (April 16 and Aug. 19) are of interest in showing so wide a range in the breeding season of the flying squirrel.

"On Dec. 16, 1890, a family of six flying squirrels was found by J. M. Beck near Burlington. They were all full-grown. On Thanksgiving Day, several years ago, Prof. U. O. Cox, then of Farmland, Ind., found fifteen flying squirrels in a small rotten stump a little higher than a man's head.

"It is remarkable the number of flying squirrels that can be discovered in any wood by knocking on the old dead snags or trees, particularly in the spring. We had found them in old oaks, beeches, maples, ash, willows, sycamores, and hickories, as well as in various old buildings. They seem to breed chiefly early in the spring, about sugar-making time. A second or third litter may be produced later in the season.

"Flying squirrels make interesting pets. Several years ago one of us had two which were kept as pets for several weeks. They had the freedom of one room in the house. During the day they lay curled up in a box provided and made comfortable for that purpose. At night, particularly before midnight, they would come out to play about the room and to accept the nuts and other food offered them. One night a drawer containing a number of bird skins was inadvertently left open. One of the squirrels got into it, ate one of the skins, and as a result, died of arsenic poisoning."

[TO BE CONCLUDED.]



A LITTER OF TEN HALF-GROWN COYOTES.

Mr. Pellett's Coyotes.

IN the third one of the series of pictures of coyotes made by Frank C. Pellett, ten of these interesting beasts are shown together. It is, as Mr. Pellett says, unusual to capture an entire litter of half-grown coyotes. These specimens appear to be in good condition.

GAME BAG AND GUN

Real Life.

No, we are not trust-fed magnates; neither do we belong to that class designated as "the idle rich," my wife and I. We are simply ordinary American citizens with what some might call an inordinate love of nature and a firm belief that God intended all his creatures, great and small, to be happy; and when we see animals at play a portion of their time, we know that it is a part of the divine scheme.

When my wife takes up her twenty-gauge gun, the rabbits and gray squirrels scurry to cover. When it happens to be her .22 caliber rifle, I wonder if it lies within my power to convince her—whether true or not—that all those shots nearest the tack were fired by me. If it is the .25-35 carbine and we are in camp, the deer immediately get their wireless in operation, for there is no doubt that she can shoot, and any self-respecting young buck out for a walk on a fine frosty morning and meeting her is liable to be smitten. She can handle them, too, if necessary, but I am usually not far away when she hunts.

Last August we went up the river and camped for the month in a nice cool shady place. There were trout there, not all mammoth in size, but large enough to eat. There were a bevy of young women in the neighborhood, and they honored us by calling occasionally. There was a nice swimming hole back of the tent, and they enjoyed that, too.

This was all very nice in its way, but we were thinking and talking of something else, and at the beginning of the deer season we started for the tops. It is only four miles, but mostly up hill. Our outfit consisted of a nine by twelve tent, a camp kit, a two-burner oil stove, for inclement weather, a light oak frame over which a canvas is stretched for a bed, a water pail, five gallons of oil, a lantern, bread can, a tent cot taken for the use of any strolling leather-stocking, and an Airedale pup six months old. Of course we took along some guns, among them a sixteen gauge gun and a .32-40 rifle, an old favorite.

Arrived at our campsite of last year we pitched the tent, set up the bed, got the blankets and extra clothing out of the packing boxes, which were fitted with screen doors and served as cupboards in camp, and had everything shipshape before dark.

Many pleasant dreamy days were spent in camp, reading and smoking, or sitting under the trees with the pup, watching the grays, shooting one only as needed. Dates were lost track of, and care left in the valley below. "Johnny," the fourteen-year-old son of the most accommodating farmer who lived on the farm below, twice a week brought up the mail, potatoes, butter and milk and anything we needed.

The weather averaged fine during the entire fall, an occasional thunder storm breaking the monotony. There is something about a thunder-storm in the mountains, especially among the tops, that is sublime, and it is always seen at its best at night. A good quality fly, well tied in place, is a necessity at such a time. It not only keeps one dry, but prevents soaking the tent, thus making the interior damp, causing guns to rust and making things generally disagreeable. We prolonged our stay to over two months.

Just beyond a wire fence, the existence of which is ignored by the deer family, is a preserve of something like one hundred thousand acres owned and guarded by George W. Vanderbilt, to whom gratitude is due for the existence of any large game that may be in this section. If nothing but males were shot, deer would be even more plentiful outside the preserve. There is true pleasure in the knowledge that one has never killed a doe, and there is not much hope for the chap who, having done so, is not ashamed of it. This practice, from the standpoint of the sportsman, is reprehensible, for it has depleted millions of acres of forest.

Grassy Gap is about forty rods this side of the camp site. From this gap a ridge runs down to a flat called Israel's Camp. It was to this ridge I went one beautiful autumn afternoon just to see if my old friend of the season before, whose tracks had been invariably present in number, might still be found. I went down the side of the ridge to a thicket well toward the bottom, when I made for the top very slowly and carefully. Cautiously I parted the bushes as I discerned signs of his recent presence in the way of horned trees and fresh tracks in the soft mold.

As I neared the top, after carefully inspecting the surrounding open spaces, and noting a bed twenty-four hours old, a snort and crash told only too plainly that the buck had seen me first.

My wife had shot the .22 so much that she realized the difficulty of getting a shot at every gray squirrel with a rifle, and as she invariably went for game when she carried a gun, she preferred the twenty-gauge. One day I told her I would go down Bee Branch, look the ground over, and if nothing transpired, stop to look for the turkeys she thought she had heard the evening before. Just before sunset I seated myself at the foot of a tree. I had called only a few times when I heard voices. It was my wife and Johnny. My wife had seen two fine turkeys coming down the side almost directly toward her. She pushed off the safety, but they turned, feeding slowly, and worked their way out of range.

The next evening we went out together, taking the rifles. I placed her a little below my stand, so that we were able to watch a larger amount of territory, got into position and began to call. Twenty minutes later we heard steps in the dry leaves. They would come a little way, then all would be quiet for a moment, then suspicion allayed and they would be heard again. With the advantage of sound and motion on our side, I am bound to confess that the wary old chap scored, and when I first saw him he was making a hasty retreat. Later my better half brought in a hen from that locality, shot at sixty-four yards with the .22.

Last year's experience had taught us that when the wind was blowing it was impossible to have a camp-fire unless the leaves were wet, as the sparks and fire blew out in a dangerous manner, so I constructed a fireplace facing and about three feet in front of the tent, put up a windbreak and covered the space between both sides and top, and at this site we weathered two early snowstorms.

After frequent calls at the big buck's stamping ground, heretofore with disappointment, I decided that if he refused to meet me I would be equally pleased to have him make the acquaintance of my wife, so one beautifully clear, frosty morning I placed her near the top of the ridge, took the pup, and making him follow close at heel, as he had been taught, struck out across the head of the branch to the top of the ridge upon which grew the finest chestnuts in that part of the country.

With all due caution the pup and I made our way up the trail, and when I motioned in the direction of a thicket, the pup understood. I waited at ready for ten minutes, when I heard a pitiful whine. Upon looking about I was amazed to see the pup in the forks of a tree twenty feet above the ground. His appearance was both pitiful and laughable. He had evidently followed a track of some sort up a dead chestnut which had lodged in the fork and was unable to turn. I spoke to him soothingly and sat down to let him work it out for himself, then we went on to where my wife was and we returned to camp.

Flowery Gap, about fifteen minutes' climb from the camp, is a small gap in the ridge proper, which is known as The Tops. On the very top of a knob there is a little chestnut grove often frequented by the deer. To the right of Clubs Gap trail the land is sparsely covered with laurel and ivy, chestnut and oak trees. There, the sign being plenty, I went one afternoon, and after waiting until the sun had disappeared behind the tops, I heard a stick crack and saw the ivy in the ravine move. At last, being unable to see the sights on the rifle, I slowly crept back to the trail, and on my way home a white flag was flashed in my face as a whopper dashed over the ridge.

Being anxious for my wife to get a shot, I determined to place her at the top where she could overlook this point. During the afternoon a hunter from the settlement called, and we invited him to accompany us. We got placed, but our friend had a cold, and just at a critical moment was compelled to cough, whereupon there was a snort and crash from the bushes directly in front of my wife.

One day I was walking carefully through habit, but not looking for deer, as I was considering where I should go. Glancing ahead I saw a big four-prong buck standing tail toward me at sixty-six yards. His position made the shot a little difficult, but I had confidence, so I fired, knowing full well at the report that the bullet

went a trifle to the right. The deer sprang in the air and turned broadside on, frozen in his tracks. I deliberately moved the white bead until it was exactly where I wanted it, but when the sharp report rang out I was more than surprised to see the buck bound out of sight, for I was as cool as a cucumber.

I went back to the camp and put up a square of paper at sixty-six yards, walked back and fired at it. The bullet struck nearly a foot low! The rear sight had been lowered almost an eighth of an inch. On a twenty-inch barrel that is sufficient to cause a miss in shooting at a deer at sixty yards if the holder knows nothing of it.

During these days the dog was watching the camp when we were away; or, if we went out

"SHE CAN HANDLE THEM, TOO."

to grassy gap for a few squirrels, he was allowed to accompany us, and right proud he was to do it. Birds, squirrels, rabbits, 'chucks—anything in the game line compelled a share of his attention, and I am sorry to relate that his utter disregard of the law caused him one day to show a too inquisitive buck the nearest route to cover. Truly, the Airedale is always on the job.

Some of the boys came up occasionally and spent the night with us, to be near the hunting grounds in the morning. They brought their rations, knowing that we had to have ours toted, and they frequently brought fresh pork for a change for us, and right welcome they were. Two who are considered among the most successful hunters left us two deer hams each, saying they would not tote them home for them. Nevertheless, they had toted them over rough country that far. And these were North Carolina mountaineers of whom you have read, but they are not as you have heard them described. I cast my lot among them a few years ago, and have found them very kind and accommodating neighbors. Of course they have faults—so have you and I—but for uprightness and fair dealing give me the country mountaineer. I could wish for a little stricter observance of the game law, but the Vanderbilt preserve, so long as it exists, will serve the purpose, as protection there is constant, there being no open season.

Mat. and Wes., two brothers and neighbors of mine, had been out with me once for a couple of days. Mat. is fire warden for the fiber company that owns several thousand acres of timber land adjoining the preserve, and Wes. is a trapper of note. One morning Wes. came to the camp and said Mat. would meet us at a point some distance from the camp where sign was plenty. We had gone only a short distance when a fine two-prong buck sprung out of a gap, and as he dashed down the ridge Wes. fired a .25-20 bullet at his shoulder. We followed the track and found him lying with his head down hill. When he sprang to his feet, we both fired, Wes. once and I twice. The boys not only gave me this buck, but toted it most of the way to camp.

On our next trip we soon discovered fresh signs of a forest tragedy of the previous night. A streak of feathers led to the carcass of a fine large gobbler that had yielded up his life to a red fox. Wes. shot a fine two-prong buck. We camped in a ravine that night. The next morning we had passed through the gap without seeing any fresh sign, and had concluded to go back toward home when Mat. said: "I see one. He is down where we came through the gap. He smells our sign." The buck was slowly and suspiciously walking toward us, stopping every second or third step, head up in the air, about 125 yards away. Mat. deliberately put his rifle on the ground, determined to give me the shot. Slowly the white bead traveled up between the intervening saplings, found the gray mark, there was a sharp report, and the buck dropped in his tracks. He lay still for a minute, then raised up on his haunches like a dog, gave one snort and was dead, a victim to the accuracy and tremendous shocking power of the little .25-35 bullet. Nothing but the shock of 2,050 feet per second, entirely absorbed by the animal, could account for the knockout blow, as no immediately vital spot had been traversed.

This deer was cut in two, the boys each taking a part while I carried two guns, and the return journey was commenced, and it was all I could do to keep up with them. At noon we arrived where Wes. had hung the deer killed the previous day. I took part of one of the carcasses, and the journey was continued until the trail leading to the valley was reached. There we parted, the boys taking their load home with them, to be delivered the following day at my home, for the legal limit had been reached, and while the boys took half of one of these deer, what had been previously given me made a trifle over three bucks for the season, and not a scrap of the meat spoiled, some being smoked, some dried, some eaten fresh, about one carcass given away, besides a nice lot canned fresh by my wife for a future taste of the venison during closed season.

I arrived at camp about 3 o'clock and found the lady of the camp had been busy during my absence, but that is another story, and she will tell you about it at some future time.

W. H. Shay.

Secretary Whish Resigns.

John D. Whish, for nearly ten years the secretary of the New York State Forest, Fish and Game Commission, has handed his resignation to Commissioner Thomas Mott Osborne, who has accepted it.

Mr. Whish is well known to the sportsmen and nature students of this and other States from the intelligent interest he has taken in all branches of conservation work. He came into the service of the State when the old Forest Board and the Fish and Game Commission were consolidated during Governor Roosevelt's administration. One of his first acts was to collect and send out to the largest woodland owners and lumbermen a set of pamph'ets dealing with

CALLING TURKEYS.

forestry problems. This information was of great service to the landowners and resulted in an important movement toward reforesting work in the Northern counties.

Later when the untimely death of State Fish-culturist A. N. Cheney occurred, Mr. Whish took hold of the hatchery work and conducted it successfully up to the time when the State secured the services of Dr. Bean. During this period Mr. Whish received a silver medal from the St. Louis Exposition as a collaborator in the preparation of the large collection of New York State fishes then exhibited and now forming a permanent exhibit at the New York State House in Albany.

During recent years Mr. Whish has practically had charge of the preparation of the valuable annual report issued by the commission, and has contributed much interesting matter to its pages. He will remain in Albany for the present. His successor is to be Francis A. Willard, the secretary of the Democratic State League of which Commissioner Osborne is the head.

Fewer Wildfowl.

San Francisco, Cal., March 10.—*Editor Forest and Stream:* With the duck and quail shooting season at an end, most hunters have packed their guns and will turn their attention to other lines of sport until next fall, a few, however, planning to continue the season on bluerocks as soon as the trapshooting tournaments open. The duck season just closed was in many ways a rather unsatisfactory one, but weather conditions are to be blamed rather than a scarcity of birds. During the first few weeks of the season very warm weather prevailed and sportsmen with an eye of conserving game did not venture forth to kill unless facilities were at hand for preserving the birds secured. Hundreds, however, did not think of this and went forth to slaughter and the game secured was rendered valueless by the hot weather. Then for several months there was no rain and the ducks were thus kept away from many feeding places that formerly afforded good sport.

Early in January rains commenced to fall, but the downfall was so heavy and so incessant that for a long time but few ventured forth, and these found the webfeet visitors badly scattered. Just before the season closed there was a period of good weather and some excellent sport was enjoyed, but on the whole the season has been unsatisfactory. Many experts hunted through the entire season and on but one or two occasions secured limit bags, but this, of course, depended largely on the grounds over which they shot. Whether there is an actual scarcity of ducks here, or whether the incessant shooting of the market hunters has resulted in driving them away is still a question, but the fact remains that fewer ducks have been seen during the past season on the marsh preserves than in many years past. Market hunters operated during the season in great numbers, prompted by the excellent prices secured to make as large bags as the law allowed. From two counties in the State more than 10,000 ducks were shipped to San Francisco in two months, to say nothing of those sent to other places. Many changes to the present laws are being made with the idea of making it impossible for the market hunter to operate, and many other amendments are proposed, prominent among them is one which would reduce the bag limit to fifty birds a week, instead of twenty-five a day. That the market hunter is largely responsible for the scarcity of ducks in the marsh sections is reasoned by some who point to the fact that in certain districts where the hunters cannot operate successfully there are still plenty of birds.

In the overflow sections of the Sacramento and San Joaquin rivers, in the Tulare Lake country and in the Colorado River territory across the International boundary, the birds are still to be found in great numbers, indicating that their extermination is not a matter of the immediate future. The rapid settling up of the coast States, and of California in particular, is increasing the number of hunters and decreasing the extent of the shooting grounds, with result that new laws are urgently needed. The mere reduction of the bag limit is not looked upon generally as affording sufficient protection to the birds and a law prohibiting entirely the sale of duck and quail is advocated by many.

Following the closing of the active shooting season the Gustine Gun Club has elected officers, as follows, to serve during the ensuing year: J. M. McDonald, President; S. Snyder, Vice-President; Jack Linn, Secretary and Treasurer; Jack Hazlewood, Pete Ashcroft and Arthur Ehrenpfort, Directors. A change has been made in the club shooting days, and next season these will be Friday, Saturday and Sunday.

The Gabilan Gun Club, of Watsonville, Cal., is making attempts to clear its preserves of mudhens which have become so numerous that the ducks there have been crowded out. It is stated that the mudhens have eaten by far the most of the feed placed in the ponds for the ducks, and this brought about the decision to make away with the pests. At the close of the mudhen shoot, held recently, a sumptuous dinner was served by Mr. and Mrs. George Gray, but those who attended state that mudhen found no place on the menu.

A. P. B.

The Use of Game.

Bennington, Vt., March 5.—*Editor Forest and Stream:* In my opinion the suggestions made by the Game Preservation Committee of the Boone and Crockett Club are positively the most valuable contributions to the cause of preservation of our wild life which have been issued in a decade. I am in hearty sympathy with each suggestion because I am certain they are "sane, simple and scientific." They are in line and square with my personal ideas exactly. I will attempt to call attention to one particular suggestion.

"In some parts of New England great complaint has been made by farmers of the damage done to their crops and fruit trees by deer. * * * It may be quite possible to push protection to a point where it will become unpopular, so that the public favor may turn from them and hostile legislation will follow." All of which is precisely so, as witness our case here in Vermont. The deer became so numerous here in certain sections, and did so much damage to the farmers' crops, that the farmers presented a united front at the session of the Legislature in 1908 and caused to be enacted a law removing all protection to the does and affording practically none to the fawns. The result was, there was a wholesale slaughter of deer in the open season of 1909, during which time nearly 5,000 were taken. Of course if this had continued the deer would be exterminated in a short time.

But this was not the only setback the cause of preservation received from over protection. It caused the farmers to view all game laws in the light of suspicion and disgust. They opened up the old argument that they were compelled to support the game on their lands throughout the year for the purpose of supplying the city men with recreation, and they did not think the laws were fair and just. As a result they withdrew their advocacy of the cause and would give the wardens no aid in apprehending violators of the law. On the other hand the farmers appeared to be in sympathy with the violators and would do anything within their power to protect the latter class. Naturally this made the work of wardens doubly difficult. We have since learned by this experience that the farmers must be consulted before we enact any law to protect the game.

It has been the experience of the entire country that over protection acts as a boomerang to the cause, the returns to us in the way of most amazing hostile legislation. This can all be avoided by consulting the complainants in due time and making arrangements which are fair and just to them and their property rights, thus allaying their hostility before it is too late. Any system of protection by means of legal enactments must first take into account how it will affect those harboring and supporting the game upon their property. We must recognize that human rights take precedence of those of wild animals. As a rule, if the farmers are consulted in the spirit of friendship they are only too glad to co-operate in an effort to save our wild life, but they are sensitive and are sure to resent being ignored entirely in the matter.

For this reason, and many more that I might enumerate, it occurs to me that the above suggestion of the committee is extremely timely and should be well considered by all real sane advocates of the cause of preservation of our wild life, as distinguished from the sentimentalists who wish to preserve all wild animals at the expense of human progress. This latter class is doing the cause more harm than good by their extravagant ideas and measures, and I trust they will leave the center of the stage as quickly as they can.

Harry Chase.

National Forest Fire Losses.

Reports based on detailed field examinations made by the National forest officers, of the lands burned over in the forest fires of last summer in Washington and Oregon, which have been received by the United States Department of Agriculture, show that the National forest timber loss in these States is about 700,000,000 feet. This is somewhat less than was indicated by the provisional estimates made shortly after the fires. The reports also show the importance, as a means of protecting the forests against fires, of the efforts which are being made by the department to open new range to stockmen.

Of the National forests in Washington and Oregon, that on which the fires extended over the greatest area was the Colville, with 160,000 acres burned. The fires on this forest, however, were chiefly surface, which are far less destructive than fires which travel through the crowns of the trees. It is considered by the forest officers that the fires on this forest point clearly to the value, from the standpoint of fire prevention, of proper utilization of the range under regulated grazing. Large parts of this forest, and also of the Chelan, Okanogan, and other forests, are not used by stock because of their inaccessibility, although a good supply of forage is produced. The dry grass and other herbage both spread the flames and made them fiercer and more destructive than they would have been if the land had been grazed. One of the objects of National forest administration is to open all available range to the fullest use consistent with preservation of the carrying power of the range and protection of forest growth and water supplies.

Letting Dogs into the Woods.

NORWICH, N. Y., March 11.—*Editor Forest and Stream:* Assemblyman Shea, of Essex county, has introduced two bills which, if they or either of them, become law will operate to decrease and exterminate our stock of wild deer.

One bill provides that dogs and bitches may be harbored in any part of the Adirondack Park and used in hunting deer the last ten days of the open season in Essex, Warren, Franklin and Clinton counties. Section 79 of our present game law prohibits this and should not be changed if we care to keep what few deer are left in the Adirondacks.

The using of dogs during the last ten days of the open season will result in killing more deer than can be killed without the use of dogs during our present open season of six weeks. Formerly it was lawful to kill deer four months, from the first of August to the first of December, and it has been found necessary to cut the open season down to six weeks with some now advocating a further reduction to thirty days in order to save what deer remain.

When it was lawful to hound deer I had reliable information about four men who took dogs into the Adirondacks to run deer into a lake, and then rowing alongside the swimming deer and shoot them at close range. Within a week those four men returned home, bringing the saddles of nineteen deer, having left the fore parts in the woods to rot. Those four men could not have killed nineteen deer if they had still-hunted all winter.

Besides, dogs, like minks and weasels, are wanton killers and kill deer the year round if left in the woods, just as dogs kill sheep. The State paid thousands of dollars in bounties on wolves in order to get them out of the woods, and one dog will kill more deer than several wolves, as the latter kills to satisfy hunger.

Venison taken by still-hunting is sweet, prime and fit for eating; that taken by hounding is just the contrary. Deer shot after having been run by dogs are hot, inflamed and distressed with the poison of used-up tissue in their bodies and blood to such an extent that only a very small part of the blood will run out. Some persons are made sick by eating such venison. If our butchers ran sheep and cattle with dogs before killing and sold the meat, we would prosecute them for selling meat unfit for food and dangerous to life and health.

The other bill, introduced by Assemblyman Shea, provides that any citizen may, upon procuring a license, hunt birds, foxes, hares and rabbits in the proper season with dogs or bitches, but not of a breed used in hunting deer, the license fee being one dollar each.

It will be worse than a mistake if these two bills, or either one of them, become law. The first mentioned one would allow the keeping of dogs and bitches of all kinds and breeds in the Adirondack Park all the year, and many of them pursue and kill deer the year round, for dogs like to hunt alone and kill whatever game they can; besides which their owners could use them to run deer whenever they so wished, and an army of protectors cou'd not stop all of it, even if they really cared to stop hounding of deer. The only safe way is to retain our present law, which does not permit dogs or bitches to be kept or taken into forests inhabited by deer.

The second bill would let dogs and bitches into the park and other forests where we have deer for the ostensible purpose of hunting birds and small game, which would really result in much illegal hunting of deer, besides their death and depletion throughout the year, even though these words, "But not of a breed used in hunting deer" are included in the bill. Do not let those words deceive you, for I know of no breed of dogs which will hunt birds, foxes and rabbits that cannot be easily trained to hunt deer and do it very effectively.

First—Most dogs that will hunt foxes and rabbits, together with some dogs used for hunting birds, will hunt and pursue deer and will leave the smaller tracks for the larger when-

A FAITHFUL COMPANION.
Photograph by W. H. Shay.

ever chance permits. Further, any kind of a dog, including bird dogs and common curs, can readily be trained to hunt and pursue deer. The first law was against hounds and had to be changed to cover all dogs and bitches because they were used in place of hounds, and will be again so used if this bill becomes law.

The usual way of hunting deer in Florida is to go out on horseback with a pack of dogs to start the deer, which are shot from the saddle, the dogs being used to find and start the deer, just as bird dogs find and flush birds. I have thus hunted in Florida behind packs of dogs, no two of which were of the same breed, and at different times a bulldog seemed to be the most effective one in the pack, and this in company with a fine looking hound.

Second—If a dog chases a doe when snow is deep, she has small chance, and if she escapes with her life, she soon drops a still-born fawn and one life is lost. It takes only a short chase in the spring to bring the same result.

Third—Hundreds of deer dogs will get into the Adirondack Park under this bill, and our remaining stock of deer will rapidly decrease. We have shortened our open season for deer from four months to six weeks in order to save them from extermination. If the dogs are let in they will hunt and kill deer the year round. It will not answer if we care to keep our deer.

Besides, we should have these partial game refuges or shelter for game and birds. Such refuges have been provided in other parts, and we ought to have them in our State. Deer, partridges, foxes and rabbits naturally work toward the edges of our forests, and all except deer will spread out and away from the woods and help replenish covers in the farming sections.

It would be a rare experience in the Adirondacks to find a shotgun without its accompanying supply of buckshot cartridges. So do not be misled by the statement, "In permitting the use of bird dogs in the Adirondack preserves, the killing of deer will not be greater, as the bird hunter's weapon, a fowling piece with a load of 1⅛ ounces of small shot, would rarely if ever be effective if used on deer." Many deer are killed with shotguns and buckshot each year, and many more will be if dogs are let into the woods on any pretext whatever. Do not fall in with the mistaken idea that it will save human life if hounding of deer is allowed. On the contrary, it would send many more hunters into the woods during the time dogs were used, and would that much the more tend to loss of life. Having the open season from the 1st of October to the 15th of November, in order that hunting may be done after the leaves have fallen, when hunters can see further and more clearly, will help save human life.

It will be well for game clubs and associations, together with individuals from all parts of the State, to write their Senators and Assemblymen about these two bills, asking that the dogs be not let into the woods, and that what deer we have may be given even better protection than they had in the past.

CLARENCE L. PARKER.

GLENS FALLS, N. Y., March 6.—*Editor Forest and Stream:* Herewith we hand you copy of an amendment to Section 79, Article VI., of the forest, fish and game laws, together with copy of a letter to Hon. Franklin D. Roosevelt, chairman of the Senate forest, fish and game committee.

GEO. R. HARRIS,
CHARLES H. WILSON,
AND OTHERS.

The amendment provides that any citizen of the State owning or possessing a pointer or setter dog, upon the execution of a bond for $100, the registration of such setter or pointer dog, and the receipt of a metal tag for each dog so registered, which tag with a collar identifying its owner, shall be worn at all times while hunting, may during the open season for the same, pursue and kill the game birds of the State in all parts of the State where the presence and use of dogs are prohibited. The bond to be subject to the approval of the commissioner as to form thereof and sufficiency of sureties, shall be to the people of the State, conditioned that such owner or possessor of

pointer or setter dogs will not with same pursue, hunt or kill any other wild game in any part of the State where such pursuit, hunting or killing is prohibited, and while such bond is in force will not violate any of the provisions of the forest, fish and game law.

The letter of transmittal, bearing many signatures, says, in part:

"While we earnestly favor the passage of this amendment, we wish it to be distinctly understood that we are radically opposed to the use of hounds for hunting foxes and rabbits in the Adirondack preserves, believing that such use of hounds would simply be a cover under which deer would be dogged.

"This measure in no way or manner conflicts with the preservation of deer in the Adirondack preserves. The wing shooter, after paying the State license fee, should, under proper restrictions, enjoy the same privilege of hunting in the Adirondack preserves as the deer hunter. The amount of the bond is to be fixed by the commissioner, and he can make it large enough to prevent any possible violation of Section 79 relative to the dogging of deer. On the other hand it is, of course, discretionary with the wing shooter whether he takes out such license or not."

New York Legislature.

By a vote of 26 to 16, the Senate, on March 15, passed Senator Loomis' bill, removing the restriction against spring duck shooting on Long Island. The present law limits the open season to Jan. 10, and the Long bill extends the season until March 31. The bill, which has been defeated every session for the last seven years, was opposed vigorously by the up-State members on the ground that a return to spring shooting on Long Island would lead to the extinction of ducks in this State. The Democrats who voted against the measure, were Senators Bayne, Hardin, Loomis, Murtaugh and Roosevelt. The Republicans who supported the measure were Senators Emerson, Griffith, Ormrod, Platt and Travis.

The Assembly committee on forest, fish and game has reported favorably the Long Island spring duck shooting bill of Assemblyman Sheide.

Bills have been introduced as follows:

By Senator Coats, of Saranac Lake, a concurrent resolution proposing an amendment to Section 7, Article 7, of the State constitution in relation to the disposition and use of lands in the forest preserve. The amendment authorizes the Legislature to provide by general laws for the construction and maintenance of reservoirs under State control on such lands wherever the storage of water is necessary for municipal water supply for the canals of the State, or to regulate the flow of streams. This is the Coats-Merritt amendment which passed the Legislature last year, and if passed this year will be referred to the people for adoption this fall.

This amendment is opposed by the Board of Trade and Transportation, the Association for the Preservation of the Adirondacks and various other organizations interested in the preservation of the State's natural resources.

By Senator Burd, repealing, so far as it relates to Erie county, the provision of Section 66 to the effect that there shall be no open season for Mongolian ring-necked, English or other pheasants until October, 1914.

By Assemblyman A. E. Smith, appropriating $50,000 for the payment of the expenses for the enforcement of the fire provisions of the Forest, Fish and Game law.

By Assemblyman Brereton, prohibiting the taking of fish from the waters of Lake George by trolling from boats or vesseis propelled by any power other than hand power.

By Assemblyman Evans, making the open season for antlered male deer from Oct. 1 to Nov. 15, instead of from Sept. 16 to Oct. 31, in inclosed deer parks, and in the counties of Clinton, Dutchess, Essex, Franklin, Fulton, Hamilton, Herkimer, Jefferson, Lewis, Oneida, Saratoga, St. Lawrence, Warren and Washington, except in that portion of Oneida, Lewis and Jefferson counties lying westerly of the Utica and Black River Railroad. It makes the open season for such deer in Ulster county and in the towns of Cochecton, Tusten, Highland, Lumberland, Forestburg and Bethel, and that section of the towns of Mamakating and Thompson lying south of the town of Deer Park in Orange county, from Nov. 1 to Nov. 15, instead of from Oct. 16 to Oct. 31, as at present. It also limits to two the number of wild antlered male deer which any person may take in an open season, and prohibits the killing of female deer.

By Assemblyman Shortt, making the open season for hares and rabbits in Richmond county from Nov. 15 to Dec. 31, both inclusive, and providing that they may not be taken when snow is on the ground.

By Assemblyman Blauvelt, of Rockland, introducing a bill the same as was introduced by Senator Bayne on Feb. 23 in relation to the sale of game.

Assemblyman Merritt introduced on March 16 a concurrent resolution proposing an amendment to Section 7, Article 7, of the constitution in relation to the disposition and use of lands in the forest preserve. It is the same bill that Senator Coates introduced on the 15th.

Sparrow Hawks High Up.

New Orleans, La., March 18.—*Editor Forest and Stream:* Dr. H. F. Moore, of the Bureau of Fisheries of Washington, spent several days last week in New Orleans, and while here held a conference with the Game and Oyster Commission. Dr. Moore talked on a good many problems concerning the growth and culture of oysters, and gave the board a great deal of interesting information. The conference was executive, and nothing definite was made public. Dr. Moore made an inspection of Lake Borgne and Mississippi Sound. The local board is endeavoring to increase the oyster industry of Louisiana, and Dr. Moore was given a most cordial welcome.

Dr. A. K. Fisher, of the Biological Department in Washington, who has been here several days on a tour of inspection connected with his department, gave out a statement to the effect that he thought that the open season for killing ducks should be confined to a period not exceeding three months. He suggested an open season comprising November, December and January.

Dr. Fisher says that toward the end of February he finds the ducks nest and hatch out their young. The killing of ducks from the nest not only diminishes the supply, but hunting them has a bad effect. When a female duck is killed under these conditions it means the destruction of six or seven, as that number represents the eggs in the nest. He points out that no one would think of eating a domesticated fowl after it begins to sit on its eggs. The ducks should have a season of rest before they start on their pilgrimage north, and if they are hunted and harassed up to the moment they migrate, they will be in poor condition for the long pilgrimage. The duck open season in Louisiana is from early fall to March 15. It is probable that the sound advice given by Dr. Fisher will be seriously considered, and the game commission will ask the Legislature at its next session in 1912 to amend the law and shorten the open season.

Dr. Fisher stated that the Gulf coast furnished about 75 per cent. of the ducks in the United States, and the mallard duck is considered a delicacy and almost equals the canvasback duck. He spent several days at the Government experiment farm at Brownsville, Tex. The station has been troubled with rodents, and Dr. Fisher gave some directions looking to their destruction, and also on various other subjects. He left New Orleans for portions of Mississippi on his tour of inspection and study. He will return to Washington in a few days.

During the last few days a professional steeple jack painted several steeples here and repaired some high belfries. He announced that he found a great many sparrow hawks had nested in the belfries and high recesses in the steeples, and that he is sure these hawks feed on the English sparrows. He declared that this accounts for the diminution in the number of sparrows in several of the large cities. He states that these hawks are growing more numerous in the large cities, and he predicted that the time will come when the English sparrow will be almost run out of cities into small towns and villages.

F. G. G.

William's Mixed Bag.

The following figures have been published in the German sporting papers as the result of the Kaiser's shooting for the season, 1910: Sept. 6, Prökelwitz, 5 roebuck; Sept. 12-14, Pait, 2 bull elk and 1 calf, 1 roebuck; Sept. 16-19, Bellye, Karapancsa, Hungary, 9 stags, 1 roebuck; Sept. 24-Oct. 6, Rominten, 11 stags; Nov. 5, Oranienburg, 27 fallow bucks; Nov. 12-17, Donaueschingen, 97 foxes; Nov. 25, Neudeck, 629 pheasants, 3 hares, 1 various; Nov. 28, Rauden, 738 pheasants, 1 hare, 3 wild turkeys, 1 various; Dec. 9, 10, Springe, 5 fallow bucks, 66 wild boars; Dec. 27, Hinter den Communs (Potsdam), 43 pheasants, 1 hare; Dec. 29, Entenfang (Potsdam), 173 pheasants, 21 rabbits—in all, 1,842 head. His Majesty's total bag during his career as a sportsman is given as follows: 1,880 stags, 90 hinds, 1,768 fallow bucks, 98 does, 3,392 wild boars, 931 roebuck, 17,963 hares, 2,447 rabbits, 121 chamois, 439 foxes, 3 bears, 12 elk, 6 bison, 3 reindeer, 6 badgers, 1 marten, 108 capercailzie, 24 blackcock, 3 wild turkeys, 33,637 pheasants, 856 partridges, 95 grouse, 4 woodcock, 2 snipe, 87 ducks, 2 guinea fowls, 826 cormorants, herons, etc., 1 whale, 1 pike and 516 various. Our German contemporaries credit the Kaiser with a gross total of 65,332. According to our calculation this exceeds the tale by ten.—Field.

SEA AND RIVER FISHING

Going Again.

MUSKOGEE, Okla., March 11.—*Editor Forest and Stream:* Although the past few weeks of ideal summer weather conditions have been no decided contrast to that prevailing nearly all winter, the "fish-hook worm" did not develop in our system into a virulent stage until three Sundays ago, when, refusing to heed the jeers of the vast majority who fish according to the calendar, we armed ourselves with our lightest bait-casting rods and the usual array of wooden minnows and spinners and went forth.

During the quail season, Nabers, while hunting, had noted a fair sized creek; that is, the banks were of fair sized capacity, but alas, the protracted drouth had caused the once pretty stream to dwindle to a succession of holes, ranging from a damp spot to half a mile in length. The entire length of the creek is but fifteen miles. It is but thirty miles from Muskogee to the railroad station nearest it, after which there is a two-mile walk. Never before had an artificial lure of any kind been placed in its water. I have promised Nabers, the discoverer, not to reveal the name of this piscatorial haven, and while you are still my friend, I shall say to you as I have said to the many inquirers here that instead of telling where it is, I shall be glad to take you to it.

THE PROPOSED NEW AQUARIUM IN BATTERY PARK, NEW YORK CITY.

If built as planned, the present floor space will be trebled, giving more room for exhibits and the greatly increased attendance, as well as for offices, a lecture hall and a library.

Arrived at the edge of the hole which confronted us when we first reached the creek, we experienced the customary erratic heart action annually incidental to the inaugural effort. I have never understood just what a bated breath is, but something similar weighted ours as the very first cast was made, and if it was bated, it proved for that cast, and for several more to be the wrong kind of "bate." Mind you, we did not know there were fish in this water; it had merely looked good to Nabers, and we were enthusiastic enough to go out there, taking a chance. Hope shrinking and a magnified prospect of spending a dreary day in a grassless, leafless open country, we rather silently stumbled along the dry, rocky bed to a much larger pool of water. Naber's first cast there was almost tournament work in its accuracy, with a dead treetop the target. A guttural and suppressed "Gee!" and then as the fish broke water, "S-a-a-a-y!" and still later, as a two-pound big-mouth bass lay on the rocks, with eyes glaring and dorsal fin bristling, "I judged it right, after all." Good old Nabers; he certainly had, as but a few minutes afterward I helped to prove by bringing in on a homemade, chicken feather, treble hook a striped bass weighing about one and a half pounds. The shrinking process in hope had ceased; the magnifying effect on the local topography was displaced by beautiful shrubbery more artistic than that of world-famed gardens, and the vast prairie was knee deep in blooming alfalfa.

About this time followed what we expert grammarians term "coarse work." Shut up in an office since last summer's fishing in Colorado, I had lost nearly all sense of distance. I could not put the lure within three feet of the opposite bank without dropping it in the section road beyond. Therefore, I confined myself to distance casts and developed the fact that that creek would produce bass against tradition right from its center. Later in the day, however, I essayed some proper work and was rewarded by striking and landing one weighing over two and a half pounds. Nabers had four, one of which was but a fraction under the weight of my largest. When we had reached a point which we judged to be about two miles from where the creek empties into the Grand River (Neosho River on a'l maps), I had seven, none under eight inches in length, and had put back two.

That part of the scenery just ahead is always more interesting, and that part of a stream untried and unseen attracts with impelling force. We had not fished all the way to the Grand River, and that stretch of water appealed so strongly that with another companion, Ewing Adams, I went again the following Sunday. On this occasion, to be true to the traditions of his tribe, not one bass struck in the holes from which they had been taken the previous Sunday. And still further maintaining his reputation for exaggerated erraticism, he reversed his action in the other holes. Habitually I am loth to change lures for bass; I could expound with more verbosity than lucidity as to my reasons, and merely state the fact. There was no reason other than that the day was calm, which is itself remarkable here, why I put on a double spinner much lighter in weight than the minnows. Therefore, that does not prove that the fish would not have struck at a minnow, as Adams argued, because it was his first effort at bait-casting and he had acquired none of the art which contributes almost entirely to successful catches. Nevertheless, they wanted the spinner, or did not want it, which makes no difference, because they strike it in either event.

I do not mention now that the rod I was using is a four-ounce six-strip split bamboo, because I think I performed a creditable feat by not breaking it in the struggle, but to give an idea of the real, genuine element of chance, known as sport, which entered into the situation when I felt that vicious jerk as if the lure had fouled a running dog. It was one of those moments in which I invariably am blind to all surrounding objects except the water in front of me.

While this particular bass of mine did not show the stamina I have seen in some, yet during the few minutes he held out he described about all the angles and curves known to geometrical science. I judged it at the time to weigh four pounds, but next day, eighteen hours afterward, it recorded but three pounds one ounce. A contribution to the loss in weight was its loss of blood when I killed it immediately after landing it.

This memorable day was replete with exciting contests; one (estimated) of three pounds, two of two and a half and six of two pounds and under. Four were allowed to free themselves without being landed, because they appeared to be under size.

"I'm goin' again," too.

PAUL H. BYRD.

A Nomadic Angling Family.

Two years ago the three of us—Wife, Girl and I—took a rather extended tramp through the wilds of Marinette county, but last year my health did not warrant such strenuous exercise, so we cast about in our minds for an easier way to see the wilds.

After spending some time in useless discussion we hit upon the following plan: to reduce our camp outfit to the absolute essentials and travel by train through the wilder portions of the State, stopping off wherever trout fishing promised to be good, or fancy might dictate. The uncertainty of the plan, the possibility of stumbling on good fishing, and the chance that we might have what Girl called a "sure enough adventure" before the end of the trip led us to adopt the idea. The next question was, what portion of the Badger State to visit. We learned that the northern half of the State offered unlimited opportunities for such a trip. From almost every town to which we wrote for information we would receive some such word as, "Fishing conditions good and country wild enough for your purpose," so the form of the problem changed; how should we choose among so many attractions? Finally we decided to go to Armstrong Creek. This stream empties into the Peshtigo River, and we already knew something of the size and gaminess of the rainbow found in the Peshtigo waters. So our plan was to journey north from Green Bay over the Green Bay and Saunders branch of the Northwestern to St. Andrews where the Soo Line crosses, then journey east over that line as far as Armstrong Creek and follow its banks down. The territory was new to us and we were well aware that probably we would miss some good fishing and leave the train at points where there would be no fishing at all, but that uncertainty added to the attractiveness of the plan. We held ourselves free to diverge from this plan as occasion might seem to require.

Our outfit is the result of a process of selection and elimination which has extended over fifteen years of migratory camping. Each year we make some slight change, always with the idea of reducing weight and bulk. The article which is used only once or twice on a trip is left at home the next time. We have discovered that actual necessities are few, and that luxuries are many. Our outfit was as follows:

1 7½ ft. x 7½ ft. silk canoe tent.
2 ten-pound wool blankets.
2 light cotton blankets.
1 1½-pound camp axe.
1 folding 3A camera and eight rolls film.
1 steel tripod, telescopic.
1 pistol (luxury); 1 box shells.
3 trunk rods, reels, fly-books and one canvas creel.
1 folding landing net with 18-inch handle.

Our culinary outfit consisted of the following articles, all of aluminum:

1 folding baker.
2 kettles, to nest.
1 fry-pan.
4 plates.
3 cups.
1 pan.
Knives, forks and spoons for three.
2 friction top cans for bacon and butter.

We carried little food, as we did not expect to be out of reach of towns for any great length of time, but such staples as bacon, tea, coffee, butter and a few other things regarding the quality of which we are somewhat particular we took from home.

Our personal outfits consisted of one suit of duck clothing and change of underclothing. Each carried a heavy sweater, for there is nothing more comfortable on a cold night or when it rains than a warm sweater. We did not carry changes of shoes, which was a mistake, though each had rubbers. There were several little articles of personal equipment which we carried in our pockets, not important enough to mention, but which added greatly to our comfort. Each had a little bag with name written on the outside in which were note books and pencils, reading matter and other little odds and ends which our personal idiosyncrasies demanded. I carried a simple tackle repairing outfit, Wife some fancy work, and Girl a miniature doll and bits of cloth from which to make dresses. Thus we fortified ourselves against the possible rainy day. We secured an acetylene lamp, but owing to the weight of the carbide, rejected it and carried candles instead. The folding candle lantern we left at home, a bit of candle thrust into a cup filled with sand serving as well.

When we came to make up our packs, Wife had twenty-five pounds consisting of the cooking outfit and a day's food. Girl carried the camera and tripod in the canvas creel, but the next time we go on such a trip she shall be provided with a small rucksack, as the side pack was very bothersome. Another thing, next time Girl shall be provided with a camp suit like her mother's. She has worn her boy's suit for the last time. My pack weighed in the neighborhood of 100 pounds, sometimes more and sometimes less, as the supplies increased and diminished. I have tried many packs and have come to the conclusion that my home made affair with its surcingle straps is the most comfortable, commodious and satisfactory pack made. If the reader is interested I will gladly tell him how my pack harness is made. For each of the various articles of food we provided a strong sack with the contents plainly lettered on the outside; therefore, when we wanted salt we were not annoyed by getting hold of sugar or vice versa. While on the matter of sacks let me say that a good rule for the camper is a sack for everything and everything in its sack. As an illustration, knives, forks and spoons loose in the cooking utensil sack are hard to find, but are always accessible in a little bag by themselves. Articles like kettles and fry-pan must be provided with cases in order to prevent them from smutting everything in the pack.

The morning of Aug. 12 we boarded a northbound freight train, for at the last moment Wife refused to face conventional travelers. She insisted that she would not "care a bit" once she was beyond the ken of those who knew her, but when she might meet women with whom she had pink-tea'd"—well, you know how it is yourself. The locomotive shrieked hilariously, there came a jerk that sent Girl flying from the seat and piled our packs in a corner of the caboose, and we started. The train crew were all attention and kindness, evincing no vulgar curiosity, and this was the attitude of every train crew with which we had to do during the entire trip. After consulting the conductor we decided to stop at a side track called Anderson's Spur where we were informed that a fairly good trout stream was to be found. It was Friday and we desired to find a quiet spot where we would be away from folks and could rest over Sunday.

At last, after what seemed an interminable time—for a way freight does not travel as fast as the Twentieth Century Limited and stops more often and long—the conductor informed us that we were nearing our destination. The locomotive uttered a short, sharp word of warning, the caboose bounded up and down in agony as the air was applied, the "boys" jumped down to help Wife and Girl to the ground—for of course there was no platform—and I kicked the packs off the step. The conductor waved his hand, the engineer responded with two blasts from the whistle, the crew sprang on board, and, as the train got under way, shouted all manner of good advice and kind wishes. As the caboose careened around a bend they were all standing on the rear platform, waving their hats.

Sitting down on a pile of ties, we looked about us. The view which we beheld was a lesson in forest conservation. As far as we could see in any direction were bare, denuded hills, the result of our destructive methods of lumbering. Dead grass, brown and sere, waved in the hot wind, for the country was still suffering from the drouth which made 1910 famous. Altogether it was a dreary prospect, yet the very dreariness had its attractions for us who were folk weary. Some distance up the track was a half dismantled log shanty, and shouldering our packs we made our way toward it, looking for a place to set up the tent. Following the track we crossed the creek of which we had been told, a rollicking rapid stream, and we felt better. Though high and dry, the immediate vicinity of the shanty did not offer a very inviting camp site, for the dry grass was too suggestive of fires. Leaving my companions to gather the raspberries which grew in profusion along the railway embankment, I pushed on. Half a mile above the spur, the creek crossed the railway again, and there, well back from the right of way, I found an ideal camping ground shaded by hemlock trees.

Why is it that when on such a trip it must rain or threaten rain the first day out? Soon after my return to the others, while we were feasting on berries, thunder began to mutter and grumble in the distance, and we indefinitely postponed the berry festival. We pitched our tent amid the tall hemlocks close to the creek, and when the wind was not making music among the hemlock branches we could hear the gentle murmur of the water. It was well past the noon hour when we sat down to our first meal in the open.

After dinner Wife said, as she gathered up the dishes preparatory to washing them in the creek: "If anything should happen to call us back home our friends would find it rather difficult to find us, would they not?"

"Oh, no," I carelessly answered, for such a thing has never occurred on any of our trips, "they could reach us easily enough, but we will trust that no necessity will arise for their doing so."

Assembling my rod I started down the stream to investigate its possibilities before the threatened storm made fly-fishing impossible. Imme-

diately upon stepping into the stream I discovered that the water was exceptionally low, the marks upon the rocks indicating that the mean level was a foot above where it then was. I was thus prepared for indifferent fishing, but not for the a most absolute failure that was my portion. Though I handled my flies to the best of my ability, only a few small trout came to my creel, though good fish were there, for I caught fleeting glimpses of them as they darted through the clear water. That night we had trout and chubs for supper. Chubs from the cold water of a trout stream are not bad eating, provided you cannot secure a more worthy fish, and know how to prepare them. They should be soaked in salt water two or three hours—even longer will do no harm—then rinsed and wiped dry, rolled in bread or cracker crumbs and dropped into hot bacon fat. When so treated they are positively delicious.

The first night in the tent when on a camping trip is an event; many pleasant nights follow, but none are quite like the first one. The play of the moon shadows upon the roof of the tent, the mysterious wood sounds, the authors of which no man knoweth, the low, ethereal whisper of the imperceptible breeze through the thick pine branches sounding not unlike the lapping of distant waves, the sudden rollicking song of some wakeful night bird, the dog-like voice of a foraging owl and the constant, monotonous chorus of the frogs—such are some of the sounds which conspire to keep us awake the first night in camp. Never again are we quite so impressionable, though we remain in the woods a full month. It is the first night that ministers to the soul of the weary worldling as no other nights during the trip do or can. No matter if we are seasoned campers we know that something miraculous will happen the first night. It is one of the unalienable rights of the outdoor dweller. O. W. Smith.

[To be continued.]

Fishermen's Club of Chicago.

Chicago, Ill., March 18.—*Editor Forest and Stream:* The fourth annual dinner and campfire of the Fisherman's Club of Chicago will be held at the Auditorium Hotel, March 31, at 6:30 P. M. sharp. Judge E. B. Belden, of Racine, Wis., will be toastmaster. The following men will take up various themes apropos to angling and nature's undefiled charms: Chas. E. Elliott, Elgin, Ill., philosopher and accomplished fisherman; Dr. Ernest L. Hayford, Chicago, piscatorial bibliophile; Cy. Warman, Montreal, Can., litterateur; D. C. F. Browne, Racine, Wis., tackle expert; Col. Dan B. Starkey, Milwaukee, Wis., Editor Outer's Book; Harry D. Noyes, Chicago, raconteur, fisherman; Edward B. Barr, Oshkosh, Wis., Hudson's Bay canoeist, journalist, lecturer; Benj. F. Fiegel, Warren, Ohio, champion long distance caster; H. Wheeler Perce, Chicago, President of National Association of Scientific Angling Clubs; Grant D. Harrington, Elkhorn, Wis., naturalist; J. V. Quarles, Jr., Milwaukee, Wis., canoeist, fisherman, writer; Neal Brown, Wausau, Wis., lawyer, sage, philosopher, fisherman.

There will also be songs, instrumental music, toasts, moving pictures, sentiment, repartee, etc. Covers, $2; informal.

Geo. Henry Cleveland, Sec'y.

Fishermen's Plaints.

New Orleans, La., March 18.—*Editor Forest and Stream:* The civil district court has rendered a decision in the case of the State against the Bayou Johnson Oyster Company to the effect that the State is the owner of 1,623 acres of oyster lands in Bayou Johnson, Tucker Bay and various other small bodies of water. Judge King held that the title to these lands is in the State, even though they have been apparently alienated. The court further holds that the State cannot sell oyster lands, as they are held in trust for the people. The Johnson Company claimed title to the oyster lands by purchase from the levee board, said board having acquired them from the State as a gift many years ago. The court says the lands may be leased to private parties or corporations, but not sold and a title made to them, and that all such sales are void.

Fishing has been somewhat poor during the last week on account of sudden changes in the weather. A number of fishermen spent Saturday and Sunday at various resorts and report only fair luck. Green trout, perch, speckled trout and redfish were landed, but the waters appear to be a little too cold for successful fishing, although the weather for the most part was very warm until the cold snap of the past few days. Shrimp are becoming more abundant, and there will be no trouble in securing bait. Several of the clubs at the Rigolets, Chef Menteur, Lake Catherine, Lookout and other fishing points have been repaired and put in good condition for the season and the visitors. A number of business men will move their families over to Waveland, Pass Christian, Bay St. Louis, Gulfport and other places on the Gulf coast shortly for the summer and will spend one or two days each week fishing.

The professional fishermen are protesting loudly against the law in this State which prohibits fishing in salt waters from May 15 to Aug. 1. They are also protesting against the ruling of the game commission prohibiting the shipment of salt water fish to Louisiana from Mississippi and Alabama waters during the closed season. The commission has passed an order permitting salt water fish to be shipped into Louisiana from Texas and Florida points from May 15 to Aug. 1. It is contended by the fishermen and dealers that this will be a great hardship on local people engaged in the fishing business. It will cost a good deal more to get fish from Texas and Florida waters than from Louisiana, Mississippi and Alabama, and the consumer will have to pay the increased cost.

Dealers and fishermen will appeal to the Progressive Union to help them in their fight against this "iniquitous law." They claim that there are 4,000 fishermen engaged in the business in Louisiana, and practically all of them are poor and dependent upon their labors for a livelihood for themselves and families. If the law is rigidly enforced, it will cause much poverty and scores of families will suffer. It seems probable that the right of the game commission to make a distinction between various public waters, and to say fish from any body of water shall not be shipped into Louisiana, will be contested in the United States District Court. One of the morning papers editorially comments on this phase of the question and expresses a doubt in regard to the legality of the game commission's ruling permitting fish to be shipped to Louisiana from certain waters and prohibiting fish from other waters. This paper advises that the subject be taken to the courts for a judicial determination of the question. It also contends that all public bodies of water off the coast of any of the States belongs to the United States so far as jurisdiction is concerned. F. G. G.

Fishing Fever.

Minneapolis, Minn., March 18.—*Editor Forest and Stream:* Welcome are these hours when one can take down the rod and go over the tackle laid away carefully the year before. The call of the stream grows into one's heart, and the longing is perhaps even more pronounced than is the hunting fever. The advent of spring is sure to light the spark that has been smothered during the winter months. One longs for the day when he can draw on the hip boots, don the light coat with the many pockets and with rod in hand, make for the place where the waters gurgle and the rapids flash. The day will soon be here when we may realize all this. We shall soon be whipping the clear brooks and the lakes for trout and bass; the still-fisherman will row across the silent waters and fill his basket with the sunfish and crappies at that place where on the year previous he spent many a day of sport close to nature. Under whatsoever circumstances, we will all have our share of it, and we feel supremely glad in reviewing the prospects of the future. We can forgive the relentless winter that deprives us of the joys of the stream in this moment of returning life and warmth. The mind grows keen and the finger moves at the thought of the line buzzing through the guides; we again see the lordly king of the brook rise from the depths and with his gills distended, vainly try to shake out the cold and relentless hook.

Prospects for the season in Minnesota are as yet uncertain, but I have every hope that it will be better than the past summer when conditions were certainly not of the best. But last year was an exception and I think no such hard luck will visit on us this year. The lakes and streams are very low, but that will not interfere with fishing to any extent. Minnesota offers a great deal in the way of fishing. It is a State with a reputation behind it and each year thousands of fishermen from all over the country come here to try their luck in the waters. Black bass are numerous and other species common.

Robert Page Lincoln.

San Francisco Fly-Casting Club.

San Francisco, Cal., March 10.—*Editor Forest and Stream:* At a meeting of the directors of the San Francisco Fly-Casting Club, held this week, it was unanimously decided that application be made on behalf of this club for the holding of a World's Fair Angling Tournament, under the auspices of the National Association of Scientific Angling Clubs, in San Francisco, during the exposition in 1915.

This application has been regularly made, and I bespeak for this club that the proposed tournament will, when held, prove to be the greatest assemblage of noted fly-casters and anglers ever brought together. A special effort will be made to interest our angling friends in all parts of the world in this coming great event.

D. J. Cooper, Sec'y.

YACHTING

Some News and a Little Gossip.

THE races for the Manhasset Bay Challenge Cup, which are scheduled to begin on July 10, promise to be the feature of this season's sport. This cup is held by the American Y. C., having been won last year by Stuyvesant Wainwright's Cara Mia. The Seawanhaka Corinthian, Manhasset Bay, Indian Harbor, Corinthian of Marblehead and Eastern yacht clubs have challenged, and it is expected that still another challenge will be received from the Boston Y. C. This means that three of the Eastern 31-raters will come around the Cape and meet in local waters four of the same class owned here, and of these four, three are new boats. There are three new boats building for this class for Eastern yachtsmen from designs by George Owens. Commodore William H. Childs, of the Indian Harbor Y. C., is having one built at Herreshoffs, a syndicate of the Seawanhaka Corinthian Y. C. has ordered a Herreshoff boat, and a syndicate of the Manhasset Bay Y. C. has ordered a boat from Gielow designs. It is said, too, that Gardner has an order for one of these boats which, if the rumor is true, will undoubtedly take part in the cup race.

On Gravesend Bay Class Q will be boomed this year with two new boats, one from Gardner designs for Gherardi Davis, and one from Mower designs for a yachtsman who at present wishes to be unknown. This boat will be ready for launching next month and will be brought to Gravesend Bay in May. The Grayjacket champion of last season, the Soya and Spider, too, of last season's boats will be in commission, and the racing should be of the best.

It is as well that the small classes promise good sport, as the outlook in the larger classes is not at all good. There have been more rumors about the Westward having been purchased, but no definite announcement has yet been made. It is hoped by all that the crack schooner of last year will be brought back to these waters to meet Elena, building at Herreshoff's for Morton F. Plant.

In the large class of schooners there will be Enchantress and Karmina, and these two boats will be raced in some events and possibly in some long distance races with Atlantic. The 65-footers will not be in commission, according to the present plans of their owners. H. F. Lippitt, owner of Winsome, is now United States Senator for Rhode Island, and he will be too busy to attend to racing this summer. G. M. Pynchon has recently married and will not have Istalena in commission. With these two not in racing trim, it is hardly likely that Cornelius Vanderbilt will fit out Aurora. In the next class Rear Commodore Daniel Bacon will have Avenger in commission, but unless someone buys Shimna, now laid up at Herreshoff's, there will be nothing for that yacht to race against.

The Larchmont Y. C. has at last joined the Yacht Racing Association of Long Island Sound. Now all the racing clubs on the Sound are in the association. For various reasons the Larchmont Club has always objected to the association as far as that club was concerned, and while the schedules have been arranged without any conflicting dates, there has been a feeling among other Sound clubs that Larchmont was receiving more consideration than it was entitled to. The trouble has been smoothed away largely through the influence of Commodore Leonard Richards and of Horace E. Boucher, chairman of the regatta committee.

The schedule of races arranged by the Sound association is a good one, and the contests will give a variety of sport. The Indian Harbor Y. C., of which W. Burton Hart is regatta committee chairman, has arranged for a cruising race from Greenwich to New London to take the yachts there for the Harvard-Yale boat race, and the Seawanhaka Corinthian Y. C. has arranged a race to the westward after the race. At the same time the Eastern Y. C. will start a race for big yachts from New London to Marblehead. The New York Athletic Club will have its usual races through the Sound to Block Island, and other long distance events will be announced by the New Rochelle, Manhasset Bay and other clubs.

The season will end with a championship race revived by the Indian Harbor Y. C. This race is to determine the individual champion of the Sound and will be similar to the Wilson cup races of the lower bay. When first inaugurated some years ago it was suggested that the race should be an annual affair, a different club managing it each season. The Indian Harbor Club held one race, and then as other clubs did not take up the plan, it was dropped. Now it is to be a feature again. All yachts 40 feet and under will race in one class, with full time allowance.

A most attractive yacht list has been issued by Seaman & Huntington. It contains 132 pages of handsomely illustrated matter and gives pictures and details of all sorts of pleasure craft from the small catboat or power skiff to the big cruiser. The list is in great demand because it tells so much about yachts that is of interest to all.

Under the auspices of the Philadelphia Y. C. it is proposed to devote the week of May 29 to June 3 to a race week on the headwaters of Chesapeake Bay. Each day will have its special events. All will be held within sight of the rendezvous at Fords Land.

All representative clubs of Philadelphia, Baltimore, Chesapeake Bay and coast resorts will be invited to participate. At a meeting of the club held at Essington, a preliminary plan was presented, and Commodore Barth authorized to appoint committees. Details will be formulated at once and yachting given a newer and stronger impetus.

The customary "flag day" on the Delaware at the Philadelphia Y. C. house will be held Saturday, June 17.

The Holyoke Y. C. has elected the following officers: Commodore, C. E. Cowan; Vice-Commodore, J. E. Bardwell; Rear Commodore, T. J. Morrow; Purser, George Webster; Finance Committee, Lewis Warner, C. K. Fiske and J. A. Jones; Cruise Captain, S. E. Whiting; Fleet Captain, J. Bertram Newton; Fleet Surgeon, Sumner Whitten; Regatta Committee, Lewis Warner, J. V. Bardwell and L. F. Hayward.

Commodore W. H. Childs, of the Indian Harbor Y. C., has made these appointments: Fleet Captain, Frank Bowne Jones; Fleet Surgeon, William Burke, M.D.; Fleet Chaplain, the Rev. William V. Waller.

Sound Racing Schedule.

THE annual meeting of the Yacht Racing Association of Long Island Sound was held at the Hotel Astor last week. Prior to the meeting of the delegates, the Executive Committee had a short session and elected the Larchmont Y. C. to membership. This club has always held out for its so-called independence, and while it has not been allied with the association, it has worked with it in arranging dates, etc. Now there is harmony among the Sound clubs which will help the sport.

These officers were elected for the year: Stuyvesant Wainwright, American Y. C., President; James W. Alker, Manhasset Bay Y. C., Secretary; Victor I. Cumnock, Seawanhaka-Corinthian Y. C., Treasurer; W. Butler Duncan, Jr., Charles P. Tower, H. A. Jackson, Jr., and E. Burton Hart, Executive Committee.

The racing schedule was adopted. The season will open on Decoration Day and close with a championship race, all yachts in one class on Sept. 23. The schedule is as follows:

May 30—Harlem Y. C. annual; Bridgeport Y. C. spring.
June 3—Knickerbocker Y. C. annual.
June 10—Manhasset Bay Y. C. annual.
June 17—Larchmont Y. C. spring.
June 22—Seawanhaka-Corinthian Y. C. special classes.
June 23—Seawanhaka-Corinthian Y. C. special races.
June 24—Seawanhaka-Corinthian Y. C. annual New York A. C. Block Island race.
June 28—Indian Harbor Y. C. race to New London.
July 1—New Rochelle Y. C. annual and ocean races.
July 3—American Y. C. annual.
July 4—Larchmont Y. C. annual; Hartford Y. C. annual.
July 8—Riverside Y. C. annual.
July 10—American Y. C. Manhasset Bay challenge cup races.
July 15—Larchmont Y. C. race week.
July 25—Larchmont Y. C. race week close.
July 29—Indian Harbor Y. C. annual.
Aug. 5—Horseshoe Harbor Y. C. annual; Corinthian Y. C. of Stamford annual.
Aug. 12—Huguenot Y. C. annual; Bridgeport Y. C. annual.
Aug. 19—Stamford Y. C. annual.
Aug. 26—New Rochelle Y. C. special; Northport Y. C., annual.
Sept. 1—Seawanhaka-Corinthian Y. C. special.
Sept. 2—Seawanhaka-Corinthian Y. C. fall.
Sept. 4—Larchmont Y. C. fall; Norwalk Y. C. annual; Sachem's Head Y. C. annual.
Sept. 9—Indian Harbor Y. C. fall.
Sept. 16—Manhasset Bay Y. C. fall; Larchmont Y. C. special.
Sept. 23—Indian Harbor Y. C. championship race.

Massachusetts Bay Schedule.

THE annual meeting of the Yacht Racing Association of Massachusetts was held last week at the Boston Y. C. house at Rowe's Wharf, Boston.

The reports of the officers showed that the association is in fine condition, and the following officers were elected for the 1911 season: Charles Francis Adams 2d, President; B. S. Permar, Vice-President; A. T. Bliss, Secretary; I. H. Willey, Treasurer; C. F. Adams 2d, A. T. Bliss, B. S. Permar, H. W. Robbins and Ernest Hendrie, Executive Committee.

Hereafter, in figuring the season's championships the yachts in each class will be considered as starting in at least 80 per cent. of the races of the yacht having the greatest number of starts.

It was voted that the association indorse the open squadron run of the Lynn Y. C. from Bass Point to Marblehead on Aug. 6.

In the coming season's racing the Cohasset Y. C. will give a Y. R. A. open race for the first time. Another change in the schedule is that the Lynn Y. C., which since the formation of the association has always had Labor Day, will this year give its open regatta off Bass Point, Saturday, Aug. 5. The season's schedule, the following dates except July 4, Aug. 7, 8, 9, 10, 11, 17, 25, 29 and 30 being Saturdays:

May 30—South Boston Y. C., Y. R. A., City Point.
June 3—Boston Y. C., Y. R. A., City Point.

June 3—Mosquito Fleet Y. C., Y. R. A., City Point.
June 10—Corinthian Y. C., club.
June 17—Boston Y. C., Y. R. A., Hull.
June 24—Corinthian Y. C., ocean race.
July 1—Cottage Park Y. C., Y. R. A., Winthrop.
July 1—Eastern Y. C., special race.
July 4—City of Boston, open, City Point.
July 4—Eastern Y. C., start of cruise.
July 4—Corinthian Y. C., open, P. M.
July 8—Corinthian Y. C., club.
July 15—Columbia Y. C., Y. R. A., City Point.
July 15—Corinthian Y. C., club.
July 15—Boston Y. C., start of cruise.
July 22—Cohasset Y. C., Y. R. A.
July 22—Corinthian Y. C., club.
July 29—Corinthian Y. C., club.
July 29—Squantum Y. C., Y. R. A.
July 31—American Y. C., Y. R. A., Newburyport.
Aug. 5—Lynn Y. C., Y. R. A., Bass Point.
Aug. 6—Lynn Y. C., open squadron run, Bass Point to Marblehead.
Aug. 7—Eastern Y. C., special open.
Aug. 8—Boston Y. C., Y. R. A., Marblehead.
Aug. 9—Corinthian Y. C., midsummer series.
Aug. 10—Corinthian Y. C., midsummer series.
Aug. 11—Corinthian Y. C., midsummer series.
Aug. 12—Corinthian Y. C., open.
Aug. 17—Gloucester Y. C., Y. R. A.
Aug. 19—Annisquam Y. C., Y. R. A.
Aug. 19—Winthrop Y. C., Y. R. A.
Aug. 25—Boston Y. C., Y. R. A., midsummer series.
Aug. 26—Quincy Y. C., Y. R. A.
Aug. 28—Hingham Y. C., Y. R. A.
Aug. 29—Boston Y. C., Y. R. A., midsummer series.
Aug. 30—Boston Y. C., Y. R. A., midsummer series.
Sept. 2—Wollaston Y. C., Y. R. A.
Sept. 4—Open.
Sept. 9—Open.
Sept. 10—Y. R. A. rendezvous, Hull.

The Lipton Honor Shield.

AT the annual dinner of the Yacht Racing Association of Massachusetts last week the honor shield presented to the association by Sir Thomas Lipton was formally presented to the association by Bryan S. Permar and accepted by Judge Louis M. Clark. This shield is to be a perpetual record of racing in the association classes. It is a massive piece of bronze, and on small silver shields bears the records for past years and on similar shields records of years to come will be added.

Sir Thomas Lipton was elected an honorary member of the association. This shield will be valuable as a record of each year's racing, and in order that it may be complete the winners each season since the association first regulated yacht racing, in 1896, have been engraved on the trophy. These records are as follows:

1896.
25-30-Foot Class—Ida J., F. E. Beckman.
21-25-Foot Class—Gleaner, F. O. Wellington.
18-21-Foot Class—Arab, W. F. Scott.
21-Foot Knockabout Class—Cock Robin, Chas. S. Eaton.
15-18-Foot Class Alpine, C. J. Blethen.
Under 15-Foot Class—Elsa, H. M. Crane.

1897.
Cabin Class, 24-49-Foot, Low Waterline—Ida J., F. E. Beckman.
Open Class, 20-24-Foot Class—Hoodlum, A. H. Higginson and R. Boardman.
Cabin Class, 20-24-Foot Class—Muriel, Herbert N. Nute.
21-Foot Knockabout Class—Goslin, F. O. North and Louis M. Clark.
Open Class, 17-20-Foot Class—Rooster, Chas. F. Adams 2d.
Open Class, Under 17-Foot—Vitesse, Charles D. Mower.

1898.
30-Foot Cabin Class—Meemer, R. C. Nickerson.
25-Foot Cabin Class—Hermes, A. W. Chesterton.
21-Foot Class—Privateer, A. F. Schaaf.
21-Foot Raceabout Class—Jilt, W. O. Gay.
21-Foot Open Class—Bud, S. N. Small.
18-Foot Open Class—Duchess, Hayden, Blanchard & Parker.
15-Foot Open Class—Vitesse, E. H. Clapp.

1899.
30-Foot Cabin Class—Meemer, R. C. Nickerson.
25-Foot Cabin Class—Hermes, A. W. Chesterton.
21-Foot Cabin Class—Arab IV., W. F. Scott.
21-Foot Raceabout Class—Pirate, B. B. Crowninshield.
21-Foot Open Class.—Heiress, Charles Hayden and A. H. Parker.
18-Foot Open Class—Dauntless, Benner and Patten, tied with Perhaps, J. E. Robinson.

1900.
25-Foot Cabin Class—Flirt, F. W. Fabyan and T. M. McKee.
21-Foot Cabin Class—Harriet, L. T. Harrington.
21-Foot Open Class—Hostess, Henry M. Faxon.
18-Foot Open Class—Dauntless, Benner and Patten.
15-Foot Open Class—Vitesse, Walter J. Coombs.

1901.
25-Foot Open Class—Thordis, W. U. Foster.
25-Foot Cabin Class—Calypso, A. W. Chesterton.
21-Foot Cabin Class—Mildred II., S. P. Moses.
18-Foot Knockabout Class—Malillian, Bryan S. Permar.
18-Foot Open Class—Fantasy, J. and W. Allerton.
15-Foot Open Class—Vitesse, Walter J. Coombs.
*25-Foot Cabin Class—Hermes, A. W. Chesterton.
*21-Foot Cabin Class—Usona, Elmer E. Prior.
*18-Foot Knockabout Class—Kittywake, H. M. Jones.

1902.
25-Foot Cabin Class—Calypso, A. W. Chesterton.
21-Foot Cabin Class—Little Haste, T. J. Lothrop, Jr.
21-Foot Raceabout Class—Tunipo, C. A. Cooley.
18-Foot Knockabout Class—Malillian, Bryan S. Permar.
18-Foot Open Class—Lobster, C. J. Hendrie.

1903
25-Foot Cabin Class—Sally VII., L. F. Percival.
22-Foot Cabin Class—Opitsah V., S. H. and H. I. Foster.
21-Foot Cabin Class—Mildred II., S. P. Moses.
18-Foot Knockabout Class—Miladi II., F. R. Adams.

1904.
30-Foot Cabin Class—Chewink IV., F. G. Macomber, Jr.
22-Foot Cabin Class—Clotho, B. P. Cheney and C. D. Lanning.
18-Foot Knockabout Class—Hayseed, H. L. Rowden.
15-Foot Cabin Class—Vera II., H. Lundberg.

1905.
22-Foot Cabin Class—Tyro, William H. Joyce.
Cape Cat Class—Marvel, Ira M. Whittemore.
15-Foot Cabin Class—Vera II., H. Lundberg.
18-Foot Knockabout Class—Hayseed, H. L. Bowden.
Racing Dory Class—Barbara, Blaney & Wardwell.

1906.
22-Foot Cabin Class—Tyro, William H. Joyce.
Cape Cat Class—Arawak, H. C. Nickerson.
22-Rating Class—Orestes, Caleb Loring.
18-Foot Knockabout Class—Dorcheu, A. W. Finley.
15-Foot Class—Teazer II., Ben Smith.
Racing Dory Class—Teaser, R. R. Smith.

1907.
22-Foot Rating Class—Eleanor, F. W. Fabyan and T. M. McKee.
Cape Cat Class—Iris, Frank F. Crane.
18-Foot Knockabout Class—Aurora, F. L. and R. W. Pigeon.
15-Foot Class—Teaser II., Ben Smith.
Racing Dory Class—Teaser, Joseph Vaux.

1908.
22-Rating Class—Eleanor, F. W. Fabyan and T. M. McKee.
Cape Cat Class—Busy Bee, Walter J. Coombs.
18-Foot Knockabout Class—Dorchen, Albert W. Finley.
15-Foot Class—Swallow, J. H. Hammond, Jr.
Racing Dory Class—Barbara, John J. Blaney.

1909.
31-Rating Class—Wianno, A. W. Stevens.
Cape Cat Class—Iris, Frank F. Crane.
18-Foot Knockabout Class—Kittywake V., A. E. Whittemore.
15-Foot Class—Teazer II., R. R. Smith.
Racing Dory Class—Raggylug, S. H. Brown, Jr.

1910.
31-Rating Class—Mavourneen, George Lee.
Cape Cat Class—Dolly III., Wallace W. Arnold.
18-Foot Knockabout Class—Aurora, F. L. and R. W. Pigeon.
15-Foot Class—Teaser II., R. Russell Smith.
Racing Dory Class—Teazer, Joseph Vaux.
15-Foot H. O. D. Class—Meave, E. W. Dutton.

*South Shore circuit.

British Yachting.

THE British Yacht Racing Association at its annual meeting last month adopted a rule requiring all racing yachts to carry distinguishing numbers on their sails. The new rule says that the number shall be carried in the peak of the sail. On this side the rule says it shall be above the reef points midway between the leech and the luff, and that is the only place where it can be properly distinguished. The British, however, have gone a little further than we have on this side and adopted a size for the number for each class. The rule says:

Class, Meters.	Letter.	Height of Figures, Inches.	Width occupied by Each Figure Except Fig. 1, Inches.	Minimum Thickness of Every Portion of Each Fig. or Letter, Inches.	Minimum Space Between Adjoining Figs., Inches.
A	A	30	20	4	6
23	B				
19	C				
15	D				
12	E	26	17	4	6
10	F				
9	G	20	14	3	4
8	H				
7	K				
6	L	18	12	3	4
5	M				

The index letter (in black) shall be equal in size to and carried above the numeral (also in black), and may be either marked on the sail or on a piece of cloth attached to the sail.

The numbers, which shall commence with 1 in each class, shall be allotted by the secretary of the Yacht Racing Association upon application, and shall remain in force to the close of the season, unless previously cancelled by him.

It might be well if those in charge of the races on this side would make a similar scale for the numbers. Sometimes an owner will daub his sail with some hyroglyphics that don't look anything like a number when the yacht is some distance away and these are not only hard to distinguish but are unsightly, too.

At a meeting of the executive council of the International Yacht Racing Festival, which is to take place on the Solent Aug. 7 and 8, Peter Donaldson presided. It was decided that the races should start off Spithead and finish off

Ryde. The program arranged for champion matches is as follows:

First Race.—Class A (above 23-meter) schooners (ketches and luggers) and yawls only. These yachts must be adequately fitted as cruisers.
Second Race.—23-meter (75.4 feet) class.
Third Race.—15-meter (49.2 feet) class.
Fourth Race.—12-meter (39.4 feet) class.
Fifth Race.—10-meter (32.8 feet) class.
Sixth Race.—9-meter (29.5 feet) class.
Seventh Race.—8-meter (26.2 feet) class.
Eighth Race.—7-meter (23.0 feet) class.
Ninth Race.—6-meter (19.7 feet) class.
Tenth Race.—5-meter (16.4 feet) class.

All the prizes will consist of trophies. In addition a medal commemorating the first European festival will be presented to the owner of every competing yacht. A yacht duly entered for a race will be entitled to sail over the course for the prize.

Yachts in the classes of 8-meters and under must be steered by members of yacht clubs recognized by the national authority of a country affiliated to the International Yacht Racing Union.

Any owner belonging to a yacht club recognized by a national authority, or any club or body recognized by a national authority, is eligible to enter a yacht for any of the races at the regatta, in accordance with the I. Y. R. U. rules.

All entries must be made to Mr. B. Heckstall Smith, secretary of the Y. R. A., Ryde, I.W., on or before July 25.

It has been rumored in yachting circles abroad that the schooner Westward has been purchased by a German yachtsman.

The Yachtsman recently published a statement showing the records of W. P. Burton, one of the most successful amateurs in British waters, and Capt. Edward Sycamore. Captain Sycamore, it will be remembered, came to this country in 1901 with Shamrock II., and had he had his own way about sailing that yacht, the America's Cup might have gone to the other side. These records are as follows:

MR W. T. BURTON'S RECORD.

Year.	Boats.	Races.	Firsts.	Other.	Total.
1897	Penitent	16	9	3	12
1898	Penitent	41	17	3	20

Cast Anchor.

A YACHTSMAN, who is also a trustee of a Presbyterian Church, recently found an article in one of the daily newspapers which, recounting some shipping troubles, told how they "cast anchor." That paper prides itself on its accuracy, and this yachtsman thought it a fine opportunity to have some fun with one of the editors, a friend of his. He pasted the clipping and marked the phrase and then wrote, "They do not cast anchor anywhere except in a foundry and in the editorial rooms of a newspaper, and for confirmation of this I refer you to your yachting man."

The editor promptly took it to the yachting man, who agreed that the phrase was incorrect from a nautical point, "but," he added, "it is used in the Bible."

"Where?" asked the editor.

"In the account of St. Paul's shipwreck. St. Paul tells in Acts 27, verses 29 and 30 how they 'cast anchor.'"

A marginal note was added to the yachtsman's letter, which read. "Also in the Bible, see Acts 27, verse 29. The yachting man evidently is better posted on his Bible than the Presbyterian trustee."

The yachtsman's only comment when met later was that St. Paul always was a very bad sailor.

Hussar Makes First Trip of Season.

THE auxiliary cabin sloop Hussar, owned by A. P. Bennett, New Rochelle Y. C., cruised over to Lloyd's Harbor on Sunday, March 19, and won the prize offered by the Lloyd's Harbor Y. C. to the first yacht making the trip this year. Hussar is probably the first boat in commission on Long Island Sound in 1911.

With Mr. Bennett were George P. Granbery, J. P. Donovan, H. H. Moulton and Frank Maier. Hussar left the New Rochelle Y. C. at 10 o'clock, Lloyd's Harbor was reached at 1:30 o'clock, and at 2 o'clock she started back to the club house on Echo Bay, where she arrived at 5 o'clock. There was a moderate breeze all the way.

Hussar is 65 feet over-all and is fitted with an auxiliary engine. She was originally built for E. F. Hutton.

Motor Boating.

Monaco Motor Boat Races.

The annual motor boat meeting at Monaco will begin on April 4. As usual, the first few days will be devoted to the exhibition, and no boat will be allowed to compete in the races unless it has been on exhibition and measured. The chief interest this year will be centered in the second series for racers because in the races for that class the Duke of Westminster's Brunhilde will meet E. Mackay Edgar's Maple Leaf III. Brunhilde was launched recently and the builders have guaranteed 45 nautical miles an hour for this boat. These builders expect that Brunhilde will exceed that speed considerably. Maple Leaf III. is one of the challengers for the British International Cup, and great things are expected of this boat. The latest from the other side about her was that the hull had been finished and one of the twin motors had been tested and done all asked of it. She was expected to be in the water for trials about the middle of the month and be ready for the Monaco racing. The hull itself is said to be a remarkably fine piece of workmanship.

Brunhilde has been built by Saunders and is a Fauber hydroplane. Her dimensions are 49 feet 8 inches over all, 8 feet 6 inches beam, and hull weighing 21 cwt. She is a multistep hydroplane, with six steps, and is built on the celebrated Saunders sewn system, with three skins. The skins consist of three layers of mahogany, except in the bottom of the boat, where the middle skin is of oak, for the purpose of gaining extra strength. All the layers are sewn together with copper wire. The mahogany skins are all in one length, with no butts, and are cut from the same log which the successful Ursula was built. By an ingenious arrangement of the step frames the risk of leakage due to straining, which has always been a difficulty in the construction of vessels on the hydroplane principle, has been completely eliminated—a most important factor. There are two watertight bulkheads, one forward and one aft, and a collision bulkhead right forward, which should render her unsinkable.

Brunhilde differs in her design from Pioneer—the hydroplane which the Duke of Westminster sent to America to compete in the race for the International trophy—in having a much greater flare forward, thus giving her greatly increased buoyancy. She looks all over a powerful craft and is one of the finest specimens of the boat builder's art, both in point of finish and design, that has ever been set afloat. In appearance she is without a blemish, and will certainly command universal admiration when staged in the exhibition at Monaco.

She is engined with two 12-cylinder Wolseley engines, each developing 380 horsepower. When we mention the fact that these are the same engins that enabled Ursula to sweep the Mediterranean for the past two years it speaks volumes for the really wonderful qualities of the Wolseley marine engines.

Brunhilde is the first hydroplane to be fitted with double screws. Her engines weigh 30 cwt. each and her total displacement in racing trim, with a crew of three, fuel, lubricating oil, and water, is under 5½ tons. Her builders guarantee a speed of 45 knots, although it is anticipated that when in proper racing order she will considerably exceed this.

In the first series of races there will be Brasier-Despujois II., Rapiere III. and Miranda IV. The latter has a Thorneycroft motor, and the hull was built and designed by Thorneycroft. She was the best boat in England last year.

There are five series for cruisers and in these there have been seventy entries made, nearly all of which are French or Italian. One named San Francisco II. has a Gray motor. This is in the second series. A few have Gnome motors and the work of these motors which have been so successful for aeroplanes will be carefully watched.

Oil Fuel.

WITH so much spoken and printed about oil fuel steam-plant ashore and afloat, a general idea seems to have arisen in the merely "well-informed" lay mind that the use of oil fuel is going to supersede that of coal—is doing so, in fact—and that the long-drawn trail of smoke will be no more seen on the face of the waters, says the Yachting World. That would be sad, if only for the consequent elimination of many thrilling passages in the literature of sea adventure. But neither reader nor romancist need worry, for the idea in question is only another romance of the sea, mainly because of its suitability for the consumption of the marines. That is to say, it all depends on the consumers, in other words the burners, which in the majority of cases are so imperfect that the universal adoption of oil fuel is still far away. One sees a concrete example of this in the recent experience of a t.b.d. in the French navy, converted from coal to oil for experiment's sake. Various short trips had brought the new system into apparently perfect working order, so the vessel started on a hundred-mile coastal voyage, during which it was found that to maintain an average head of steam and speed she only burnt four times the weight of fuel at about five times the cost of coal. On the other hand, there is the Carbogen burner, which the present writer has seen give highly satisfactory and economical results with crude gasworks oil and with heavy crude petroleum. But the vessel in this case was only a small yacht, so it remains to be seen how far the system is really applicable to large steam craft of pleasure or commerce. Against all this we have the well-certified use of both these heavy fuels in large internal combustion motors, of which the economies and efficiencies generally are equally well known and beyond either argument or uncertainty. And, paradoxically enough in this connection, a highly economical system has been discovered and tried-out to success for using powdered coal in an internal combustion motor.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

EDITH II. AND VITA RACING OFF BAYONNE.

To Celebrate Com. Perry's Victory.

A YACHTING regatta, surpassing anything ever held in this country was the promise made by Commodore George H. Worthington, of the Cleveland Y. C., to the members of the Interlake Yachting Association assembled at the banquet held last week. This is part of the plan of the Perry's Victory Centennial Association, of which Commodore Worthington is the presiding officer, being chairman of the Interstate Board in charge of the centennial. The celebration will open at Put-in-Bay July 1, 1913, and continue until Oct. 5.

A bill is now before Congress to appropriate $250,000 and the ten States represented on the Board which include besides those bordering the Great Lakes, Rhode Island and Kentucky, will put up in each instance from $50,000 to $100,000 to conduct the celebration. Commodore Worthington expressed the opinion that between $10,000 and $20,000 would be devoted to a yachting regatta which will make a prize list much larger that was ever spent in the United States for this purpose. He declared himself in favor of separate regattas for both power boats and sailing craft, devoting a week to each.

The business meeting of the Interlake was held recently, according to the Plain Dealer, with delegates from thirteen clubs present, as follows: C. D. Buskpitt, Buffalo Y. C. and Motor Boat Club of Buffalo; W. C. Willard, Cleveland Power Boat Club; George H. Worthington; Cleveland Y. C.; George F. Mooney, Buckeye Lake Y. C.; C. G. Jennings, Detroit Country Club; William Bewick, Detroit Boat Club yachtsmen; Charles P. Sieder, Detroit Y. C.; R. M. Starr, Maumee River Y. C.; H. A. Card, Lakewood Y. C.; James Kilbourne, Sandusky Y. C.; S. O. Richardson, Toledo Y. C.; William Hass, Put-in-Bay Y. C.

Put-in-Bay will have the annual regatta. It offered $800 bonus to the association and use of the Colonial Pavilion for the annual ball. The date decided upon was the week of July 16, this being the time when the full moon is most apparent.

A change in the cabin house restrictions for Class R was suggested by Commodore Jennings who moved an amendment to the existing rule to make the I. L. Y. A. restrictions conform with those on Lake Ontario, viz., area of cabin house 25 square feet, height 6½ feet. This was supported by the delegates. A motion later, however, to prohibit pot leading on Class R boats emanating from the same source was unanimously voted down. The Maumee River Y. C., of Toledo, endeavored to secure the adoption of restrictions for the 14-foot class, but their motion was referred to the rules committee for report. It is expected that the committee will act favorably and that the class will be added to the Interlake this season.

The question of securing greater interest in power boat racing was discussed at considerable length. Commodore Richardson, of Toledo, suggested the possibility of an organization similar to the Y. R. U., which would have the power to formulate rules and adopt classes for cruising boats of a type suitable for use on the Great Lakes. These rules could be agreed upon by representatives of the clubs on Lake Michigan, Erie and Ontario and would tend to unify the interests and promote the sport. Vice-Commodore Willard, of the Cleveland Power Boat Club, recommended the adoption of rules for speed boat racing to correspond with those in effect in the Mississippi valley, where there are no handicaps and no restrictions on horse power, but the boats are classified simply on over all length. It is apparent from the discussion that the Interlake is intensely interested in promoting the powerboat sport and nothing will be left undone by Commodore Winton or his officers to bring about satisfactory conditions.

127 Franklin St., New York.

New Model Hydroplane.

A NEW form of hydroplane has been invented by an Italian engineer, which is something quite new. The inventor, Ing. Enrico Forlanini, of Milan, has furnished a description of the new craft.

"The apparatus has been patented under the name of appareccio idrovolante (apparatus for hydroplaning). It constitutes true hydraulic flight, the apparatus being sustained by the water in the same manner that birds and aeroplanes are sustained in the air; that is to say, by the dynamic reaction of the water on the superficies or planes attached to the hull of the hydroplanes, most of these planes remaining completely out of the water while the machine is in action.

"The idea of using the dynamical reaction of the water is not new but up to the present has not been applied with success exeept what has been attempted with gliding boats; in these boats, however, the hull does not leave the water but skims on the surface, which hinders the attainment of really high speeds.

"The most important characteristie of the hydroplane is that the resistance of the water is not dependent on the speed but remains constant and is equal to half the total weight of the apparatus; the total resistanee is increased only by a portion of resistance due to the air, a portion naturally proportional to the square of the speed. In consequence similar hydroplanes in the future should be able to attain speeds of 60 to 100 miles an hour and change themselves into flying machines by the addition of the neccessary planes for aerial suspension."

After six years of experimenting Ing. Forlanini can now consider that he has arrived at fully satisfactory and definite results, says the Scientific American. The first hydroplane he tried during the years 1905, 1906 and 1907 immediately demonstrated the excellenee of the new system, but its performanees were always handicapped by the irregular working of a bad 70-horsepower motor with whieh it was fitted. Another hydroplane tried during the years 1908 and 1909 was fitted with a steam motor that worked more regularly. Although the effeetive power was only 25 horsepower and the weight of the boat over a ton, this machine attained a speed of over fifty kilometers an hour.

The hydroplane that is being tested at present weighs two tons when there are two persons aboard—it is possible to carry four other persons—and it is fitted with a 100-horsepower gasolene motor. It has attained a speed of 45 miles an hour, and this speed will be increased by the introduetion of a few modifieations that are being gradually indicated during the trials it is now undergoing. This hydroplane has a hull 32.8 feet long, at the bows and stern are two strong steel tubes about 11½ feet long, fixed transversely. At the four free ends of these tubes—namely, on the starboard and port sides of the boat—is fixed a sort of framework which eontains a series of planes, one above the other. These superficies or planes are made of high resistance steel, the workmanship being very accurate, and their size decreases from the top to the bottom.

When the hydroplane is not working, but is floating on the water like any other ordinary boat the planes are immersed in the water and have a slight horizontal inclination. Immediately the hydroplane, owing to the working of the screw, begins to move forward, the water exercises a vertieal force on the planes in preeisely the same manner as the air on the planes of an aeroplane; the hull, therefore, tends to rise and so diminishes its immersion and naturally the resistanee against its motion in a manner that the speed is able to inerease. In this way there comes a moment when the hull is completely out of the water. At this point the speed rapidly inereases and little by little the various planes or superfieies rise out of the water one after the other. When the maximum speed is reached only the bottom planes remain on the water, while the bottom of the hull is sixty-five centimeters higher.

The propeller by which this strange craft is driven is carried on a hollow fin whieh may be seen amidships, the short propeller shaft being revolved by bevel gears attached to a vertical, intermediate shaft, driven direet off the motor.

A Naval Discoverer.

PRESIDENT LOWELL, of Harvard, speaking of the English Ministry, told this story to illustrate the faet that the lord admiral is chosen rather for his executive ability that for his knowledge of naval affairs, says the Boston Reeord. The lord admiral, shortly after his appointment, went down to the docks to inspect the ships and to show his interest in the navy. As he approaehed the first large ship, whose portholes were open, his interest increased and his step quiekened. When he finally was near enough to look inside the ship, he exclaimed in amazement: "Why, the old thing is hollow, isn't it?"

Sparks.

At the regular meeting of the Westchester Motor Boat Club the following officers were elected: Commodore, William H. Ferris; Vice-Commodore, William Torbeek; Secretary, Charles B. Lambert; Treasurer, Edward Hehre; Fleet Captain, Henry W. Piering; Fleet Surgeon, Henry Hehre; Board of Direetors—William H. Ferris, George Auer, Sidney B. Hickox, Alfred Gatterdem and Bernard Nathan.

Canoeing.

Atlantic Division Dinner.

THE annual dinner of the Atlantie Division of the A. C. A. was held on Saturday evening, Mareh 18, at Teutonia Hall, 144 East Sixteenth Street, New York city.

The room was deeorated with flags belonging to the assoeiation and the elub flags of the clubs attending. After the usual meetings and renewal of friendships, usual on such oeeasions, the dinner eommeneed and seventy men arose to the toast to the A. C. A.

After an excellently served dinner, enlivened by the efforts of several singers engaged for the oecasion, and the Stein song rendered by Chipmunk to an admiring audience, the program for the eoming season was announeed by Viee-Commodore R. F. Tims.

An address was read from Commodore H. D. James in whieh he outlined many ways in whieh the members could assist the offieers in obtaining better results in inereasing the membership and advertising in the Year Book.

A telegram received from J. K. Hand, F. Abercrombie and C. Tyson, all absent members, was read, in which they expressed their regrets in being unable to attend.

Judge R. J. Wilkin, president of the board of governors, then made a speeeh, in the course of whieh he announced that the disbanded Admiralty Canoe Club had established a fund to be controlled by the A. C. A., and the interest of whieh was to be used for the purchase of prizes. Among other things spoken of was the advisability of changing the location of meets and need of more activity in eanoeing among the offieers.

What appealed most to the members was his allusion to the spirit of free masonry among the members, and in eonclusion expressed his firm intention of deelining to serve another term as president of the board of governors.

Judge F. W. Hopkins was then introdueed and delighted the diners with an entertaining and witty speeeh on the benefits of eanoeing to the "bald heads."

Ex-Vice Commodore Quasebart then distributed prizes won at the Labor Day meet to those who had proved too modest to eall for the fruits of their labor.

Rear Commodore H. B. Fort made a few well chosen remarks on the Delaware end of the program, and pleaded for a big delegation from New York.

Frederic Andreas then reminded all of the beauties and deiights of the Hackensack cruise, which is the next event of the season. Ex-Commodore Douglass then took matters in hand and spoke on the need of everyone putting their shoulder to the wheel and not depending on a few men to do the work. Raeing matters then were discussed, and he closed by proving "that he was not as old as he had thought." Commodore Hyde, of Yonkers C. C., then spoke on missionary work and casually mentioned that the Yonkers four was scheduled to elean up everything in the Division.

Commodore Burns, of the Chippewa C. C., then spoke of the expectations of his club in the racing line, and spoke as though he doubted the aeeuracy of the representative from Yonkers.

D. Hill, of Mohawk C. C., then spoke of the work and elose affiliation of the A. C. C. D. and the A. C. A.

Ex-Commodore W. U. Lawson was then introduced and spoke of the strides made in the association since his term of offiee.

Ex-Commodore H. L. Quick then made a speeeh in the eourse of whieh he apologized for the fact that the Yonkers four were not present owing to the strict training that they are under.

Ex-Purser F. T. Wilson asked for more visitors to his club and reminded us of the well known fact that the latch string of the Red Dragon C. C. was always hanging out.

As the hour was getting late, the dinner was then closed, and the visiting members departed for their respective hotels. The large representation from the Delaware River canoeists was partieularly noticeable, and aroused much favorable comment. HARRY F. NOAH, Purser.

Swastika C. C.

THE third regular meeting of the Swastika Canoe Club, eomposed of members of the Spring Street Athletie Club, was held at Trenton recently. The following offieers and members were present: Willard B. Yates, President; A. Bruee Campbell, Vice-President; Irving R. Yates, Treasurer; J. Dale Herron, Secretary; George W. Williams, Sergeant-at-Arms; Edgar H. Wilson, Charles E. Wilson, Brayton E. Robbins, Clifford T. Robbins, William H. Kelly, Elmer E. Wright.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantie Division.—John F. Miller, Bordentown, N. J.; Riehard Albert Barry, Bordentown, N. J. and Allen H. Robinson, 115 Harvard avenue, Collingswood, N. J., all by Elmer B. Ayres.

Eastern Division.—George H. Copeland, 29 Elma street, Providence, R. I., by Fred C. Rexford; Charles M. Sillers, 230 Pearl street, Somerville, Mass., by Sidney G. Barnstead; Walter E. Hewins, 61 Monument street, West Medford, Mass., by B. F. Jacobs, Jr.

NEW MEMBERS ELECTED.

Atlantic Division.—6180, Curtiss H. M. Patzig, 265 West 132d street, New York, N. Y.; 6182, Williams A. Kemble, 305 Spring street, Trenton, N. J.; 6183, William E. Mueller, 508 West State street, Trenton, N. J.; 6184, Benjamin H. Margerum, 278 Bellevue avenue, Trenton, N. J.; 6185, William M. Johnson, Morrisville, Pa.

Central Division.—6163, Arthur J. Baeker, 204 E. Jefferson street, Syraeuse, N. Y.; 6172. N. L. Somers, 819 Eleetrie street, Seranton, Pa.; 6173, R. Leo Huber, 933 Taylor avenue, Seranton, Pa.; 6174, Edward H. Beavers, 371 North Rebeeca avenue, Seranton, Pa.; 6175, William Gardiner Pearson, 516 Quiney avenue, Scranton, Pa.; 6176, Harry W. Sept. 13-14.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.
Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.

DRIVERS AND TWISTERS.

Secretary A. K. Ludwig writes that "the Hereules Gun Club, of Temple, Pa., will hold a shoot on Friday, April 28. Program calls for ten events of 15 targets each, entrance $11.50. Open to all amateurs."

The date of the Vicksburg Gun Club's registered tournament, scheduled for May 14, 15 and 16, has been pushed back a day to May 15, 16 and 17. There is also a change of date of the Western Connecticut Trapshooters' League tournament at Bridgeport, from Aug. 26 to Aug. 19.

The Manhasset Bay Yacht Club, of Port Washington, L. I., will hold an invitation clay pigeon shoot to-day. The morning program comprises a 50-bird scratch shoot, entrance $2; first and second prizes; $2 optional sweepstake. Afternoon, 100 bird handicap, entrance $3; first and second prizes; special prize, high gun, scratch; $3 optional sweepstake. All sweepstakes from scratch to be divided into five moneys. Entrance by invitation only. Entrance fee covers cost of birds.

Baltimore Annual Amateur Shoot.

BALTIMORE, Md., March 18.—Under the most trying conditions, the annual shoot promoted by Messrs. Geo. P. Mordecai and Basil Wagner opened at Prospect Park on the 16th. Close on to seventy well-known amateur and professional marksmen faced the traps. The attendance, while not as large as last season, was considered exceedingly large under the circumstances, and over 10,000 targets were thrown during the running off of the different events on the program.

The most skilled shots at the park found it a diffieult task to lacate the flying clay birds, which were, as a rule, taken out of their course by the wind, whieh swept over the grounds. Lester German, the well-known eraek shot from Aberdeen, Md., who has been one of the leading faetors in the big shoots through the country, was at the top of the professionals at the conclusion of the day's sport. His total was 168 breaks out of a possible 200. J. Mowell Hawkins, the local expert, was the winner of seeond honors with a total of four less. George L. Lyons was a close third with one target less than Hawkins. Straight runs were a scareity, as T. H. Keller, of New York, and German were the only two men to run through an event without a single miss. In a 20-bird raee the pair went through with a clean performance.

In the amateur 50-bird raee the honors were won by Guy Leister, of Westminster. Three finished a tie. Edward, of Philadelphia, and Street, of this city, finishing with the same seore—54. In the shoot-off, however, Leister outshot his rivals, having a score of 20, while Edwards and Street each made 18.

The scores of the first day were as follows:

Targets:	20	20	20	20	20	20	20	T'l.	25	25	Tl.

*Professionals.

The second day the weather conditions were much improved. The wind subsided considerably and the day was ideal for good shooting. Sixty marksmen competed for the prizes in the different events throughout the day. The feature of the program was the Maryland Handicap, which was won by Porter E. Osborne, who broke 86 out of 100 targets. In addition to being presented with a sterling pitcher valued at $50, he took down $107.

W. M. Foord, of Wilmington, won high amateur average, while J. W. Ewing was second. Low amateur average went to George P. Mordecai. Harry E. Buckwalter, of Philadelphia, was high amateur at targets shot during the meet. Walter T. Harvey, who was to have shot through the program, was injured in an accident.

The boys shot until dark before the regular events were finished, and enjoyed the sport immensely. There was lots of money taken down in the different events. Phil Steubner, of Bladensburg, won $47.90; Frank Gosnell, Jr., a novice, $57.70; Tomlin, $52.85; G. D. Diffendal, $41, and Fred Coleman, $16.

The Maryland Handicap was won last year by Wolstencroft, of Philadelphia. Shooting from the 19yd. stake, he broke 92 targets. Lester German, George Lyon and Emory Storr shot splendidly. To-day's scores follow:

Targets:	20	20	20	20	20	25	25	25	25

Meadow Springs Gun Club.

PHILADELPHIA, March 19.—Class shooting brought out a fairly good field at Fifty-seventh and Lancaster avenue yesterday afternoon and every member of the Meadow Springs Club had enough to keep him busy throughout the afternoon. The condition called for 25 targets, handicaps added with the gunners divided into two classes, A and B. Two spoons were offered for the respective high men in each class. Hogan, with 23, won the dipper offered for the A men, he breaking 23 straight and shooting from scratch rise. Coyle, who won the B prize, made the best score of the day, but he was aided by his handicap in reaching this honor. He broke 22 of his 25 birds and the two allowed him for a handicap enabled him to beat out the field. Scores:

	Class.	H.	T.		Class.	H.	T.
Roland	B	2	20	Serfass	B	3	19
E B Garrett	B	3	19	Coyle	B	2	24

Northern Kentucky Gun Club.

A FEW members attended the live-bird shoot held on March 16. The weather was pleasant, but quite cold, and with a brisk wind blowing most of the afternoon. The birds were an average lot, with enough hard ones to make the shooting interesting. Two 10-bird events were shot, and several miss-and-outs were pulled off to finish up the afternoon. Payne divided first with Rogers in the first event on a straight score, captured first money alone in the second event with another straight, and finished well in the lead with 30 out of 31 shot at in all events. Rogers was next with a total of 23 out of 29. Walker showed better form than at Ryland, on Feb. 22, but was not doing his best; he killed 22 out of 31. Schreck missed 8 out of his 30 birds, an unusually large number of goose eggs for him. Gould had bad luck in the second event, losing his first bird dead out, or he would have been in a tie with Payne. Koch generally gets out to the pigeon shoots, but they do not come often enough for him to keep in practice. At the annual meeting of the club held on March 14, the following directors were elected for the ensuing year: Dr. S. B. Shouse, John Schreck, George Walker, John A. Payne, John V. Dea, George Dameron, J. P. Gould, George Keifer and A. J. Cook. The board will meet on March 21 to organize.

Event No. 1, 10 birds, $4 entrance, 60 and 40 per cent., all at 30yds.:

Rogers	2111122222—10	Walker	2212022021— 8
Payne	1221211112—10	Schreck	2022220222— 8
Gould	2222222021— 9	Koch	2210011201— 7

Event No. 2, 10 birds, $4 entrance, 60 and 40 per cent.:

Payne, 32	2222111122—10	Gould, 31	*2122222211— 9
Walker, 31	2021122211— 9	Koch, 28	1102220012— 7
Rogers, 32	2201212111— 9	Schreck, 30	0222020202— 6

Miss-and-outs, entrance $2 in first and third event, and $1 in second. Gun held below elbow in third event, and distance 28yds. Handicap in first and second. Re-entry allowed:

	No. 1.	No. 2.	No. 3.

Montclair Gun Club.

MONTCLAIR, N. J., March 18.—Eleven members were present to-day. Messrs. E. K. Winslow and Chas. Siedler tried their hand at trapshooting for the first time. Holloway and Dinkins showed up after an absence of nearly a year. Messrs. Bush and Crane tied for first place in event 2, the first leg on the Du Pont trophy, Crane winning out in the shoot-off, while Frazee was successful in capturing event 3, the third leg on the March cup.

The last two events were two-man team races, with Messrs. Holloway and Frazee winners in event 4, and Messrs. Winslow and son winners in event 5.

The Passaic County Gun Club visit Montclair on March 25, with their ten men team.

Events:	1	2	3
Targets:	25	H.25	H.25
S G Francisco	18	4 22	4 23
C L Bush	20	4 24	4 21
H F Holloway	14	5 19	5 21
E K Winslow	6	8 14	8 21
Chas Siedler	8	8 16	8 21
I S Crane	19	4 24	4 24
E Winslow	19	4 23	4 21
I W England	11	5 16	6 18
T J Dinkins	14	6 20	6 18
Y T Frazee	19	2 21	2 25
Geo Batten	..	6 21	6 23

Two man pick-up team races, 10 targets per man:

Event 4: Francisco and Batten 15, Bush and England 14, Holloway and Frazee 18, Crane and Dinkens 13, E. Winslow and E. K. Winslow 10.

Event 5: Francisco and Batten 11, Bush and England 17, Holloway and Frazee 18, Crane and Dinkins 13, E. Winslow and E. K. Winslow 19.

E. WINSLOW, Sec'y.

Hyde Park Gun Club.

SOME good scores were made at the shoot on March 18. The attendance was smaller than at the previous week's shoots, eight men facing the traps. Tarbell made a good start, getting them all in the first event, and this proved to be the only straight made during the afternoon, and finishing in a tie on 92 with Holoday. Welsh is still sticking to it, and when he gets settled down to one gun, will make them go some to beat him. He finished second with 83. We were glad to see Joe Block again. He used to be one of the regulars at St. Bernard, and his score to-day shows that he hasn't forgotten how to point. He promises to come out often through the summer. Smith got into a couple of events and started in well, but couldn't keep up the pace. Huttersley will he with us this summer, and is going to improve when he gets a little more practice. De Mar was missed to-day, and will have to pay his fine next week before he shoots. Rhodes did his best work in the third event, when he broke 84 per cent. We hope he will not let the attraction of tennis keep him from the firing line this summer. Frohliger went for them in earnest in the first event, striking an 88 per cent. gait, but the pace was a little too rapid for him to maintain, as he had other things to look after. A bunch of the Morrow (Ohio) shooters will visit here on March 25, and an interesting team match is scheduled. Another attraction (or two of them) will be the presence of Fred Gilbert, and Luther Squier, both well known and popular trade representatives. A big crowd will be on hand to welcome them.

Targets:	25	25	25	25	Total.
Tarbell	25	22	23	22	92

Smith	19	17	..	..	36

Yale University—Larchmont Y. C.

TRAVERS ISLAND, N. Y., March 18.—One of the finest exhibitions of trapshooting for the season was given here to-day by Yale gunners and the Larchmont Y. C. team, in their annual trap shoot. Firing at 100 targets each, the totals of both five-man teams were tied at 448. Unfortunately for the collegians, they failed to maintain their high form in the shoot-off at 25 each, and the Yacht Club boys won the tie and match by 119 to 101.

R. L. Spotts, of the victorious squad, and G. E. Dimock, Yale's captain, tied for the high gun honors with 95 out of 100. Tallies were as follows:

Yale University.

L S Morrison	22	23	23	23—91	
S Biddle	22	23	23	23—91	
H Emmett	18	24	23	22—87	
L H Thompson	18	23	20	23—84

G E Dimock	20—101	R L Spotts	25—119

CAST IRON MEDAL

The Historic Cast Iron Medal

This emblem of the Live Bird Championship of America is still held by J. A. R. Elliott. He won it several years ago with

WINCHESTER

Shells and Repeating Shotgun

and no one has yet been able to wrest it from him. Mr. Elliott has always shot and continues to shoot Winchester guns and shells exclusively. There is in this a note of confidence which is illuminating.

No shooter can expect to win any great success unless he has entire confidence in his gun and shells. Mr. Elliott's work shows that Winchester guns and shells can be depended upon thoroughly.

J. A. R. ELLIOTT

New York Athletic Club.

TRAVERS ISLAND, March 19.—Most excellent weather conditions favored the New York Athletic Club at its weekly shoot yesterday, and the performanees of the participants have rarely been surpassed. The club held an open 100-target seratch event in addition to the regular weekly competitions. Forty-four took part in the extra shoot, eleven scores of 90 being registered, and some twenty-five more ranging from 75 to 90. Fred. A. Hodgman, of the Athletics, was the winner, with a 25 in his first event and four 24s, rolling up the splendid total of 97. He was hard pressed, however, by the former national champion, John H. Hendrickson, with 96. In third place were R. L. Spotts, of Larchmonts, and G. G. Dimock, of Yale, with 95.

The Haslin cup became the permanent property of Hodgman by winning his fifth leg on the trophy with a straight 25. The shooting throughout the afternoon was of a very high order. Scores:

Open scratch shoot, 100 targets:

F A Hodgman	97	G L Bready	83
J H Hendrickson	96	Dr E R De Wolfe	82
G E Dimock	95	W J Elias	81

G M Lyon	0	23			

Shoot-off won by Ranney.

S. S. White Gun Glub.

HOLMESBURG JUNCTION, Pa., March 19.—There was a lively scramble among the S. S. White gunners to secure the much-coveted silver spoons the club offered for the various events in the monthly shoot, which was held here yesterday afternoon. Twenty-seven men attended, and one of the visitors, C. B. Cole, of Yardville, N. Y., a former State champion of New Jersey, tied with Griffiths and W. H. Mathews for the high actual score of the day. Each gunner broke 95 out of their 100 targets. Inasmuch as a dipper was offered by the club for the high net score, the two White members got together and waived claim to the prize, the spoon being turned over to the Yardville gunner.

The program was the usually varied one of the Dentists. There was a club event, which called for a 25-target test, with handicaps added to the score. A spoon was offered for the winner of this event. Lodge, Roland, Tansey and Abbott were on equal footing when the shoot was over, with 25 all, but in the following events Roland won the dinner by totaling better scores.

In the 50 targets, which counted in on the Eames trophy and also called for the runner-up of the high man for a spoon, Roland got a win on the trophy and Howard George carried home the silver offering.

Hoffman fared more than the average gunner did at the traps. His high total score on the 75 targets, with the handicaps added not only was good for a spoon, but as well earned him a leg on the Monitor cup.

In the class challenge cups, Griffith and Cantrell tied for the Class A win with 25, but in the next event Griffith won the point credited to the high men by breaking 24 to Cantrell's 23. Appleton led the Class B men with 25, while Pratt was the best Class C gunner with 24, and Roland's 20 overshadowed the other Class B bluerock devotees.

Crescent Athletic Club.

BAY RIDGE, N. Y., March 20.—Saturday last saw a goodly gathering of club members on the shooting grounds, and the all-round conditions being of the best, the scores proved most excellent, making a number of shoot-offs necessary to determine the winners. Summaries:

Monthly cup, 50 targets, handicap:

F S Hyatt	4	46	F B Stephenson	0	39
W W Peabody	4	44	J S Lawson	10	39
J F James	6	43	J P Fairchild	6	37
Geo Felix	4	42	W W Pell	10	35
Geo Brower	8	41	A E Hendrickson	6	34

J S Lawson	5	25	A E Hendrickson	3	22
C R James	2	24	J F James	3	21
W W Peabody	2	23	W W Pell	5	21

Blake, Pulis and Lawson divided the prize.

Sweepstakes, 25 targets, handicap:

Geo Felix	2	25	C R James	2	18
F B Stephenson	0	24	C H Pulis	3	18
J F James	3	22	J S Lawson	5	17
W W Peabody	2	22	A E Hendrickson	3	18
F S Hyatt	2	21			

Newton Gun Club.

GLOUCESTER CITY, N. J., March 18.—The weekly shooting match of the Newton Gun Club was held this afternoon. Six members participated, and each shot at 25 bluerocks. Parker proved the winner by hitting 19, and thereby gained 3 points for the Du Pont trophy. The following were the scores: Parker 19, Strain 17, Jingling 15 Daisey 13, McQuaid 11, Fogarty 9.

On Saturday, April 1, the Lindon Gun Club will have a special prize shoot.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Bergen Beach Gun Club.

NEW YORK, March 17.—The Bergen Beach Gun Club held the second shoot of the Spring series on Tuesday, March 14, beginning at 11 A. M. The wind from the southeast did not appear to affect the flight of the targets much, but no straight scores were made on the club set of traps. Nevertheless on the 25-strings that were the rule all day, some of the boys fell down dreadfully. We shot to-day at 6,800 targets, mostly from the club traps, and about eight cases of shells were sold. The main event was a distance handicap, three classes. Kouwenhoven, at 19yds., was high man in Class A with 47. Howard Voorhies in Class C exceeded any record made by a Class C man heretofore with the same total, 47, from 16yds., and Dalton was high in Class B with 39. Billy De Long handled the scoring end of it. Fred Schneider and Sam Short refereed. Harry Bergen attended to the traps and they certainly were in good order, as usual, and Schortemeier cashiered and tabulated the scores of the main event. The main event is noted on the seores below at 50 targets in three classes, from 16 to 19yds. The rest were all at 25 targets each from 16yds., except the last, which was shot at 22yds., and won by Brother Medler. Mr. Wynne, who did not shoot in the handicap, a Class A man, made a straight score on the lower set of traps. Forty-two shooters participated today. Scores:

Class A: Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

Riverside—Smithville.

ESSINGTON, Pa., March 19.—The Riverside Gun Club, of Essington, won another target race yesterday here by out-shooting the Smithville gunners in a lively match, by a score of 131 to 103. Elkins and Wiltbank, of the winners, were the high men, with 19 breaks each out of their 25 targets. Scores:

Riverside.		Smithville.	
Elkins	19	Peben	15
Wiltbank	19	Moore	14
Steller	18	Hammond	14
Wharber	18	Martin	13
Bowers	16	Kepler	12
Fullerton	15	Williard	12
Eisel	14	Fox	11
Horn	12—131	Dilkes	11—103

South End Gun Club.

SOUTH CAMDEN, N. J., March 19.—There was only a small field out at the monthly shoot of the South End Gun Club on the South Camden grounds yesterday afternoon, but those who took part made excellent scores. The shoot for the annual trophies is narrowing down and there will be only one more.

Horner led for the club points with a clean score, but his handicap of seven added targets materially figured in the total, the best actual breaks being Wakeman, who smashed 22.

In addition there was a shoot for a gold watch, in which Butler and Pechman tied with 10 straight, but in the shoot-off, miss-and-out, Pechman captured the prize. Scores:

Trophy shoot:

	H.	B.	T.		H.	B.	T.
Horner	7	18	25	Pechman	0	21	21
Butler	7	17	24	J Anthony	5	15	20
Fleming	4	19	23	Hineline	0	20	20
Wakeman	1	22	23	Johnson	6	12	18

Prize shoot:

Butler	10	Horner	7
Pechman	10	Newkirk	6
Wakeman	9	Johnson	6
Baxter	8	J Anthony	5
Fleming	7		

Other scores:

J Anthony	18	19	37	Wakeman	22	..	22
Horner	15	18	33	Fleming	21	..	21
Hineline	19	22	31	Pechman	21	..	21
Butler	15	10	25	Johnson	17	..	17
Cox	13	10	23	Ashton	5	6	11
Newkirk	13	10	23				

Mineral Springs Gun Club.

WILLOW GROVE, March 18.—In a special sheet, conducted by the Mineral Springs Gun Club, on their range at this place, for a shotgun trophy, Haas and Strawn tied with 95 breaks out of a possible 100, with handicaps, and on the shoot-off, Strawn won by two targets. Fourteen men eompeted in the shoot, but only nine finished the entire string of one hundred targets. The summaries follow, the shoot being divided into four events of 25 targets each.

Events:	1	2	3	4	
Targets:	25	25	25	25	Total.
Haas	24	25	24	22	95
Nice	21	24	24	21	90
Houpt	25	23	23	22	93
Hotzell	24	22	23	22	92
Strawn	23	24	25	23	95
Gibbs	24	23	21	22	90
Berk	24	22	24	23	94
Cooper	24	24	23	22	93
Larzelere	24	23	24	22	93
Myers	23	20	21	..	64
Hilt	22	24	..	..	46
Reatche	22	20	..	..	42
Nash	23	21	..	..	44
Clark	25	23	..	..	48

In the final shoot-off of the tie between Haas and Strawn, these scores were made:

	H.	B.	T.		H.	B.	T.
Haas	14	8	22	Strawn	21	3	24

On Highland's Traps.

EDGE HILL, Pa., March 19.—The final shoot for the championship of the North Hills Country Club was decided over the traps of the Highland Gun Club at Edge Hill yesterday, and Robert G. Ringgold easily captured the honors, beating out J. Franklin Meehan in the final shoot by 5 targets. When the two shooters took their places at the traps yesterday, Ringgold had one target to the good. He broke his first string straight, lost one on the second, two on the third and three on the fourth, while Meehan lost four in his first 25. The shoot for the Class C cup easily went to Thomas Meehan, Jr., who shot in decidedly sensational form for a youngster, he smashing 20, while Lee's best effort was 14. Ringgold also carried off the high gun honors in the regular club shoot, with 22 out of 25 targets. Scores:

Championship shoot:

Ringgold	25	24	24	22—94
Meehan	21	23	22	23—89

Class C cup:

Thos. Meehan, Jr.	20	Lee	14

Club shoot:

Ringgold	22	T Meehan, Jr.	15
Milton	21	Lee	14
F Meehan, Jr	17		

Trap at Larchmont.

LARCHMONT, N. Y., March 20.—Fifteen of the Larchmont Yacht Club's crack trapshooters made some excellent scores yesterday despite the adverse weather conditions, and they were encouraged by the presence of many club members and guests. Full scores were returned in several of the eight matches contested, and in five of them ties were recorded. By reason of darkness and the bad weather the leg for the March cup cou'd not be completed. A tie between S. Samson and R. L. Spotts—each breaking 24 out of their 25 targets—will be shot off next week.

G. J. Corbett, although not a member, carried off the honors of the day. He won the 15-target scratch contest with a full score and a special match in which he also returned a card of 25. He was also "high gun" in the 125-target scratch competition, his score being 111.

W. J. Elias proved the winner of the 10-target scratch contest, and S. Samson won the leg for the Commodore's prize with a full score. After a shoot-off with J. Ross Collins, W. B. Short won the leg for the Sauer gun, while R. L. Spotts, with a score of 114, won the handicap match in the high gun shoot at 125 targets.

The Larchmont team will shoot against the Crescent men at Larchmont on April 15 and will appear at the New York Athletic Club grounds on April 22.

Clearview Gun Club.

DARBY, Pa., March 19.—Harry Fisher led the way for the club members of the Clearview Gun Club in the monthly shoot, which was held at Darby yesterday afternoon. Out of his 50 targets he broke 42, getting 21 of his first string and the same number in his second. Fisher was the only Class A man competing. McCullough led the delegation of seven B men with 40 breaks, while Ullman, with a score of 37, was the leader in Class C. G. Shuster, a visitor, really carried off the honors of the afternoon, for his score of 43 breaks was the best on the grounds. Scores:

Class A.

Fisher	21	21	42

Class B.

McCullough	19	21	40	Ferry	17	13	30
Bonsall	20	18	38	Elwell	15	15	29
Lohrmiller	19	18	37	Krietzberg	15	13	29
Holznagle	20	14	34				

Class C.

Ullman	20	17	37	Dalton	16	12	28

Hill	20	17	37	Crawford	16	9	25
Beers	20	12	32	Berthold	12	12	24
Peebles	14	16	30	Rife	6	4	10

Jersey City Gun Club.

JERSEY CITY, March 18.—C. Day, Jr., trapshooter champion of New Jersey, earned the honor of being high gun among the amateurs who competed in the open distance handicap events at the Jersey City Gun Club yesterday. Considering the strong, bothersome winds that prevailed, Day's average of 88 per cent. was an excellent one. He started in ordinary fashion, missing eighteen targets in his first hundred, but finished with a 93 in the next, making his total 175. His nearest rival was C. W. Billings, of the New York A. C., who broke 169 in the 200-target match. Scores:

First event, 100 targets:

	Yds.	T'l		Yds.	T'l
E E Hallinger	17	91	J S Fanning	19	83
H H Stevens	19	90	C Day, Jr.	19	82
C W Billings	19	88	G H Piercy	19	79
N Apgar	19	87	J Martin	19	78
A E Ranney	17	84	C B Brown	17	73
A L Ivins	19	83	R L Shepard	17	70

Second event, 100 targets:

C Day, Jr.	19	93	C W Billings	20	81
H H Stevens	19	90	C B Brown	17	72
J Martin	19	88	G H Piercy	19	71
H H Shannon	18	88	A E Ranney	18	68
H J Burlington	17	85	E Hallinger, Jr.	19	67
C Shreyvogel	17	85	P Moeller	16	67
A L Ivins	20	84	J W Williams	16	67
J S Fanning	19	83	R Young	18	62

Essex County Country Club.

ORANGE, N. J., March 18.—At the traps of the Essex County Country Club to-day the following scores were shot:

Daly Cup:

D W Granberry	4	24		A O Headley	5	21	
C Feigenspan	0	21		H C Brower	8	21	
B M Shanley	2	21		C H Daly	0	18	
W C Shanley	6	21		J A Hart	0	17	
D W Heller	4	21					

Taylor cup:

D W Granberry	4	22		D W Heller	4	21	
W C Shanley	6	22		C H Daly	0	20	
C Feigenspan	0	21		H C Brower	7	20	
B M Shanley	2	21		Brown	0	20	
A O Headley	5	21		P Ross, Jr.	8	18	

On shoot-off, Granberry won.

Hart trophy, 10 pairs doubles:

C Feigenspan	17	C H Daly	8
J A Hart	11	W C Shanley	8
A O Headley	10	D W Granberry	8
Brown	10	P S Ross, Jr.	7

Registered Tournaments.

PITTSBURG, Pa. Tournaments registered with the Interstate Association during week ending March 18, are as follows:

May 9-11.—Lawton, Okla.—Oklahoma State tournament, under the auspices of the Lawton G. C. G. A. Horton, Sec'y.

June 10.—Allentown, Pa.—Lehigh Valley S. A. Allen Hall, See'y.

June 24.—Long Hill, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Hillside G. C. E. H. Bailey, Pres.

July 11-13.—Little Rock, Ark.—Arkansas State tournament, under the auspices of the Little Rock G. C. Geo. W. Clements, Sec'y.

Aug. 22.—Mechanicsburg, (O.) G. C. F. J. Coburn, Sec.

Aug. 24-25—Sioux Falls (S. D.) G. C. J. J. Burns, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

The Westy Hogans.

NEW YORK, March 18.—Taking advantage of the fine opportunity afforded, Westy Hogans attending the target shooting tournament run in connection with the Sportsmen's Show in Madison Square Garden during the past week, held a meeting in the Grand Hotel and paved the way for this year's tournament of the Westy Hogans, which will again be held in Atlantic City in September. The meeting was attended by President Neaf Apgar, L. J. Squier, L. S. German, H. H. Stevens, Charles A. North, C. B. Brown, George Lyon, J. F. Pratt, J. S. Fanning, L. Z. Lawrence, F. E. Butler, H. B. Brown, George Benjamin and Secretary Bernard Elsesser.

It was a matter of regret that the management of the Sportsmen's Show was disinclined to carry the show over another week, so that the Hogans could assemble on Westy's natal day, March 17, and thus give the meeting an additional air of importance and significance. However, the gathering was quite timely and much business of importance was transacted. It is the intention of the Hogans to make their 1911 shoot even more attractive than was last year's and this will be "going some." The 237 different participants in last year's tournament are a unit in declaring it to be one of the most satisfactory trapshooting tournaments within their knowledge of the sport.

The Hogans propose to hang up approximately $2,500 in cash and prizes for the 1911 shoot. The Squier money-back system will, of course, again be used. The tournament committee will devote much time and thought in constructing the program, to the end that all who attend the 1911 shoot will be as well, or better pleased (if this be possible) than those who participated last year.

It was freely predicted at the meeting that the attendance at the 1911 shoot will run close to 300, and in view of the likelihood of this increase over last year's figures, the tournament committee will make its arrangements accordingly, so that the shoot will move along in the same systematic manner as it has in former years. Publicity was one of the chief subjects under discussion at the meeting, and in order that this important detail shall be given proper attention, a committee was appointed to inaugurate a campaign of advertising that will cover a wide range of publicity. In this connection, the fact that the shoot will be held in Atlantic City, where an unusual diversity of amusement is afforded, aside from the novelty of shooting into the ocean from a pier extending nearly a mile into the sea, will be featured.

The Westy Hogans were pretty much in evidence at the Sportsmen's Show tournament. As stated in your columns, President Neaf Apgar won the professional indoor championship, for which he received a handsome gold watch fob, and Westy German made the longest run of the tournament and was runner-up in the professional championship. An exhibition squad composed of Neaf Apgar, Lester German, Jack Fanning, H. H. Stevens and L. Z. Lawrence, all Hogans, was the chief attraction of the Saturday night program. An immense crowd saw these expert marksmen smash all but a few of 250 clay pigeons.

The tournament was under the skillful management of "Money-Back" Squier, chairman of the program and tournament committees of the Westy Hogans, and its complete success was, in a very considerable measure, due to his superior knowledge of the fine points in the conduct and management of a tournament.

Hercules Gun Club.

TEMPLE, Pa., March 18.—The weather was damp, snowing and raining part of the day. Considerable pleasure was taken in these contests. While the Elm Leaf won the single target race, the Hercules won the double-target team race. Considering the weather, the shoots at Reading, Boyertown and Newmanstown, we must say, had a nice crowd. In the extra gun event for a Remington pump valued at $28, donated by Mr. Bertolett, Mr. Eick, of Reading, won with flying boards.

Rahn	11	12	11—31	Brunner	6	5	5—16
Ludwig	11	10	10—31	Pothermel	4	7	4—15
Schmehl	8	12	10—30	Noll	6	5	4—15
Hart	8	12	7—27	G D B	..	..	9— 9
Biehl	8	7	8—23	Bowers	..	14	10—24
Bortz	4	6	10—20	Eck	..	..	13—13

Hercules vs. Elm Leaf, two-man team match, 15 singles:

Hercules Team.		Elm Leaf Team.	
Rahn	12	Bertolett	12
Noll	7—20	Eck	13—25

Match at 5 pairs doubles:

Hercules Team.		Elm Leaf Team.	
Rahn	7	Bertolett	6
Noll	7—19	Eck	5—11

Haddonfield—Laurel Springs.

HADDONFIELD, N. J., March 18.—The first of three matches between the Haddonfield Gun Club and the Laurel Springs Gun Club took place on the grounds of the former to-day, resulting in a victory for the home team. J. W. Logan, of the visitors, was high gun with 46, while F. T. Holloway and Dungan made 45 each for Haddonfield. The score was 413 to 391, ten men from each club having 50 targets pulled for him. The next match will be held at Laurel Springs on April 29. The prize for the winner is a cup.

Haddonfield.		Laurel Springs.	
F T Holloway	45	J W Logan	46
Dungan	45	Du Rand	41

New Orleans: 321 Magazine St. P. R. LITZKE, Manager

San Francisco: 608-612 Howard Street. J. S. FRENCH, Manager

Chicago Gun Club.

CHICAGO, Ill., March 11.—While the sun was shining brightly and it was quite warm enough to be pleasant, the wind was blowing from the south with great force. Jay Graham topped the list in the first event with a score of 46 out of 50, Barto being second with 42 breaks, while Sharp scored 40.

In event 2 the honors went to the same men and in the same order, Graham breaking 38 out of 25 pairs shot at, Barto getting 36, while Sharp fell back somewhat and scored only 22.

In event 3, at 25 singles, Graham landed 22, Gill 19, Barto and Harpham each breaking 18.

Event 4, again went to Graham with 24, Sharp taking second with 20, while Barto broke 19.

March 12.—To-day the weather man had another inning, for after the night of rain and scattered showers of the early morning, at about 10 o'clock he turned loose a blizzard, which came from the north and raged with unabated fury most of the afternoon; and then, apparently satisfied with having kept a good number of shooters away and making conditions exceedingly hard for the thirteen who braved the elements for their favorite pastime, they had no more than gone, when the sky cleared off and the wind died down.

First honors in the handicap event at 50 singles went to Dr. Robb, who broke 45 from the 16yd. mark. Burton coming in for second place with 42 from the same mark, while Fetherston was next in line with 41 breaks from 19yds.

Fetherston landed first with 31 breaks in the second event at 20 pairs, Burton giving him a close race by breaking 30, while Sharp was third with 27.

In the practice event at 25 singles, Sharp and Burton tied for first with score of 21, Schultz, Kammerer and Dr. Robb each scoring 19, while Thomas, Thwaite, Butler and Cole each made an 18.

Twaite led the way in event 3, at 25 singles, with a score of 22, Sharp keeping close after him and finishing with one less, scoring 21, while Robb made it 20.

Thomas, Thwaite, Fetherston and Butler shot a race from 19yds., in which Thomas came out at the front by scoring 19, Fetherston made 18, while Thwaite broke 15.

Fetherston and Thomas then shot a match at 12 pairs of doubles, in which Fetherston scored 21 against Thomas' 19, after which Fetherston shot at 5 more pairs, of which he broke 3, losing only 4 birds out of the last 34 he shot at.

WM. F. MERKLE, Supt.

Columbus Gun Club.

COLUMBUS, O., March 17.—H. E. Smith and Bert Cooper tied for high amateur average with 184 each at the St. Patrick's day shoot, held on the Columbus Gun Club ground. Jim Smith won second with 183. K. Johnson, J. Dixon, C. Coburn, tied for third high with 180. J. Taylor was high professional. D. Clancy second; F. Gilbert third. The shoot was a success. Every one seemed to have a good time. Thirty-eight shooters took part, of which thirty-one shot the program for the 200 targets. Fred Gilbert, of Spirit Lake, Ia., was a welcome visitor and shot the program. K. P. Johnson, from Kenton, came down to see how they looked once more. Still knows how. Squad No. 2 was made up from the Circleville Club. Dixon had a cinch on high average until the last 20, but he let 6 get away and landed third.

The next monthly shoot will be April 20.

The Palefaces.

BOSTON, Mass., March 15.—The third shoot for March on the Paleface grounds was held to-day, and while the regulars did not turn out, as is the usual case, a number of newcomers were in evidence and made some very creditable scores in view of the unfavorable conditions.

On the high average, Frank carried away a very pretty cut glass dish as a souvenir of the occasion, while President Charles was an easy winner of second place, 3 targets less. Charlie Marden looked way out of condition and showed the lack of practice, which we are in hopes will vanish before the amateur championship at New York, as we are looking to Charlie as one of Boston's chances if things break anywhere near decent for him.

In the added target race, Charles made a runaway of it and annexed his third straight win in the same number of shoots with Jones in second position, 8 targets behind.

The prettiest shooting of the afternoon was Frank's on the double event, his 25 being a fine piece of work. Crane, in this match, made 22, with the President again in the lime light with 21. Scores:

Events:	1	2	3	4		
Targets:	25	20	15	25	Hdcp.	T't'l.
Charles	20	19	21	23	16	99
Frank	22	19	25	20	8	94
Jones	23	13	17	18	20	91
Marden	18	17	19	23	12	89
Morse	21	12	19	21	12	85
Crane	17	16	22	17	12	84

J Smith	11	7	9	4	20	51
Paul	10	10	18	..	..	..
Dick	8	12	6	..	..	..

Events Nos. 1, 3 and 4 were and 16yds.; No. 2 at 18yds. Event No. 3 was at 15 pairs.

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., March 15.—At a meeting of the Fred Macaulay Business Men's Gun Club last evening, at the Speedway Inn, the following officers were elected for the coming year: President, Bernard M. Shanley, Jr.; Vice-President, William Stengel; Second Vice-President, Geo. A. Ohl, Jr.; Recording Secretary, Lloyd H. McKee; Financial Secretary, James J. Quinn; Treasurer, Richard A. McCabe; Captain, Frank Mihlon; First Lieutenant, Fred W. Macaulay; Second Lieutenant, William Trowbridge; Third Lieutenant, Louis Colquitt; Fourth Lieutenant, John J. Geiger; Official Scorer, James J. Wheaton; Assistant Scorer, Peter Bey; Attorney, Wm. J. Kearns.

One year ago the club was organized with F. W. Macaulay as its first president. The club has been a prosperous one and a big success, considering the number of rainy and rough shooting days it has had during the past year. It is expected that the new President, Mr. Shanley, who is a very enthusiastic shooter and an enterprising man, will make every effort to have the club rank among the very best in the East. A committee has been appointed to hold a smoker soon.

Yesterday afternoon the members of the club shot at the Speedway traps. Neaf Apgar, the professional was high gun, with a score of 114 targets out of 125. Charles W. Billings was second with a score of 112 out of 125, and Carl Von Lengerke was third with a score of 103 out of 125. B. M. Shanley, Jr., gave a very creditable performance, breaking 23 out of 25 in one string. The scores:

George Ohl, Jr., 7, 9, 10, 2; J. S. Thompson, 17, 21, 20, 18; Neaf Apgar, 24, 23, 24, 20, 23; Charles Billings, 22, 21, 22, 24, 22; Peter Bey, 18, 18, 17, 17, 18, 15, 19, 15, 23; C. Von Lengerke, 18 21, 21, 18, 24; B. M. Shanley, Jr., 16, 23, 16, 17, 21; William Stengel, 14, 16, 16, 18; William

DuPont Gun Club.

WILMINGTON, Del., March 19.—In a 100 bird race between J. T. Skelly, of the Du Pont Gun Club, and H. J. Donnelly, of Guthrie, Okla., on the grounds of the Du Pont Gun Club, yesterday, Delaware upheld her reputation in target shooting. Skelly won, 96 to 90. J. A. McKelvey, of Hockessin, and Frank Mathewson, of this city, also made an excellent showing in the squad, with Skelly and Donnelly, both getting 91 out of 100.

The three traps were worked to the fullest capacity. Some of the enthusiastic shooters enjoyed several events at double targets, and very creditable scores were made.

In the ties held over from last week, the following scores were made and the silver spoons presented by Mr. T. C. Du Pont, were awarded:

Class B J. W. Mathews, 21 out of 25.

Class C—Stanley Steele, 23 out of 25.

Class D—H. T. Reed and F. F. Lofland again tied on 15, and will shoot again this week.

The day's scores follow:

H. T. Reed (50) 28, Stanley Steele (150) 114, *H. H. Lukens (425) 313, F. Mathewson (200) 170, *T. E. Doremus (225) 149, H. J Donnelly (125) 115, W. E. Husbands (50) 39, E. E. Handy (50) 19, C. H. (Scores marked * include 25 pairs.)

Ludlam—Brandywine.

WILMINGTON, Del., March 19.—It was a big day at the Ludlam Gun Club grounds, at Sycamore and Union streets, yesterday afternoon. There were three shooting events.

Ludlam defeated the Brandywine Springs Gun Club ten-man team, shooting at 250 birds, 162 to 125. Ludlam also defeated the five-man team from the same club, shooting at 125 birds, 75 to 69. The regular Saturday afternoon shoot of the club was also held, J. Hendricks being high man with 20 breaks out of 30 shot at. The scores were:

Ten-man shoot, 25 birds per man:

Brandywine Springs.		Ludlam.	
R C Robinson	8	R Chase	19
E Guest	14	D Burns	16
F Springer	13	D Ludlam	17
E Springer	17	L Pike	11
A Hickman	16	Vandegrift	17
W Smith	19	R Chase	19
D Melson	11	Clemens	20
M W Melson	9	Porter	13
G Huber	12	Sheperd	16
R N Cranston	6—125	Richards	14—162

Five-man shoot, 25 birds per man:

Brandywine Springs.		Ludlam.	
E Springer	15	J Burnes	15
F Springer	10	D Ludlam	15
W Smith	19	R Chase	15
P Guest	15	J Burnes	13
A Hickman	10—69	L O Porter	17—75

In the regular weekly shoot, J. Fenton shot at 25 and broke 10, J. Fagen (25) 13, J. Spragg (25) 11, J. Sheperd (5) 3, G. Vandegrift (60) 30, J. Hendricks (30) 20, G. Spidle (35) 17, J. Burnes (25) 14, R. Chase (10) 5, J. Smith (50) 28, A. Dubb (75) 33, C. Downey (50) 25, C. Kenworthy (25) 13, D. Ludlam (50) 21, M. Lockwood (15) 8, A. Richards (10) 7, G. Bernard (25) 12, L. O. Porter (25) 13, C. Henderer (25) 12.

Manhasset Bay Y. C.

PORT WASHINGTON, L. I., March 20.—The regular weekly shoot of the Manhasset Bay Yacht Club was held to-day. It rained hard all day and only two squads showed up. Some good scores were made, considering the weather. J. W. Alker won every event except one, thus winning for good the monthly cup and establishing a safe lead for the yearly prize. Scores follow:

Ten birds, scratch: J. W. Alker 9, W. Roesler 8, H. L. Hoyt, Jr., 8, B. G. Loomis 7, E. P. Alker 7, E. Roesler 7, C. M. Gould 6, H. Sierck 5.

Fifteen birds, scratch: J. W. Alker 14, W. Roesler 13, H. L. Hoyt, Jr., 12, E. P. Alker 12, E. Roesler 12, B. G. Loomis 10, C. M. Gould 9, H. Sierck 8.

Sweepstakes, 25 birds, handicap: E. P. Alker (3) 25, J. W. Alker (3) 24, W. Roesler (0) 23, H. L. Hoyt, Jr. (0) 21, C. M. Gould (4) 21, H. Sierck (5) 21, E. Roesler (4) 21, B. G. Loomis (3) 21.

Monthly cup, 25 birds, handicap: J. W. Alker (3) 24, H. L. Hoyt, Jr. (0) 23, W. Roesler (0) 22, H. Sierck (5) 22, B. G. Loomis (3) 21, E. P. Alker (3) 20, E. Roesler (4) 20, C. M. Gould (4) 20.

Yearly cup, 25 birds, handicap: J. W. Alker (3) 24, W. Roesler (0) 23, E. Roesler (4) 22, B. G. Loomis (4) 22, H. L. Hoyt, Jr., (0) 21, E. P. Alker (3) 20, H. Sierck (5) 20, C. M. Gould (4) 20.

Ten pairs doubles: H. L. Hoyt, Jr., 16, E. Roesler 12, C. M. Gould 10, W. Roesler 8.

Rhymes of The Stream and Forest
FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.
LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.

Live Bird Shooting in Pennsylvania.

MAHANOY CITY, March 18.—By killing 9 out of 16 live birds in a match shoot here to-day, Frank Mitchell, of this place, defeated Levi Maurer, of Park Place, and carried off a $200 purse. Maurer got 6 out of 15.

Manoa, March 19.—Fred Murphy and H. Jackson shot each other to a standstill in a special 25-bird race yesterday afternoon at the Eagle Gun Club's grounds. In the 5-bird event which followed, Murphy, Jackson and Redmond shared up the purse with straight scores.

Pottsville, March 18.—Fred Coleman, the world's champion shot, to-day arranged a series of three live-pigeon shooting matches between John Buckwalter, of Royersford, and James Sommers, of Easton. The first will take place at Tumbling Run Park, here, on March 28, for $300 a side, each man to shoot at 100 birds. A second shoot will be held at Easton on the following day, and a third shoot at Fort Side on the 30th inst. Coleman will officiate as referee.

Wilkes-Barre, March 18.—The spring shooting match of the Elm Hill Gun Club was held to-day, the first prize being won by William Cookter, who killed 7 straight. Richard Morgans, John Eustis, Davis Bryan and Francis Calker killed 6 each. Thomas Kempthorn and Robert Sampson killed 5 each; E. T. Sprake and Irving Easton killed 4 each; Davis Thomas, 2; Robert Law and D. H. Wilson 1 each.

Pottsville, March 18.—At the Tumbling Run Park, this afternoon, Martin Mottley, of Pottsville, and Thomas Brennan, of Locust Gap, shot a tie live-pigeon match. Each man shot at 25 birds, and they grassed 21 each. The stake was $50 a side. The tie will be shot off at Locust Gap next week.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., March 18.—Mitchell's score of 104 out of 110 was the only thing worthy of note to-day:

DuPont Gun Club, Rifle Dept.

WILMINGTON, Del., March 19.—Unusual interest was manifested in the rifle and revolver division, and good scores were made. Capt. Casey and Lieut. Harkins tied on 93 out of a possible 100 in the revolver qualification series.

In the .22cal. rifle qualification, Dr. Weedon made an 81, and Shephard, Fletcher and Scott in practice work made some high scores.

Revolver and pistol qualification scores: K. K. V. Casey 93, 88, 87; F. B. Harkins 93, 81, 80, 77; John Bancroft, Jr., 73, 72, 72, 68.

Revolver and pistol qualification scores: F. B. Harkins 84, 84, 74; J. W. Pusey 77; J. W. Scott 70; J. T. Skelly 68, 68; A. G. Riley, 66; Eugene du Pont, 51; E. White, 32; J. F. Donnelly, 30, 28; C. Leedom, 19; G. White, 18, 13; Wm. Coyne, 16, 6.

Rifle qualification scores, .22cal.: W. S. Weedon, 81, 76, 66; F. B. Harkins, 74, 71.

A number of practice scores were also shot.

U. S. R. A. League.

SPRINGFIELD, Mass.—Following is the standing of the United States Revolver Association clubs at the end of the twentieth match:

	Won.	Lost.
Smith and Wesson (Springfield)	18	1
Portland (Oregon)	18	2
Manhattan	17	2
Boston	17	3
Newark	16	3
National Capital (Washington, D. C.)	14	5
Century (St. Louis)	12½	5½
Providence	13	6
St. Louis	13	6
Seattle	13	6
Shell Mound (Emeryville, Cal.)	9	9
Duluth	9	10
Willow (Chicago)	9	10
Myles Standish (Portland, Me)	8	10

National Capital	1057	vs. Boston	1069
Osborn	932	vs. Portland	1080

Columbus and Oakland not heard from.

Reported Abandonment of Sea Girt.

TRENTON, N. J., March 18.—It was rumored here today, on the return of General Wilbur F. Sadler from a visit to Washington, that Sea Girt is doomed to become a memory only, so far as the shooting matches on its ranges are concerned. It is expected the matches will be held this year at Sparta, Wis., where the Government has spent a great deal of money in the construction of what is said to be the finest range in the world.

The matches for the best shots in the world have been made at Sea Girt each summer for a number of years and were always the center of much interest to the hundreds of vacationists and others in the vicinity of Asbury Park. Some time ago it was said there were not enough ranges at the camp to accommodate the entrants in the events and that in all probability the contests this year would be held somewhere else, but serious thought was not given to the rumor until a few days ago, when it was learned that the contests this year would not be held there.

General Sadler went to Washington and upon his return he would not deny that Sea Girt has seen its last national or international shooting contest, but from other sources it was said that in all probability such is the case.

Interclub League.

WASHINGTON, March 18.—With the concluding weeks' matches the standing of the clubs in the Eastern Division of the Interclub Rifle Shooting League was as follows:

Winchester Rod and Gun Club, of New Haven, won the pennant with 13 wins and no defeats; Warren (Pa.) Rifle and Revolver Club and the Myles Standish Rifle Club, Portland, Me., 11 wins, 2 defeats each; Bangor (Me.) Rifle Association and the Park Club, Bridgeport, Conn., 9 wins, 4 defeats each; Manhattan Rifle and Revolver Club, New York city, and the Birmingham (Ala.) Athletic Club Rifle Association, 7 wins, 6 defeats each; Fort Pitt Rifle Club, Pittsburg, 6 wins, 7 defeats; Butler, Pa., Rifle and Pistol Club and the Presque Isle Rifle Club, Erie, Pa., 5 wins, 8 defeats each; South Providence (R. I.) Rifle and Revolver Association, 4 wins, 9 defeats; Washington (D. C.) 3 wins, 10 defeats; Atlantic City Rifle Association, no wins, 13 defeats.

Intercollegiate Rifle Shooting League.

THE Massachusetts Agricultural College and Iowa State University are still tied for the leadership in the Intercollegiate Rifle Shooting League, with nine straight victories and no defeats. Results for the week ending the 18th were:

Iowa defeated Columbia, 1,892 to 1,887; Massachusetts Agricultural defeated Washington, 1,862 to 1,791; Cornell defeated Purdue, 1,775 to 1,765; Dartmouth defeated North Georgia Agricultural, 1,736 to 1,712; Missouri defeated Louisiana State by default, score 1,725; Minnesota defeated Rhode Island, 1,718 to 1,657; Arizona defeated University of California, 1,752 to 0 (by default); Princeton and New Hampshire shot a tie, score 1,671, the former winning by having the highest score at the standing position.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

The ***Marlin*** *Model 20*

REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

On the Seventh Regiment Ranges.

A two-days' competition closed on Saturday afternoon, March 18, on the regimental ranges, Park avenue and Sixty-seventh street. In the expert class Private A. Scholz, of Company A, the regimental champion, realized his ambition of the season by making a perfect score of 35 off-shoulder and 35 prone. Rarely is such a score made. The other two who made a perfect score this season were Pvt. J. K. Boles, of Company I, and Lieut. A. N. Cowperthwait, Company I. His fine score put Pvt. Scholz in the lead for the cup in his class, with the excellent total of 139 out of a possible 140.

In the last few minutes of shooting, Corp. W. O. Raymond, of Company G, made a 68, which won for him the expert class prize for first entries. Sergt. F. C. Noble continued at the head of the sharpshooter division, while Pvt. W. L. Rogers held the advantage in the novice section. The summaries:

Leaders in Class cup match No. 4; Expert Class:		
Pvt A Scholz, Co. A	70	69—139
Lieut W B Short, Vet	69	68—137
Pvt. J K Boles, Co. I	69	68—137
Sharpshooter Class:		
Sergt F C Noble, Co. K	68	67—135
Lieut A B Wade, Co. K	67	66—133
Pvt J D McQuaid, Co. F	66	65—131
Novice Class:		
Pvt W L Rogers, Co. H	67	65—132
Pvt A H Kropff, Co. G	66	64—130
Musician C Daut, Co. A	66	64—130
First entry prize winners; Expert Class:		
Corp W O Raymond, Co. G	34	34—68
Sharpshooter Class:		
Corp H Simpson, Co. F	32	34—66
Novice Class:		
Pvt A H Kropff, Co. G	30	34—64

Expert qualifications: Pvt. P. E. Grannis, Co. K., 68 deliberate, 40 rapid; total 108. Necessary for qualification as expert, at least 68 out of 70 in deliberate fire, and at least 40 out of 50 in rapid fire.

Sharpshooter qualifications:

	200yds.	500yds.	Total.
Corp H Simpson, Co. F	32	34	66
Sergt C D Macdonald, Co. K	31	35	66
Corp S C Van Note, Co. G	33	32	65
Pvt H W Taylor, Co. C	31	34	65

Necessary for qualification, as sharpshooter, at least 65 out of the maximum of 70, deliberate fire.

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

RABBITS A FOOD SUPPLY.

"Few people realize the importance of the rabbit as a source of food supply," said General Speaks of the State Fish and Game Commission, in the Wilmington (Ohio) Journal. "Many people consider them merely pests, but from now on thousands of rabbits will be on sale in the markets of Cincinnati and other Southern Ohio cities. We don't get so many of them here because the little animal is not so plentiful in this section as in the hills of Southern Ohio, Indiana, Kentucky and West Virginia.

"Cincinnati residents are very fond of rabbit meat, and a meat dealer of that city told me recently that the large sale of rabbits there last winter materially affected the sale of beef and other meats.

"There are great food possibilities in the rabbit, and I think the time is coming when rabbit farms will be started for the purpose of raising the animals for the market."

A SUBSTITUTE FOR RUBBER.

According to a Frankfort publication a German patent has been secured for the manufacture from the soya bean of a product to take the place of rubber. The process consists in the reduction of the oil of the soya bean to a thick, tough liquid through the addition of nitric acid. After further treatment with alkaloid solutions the mixture is heated to 150 degrees, giving a tough, highly elastic product similar to rubber, which can be vulcanized by the same process as rubber.

Consul-General Frank D. Hill says numerous attempts have been made in the past to manufacture artificial rubber and processes, which in the laboratory gave excellent results, but have been found impracticable on account of high cost. Whether this latest method will be successful remains to be proved. However, the fact that the soya bean is being experimented with is illustrative of the fact that it is beginning to be known in Germany, where it is now imported free of duty.

The bean is cultivated in the hinterland of Kiaochaw, the German leased territory in China, as well as in Manchuria. Its increased commercial importance would help develop the Province and bring new life to Tsingtau as a port.

A NATURAL RESOURCE INADVERTENTLY PROTECTED.

The Gila River, which is Arizona's largest stream, was, until about twelve years ago, remarkably well stocked with fish throughout its course across the territory. Then, almost within a year, practically all its fish disappeared. This was very puzzling until it was discovered that they had been exterminated by the turning into the river waters near the head of the "tailings," or ore washings, from copper and gold mines opened up here. Of course fish-lovers, whether attached to the tribe broiled or in their wild, free state, deplored their destruction, but nothing was done about it.

However, about three years ago the alfalfa growers of the Upper Gila Valley decided that their crops were being damaged by these same "tailings," and through the courts they have succeeded in having settling reservoirs established by the mining industries, where the harmful silt is being eliminated from the inflow to the river.

Thus, quite unintentionally, the fish are being protected, and are now gradually making their way down from the little streams above where the water was polluted, and are again stocking the river.—Stella C. Dysart, in the Wellspring.

MAULED BY A LION.

THE ostrich camp near Sir Alfred Pease's homestead at Athi River had been worried by lions, and a hunting party was organized consisting of Sir Alfred Pease, G. Grey, Howard and Edward Pease, Captairn Slatter, Mr. Clifford and H. M. Hill. They divided into two parties, one consisting of Sir Alfred and Mr. Hill.

After about half an hour's ride Mr. Hill espied two large lions and the party of two galloped after the quarry. Sir Alfred followed the bigger and slower animal, and Mr. Hill the leader. The object of the hunters was to turn the game into a donga (creek) and thus to give time for the other party to come up, hoping that Mr. Grey would be given the opportunity to open the shoot. He was a sportsman with a fine reputation for high courage and was no novice with big game.

Unfortunately Mr. Grey on seeing the game at once put his horse to the gallop and practically started to course the lions. His companions were immediately alarmed at his temerity and endeavored to warn him of the danger he was courting. They were doubly alarmed at seeing one of the lions preparing to charge.

Mr. Hill dismounted and fired a quick shot at the bigger lion in the hope of distracting his attention from Mr. Grey. The bullet unluckily fell short and the lion charged Mr. Grey, who jumped off his pony and awaited the onslaught. At about twenty yards he fired. The shot went into the shoulder, but did not stop the charge. He got in another shot at about five yards, hitting the lion in the mouth, breaking two of his fangs. Then the lion flung his victim to the ground and began to worry him like a dog would a mouse.

Meanwhile H. Pease had followed Mr. Grey and with Sir Alfred and Mr. Hill galloped to the lion and his victim. When they were some fifty yards away, the lion noticed his fresh antagonists and ceased to maul Mr. Grey.

At twenty-five yards the party dismounted and ran in. The lion immediately made toward them. At this moment of peril Mr. Hill's rifle jammed. Sir Alfred and H. Pease fired and the balls entered the lion's ribs. The wounded animal then returned to his victim.

The horrified relief party scarcely remember what happened during the next brief moments further than that the lion was on top of Mr. Grey, and animal and man were so mixed up that it was most difficult to distinguish the former's head from the latter's body. It was found impossible to get in a deadly head shot until the lion was almost lifeless. During the fray the other lion was only about one hundred yards away, growling and lashing his tail. The hunters, having only two .256 rifles, paid no attention to the second animal.

Mr. Grey's wounds were very numerous. The lion severely clawed his face and head, bit his arms, hands and thighs and inflicted wounds on his back. Mr. Grey died in the hospital at Nairobi.—East African Standard.

TWO YARNS.

HE had heard of an angler who owned a pointer that would point to the spot where a fish happened to be. The Squire doubted the dog's gift, and a date was arranged for testing it. On the occasion the animal would not point to the water, but persistently gazed steadfastly at the keeper who walked behind. The keeper was asked for an explanation, and he remarked, "Begorrah, I had a kipper for breakfast this morning."

Another quality was that of acting promptly, and with decision, and, in illustration, Mr. Wardle told of the old man who, dying, willed that his four sons should indulge in an angling competition, the winner to take possession of the property. One son caught a pike weighing 6 pounds, another caught a pike of exactly the same weight, and the third caught an eel which turned the scale at 6 pounds also. The fourth caught the train for Liverpool, and as that was the biggest fish, he took the cash-box with him. —Fishing Gazette.

SMITH GUNS
HUNTER ONE-TRIGGER

CHOOSE your gun as you would your hat—*to fit you perfectly.* It means higher scores and more birds. There is some rather wise advice on this point in our handsomely lithographed new Catalogue — and you may have it for the asking.

THE FIRST THING to remember, however, is that it does make a great deal of difference whether or not your gun fits you. The next thing to remember is that there is a Hammerless Smith Gun that *does fit you* better than any other gun in the world.

The most wonderful improvement in gun-making in the past fifty years is the *Hunter One Trigger.* It is just as great a boon to the professional as to the amateur sportsman. It spells accuracy to the highest degree.

The most wonderful advance in gun-making *this* year is the thoroughly tried and tested new *20-Gauge Hammerless Smith Gun*—with or without the Hunter One-Trigger attachment. Weighs 5¾ to 7lbs. Just *all gun and no frills.* Ask about it today.

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

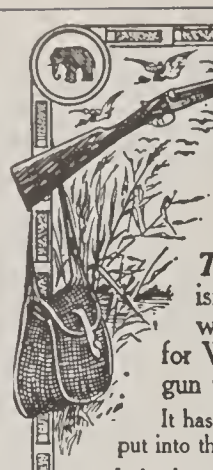
Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for reference. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY



GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener "Unique" Ejecting mechanism is but one of the many unique points for which the Greener Gun is famous. Weight for Weight, the "Unique" Ejector is the Strongest gun that exists.

It has all the extra weight necessary to a fore-end ejector put into the barrels.

It is the simplest and most scientifically constructed, the most perfectly balanced, the easiest and most reliable gun to use.

It has a thoroughly sound hinge joint, not cut to a mere skeleton by cocking levers and ejecting connections.

There is no thrust to force the fore-end away from the joint.

The action frame, though light, has the metal so disposed as to offer the greatest resistance where the strain comes.

It is the most compact form and is the handsomest of all guns.

It is made in the best quality only, and your new gun should certainly be made on this system!

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

Catalog, illustrating and describing 38 grades. :: Mailed free.

WHALING ON THE PACIFIC COAST.

A large whaling station is to be erected at Sanford Point on Gray's Harbor by the owners of the two stations now in operation on the west coast of Vancouver Island. The common North Pacific whale has been loafing around the waters adjacent to Oregon, Washington and British Columbia since the days of Jonah, but it is only in recent years that his value has appealed to man.

Inasmuch as this species of whale attracted no attention when hundreds of Massachusetts whalers were chasing the sperm whales in the far North it is perhaps eminently proper that the industry as now carried on should be entirely devoid of the romance and excitement that attended the chase of sperm whales. The modern whaling steamer with bomb guns and other modern equipment goes out from a station, the whale is killed and the carcass is towed in and converted into oil with a total absence of any of the features that attended the killing and trying out process in the old days.—Portland Oregonian.

A NEBRASKA WOLF HUNT.

The last wolf hunt or roundup of the winter, so far as this locality is concerned occurred St. Valentine's Day and was participated in by nearly two hundred mounted men, who during the day killed sixteen coyotes and four big timber wolves. It was by far the most successfull of any of the roundups previously held this winter.

The invading army covered a territory twenty-five miles east and west and twenty miles north and south.

The men were at their respective posts as early as 9 o'clock in the morning, and as soon as the bugle blast was blown the march toward the center—the Dorothy ranch—commeneed. The men all rode at a brisk trot, accompanied by a hundred dogs, which were held back. Every man was armed with a shotgun, rifles and revolvers being barred.—St. Paul Pioneer Press.

SQUIRREL LAW A LINCOLN TRIBUTE.

A little tribute to the memory of the immortal Lincoln lies behind the Lieb House bill, passed by the Senate recently, which prohibits killing squirrels within the confines of parks in the State. The bill was drafted to apply particularly to the Nancy Hanks Park in Lincoln City.

This beautiful little pleasure ground is kept up within the confines of Spencer county by the State in memory of the mother of the Nation's war President. It has been stocked several times with squirrels and an effort has been made to tame the little animals. Farmer boys living near the park of late have been shooting the squirrels surreptitiously and because the park is State property the Lieb bill was framed.—Indianapolis Star.

BIG FISH TIRED TWO ANGLERS.

After tiring two anglers in a fight, the season's record albicore was landed here recently by Capt. G. Farnsworth. The fish. weighed 51½ pounds.

Thomas R. Elliot, of New Orleans, was the angler who hooked the fish, but owing to its terrifie fight to gain liberty, he was unable to eontinue the battle. Next to "take a hand in the fray" was Mr. Elliot's brother, who was fishing from the same launch. Before the fight eou'd be won, the rod had to be turned over to the boatman.—Los Angeles Times.

SWIFT THREE-LEGGED FOX.

John Davis shot a three-legged fox on the East Mountain, Bennington, the animal in spite of the handicap of a missing front foot giving the hound a chase of over two hours before it crossed the hunter's path and was killed.

The fox had evidently been caught in a trap some time ago. Just how long it had been traveling the mountains on three feet could not be determined, as the stump of the leg was perfectly healed and was covered with fur.—Kennebec Journal.

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"). Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness Out-of-Sorts Dam. Puppies. Diet. Other Food. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

Williams'

Shaving Stick

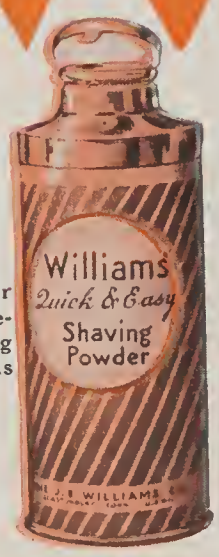
"The kind that won't smart or dry on the face"

Note the convenient sanitary hinged-cover box

A little difference in quality often makes a tremendous difference in results. The soothing, refreshing, antiseptic lather of Williams' Shaving Soap distinguishes it from other kinds. This difference may not be apparent the first time you use it, but in the course of a few days it is unmistakable. The better condition of your face shows it.

Williams'

Quick & Easy Shaving Powder



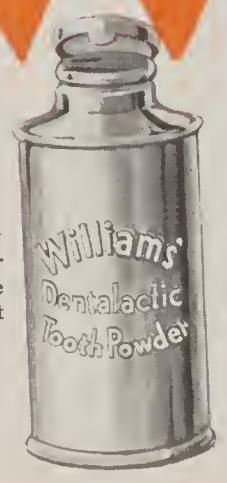
Note the convenient sanitary hinged-cover box that prevents leaking—yet opens at a touch

The same good shaving soap, having the qualities that have made the Williams' name a household word to men who shave, is sold in powdered form. It shortens the time of shaving without impairing the efficiency of the lather.

The same shaving powder is also put up in a very attractive nickeled, hinged-top box matching the Shaving Stick box, under the name Luxury Shaving Powder.

Williams'

Dentalactic Tooth Powder



Note the convenient and sanitary hinged-cover box and the visible outlet for the powder

Ask your druggist for Williams' Tooth Powder in the all nickeled, hinged cover box. The purest, finest, daintiest tooth preparation you ever applied to your teeth. So fine it cannot scratch or injure the teeth. Purifies the breath, cools and refreshes the mouth. The nickeled can is an ornament to washstand or dressing table.

SPECIAL OFFER

A miniature sample package of either Williams' Talc Powder, Shaving Stick, Shaving Powder, Jersey Cream Toilet Soap or Dentalactic Tooth Powder, mailed for 4 cts. in stamps. **All five articles in neat combination package for 16 cts. in stamps.**

SHOOTING ON AN INDIAN LAKE.

Our camp was pitched on the huge bund which was the origin of Lake Dull's existence. Fifty yards across the top, twenty feet above the water's surface, and three hundred yards in length, this massive feat of engineering skill must have silently watched the centuries of time roll by since its formation stone was first laid. The gigantic mango and peepul trees growing on the bund and immediately below it are silent witnesses of its great age. Right in the center of it rises a silk cotton tree—a tree of prodigious proportions. The tree tells the story of Mohammedan invasion and conquest, for wherever the Moslem conqueror fought and won a great battle he planted a silk cotton tree to commemorate a victory accorded to the True Faith. All over India the track of the Mohammedan invasions are clearly marked by these magnificent trees. The age of the tree fixes the year of the victory, and the year will give the invader's name, for the tide of invasion has swept over the land not once or twice, but many times.

The bund has stood the greatest test, namely, the test of time, and has withstood for centuries the strain of imprisoned waters. The camp lay silent and ghostly in the bright moonlight. The silence of sleep held everything in its grip, broken only now and again by a pony rattling a head chain, by a distant jackal's cry rising suddenly on the air, wavering a moment and dying down as quickly, or by the gurgling bubbles of a native hookah, followed by the inevitable suppressed cough—the village watchman's efforts to chase away sleep. At earliest dawn commenced the many calls of waking life. From land and water, from stony ridge and marshy jheels, rise the varied cries of birds, of insects, and of beasts. Before breakfast Malcolm and I each caught a decent fish (sanwal) from the cool depths of the lake. Sammy, armed with a light rifle, bagged a buck, and Charles, with his shotgun, added to the bag seven quail, one green and two blue pigeons, a hare, two black and one painted partridge. At 10 A. M. Charles let off his gun, a signal to commence firing. We were all in our appointed stations by then, and soon the fusilade began. Up rose the ducks on all sides, and hurried here and there, across the lake round the edges, some packs going right-handed, others left, but ever and anon leaving behind them a comrade here or a brace there as they came within range of the guns, hidden amidst the rushes at the most strategic points.

Gradually the smaller scattered packs join forces with others of their own kind, and slowly rise higher and higher into the skies; some packs vanish on the horizon, apparently off to other distant waters, but they reappear later, hurrying back from some other point of the compass. Although the various packs keep circling round and round, the different species never mix. The mallards, pochards, pintails, teal, widgeon, and cotton teal each keep in their own packs, separate and distinct, and easily distinguishable the one from the other by their peculiarities of shape, flight, and speed. The air is sibilant with the swish and rush of the thousands of rapidly moving wings.

The guns are heard less frequently as the birds rise higher and keep out of range. Occasionally a right and left resounds on the air, as an unwary brace, weary of the heat and the bustle above, separate from their pack, and, seeking the cool shelter of the rush-grown bank, come within range; or a single shot rings out as a solitary drake flies noisily round the edge of the lake, calling to his mate, and whom he seeks in vain to join.

Out of chaos comes order. The terror-stricken ducks circling high are feeling the heat of the tropical sun, the guns are silent, and from their high point of vantage the position of the sportsmen is plainly seen. They have noticed that the guns are only at these points. Pack after pack descend and drop with a splash and flutter into the bosom of the lake, right out into the middle of the water, far from the sportsmen's reach. Here they lie at rest, disturbed only by the swoop of a hawk, who, spotting a wounded bird on the fringe of the pack, dashes

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

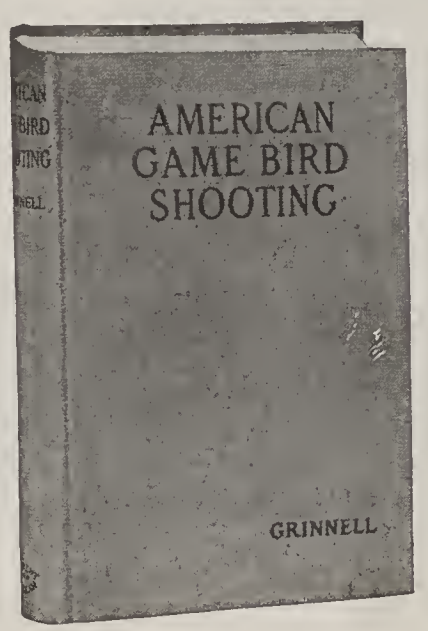
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

down in the hope of securing a meal. The ducks, with beating wings and noisy quacking, flutter twenty yards away to safety, leaving their wounded comrade to his fate.

Vultures, hawks, kestrels, and sparrowhawks have congregated from the four corners of the sky in the vicinity of the lake, and are waiting, watching, now hovering on outstretched wing, now swooping down on a stricken duck, but tirelessly watching for the wounded birds which they know must inevitably fall to their share. The dug-outs, containing some natives armed with old carbines and blank ammunition, having paddled laboriously to within a hundred yards of the ducks packed on the center of the lake, discharged a harmless but noisy salvo. Once again the distracted ducks take wing, rising in a cloud with vociferous quackings. Confusion reigns supreme—pell-mell they fly from the new danger straight back to the old, and the motionless gunners, who, knee-deep and sometimes waist-deep in water, have been watching the tediously approaching dug-outs creeping up to the ducks, are now in the thick of it, enjoying to the full the reward of patience. At last, weary of flight under a broiling sun, the duck, reckless of danger, come dropping back in ones and twos into the rushes round the edges of the lake.

Now has come the time to alter the plan of campaign and to adopt new tactics. Boldly advancing from the shelters, one walks slowly through the rush-covered shallows, talking as if no game were within hearing; the weary duck swim hard away from the advancing intruders upon their privacy, trusting to their own swimming powers and to the rushes and weeds to carry them out of danger, and to keep them hidden from view. But long legs, in spite of clogging mud and deep water, travel over the ground faster than the ordinary duck can swim through sedge and weed, and it is only a question of time for the proximity of the men to become so terrifying that the frightened duck, acknowledging himself beaten in one element, is tempted to try his luck in the other in order to escape that unseen but slowly approaching terror. With a startled quack he takes wing, and, rising above the friendly rushes, is at once seen, and falls to a well-timed shot. This shooting lasts only during the heat of the day; as soon as the cool evening breezes commence to blow (about 4 P. M.), and the sun has lost his sting, the ducks will boldly leave the lake for pastures new.

Malcolm and I lunched together on the west side of the lake under a big tree; we had marked it down at starting as being roughly halfway between our stations. Sammy and Charles never met till tea-time, in spite of having arranged a meeting to compare notes.

By 4:30 P. M. we had all assembled at our camp. Warm baths and flannels were then the order of the day. Hot tea and toast made us feel stronger men. There was nothing to do now but read and smoke till six o'clock, when the flight shooting commenced.

Our combined bag up to tea-time was 317 duck, 27 teal, 11 widgeon, 7 cotton teal, 17 partridges, 21 quail, 107 snipe, 1 green pigeon, 2 blue rocks, 1 hare, and 1 black buck, making a total of 511. The flight shooting, which was of the best while in progress, lasted but twenty minutes. The ducks came in over the bund in grand style, dashing over the trees and out over the lake like arrows from a bow. It meant quick shooting and holding well in front. The light failed us quite suddenly, the typical tropical twilight. We picked up ninety-two birds, which brought our grand total up to 602 head, besides a hare and a black buck.—S. H. C., in the Field.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

OPENING DAY.

MARCH blustered and stormed and wrestled with the sunbeams, but lost in the struggle. Enter April, introducing the gentle angler, who will find conditions to his liking—brooks not too high nor too roily, warm sunlight, swelling buds, the chirp of insects and the songs of birds. If the amateur weather prophets have not guessed wrong, spring is due to appear shortly; at any rate, it is on the way—as usual.

Early April is a season when winter weary mortals can tolerate the conflicts that rage among the elements, for the outcome of the contest is never in doubt, and even though delayed, the power of the sun will prevail. They know that winter is behind and a long season of enjoyment outdoors just commencing. Even though the mornings be cold, there are the robins calling cheerily from treetop and meadow, and the flute-like notes of the bluebird as it searches for the home it seems never to be entirely satisfied with.

The first brook trout fishing took place yesterday, when the season opened on Long Island. To-day the brooks of New Jersey will be searched by an army of anglers, while the same privilege will be afforded good citizens of Rhode Island, New Hampshire, Connecticut, Oregon and Washington. In Massachusetts, Pennsylvania, Minnesota and Wisconsin the 15th of April will be opening day, and in the southern tier of counties in New York, the 16th.

It does not appear that the past winter was severe on trout, but it remains to be seen what effect the long drouth of last autumn has had on them. In the Northwest there are many streams in which most of the trout were killed by the forest fires, while elsewhere the streams were so low during the winter that they were deeply frozen.

Big-game hunting is fraught with uncertainty; in fact, to those who possess patience, the very uncertainty is not without its charm. But to hunt unsuccessfully for several weeks, and then bag a splendid specimen, as did one of the sportsmen in Mexico, as told in another column, is an experience to be remembered.

FOR THE PUBLIC GOOD.

As we go to press an important hearing is being held in Albany before the Game and Fish Committee of the Legislature. Advocates and opponents of the Bayne bill, which is intended to prevent the sale of game in the State of New York, are presenting their arguments for and against the measure, and its fate may depend on the committee's report.

It is unfortunate that measures of this kind are too often affected by political or by local interests. Very often members of the Legislature seem unable to take a broad view and to consider what is actually for the public good. Instead of regarding the best interests of the whole people of the whole State they are more likely to consider what they believe to be the wishes of the inhabitants of their own village or township or county. Often, too, legislators walk in the direction indicated by the pointing finger of the political leader, feeling that without his approval and help their political prospects will be injured. Or the careless good-natured legislator trades his vote on some subject in which he feels no interest for the vote of another legislator on a subject about which the latter cares nothing.

For fifty years or more the larger cities of the United States have been the dumping ground where the spoils of market shooters, netters, trappers and other wholesale destroyers of game have ultimately been sold. Without such markets there would be no inducement to the commercial gunner to destroy game, and the sooner these markets are cut off, the better it will be for the wild life of the land.

It may be expected that large commercial interests will oppose the passage of the Bayne bill, but nevertheless that bill should be passed. The persons who now purchase game do not need it. As pointed out in FOREST AND STREAM years ago, there are substitutes such as ducklings, young turkeys, young guinea fowl and other birds, which may be substituted for the wild creatures of our fields and woods, now so rapidly disappearing and some of them almost threatened with extinction.

We may all of us wish for convincing power to the able arguments of the men who are advocating the passage of the Bayne bill. Unlike their opponents they have no commercial interest to serve. They are thinking of the public welfare.

On Wednesday, March 22, Senator Long's bill to permit spring duck shooting on Long Island came up in the New York Assembly. The bill had already passed the Senate, and its supporters in the Assembly were convinced that they had votes enough to carry it through that body. On the other hand the opponents of the measure—which was objected to by sportsmen generally throughout the State and by the Forest, Fish and Game Commission—intimated that they had a promise from Governor Dix that if the bill came before him he would veto it.

Practically the whole legislative day was devoted to the consideration of this bill by the Assembly. There was a long debate, a number of amendments were offered, all the reasons for and against spring shooting were ventilated, and the bill, when it finally came to a vote, was defeated by a vote of 66 to 73.

The members of the Assembly from the seaboard counties, New Yorkers and Long Islanders, generally supported the bill, while the representatives from up the State voted against it.

There were grave fears among game protectors that this bill would pass, and when the Senate voted favorably on it, this fear was augmented. Game protectors in other States who are fighting local measures of a character similar to the New York bill may take courage. It is certain that even if bills such as this should be passed in some of the States, the defeat will only be temporary.

The education of the public has progressed too far, and the importance of protecting our useful birds is now far too well understood to make it seem possible that a permanent backward step such as was proposed by New York legislators can ever be taken.

One by one the reforms for which sportsmen have striven so earnestly during recent years have been brought about. The conservation propaganda has swept aside the barriers so long maintained against the rescue of watersheds and forests in the Eastern States, and the Forest Service is now ready to purchase limited areas of land in the White Mountains and the Southern Appalachians. These plots will not be closed to shooters and anglers, but will be regulated according to the laws of the States in which they will be located. But while they are not to become game and fish refuges, it can with confidence be said that in these reserves State laws will be enforced by the foresters, and stream pollution and poaching will not be tolerated.

REFUSING to assume that a large proportion of the men who fish in summer also shoot in autumn, the sportsmen of several States are clamoring for fishing licenses in addition to the shooting licenses. Funds are accumulating, and every man has his own theory as to the disposition of the money. Foreign game birds are the hobby now being ridden hard and long, and demands for foreign fish are expected. The money spent on these costly but uncertain creatures would go far toward restocking woods and waters with native species, and giving additional protection, but not until the glamor of importing stock has passed will common sense prevail.

THE SPORTSMAN TOURIST

Boregas and Tanakas

III.—A Mountain Sheep Hunt in Lower California —J. G. M.'s Inning

By DOUBLE BARREL

DURING our stay at Las Palmitas, Captain Funcke told us a few things about his past history. He was very reticent, but his talk was very entertaining when he chose to give us some glimpses of his past life. He had started life as a hunter on a sealing schooner, had risen first to be head hunter and later to be master. He had seen all the worst of Bering Sea, Alaska and Kamchatka, and had finally been put out of business, along with the other American sealers, by act of Congress. He had then taken a position as master of a schooner trading from San Francisco to the coast of Lower California, and had later abandoned this in favor of taking camping and hunting parties into the country. He told one story which was so remarkable that I cannot refrain from recounting it here.

It seems that among the sealers the greatest prize was the now nearly extinct sea otter. Whenever an otter was sighted from a sealing schooner, four of the boats were lowered. Each boat had two hunters with a heavy rifle and 200 cartridges per man. Orders were issued to shoot every cartridge, but to get otter. The chase was pursued to all lengths, for one skin was worth from $600 to $1,000, according to quality.

When the captain was prevented from sealing by statute and went to Lower California, he heard that there were sea otter on that coast, and on inquiring at Ensenada, his first port, he was told of a man who had lately killed one. He saw the man, who proved to be a Mexican fisherman. He said there were lots of otter in the kelp down the coast, and that he had lately killed one with an oar and had sold the skin for $20 in gold, and the buyer had sent the skin to England. Captain Funcke hard'y credited the yarn, but he at once hired the man to fill a vacant place on his vessel, a gasolene schooner, and started down the coast of the peninsula. When they reached the proper point there was such a sea on that they had to go on, and the captain decided to wait till the return trip.

As luck would have it, the schooner was twenty-four hours late on the return trip, and they reached the proper place outside the kelp after dark. As there was no wind, they were running with the gasolene engine. Captain Funcke stopped his engine and started to wait all night and investigate in the morning. He had very little faith in the man's story, as he had proved to be a great liar in other matters. Still, if it proved true, the capatin knew he could resign and hire a boat with h's own money, get some men and make a small fortune. Yet, as he waited during the night, h's conscience troubled him. He was already late, and he had no business to use his employer's time for his own work. Besides, he had heard many wild tales in his time and they al' proved untrue when tested. So he gave orders to start the engine, and went on to Ensenada and San Francisco, determining to try out the matter the next trip. He was de'ayed two weeks in San Francisco, and this gave his new hand a chance to go ashore and talk. He talked sea otter, and an old German, who had a schooner lying idle, took on some men and went down the coast to investigate. In ten days the German killed fifty-six sea otter and broke up the school. There were never many again, though Captain Funcke later got six himself. The end of this story was: "Fifty-six sea otter at $700 a piece was $39,200 and nothing but a square-head who didn't know anything of the fur business." Well, it certainly stood as the finest story of hard luck I ever heard.

THE SUCCESSFUL RETURN.

The first day after we made camp at Las Palmitas, J. G. M. and Captain Funcke started out to hunt the neighboring mesa to the south of us, and having nothing else to do, and being once more out of fresh meat, I said that Eleno and I would go out and shoot a deer. This was more or less a joke, as deer were very rare in the neighborhood, and to kill one was rather an exceptional event. We started out on horseback down the desert, along the base of the mountains, and when we were about four miles out I stopped and killed a jack rabbit with the rifle. A mile further on we crossed a deer track. Eleno was in front and passed over it without noticing it, but as it looked fresh I called him back and pointed to it. He agreed that it was fresh and we followed the track across the desert, where it was plainly marked in the soft sand.

After about a mile we found where the deer had laid down and had evidently spent the previous night under an ironwood tree, so we tied the horses and followed the track on foot. Soon we came to fresh droppings, and a little later we saw where the deer had evidently been alarmed by my shot at the jack rabbit and had run for a short distance, then stopped and listened, and then gone on slowly. By this time we felt we were very close to it and followed cautiously. At times we crossed stony flats, where it was marvelous to see the way in which Eleno followed the tracks. In places for a hundred yards at a time the footing would be nothing but so'id rock, yet he followed the deer without trouble where no evidence of a track seemed to exist. The deer had crossed several such flats and fed down the little arroyos amid the ironwoods, and we followed him at not more than a mile an hour, prepared to shoot at any moment. Yet, in spite of all our care the deer saw or heard us before we located him, and as we approached a little arroyo, leaped up and started down it full speed.

For a long distance there was no open space through which I cou'd shoot, so I had to stand waiting till the buck—for so it proved to be—passed an opening about 175 yards away. As he leaped through this I fired and had the good fortune to break his back with the first shot. We at once went up and killed him, and as I

was very anxious to keep the meat in best condition, we cleaned him and hung him up in a tree, then returned for the horses. When we brought the horses up we lashed the deer behind Eleno's saddle, and rode into camp in high feather over our success. Eleno had carefully saved the intestines, and he celebrated our return by cooking them on a stick and eating them with great gusto. He was particularly insistent that I should join him in this treat, but I declined.

When Captain Funeke and J. G. M. got in after another unsuccessful day at sheep, we were glad to be able to feed them on deer liver and venison, and Captain Funeke asked me to give him the skin and head, as it seemed a buck was such a rarity in that country that he wished to send it to the museum at Washington, which had promised to pay him for the specimen. The deer supplied us with a great deal of good fresh meat, and as the weather was a little cooler, we were able to keep it for a number of days, and we lived high on steaks and roast ribs during that time.

J. G. M. and Captain Funeke hunted two days at Las Palmitas without seeing sheep, and on the third day Captain Funcke, J. G. M. and I packed one burro with the necessaries of existence and started off on horseback toward one of the nearly dry tanks to try another place for sheep. We were unable to take any number of animals, as it would immediately exhaust the water.

We were going down the arroyo at Las Palmitas, when on looking up to the top of the mountain nearby we saw a perfectly enormous ram looking down at us. He was alone, and through the glasses seemed to have a larger head than anything we had seen. We tied the horses to the trees in the arroyo and Captain Funcke and J. G. M. started round to the side of the mountain where they could approach the ram without being seen by him, while I walked up and down the arroyo and kept his attention distracted. As I had a pair of very powerful glasses with me I looked at him for a long time with great interest. He was probably three-quarters of a mile away, and through the glasses his horns seemed enormous.

After I had watched him for a short time the ram lay down and I sat down and studied him through the glass, praying and hoping that J. G. M. and the captain would soon make the top and the former would at last get his sheep. I calculated that it would probably take them about an hour to reach the top, and at the end of half an hour by the watch, the ram got to his feet again and stood looking off over the surrounding country, occasionally gazing at me and the animals in the arroyo. For fifteen minutes more he stood there, a wonderful and majestic picture, and then passed down into a little cleft in the rocks. Within ten minutes Captain Funcke and J. G. M. showed on the crest of the mountain and approached cautiously. I had no way of signalling them that I did not know whether the ram was still there or not, but I tried to indicate that I thought he was lying down, but did not feel certain about it.

At last they reached the place where the ram had been, but without showing any evidence of seeing any signs of the ram. Finally it was clear that he had gone and J. G. M. sat down on top of the mountain, while the captain came down to me, saying that he was going to camp for some lunch and water. I took a canteen and climbed up to the top of the mountain, where J. G. M. was duly grateful at having a chance to get a drink again after the long climb in the hot sun. Soon the captain reappeared with another canteen and some food, and after eating we started out along the mountain where we thought the ram might have gone, but though we followed the ridge all the afternoon, watching carefully in every direction, we never saw any signs of him. The captain still thought there was a chance the next day, and he and J. G. M. returned to the mountain at daybreak to hunt all that day without success.

When they returned at evening, J. G. M. was utterly discouraged. All of our time for hunting in the sheep country had passed, and it was necessary to be starting out. We might have

ELENO AND THE BUCK.

THE PEAK WHERE J. G. M. GOT HIS RAM.

hunted a day or two more in that camp, but there was not time to try another place, and there seemed to be no sheep at Las Palmitas; so, after a long council of war, we decided to give up the sheep hunting entirely and start for Calexico, this time going along the foot of the mountains instead of along the edge of the laguna, the way we had come in.

J. G. M. was very much disappointed and could only comfort himself with the reflection that it is the ordinary luck of sheep hunters to do without. He said that he did not mind not getting sheep as long as they stayed away from him, but when they came and looked at him, he thought that he ought to have had a shot.

Having decided on our return, we started out the first day and crossed back to Valdez Tanaka, where we spent that night and the next day, crossed once more to the side of the foothills of the Sierra Gigantica toward Calexico, our trail running parallel to the side of the Laguna, but ten miles away from it. The first night we turned up into an arroyo in the mountains to camp, and stopped in a valley called Palm-mar, or Sea of Palms.

This arroyo was composed of sand and white granite and was full of wild date palms. They were beautiful trees and bore great quantities of fruit. They were supposed to have been originally planted by the Spanish missionaries, who first came to Lower California, but they did not in the least resemble the ordinary date of commerce. The trees were of two varieties. One kind bore great bunches of fruit that looked like a black currant, but was only a hard stone with a black skin on the outside of it. The other bore a fruit about the size of a hazel nut, but it, too, was nothing but a large stone with a thin skin on the surface. Both of these, however, had a strong date flavor, and they were much eaten by the coyotes, as under all the trees we found a great many droppings of the coyotes, filled with the stones of the dates, and we saw two or three coyotes sneaking off through the palms as we came up to make camp.

The wide arroyo, with the masses of green palms, made it by far the most beautiful and picturesque place we had seen in Lower California. There did not seem to be any use stopping there to hunt, as Captain Funcke said there were few sheep in that part of the mountains, though occasionally some were seen. The next morning we started on the third day of our return march and pressed along all day through the desert at the foot of the mountains. After noon we reached a portion of the mountains where hills of water-worn stone jutted into the desert, our trail running along near the base of these cliffs. In the early part of the afternoon I walked in front of the pack train and saw another deer, but only got a glimpse and had no chance to shoot. After giving up any chance at the deer, I dropped in the rear with Eleno and spent my time in practicing my meagre Spanish.

About 3:30 we suddenly saw Captain Funcke and J. G. M. getting off their horses, and the pack animals behind them began to scatter out among the trees and start to feed. Looking up on a cliff a half mile away we saw a ram and a ewe standing looking at us. I at once got off my horse, and with the glasses saw that it was a good sized ram, which I told the cook I thought would measure about fourteen inches base by twenty-eight or twenty-nine inches in length. We could see J. G. M. and the captain sneaking off through the desert preparatory to going up the arroyo behind the ram and trying to get a shot at him, and I again had the excitement of seeing the hunt.

After the ram had looked at us for a few minutes, three ewes and a small ram came up and joined him in watching us, which they seemed to do with great interest. After a time the ram, having evidently satisfied his curiosity, went to the edge of the rocks toward us, intending to climb down. I could see his every movement clearly through the glasses. After examining the rock for some time he seemed to think it was too steep to walk down, so he tested it with his fore feet to see that he would not slip, and then calmly sat down on his rump with his hind legs stretched out in front of him, and bracing himself with his fore legs, slid down the cliff thirty or forty feet until he came to a shelf where he could stand up again. It was a ridiculous exhibition, as he looked very much like a small boy sliding down hill.

When the ram got to the shelf of the rocks he stood up and started to eat at a bisnaga growing there, but I was unable to tell whether he was trying to get inside of it or merely to pick off certain seed vessels which sometimes grow on the outside. I think on the whole that he was merely eating the seed vessels.

I was somewhat worried that J. G. M. and the captain would get around to where they expected to find the ram and not know what had become of him, so I told Eleno to get on his horse and ride after them, which he did and soon returned, saying that they were going up the arroyo into the mountains, and had seen him from the desert, and that he had waved to them that the ram was on our side of the peak.

The time passed with interminable slowness, and it seemed to me that they would never get to the scene of action. Finally the ram went up on top of the peak again and walked down on the other side out of our sight. I started running for a little cliff nearby in the hope of climbing up and again locating the ram, when suddenly I heard the roar of J. G. M.'s rifle from the mountains. In a moment this was followed by three more shots, and then by five more in quick succession, which resounded from the heights. At the ninth shot I heard a faint whoop from the captain, and I at once knew that the ram must have been struck, so Eleno and I got on our horses and rode up to the bottom of the rocks where the ram was first seen, and climbed up to the top through a gulch where it was possible to ascend.

As we climbed, I knew that the game was not over, for we heard J. G. M.'s rifle twice more. When we looked over the summit we could see J. G. M. and the captain walking down the arroyo, and when I shouted to them, the captain yelled to me to bring my rifle and cartridges and come quick, as the ram was badly crippled, but they only had three cartridges left. I had left my rifle on my saddle, and I had to return the way I had come and then run round the base of the peak, about a mile through the desert, to get up the arroyo to where the captain and J. G. M. were. When I finally arrived I was wet to the skin and out of breath, and found them in the same condition. We started up the side of the mountain where the ram had gone and soon struck a blood trail. This the captain told me was caused by the first shot, which had been fired at him from directly below at about a hundred yards.

This trail ran along the face of the cliffs until it came to where the ram had been shot again. There was a splash on the rocks where the heavy .405 bullet had gone straight through the ram and struck on the rocks on the other side. The captain pointed out where J. G. M. stood when the shot was fired, and I should say that it was well over 350 yards. The shot had knocked the ram thirty or forty feet down the side of the hill and the captain had shouted, thinking he was dead, but he had nevertheless got up again and gone on, though very sick. We fully expected to find him around the next little bend in the cliffs, and we stopped a moment before turning it. As we looked out over the laguna I could see the sun had set and the sky was glowing with a wonderful sunset. I at once thought, "What a beautiful sunset! And if we don't get this ram within ten minutes, it will be too dark to see."

The next moment J. G. M. stepped round the corner with his rifle ready. The ram was lying down twenty yards away just under the rim rock, and as J. G. M. appeared, he leaped to his feet and went up over the side like a cat. J. G. M. fired both barrels at him without effect, and I at once passed him my rifle and he fired a third shot just as the ram passed over the top. The third shot struck the rocks just under the three or four inches of the ram's back that showed as he fired. When we went up to the top of the rock there was no sign of the ram, and it was fast getting dark. We turned down into the arroyo, Captain Funcke in advance, and he caught sight of the ram going down. We followed the blood trail again until we came to where it led along the edge of a precipice, and here we lost it in the darkness. We hunted up and down for it carefully for a few minutes, but finally it became so dark it was merely a question of getting down out of the mountains to our horses, and we reluctantly gave it up and climbed down, got on the horses and pushed on until 8 o'clock that night, when we camped in another arroyo near a stream of running water.

We had great hopes of getting the ram the next morning, but it looked to me like a difficult proposition. Whenever I thought of the splash of blood and flesh on the rock, I felt that he was shot through the body, and if so, I knew we would get him, but on the other hand I could not feel certain that it might not have been a superficial wound through the fleshy part of the leg, so that the ram might go miles before he died. J. G. M. was, of course, greatly disappointed, as it seemed that he could not break his luck, no matter how hard he tried. He and the captain and Eleno were up before daybreak and off early on the burros to the place where the ram had last been seen.

There was a hot spring about a mile up the ravine, so I took my rifle and soap and a towel and went up to it and had a bath in the first hot water I came to. I returned about 10 o'clock. I felt sure that it would not be long before the hunters returned if they were successful, so I took my glasses, and walking down the arroyo about a mile, climbed a cliff and began to examine the country. After a little I saw something moving down the desert, and looking at

it through the glasses I could see burros and men coming toward camp. I knew that they must have the head to return so soon, and hastily scrambled down and walked toward them. As I came up I saw that the first burro had a huge sheep head on it, and I could hardly believe when I saw it that it was the one which we had seen the day before. We brought it back to camp in triumph, and on measuring it, it proved to be a wonderful head, with 16¼ inch base by 36 inches in length.

Luck had finally changed for J. G. M. and he had succeeded in making good use of his one chance, as he had killed one of the biggest rams that had been taken out of the country for some time.

They had found the sheep just under the cliffs where we had lost the blood trail. He had fallen dead over the precipice the night before. The first shot had struck him right through the shoulders, going in from the front and coming out behind the fore leg, while the second shot had gone straight through the middle of the body. It was a remarkable exhibition of the vitality of these animals that he had gone fully a mile and lived half an hour with two such wounds from a soft-nose .405 bullet. The hind quarters of this ram had been badly eaten by the coyotes, but we still got enough fresh meat from him to supply our immediate wants, as the venison had just given out.

This completed our sheep hunting for the trip, for we were now out of the sheep country, and we had the heads we wanted. J. G. M. had gone in from the first with the statement that he only wanted one head, while I had willingly limited myself to two. We had certainly been greatly favored by fortune, as the smallest of our three heads was larger than the largest head taken out by the party just before us, though they had been forty-two days in the mountains and had killed five rams.

As he had not had a good day of rest with nothing on his mind on the trip, J. G. M. decided that he wanted to stay over one day at the camp at Agua Caliente, so that afternoon we went up to the hot springs. We found a very beautiful spring further up the cañon than I had gone in the morning, where a great stream of hot water gushed out of the cliff, and fell down in a succession of pools, the water cooling rapidly as it flowed, and by going down as far as was necessary, a person could get a bath in any temperature that he desired. The presence of a large amount of water also brought out a luxuriance of vegetation that we had not seen equalled before in Lower California. There were gentians in bloom and goldenrod and other flowers, and some really green grass. We spent a luxurious afternoon in bathing, smoking and loafing and returned to camp for supper.

The next day was J. G. M.'s day of rest, and Eleno and I started out again deer hunting. We went back on the trail to where J. G. M. had killed the ram, and as we were going up it, a coyote ran out and started across the desert. Unfortunately for him, like Lot's wife, he stopped a long distance off and looked back. I took one shot at him with my rifle, knocking him over. I certainly thought we had that coyote, but when we got to where he fell, he had gone, and on examination we found pieces of his leg bone which had been knocked out by the bullet. The distance was evidently too great for the bullet to carry up, even though I had shot a little high, and it had cut off his hind leg at the knee. We followed his trail for some time and Eleno gave another remarkable exhibition of tracking, but it was evident the coyote would go all day faster than we could follow, so we were forced to give him up. We turned back and took to looking for deer, but though we worked hard and long, we saw no deer and returned to camp at last under the first cold and rainy sky that we had seen. It looked like a heavy storm and kept up a spatter of rain during the night. About 8 o'clock that night one white and two Mexican cowpunchers rode up the arroyo and camped near us. They were crossing the mountains and left early in the morning without having come in contact with us.

Next day our storm had blown over, and we started for the arm of the lake where we had camped the second day in. It was time our trip ended, as the horses showed the effects of three weeks of scant fare very heavily. The captain was careful of his stock, and always camped near the best feed he could find, but the best feed in Lower California would have made a Northern horse drop dead with astonishment. A few spare bunches of withered grass and some ironwood trees in leaf was "good feed."

Though the horses and mules were thin, the four burros seemed as well as ever. They always went in two pairs, and never by any chance changed off, each burro associating only with his partner and seeming to hold the other two in contempt. They had all the dignity in patience of untold years, though one little fellow not much bigger than a Newfoundland dog would sometimes jump about a little, and was, therefore, always called by Eleno "Muy broncho burro"—very wild. There is no question that for a country like Lower California, an animal like a burro, which will only drink once a day at most and which can go comfortably for forty-eight to sixty hours without water, is a tremendous advantage.

We still had three days of travel between us and civilization, and we finally left the mountains and reached the laguna early in the afternoon. The captain went up to the spring at the foot of the mountains and got our last supply of fresh water, and the next morning we struck out for Signal Mountain. It was the same long pull through desert that we had had coming out, and the midges were still with us in swarms. But at last we reached the end of the laguna, gave the horses their last drink of brackish water, and pushing on camped below Signal Mountain. It was a gorgeous night, clear and warm, bringing many regrets at leaving for the North.

We had barely got under way for Calexico when I saw a coyote looking at us from a nearby hill. Mindful of my prior miss, I got down on the ground to get a rest and make a sure thing of it, whereupon my target ran like a

MOUNTAIN SHEEP COUNTRY.

CAMP AT PALM MAR.

streak and left me to miss him twice as he vanished over the hill, and regret that I had not taken my chance when I had it. In replacing my rifle I disturbed the sheath in some way, so that I lost the rifle and had to go back for it with Eieno. Thus when we descended into the desert we were a mile behind the rest of the party. What a sight met our eyes! Before us the desert seemed to be a great lake of sparkling water. The shore was about a mile away, and as we looked, the pack train came to it and began to wade into the water. I could hardly believe that an illusion could be so perfect, and that it was only a mirage. I got out the glasses and looked at the scene through them. I cou'd see the lake and the little waves at the edge and our pack train and riders solemnly wading through water about up to the knees of the animals. It was a most wonderful mirage, and as I watched the edge of the water recede as we advanced across the desert, I imagined the feelings of some wanderer dying of thirst who sought to reach the water lying always a half mile in front of his eager feet.

At last we reached the irrigation ditch on the other side of the desert and pushed along it to the ranch and Calexico. I shot and killed a duck to give Señor Munos, and also to end the trip with a kill and not with a miss. When we reached Calexico, we were surprised to find that the United States had almost been at war with Mexico, and that American eitizens and the American ambassador had been mobbed in the city of Mexico. We, however, had been in no danger at that time, as we saw no one save one or two Indians since we had left Calexico.

The experience of J. G. M. shou!d give courage to all big-game hunters when luck breaks against them. It may turn at the last moment, and the prize you have labored in vain to seeure may be waiting for you as you forlornly turn your back on the hunting grounds and start on your journey toward civilization.

One thing about the trip has caused me much speculation. I saw J. G. M.'s two rams at about equal distances and in each case I spent fully half an hour studying them through the glass. The ram which he eventually killed appeared to me to have a small insignificant head which I thought would be about fourteen inches in diameter and twenty-seven or twenty-eight inches in length, yet when the ram was finally secured, it proved to be an enormous head with a base measurement of sixteen and one-quarter ineches and a length of three feet. Now the ram I saw at Las Palmitas even at a distance looked like an enormous head, and if his actual size was also larger than it appeared, he must have been beyond my dreams of record heads. I only hope he will eontinue to grow and wait patiently till I return to Lower California.

[CONCLUSION.]

NATURAL HISTORY

Flying Squirrels and Muskrats.

Concluded from page 453.

The muskrat is the most valuable fur-bearing animal in the region under consideration and perhaps in the State, and since these observations were made the rise in the price of muskrat fur has of eourse made them still more important. Their nests or houses are built in a variety of places, and the sites chosen for some of them are odd enough. Usually built in shallow water along the shores of ponds or even at some distances from the shore, where the water is shoal enough and the building material is convenient, they sometimes choose very different situations for their houses.

"While these are the usual places where the muskrat build their houses, now and then a house is found in some quiet unusual and unexpected place. Among these are the cross-timbers under the piers at the eottages about the lake. Dec. 24, 1900, a completed nest was found resting eosily on cross-timbers under the pier at the Lakeview Hotel. Though not large, this nest was compactly built. It was composed almost wholly of [the plant] chara, and was a foot or more above the surface of the water. Nov. 2, 1904, another nest was found in a similar situation on eross-timbers at the distal end of the Culver depot pier. This nest was quite large and composed chiefly of chara. When disturbed the owners of these nests would drop quietly into the water and swim away.

"Toward the last of October, 1904, a nest was found on the seat of an abandoned boat near Murray's. This nest was newly built and consisted chiefly of chara and scirpus stems. Later, when the lake froze over it was deserted. Still another nest was found on the top of a tree that had fallen into the lake, and yet another on the boughs of a broken tree that extended into the water.

"The most interesting and unique situation selected by a muskrat for its house ever seen by us was a large drygoods box which a duck-hunter had anchored in Outlet Bay for use as a blind from which to shoot ducks. The box was anchored some distance from shore with the open side toward the shore. Bushes with leaves still on were stuek in the lake about the box to aid in concealing the gunner and his boat, a half-inch manila rope being used to hold the box at anchor. On visiting the blind one morning in October more than a peck of fresh wet chara was found in the box. The amount was increased eaeh night for the next few days until it consisted of more than a bushel of material, almost wholly chara. One morning the box was missing and the next day it was found on the east side of the lake, where it had evidently been drifted by the wind. An examination of the anchor rope disclosed the faet that it had been gnawed in two by the muskrat itself, which thus set its own home adrift."

The food of the muskrat is something about which in the past there has been much diseussion. Certain observers have declared that they were purely vegetarian, while others better informed have declared that they ate mussels and possibly other animal food. Nevertheless the paper in question gives a lot of novel information which many of our readers will be glad to see.

"During the summer the muskrats appear to subsist almost wholly on vegetable matter. In the early fall they sometimes make foraging trips to nearby gardens where they eommit depredations on the carrots, parsnips, beets, turnips, and other succulent vegetables. They also eat the seeds as well as the stems and roots of the yellow and white pond lilies. They gnaw the bark from the roots and stems of swamp loosestrife and the buttonbush. Later in the fall and during the winter animal food enters more largely into their menu. We have found them feeding on dead coots and ducks that had drifted ashore or which, wounded by some gunner, had escaped among the weeds and sedges fringing the lake. They also feed on turtles of various species, which they find dead, or which they themselves may kill. On several occasions we have found partly devoured turtles under circumstances which left no doubt as to what had been feeding on them. Dec. 11, 1904, several dead painted turtles and a few musk turtles were found near Morris Inlet lying on their backs on the snow or ice, with the flesh wholly or partly devoured, and muskrat tracks leading to and from them and all about. The most important element of the winter food of the muskrat, however, is the fresh water mussels or Unionidæ. At various places along the shore, wherever an object projeets out into the water, such as a log or pier, or fallen treetop, there will be found in autumn or early winter a pile of mussel shells were muskrats have been feeding. These piles are frequently of considerable size, containing sometimes a bushel or more of shells. Sept. 24, 1907, one of these piles on Long Point was examined. It was off shore several feet and in water eighteen inches deep. About one-half of the shells were examined critically and eounted. There were 532 shells representing four species.

"During the fall these operations are probably confined to mussels which they find in shallow water near shore. In winter, however, when ice-cracks form and extend well across the lake, the muskrats go far out on the ice, dive through the cracks and bring up mussels which they eat sitting on the ice. At such times they get mussels at considerable distances from shore. In the first days of January, 1905, a broad crack formed in the ice from Long Point to the Norris boathouse. On Jan. 4, a muskrat was seen at the edge of this crack about

1,000 feet from shore eating mussels. It would dive through the crack and after a little while reappear with a mussel. Sometimes it dived five and six times before securing one. It would then sit up on its haunches, holding the mussel in its paws, and, by much clawing and chewing, finally succeed in opening the shell and removing the meat, which it usually licked out quite clean. In some cases the muskrat failed to get the shell open. Usually the shells are but little or not at all broken; even the hinge still holds and the shells are scarcely injured. It is our observation that the muskrat, by inserting its claws or teeth between the valves succeeds in cutting or tearing loose the adductor muscles so as to permit the valves to spring open. Another muskrat was observed further out on the same crack, a long distance from shore, and the ice along the crack between the two was pretty thickly strewn with shells. The muskrats apparently do not care so much for mussel gills filled with eggs or glochidia, as these were usually rejected. The stomach of a muskrat examined at Washington, D. C., late in the spring was found well filled with mussel remains. Muskrats also feed to a considerable extent on fish, crawfish and frogs. We have on more than one occasion found partly devoured fish at their feeding stations, and remains of fish, frogs and crustaceans in their kitchenmiddens. We have never seen a muskrat catch a live fish, but have no doubt they do so. They certainly pick up freshly dead fish which they chance to find."

WHAT WAS FOUND UNDER THE OWL'S NEST.

Nest of a Great Horned Owl.

Along the creek just above Branchport, N. Y., there used to be a little pine grove where the crows always nested, and a flicker or a little screech owl had a nest in one or the other of two tall elm stubs that stuck up skyward through the pines.

As we were passing through this grove, May 2, 1909, our attention was drawn by the number of crow and pheasant feathers on the ground, and looking up we at once saw the cause. A pair of great-horned owls had pre-empted an old crow's nest and there sat the female on the nest. But when she saw that she was discovered, she left, and was soon joined by her mate, and both flew from tree to tree and were very much excited. They were soon discovered by a crow, which set up a great cry, and its fellows began to come from all directions until there were fifty or sixty of them, and all talked at once. Occasionally a crow would dive at an owl, and if the owl made a move they would all talk faster than ever until there was a perfect bedlam of sound, and it called the crows from all the country round.

On the ground under the nest was a pheasant's leg, a rabbit's leg and a headless young rabbit and lots of crow and pheasant feathers.

Climbing to the nest we found it to contain two downy young owls about two weeks old, also the greater part of a ring-necked pheasant and the rump and legs of a crow. No wonder that crows hate and pester owls.

I visited the nest again on May 6 and got a good picture of the young owls. This time the nest contained the hind parts of a Virginia rail and under the nest on the ground was a female pheasant's head.

My observations show that this owl always eats the head of its victim first, as every animal or bird that I ever found in one of its nests was headless. In one nest I found the legs and feet of two crows, the rump and legs of another crow, a crow with the head and breast gone, the hind parts of a rat and the hind parts of a rabbit. Quite a varied bill of fare. This nest contained but a single young one, about one week old. When climbing to the nest the owl flew at me, striking me forcibly on the arm, and had I not had a good hold on a limb I should have been knocked from the tree. As it was, there were six claw marks on my arm which drew blood, and these were made through a heavy coat, shirt and heavy undershirt. I then broke a dead limb from the tree and kept close watch of the bird. She flew at me several times crying, "Wock, wock, wock," and I had to dodge behind the tree to keep her from striking me. The last time as I dodged she struck the stick and went tumbling nearly to the ground, but recovering, managed to reach a limb on a nearby tree where she sat blinking and chuckling for a few moments, then silently left the woods and was seen no more.

Verdi Burtch.

YOUNG HORNED OWLS.

Flamingoes in New England.

In Forest and Stream of Feb. 4 was printed an account of a flamingo seen on Long Island, and again on Feb. 11 John Lewis Childs, of Floral Park, N. Y., related that he had a flamingo which had flown against a telephone wire and was found exhausted in the snow. The skin is now in Mr. Childs' possession. The printing of the article of Feb. 4 called forth a letter from Dr. G. M. Minor, of Waterford, Conn., which told of a flamingo shot by a gunner in Rhode Island in November. This seemed so extraordinary that at our request Dr. Minor made further inquiry and sent us the results as reported to him by a friend in Charlestown, R. I. The essential part of this report is as follows:

"This bird is a real flamingo and was shot by Charles Cashman on Nov. 23, 1911, in Trustum pond, and this is the description that I got: Height to top of back, 34 inches; length of neck, 27 inches; tip to tip of wings, 5 feet 6 inches; color of wings, scarlet with black edges; length of body, 21 inches; color of back and neck very light pink; color of legs, scarlet; color of bill, pink and black.

"Mr. Cashman has the bird mounted and it is worth seeing. He told me that there were two of them and he got the female or at least thinks he did, as the other one had a black stripe the whole length of its back."

The mention of the black stripe down the back seems an error of observation.

This letter, with what has previously been published on the subject, seems to show that last autumn three flamingoes were at large on the New England coast. G. D. Tilley, of Darien, Conn., says that it is impossible to tell just how many flamingoes escaped from his preserve last fall; that he had a large number on hand at

the time, but that as nearly as he can discover only two birds flew away. It is altogether probable, however, that Mr. Tilley's preserve was the source of all these flamingoes, and if the third bird described by Mr. Cashman was actually a flamingo, three must have escaped from the Tilley preserve. It would be interesting if the third could be traced, but on the other hand it is a matter of congratulation that two have been accounted for.

The FOREST AND STREAM *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

Black Raccoon.

BUFFALO, N. Y., March 22.—*Editor Forest and Stream:* A farmer, Ralph West by name, who lives near Angola, N. Y., about twenty-two miles from this city, and who runs a line of traps in the winter season, writes me that he caught a black 'coon—not a negro—but a black raccoon in one of the traps, that the color of the animal's fur was the color of black fur on a skunk, and that the party to whom he ships his fur allowed him $6 for the pelt.

I saw a raccoon at Blossburg, Pa., some years ago that had fur the color of a very light red fox, but never heard of a black one before. Are they common? E. P. R.

[Raccoons are often quite dark, even black, on the back, and the blacker the more valuable. This specimen seems a case of melanism. Such a one we have never seen.—EDITOR.]

Faunal Conference.

AT the conference to take place in Washington in April as to the preservation of the North Pacific fauna, Russia will be represented by P. Botkine, Minister at Tangier, who took part in the previous conference on this subject.

GAME BAG AND GUN

A Night in a Storm.

T. N. N. WAS born in Missouri, and when fifteen years old, and large for his years, he enlisted as a volunteer in the Union army, under the first call, and served through the war, in a cavalry regiment, being mustered out in 1866. His troop was stationed chiefly in Louisiana and Arkansas, a hostile country, and as he was almost constantly on scout duty, was several times wounded and had many hairbreadth escapes.

After the war he went West and re-enlisting, served under Crook and Sheridan, fighting Indians. In 1898, he tried to enlist again as one of Torrey's troop, but was turned down because of his age.

He was one of the first settlers in Northwestern Colorado, where he subsisted for many years, chiefly as a market hunter, killing deer and elk and taking them to Leadville and other mining camps by the wagon-load. He has actually hunted elk every year but one for nearly forty years, for when they became scarce in Colorado he emigrated to Wyoming, where they were and still are plentiful.

I have hunted many a day with him, and although he is sixty-six, he is a bruiser for that kind of work, albeit he is not overfond of any other. When it comes to trailing game or a strayed horse I have never seen his equal, nor one who could stay on his feet longer.

Like many another man of his age he is full of little notions. One has to do with the camp bedding. "I can never sleep when I'm cold," says he, and his blankets are a large pack-load.

One day late in November we left camp to bring in some elk meat I had killed the day before about fifteen miles away. It lay in deep snow near the top of a ridge whose elevation was about 9,000 feet above sea level, and whose sides were covered with burnt and fallen timber, and so precipitous that there was but one place where we could get up with horses.

We had good animals and we loaded them heavily; there were seven pack-loads when all was on. Then it was just getting dark, and a bitter cold night set in, and with it a tremendous snow-storm. Still we started, but the trail was lost in a moment, and our horses would not face the blast, and almost at once three of the most heavily laden drifted away from us in the dark. So there was nothing for us to do but "lay out," as the natives call it.

We had left camp without any preparation for this sort of thing. We had had nothing to eat since morning, and nothing to drink either. And no overcoats. In the pelting wind and blinding snow we were down to our last match before we got a fire started in a big pile of down timber, and in the lee of that we cowered all night.

I shall never forget that night. About midnight the snow ceased, and the sky cleared. But that simply added to our discomfort, making the cold more bitter, and on the top of that bare ridge, the wind drove it clear through us. Wyoming cold is almost arctic, and but for the big blaze of the piñon logs, we undoubtedly would have perished.

Sleep was beyond me; once only I drifted into unconsciousness for a moment, but waked up chilled to the bone, and did not try it again. Not so the old man. He skirmished around in the snow and found a few little piñon seedlings, that had sprouted after the forest fire. He gathered some of these, spread them on the snow in front of the burning logs and lay down. They afforded about as much of a bed as a sheet of paper would have done, and he who could never sleep when he was cold, was lost to the world almost as soon as his head touched the snow, and he lay there nearly all night, shivering and shaking violently from head to foot with the cold, and snoring fit to wake the dead!

Though we were out thirty-six hours without food or drink—for we had nothing to melt the snow in—he was never a pin the worse, and walked, leading his old horse through the snow, up hill and down dale, nearly all the way to camp, fifteen miles of very hard going. Such is the stuff of which pioneers are made.

W. B. S.

When the Hound Bayed.

THE 'coon hound bayed at supper time. The cook was heard baying in the kitchen a few minutes later. It was the kitchen of a little hotel on the shore of Charlotte Harbor, Florida. There were fifteen men in the dining room when the first note of the hound's music were heard, and the two darkey waiters were just getting ready to serve them. A minute later there were no diners and no waiters in the long room. It seemed that some of the sitters must have escaped through the windows and dropped eight feet to the sand. The cook bellowed. The "cohn" bread and "poke" sausage, the boiled Spanish mackerel and the roast duck were ready to follow the green turtle soup, but there was nobody there to serve or eat the viands, and the rage of the dusky chef was due to two causes. In the first place his mighty efforts were not appreciated, and secondly he did not dare desert the kitchen and join in the 'coon hunt.

Out in the scrub palmettoes back of the fringe of mangroves the deep-throated hound's voice was mingled with the fierce yapping of the tyke and the shouts of the hunters who were stumbling and tumbling amid the cable-like roots of the stunted palms. Torches flared out and lighted up the tangle. The dogs were well forward among the slim, tall pines, and finally a stand was made and a dozen men gathered around a fire-scarred pine in a crotch of which two glaring eyes reflected the torchlight.

"There she is!" said Cato, one of the waiters. "Shall I go up and git her?"

"Go to it, Cato," said Uncle Bill. "I'll bet fo' dollars to a wild orange that it's oney a onery 'possum."

"Spat" went a Flobert cartridge fired by the youngest member, and a fiery ball tumbled from the crotch and was instantly tackled by the tyke. Cato grabbed the 'coon hound just as it closed its teeth on the whiffet, which it evidently mistook for the 'coon. Bethel, the other waiter, pounded the 'coon over the head with his light wood torch, and the hunt was over, except that the party picked up two gopher turtles on the way back to the hotel.

Accustomed to 'coons above the Mason and Dixon line, I critically examined this specimen. It was surely a degenerate as compared with a Northern raccoon. It weighed twenty-one and a half pounds and was said to be an unusually heavy specimen. Its coat was dry, hair short and chiefly tawny, and its tail was only seven and one-half inches long with the faint blackish bands and short fur or hair in comparison with the well marked brush of Tennessee or Kentucky member of the same family.

On our return to the hotel the victim was handed over to the chef together with the tortoises, and in a measure he was appeased for the neglect of his efforts in getting up a record-breaking supper. We had gopher stew next noon, but saw nothing of the raccoon.

On the side of a shack near the hotel I saw a wildcat pelt tacked out to dry. It was thirty-six inches long, rufous on the back and running down the sides to yellowish white with markings almost as striking as those of the ounce, ocelot or leopard. It was a big lynx for Florida, but then all quadrupeds seem stunted in that State, and a deer weighing 150 pounds is a wonder.

Harrimac.

Jackrabbit Bounties.

Spearville, Kans., March 20.—*Editor Forest and Stream:* Our shooting in this part of the State consists of prairie chicken and quail in season, ducks in the spring and fall and cottontails and jackrabbits all the year round. Coyotes and an occasional gray wolf are frequently caught with horse and dogs, and jackrabbit coursing is indulged in by those who like the strenuous sports.

In counting up the results of some of our rabbit hunts I think with pity of the poor Easterner who in his contribution reports a fine day's sport and counts out his bag of a half-dozen cottontails, a few snipe or a brace of partridges.

Jacks, as they are commonly called, are very plentiful—and destructive—in this part of the State, and our county pays a bounty on their scalps, or rather ears. This bounty is just about enough to pay for ammunition, so that the boys have their sport free. I have known parties of half a dozen guns to bring in anywhere from 300 to 500 jacks as the result of one day's shooting.

The accompanying picture shows 7,000 pairs of jacks' ears gathered in at one time by our county clerk, for which he paid the bounty of two cents per pair.

When snow is on the ground, jacks can be routed from every bit of shelter showing up on the prairies or in the fields, but when there is no snow, the hunters usually take two teams and wagons. Connecting the wagons by a wire 500 or 600 feet long, and as this wire is dragged across the fields or prairie, the shooters' walk along behind and bowl over the disturbed jacks as they run away. When a good piece of cover is struck, there is an almost continuous pop-pop along the line, and the wagons nearly always come home full.

Jacks are never eaten by the people here, but Eastern buyers were here this winter and gathered and shipped them by the carload, and I doubt not that many an Eastern epicure has gloated over his dish of potted chicken this winter that had its origin on the prairies of Western Kansas.

H. W. Dorsett.

New Iowa Laws.

Linville Falls, N. C., March 24.—*Editor Forest and Stream:* The new Iowa game law amendment providing for a license that covers fishing as well as hunting is an amendment to the law of two years ago that produced $108,000 the first year and something less than that the second year from the proceeds of resident hunters' licenses at $1 each. The result ought to be a large addition to the fund, notwithstanding its exemption of boys under sixteen years of age. The chief problem the State has in connection with the whole business is how to spend the money. Hungarian partridges have been introduced, an extensive system of stocking streams with fish has been established, and many fish and game wardens have been employed. The law against the destruction of game of all kinds, song birds and fish is enforced many times more effectively than it has ever been possible to enforce it before. The sentiment of the State is also better.

SEVEN THOUSAND PAIRS OF JACKRABBIT EARS.

The State Game and Fish Council, consisting of one fish commissioner, one game commissioner and one fish and game warden may set apart one-sixth of the territory of any county as a game refuge or reservation. The right to take or kill game within the territory so set apart shall cease for a period of not to exceed three years. No person over the age of sixteen years shall hunt, pursue, catch, trap, kill or take any wild animals, bird, game or fish in this State with a gun, fish line and hook, spear, seine or trap without first procuring a license from the county auditor; provided, however, that women who desire to fish only shall not be required to obtain a license therefor.

The fish and game warden shall furnish the auditor with license blanks and application blanks. These blanks shall bear the title, "Sportsmen's License." The license shall be good in any county of the State, but not on inclosed or cultivated land without permission of the owner or tenant, or on any public highway or in any game refuge or reservation.

The license fee to be paid to the county auditor by a resident of the State or by a non-resident who is temporarily residing at any of the State lake resorts is $1. For other non-residents of the State the fee is $10, and any person who is not a citizen of the United States must pay $25.

It will be noted that concessions have been made to boys under sixteen years of age, who may hunt all they please without license; to women, who may fish without license, and to the patrons of the Iowa Lake resorts, who get their license for non-residents for $1 instead of $10, the sum they must pay if they fish or hunt on a river or anywhere not at a lake. Some mighty small ponds and sloughs will become lakes, in my opinion, for the purpose of saving $9. And why should the destructive small boy be turned loose again to kill birds at will? He has been restrained for two years without harm to anyone. A boy should pay his license the same as anyone, for he does more damage than 90 per cent. of the men who hold licenses. This law makes the fishermen pay, as they have not done heretofore, and that will please the hunters and produce more funds.

Frank W. Bicknell.

Bobwhite in West Virginia.

The beautiful bobwhite, that was never known to do damage to man or any living creature, indicates, from every valley and hilltop in West Virginia, by his cheerful and happy whistle, that his heart is overflowing with joy, that the great army of pot and market hunters have been disbanded, and that once more he can gladden the life of the true sportsman, whose chase with dog and gun is from the standpoint of sport and recreation, and not one of commerce, says State Game Warden J. A. Viquesney, of West Virginia, in his annual report.

He can now proclaim, from the top of a fence post, the appreciation he feels toward the farmer who has supplied shelter and a little feed through the winter, and afforded him protection from the game hog and criminal foreigner that in a few years more would have completed the extermination of this splendid little bird.

Farmers realizing at the present time, as never before, the great value of the bobwhite as a destroyer of insects are providing shelter and feeding these birds through the rough cold spells in winter, not only from an esthetic or humanitarian standpoint, but because it is like bread cast upon the waters, and will be returned to them many fold by the good they will do in return in saving their agricultural crops from damaging insects.

A conservative estimate, made by collecting data from every county in the State, shows that we have five times as many of these birds as we have had at any time for ten or twenty years.

Too much cannot be said of the great value of insectivorous birds to the agricultural and horticultural interests of our country, and if our law had not done more than protect these birds from the ruthless destruction by the unnaturalized foreigner, who, in the past, has killed without distinction, every living creature of the animal or bird kingdom that came within his vision, it would be worth many times the effort and money that it cost. It is the universal conclusion of all scientists that the continued existence of man in the world is absolutely dependent on the work of the insect-eating bird.

Kansas Game Fund.

TOPEKA, Kans., March 18.—*Editor Forest and Stream:* I inclose you herewith the law of Kansas, which takes effect upon its publication, and therefore this published law is now in force in this State:

Section 1. There is hereby appropriated, out of the general funds of the State not otherwise appropriated as salary for the State fish and game warden the sum of one thousand dollars ($1,000) for (the balance of) the fiscal year ending June 30, 1911, and the sum of two thousand dollars ($2,000) for the fiscal year ending June 30, 1912, and the sum of two thousand dollars ($2,000) for the fiscal year ending June 30, 1913.

Sec. 2. That out of the moneys now in the hands of the State Treasurer to the credit of the State Fish and Game Warden's fund, and so much thereof as may be necessary is hereby appropriated and shall become immediately available for the acquiring of land and for the location, erection, maintenance and improvements and extension of the State Fish and Game Hatchery, in Pratt county, Kansas, and the building of fish-ponds and lakes, hatchery buildings, and pools and other needed buildings and structures and for such other purposes as are necessary to carry out the provisions of the fish and game laws of the State of Kansas. And that all moneys hereafter paid into the State Treasury for hunters' licenses prior to the close of the fiscal year 1911, and all moneys from hunters' licenses paid into the State Treasury during the fiscal years 1912 and 1913, are to be credited to the State Fish and Game Warden's fund and are hereby appropriated and made available when paid, for the same general purposes.

Sec. 3. No lands shall be purchased or buildings erected or other permanent improvements made in excess of $500 by the fish and game warden, as herein provided, until such purchase of lands or erection of buildings or improvements above provided shall have been approved by the regents of the State University, by proper resolution passed and recorded in the minutes of the board. Certified copy of which resolution shall be transmitted to the governor and if he approves the same, he shall endorse his approval thereon and file same in the office of the Auditor of the State; thereupon the Auditor shall honor all proper vouchers of the fish and game warden, for such purposes to the amount specified in such resolution so endorsed and approved by the Governor.

Sec. 4. And for the moneys appropriated by this act the Auditor of State is hereby authorized and directed to issue his warrants on the Treasurer of State, upon itemized vouchers duly sworn to by the claimant and approved by the fish and game warden.

Sec. 5. This act shall take effect and be in force from and after its publication in the official State paper.

As the Legislature at the 1909 session did not make any appropriation for the State fish and game warden, the expense of the same was paid out of the Governor's contingent fund, and this Legislature repaid the same by an act appropriating from the game and fish fund in the State treasury about $7,500, restoring the same to the general fund of the State. The laws of Kansas provide that all money received from hunters' licenses shall be maintained in the game and fish fund in the State treasury to be used by the State fish and game warden for salary and expenses in operating State fish hatchery, stocking the waters of the State with game fish and increasing the game supply of the State, but heretofore the law has required specific appropriations, and the State wardenship has been considered a political reward for some strong partisan, without regard to qua'ification for the duties devolving on the office.

The appointment of Prof. L. L. Dyche, curator of the Natural History Museum of the State University as State game and fish warden less than two years ago, has elevated this position to its proper sphere, and taken the office out of politics, and this new law not only appropriates all the money in the fund at present, but in addition all that may accrue from hunters' licenses for the coming years 1911, 1912 and 1913 which are by this act made available for the use of the warden. The last published report credited the fund with about $89,000, and the annual receipts from hunters' licenses average about $56,000, and the sportsmen of the State are all rejoicing that their wishes and requests have at last been granted by this progressive action of the State Legislature which we think will give our State high rank among the States that are trying to increase their supplies of fish and game. W. F. R.

The Use of Game.

ASHEVILLE, N. C., March 18.—*Editor Forest and Stream:* The question of solving the protection of the game and other wild creatures with an idea of lessening the danger of extinction of any given animal or bird, and at the same time protecting the rights of the farmer who may live in the vicinity, offers a proposition difficult to solve.

From the standpoint of those of us who are interested in wild animals and birds, and do not want to see the day come when the different species will become extinct, protection on the part of the State or country seems desirable. But we are bound to admit that where the State protects these animals to a point where they become a menace to agricultural interests in the community, there is danger of the protection being carried too far.

Personaliy, I believe that the National Government shou'd protect all wild creatures in the various forest reserves. If the animal then leaves the forest reserves and becomes a nuisance to agricultural interests, it would come under the laws of the State, and the farmer should have the right to kill such animal.

If the farmer locates adjacent to the forest reserve with such laws in effect, then the burden of this nuisance should be on him, but if the Government or State should locate a forest reserve adjacent to an already settled agricultural community, there should be made some arrangement for the protection of agricultural interests already established. It seems natural for people in the Eastern States to talk of prohibiting the killing of the elk and deer in the Western States, but if they were once on the ground and saw the inroads that the elk made on the ranches adjacent to the reserves, they would realize as never before that there are two sides to this question. Now that the Appalachian and White Mountain Forest Reserve bill has gone through Congress, this same matter will come up later in the East, as, when these reserves are established, the wild creatures will no doubt be protected, and sooner or later an overflow from these reserves may cause some detriment to the adjacent farmers. This will always be true.

Personally, I believe that if the National Government establishes a forest reserve, it should protect the wild creatures therein and arrange for the killing of all such animals as are a menace to the more valuable species. If the wild animals increase to a point where they become a nuisance to the taxpayers in the State wherein the reserve is located, then there should be some arrangement made between the Government and the State for payment of damages or killing off of the excess of such animals as are causing the nuisance. C. P. AMBLER.

Duck Raising in Texas.

ALFALFA, Tex., March 5.—*Editor Forest and Stream:* I have seen much in FOREST AND STREAM about rearing wildfowl and consider such discussions most interesting. Let us have more such talk.

I raise each year a good many wild mallards, but have never freed any of them, yet I find it great sport to raise them, and it is a beautiful sight to see flying about a flock of mallards that are perfectly tame and gentle. I find it very hard to get a wild hen of any kind to breed in captivity, especially where one has only small ponds for them. I generally use females reared from one that I bought and always use these hens with a full blood wild drake. The offspring are exactly like full blood wild birds and fly just as well. I raise a few full bloods, but cannot distinguish them from the others. The females I use are claimed to be seven-eighths wild mallard, one-eighth Rouen. They look like a wild mallard except that they are a little heavier. They are good layers, some laying seventy to ninety eggs in a season.

The only way that I can get the wild ones is by keeping all that I wing while hunting. For about a week I keep them in a small pen and then turn them out into a larger inclosure that has a small tank or pond. After they have been there about two months they go where they please, and it is not often that one will leave.

I have pintails that are just as gentle as any mallard. They have never laid yet, but I think they will this spring. I have several different kinds of wild ducks, but have not had very good luck with any except the mallards. This I believe it is on account of not having enough water.

Anyone with a small pond can raise his flock of mallards each year. I know of one man that raised a nice flock of mallards this year with a pond about a foot deep and ten feet across each way. He used a seven-eighths hen and a wild drake that he winged.

All the wild ducks that are raised are just that many more toward saving our wildfowl that are soon to be gone at the rate they are disappearing now. Only a few years ago mallards were here all winter regardless of the cold, but this winter has been like spring time here, and there is not a free wild duck about. A few years ago ducks passed through here by millions and now only a few hundred can be seen in a season.

Chickens and quail are also getting very scarce. One may tramp all day without seeing enough quail for his supper, and four years ago they were very plentiful. Let us hear from other game lovers. CHAS. E. JACKSON.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Spring in Minnesota.

Minneapolis, Minn., March 20.—*Editor Forest and Stream:* Spring has stretched her soft hands over the plains and woods, and we now feel the first signs of the season most welcome of those in the round of the year. The snows have fled into the streams or have soaked into the ground to nourish the roots of the grass soon to sprout in every field, hill and lane lately covered by winter's hoary mantle. The sparkling water runs through the full brooks carrying the lessening ice cakes to their doom. The lover of nature delights to feel the advent of spring and to watch her growing charms. When stormy March has come, we turn expectant eyes to the wide horizon to see what is to come. We listen and feel. Before many days the pirate crows begin to wing their way over the old cornfields, and the first robins to appear wake the woodland with their cheery calls. The high winds with their alternate warmth and chill set the blood pulsating and a new breath of life to the overworked mortal who has left the city far behind him. Worries are cast aside when spring comes gypsying over the country; a burden seems to be lifted from the shoulders of all humanity; children are gayer than ever.

Soon every wood becomes alive with the carol of the birds, the first true sign of the season. Wind-tossed, one may see the hardy bluebirds fluttering over the fields, now rising and now sinking, with their sweet notes half heard over the sweeping gale. The song sparrow from the rises in the bare fields utters a sweet, clear song that recalls many happy thoughts to the mind of the nature lover who looks upon everything outdoors as close to him.

Stand on some height on a clear spring morning and gaze out over the woods and the fields and you may feel the life that is springing from the earth into the glow of the sunlight now warming the land. On the branches of far-off trees a faint tinge is discernible, the glimmer of swelling buds that crowd the limbs from foot to topmost twig. Down in the hollows is green grass left from last year under the protection of the heavy snows that covered it many feet deep. Not yet on the hillside is seen the changed color to be given when the grass undoubles its little fists preparatory to the struggle when the day comes for its universal uprising.

Early as it may be, we can feel the life that is coming into its own again. Last year's leaves lie crowding the wood ways and from them a bare murmur is perceptible. Perhaps it is the wind stirring them; more likely it is some wood mouse abroad or a chipmunk that runs to cover at the approach of the wanderer. The squirrels are making the woods ring with their barking. An animal is seen at the side of a great sunny bank and closer scrutiny reveals a fat woodchuck sitting up on his haunches looking at you. A few weeks ago this same woodchuck lay curled up in profound sleep, little caring for the winds that howled over the bleak wood.

Truly, spring has come! There is a stir and a whisper everywhere. In the realm of nature it is laying widespread plots to bring to an end the reign of despotic winter. The blue sky never seemed more cloudless and fair. At twilight the horizon is brilliant with sunsets we are long to remember. As the days pass the buds swell until they burst.

The Flight of Geese.

Editor Forest and Stream:

Having read with interest the opinions expressed in your journal as to the flight of wild geese, I am tempted to offer my views, not so much to advance a new theory as to show the fallacy of some already propounded.

"Hermit" believes that the form of a V is assumed to afford protection from the wind to the weaklings of the flock. It is well known to all sailors and watermen generally that there is no place so unfavorable to a boat as the wake of a preceding craft. Every vessel as she progresses through the water throws off waves which leave her bow at an acute angle to the line of her course, the angle varying with the speed of the boat, but we can ignore the variation in our argument. In order that the following vessel shall get upon fair terms with the leading one, she must be close enough, and at the same time far enough on one side of the course pursued by the leader to escape these waves; otherwise she is handicapped in her speed. In other words, a boat moves through solid water more readily than through broken water, even when she derives her motive power from another medium, and if she is a power boat she is still further handicapped by having her wheel, propeller, or whatever it may be, in broken water. I understand from what I have read upon the subject that aeroplanes also perform much better in undisturbed air than in broken air, and I think our air men would of all places most carefully avoid the interior of an isosceles triangle made by preceding flying machines.

My observation has led me to believe that those geese which drop out of the line of flight almost always occupy a position below the level of the rest of the flock. I agree with "Hermit" that they appear to be tired, and I think that is the reason for the failing to hold their proper positions, in that it is due to their inability to maintain the chosen altitude of the balance, and their places are of course filled by those behind which are able to keep up to the general level.

As I have tried to demolish "Hermit's" theory, it is only fair to give him a chance at mine, so I will say that I opine the reason for the customary formation of geese and swans in flight is due to each individual trying to keep close enough to the next preceding one, and at the same time far enough to one side to give him or her, as the case may be, a line of flight through the air undisturbed by either the bow wave or the wing motion of the bird ahead.

In conclusion, I will say that I have never known either birds or animals to act in large bodies so as to favor the weaker members of the community. It is always every one for himself and the weakest goes to the wall. Were it otherwise, the species adopting the Christian idea would soon become extinct through the failure in the operation of the law of the survival of the fittest.

I do not of course include in my generalization those instances where one sex protects the other, or of the parent protecting its offspring; nor does it have any bearing on the argument which, reduced to its last analysis, is the voluntary assistance of the weak of one sex by combined effort of the strong in both sexes.

Percival Hicks.

Game and Fish in Ontario.

Superintendent E. Tinsley has submitted to the Minister of Public Works for Ontario his report for the year ending Oct. 31, 1910, and it has just been issued. Superintendent Tinsley's report deals largely with the commercial aspects of the lake fisheries, and a considerable part of the paper of nearly 200 pages is taken up by reports of the work performed by patrol boats on the Great Lakes.

The reports of the wardens and deputy wardens are partieularly interesting, and residents of the United States who make an annual outing to Canada will do well to study the report. Inspector Holden, referring to the increase of ruffed grouse following a close season of two years, says: "Is it not time some limit should be placed on the number of these birds that should fall to one gun? We hear of one man getting sixty-eight in one day. Another kills over 200 during the season, and was not out the whole of it, either." He recommends a bag limit per day, or a limit for the season, which of course is what Ontario and all other political divisions of this continent must ultimately come to. Mr. Holden recommends also that trappers be lieensed.

The general trend of the reports seems to show that ruffed grouse are increasing, and that the close season of two years was a great help to them. In sections of the Simcoe district quail are reported to be very numerous among the farmers, and similar reports, though without much detail, are made of some other loealities. Wild ducks generally seem to be more numerous than in previous years. Overseer Charles W. Parkin, of Valencia, reports of Seugog Lake: "Ducks were there in large numbers last spring, and owing to the good protection they received, a number of bluebills and redheads remained in the marshes all summer and hatched their broods there. There are thousands of the best ducks there now, and hunters are well satisfied with their sport."

In many places muskrats are reported to be decreasing in number because the high prices of fur lead to over trapping. Beaver on the other hand seem to be increasing, and the same is true of otter. In many sections it is very difficult to protect beaver, because their skins may so readily be smuggled out of the country.

Large game, deer and moose are becoming more common, but caribou are not increasing. Wolves destroy considerable numbers of deer.

Mr. Tinsley says the fishing laws were better observed last year than heretofore, and he believes summer visitors are taking an interest in this work, and will assist materially. The fishing waters were more thoroughly patrolled than ever before, with good effect. Fewer infractions of the law than usual occurred, although the number of angling permits issued was larger than in previous years.

Overseer Jones is of the opinion that guides' license fees should be reduced one-half. The fee is now $2, which he thinks keeps many competent guides from working. He has never met one guide, he says, who was a benefit in assisting in the enforcement of the game laws. Anglers, in Mr. Jones' opinion, should be permitted to keep all the bass they catch, up to the catch limit. Many small bass that are caught and released die, and much of the waste is due to observance of the size limit. Besides, he concludes, the anglers want large, not small bass.

Increased efficiency has been secured in the rearing of black bass, and through the acquisition of large ponds and better facilities, it is predicted that the output for 1911 will exceed 300,000 fingerlings.

The Purchase of Eastern Forest Lands.

The Department of Agriculture is ready to begin operations looking to the purchase of land by the National Forest Reservation Commission created under the Weeks law, which was passed with special reference to the creation of National forests in the Appalaehian and White Mountains. Under it the Secretary of Agriculture is to examine, locate and reeommend to the commission for purchase such lands as in his judgment may be neeessary for regulating the flow of navigable streams. The circular is now being printed and copies may be obtained by applying to the Forest Service.

The law is not restricted to partieular regions, except that lands may be bought only in the States whose Legislatures have consented to the acquistion of land by the United States for the purpose of preserving the navigability of streams. The States which have already taken the necessary action are Maine, New Hampshire, Maryland, Virginia, West Virginia, North Carolina, Tennessee, South Carolina and Georgia.

The first lands to be examined for purchase will be in the Appalaehian and White Mountains, but the area which is believed to need protection is mueh larger than the Government can purchase, but by careful seleetion it is believed that much can be done for the permanent improvement of the watersheds with the purchase of a relatively small part of the land.

Timbered lands may be bought either with the timber standing on them or with reservation by the owner of the right to cut the timber under certain rules to provide for perpetuation of the forest. The Government cannot pay high prices. Good agrieultural lands will not be considered. Owners may reserve the right to remove valuable mineral deposits which are known to exist.

Proposals will be received for small as well as for large tracts, although small tracts can be examined only where the purchase of a considerable total of land in the same neighborhood is under consideration.

The lands acquired by the Governmcnt will be held as National forests. They will be protected from fire and the growth of the timber will be improved as much as possible. The lands will not bc game preserves, but will continue to be open to the public for hunting and fishing in accordance with the laws of the State in which they are situated. All their resources will be available for the public under reasonable conditions. Another point emphasized is that the Forest Service is not going to take from people their homes in order to put the lands into National forests.

The areas within which offers of land are desired are parts of certain counties in New Hampshire, Maine, Virginia, West Virginia, Tennessee, North Carolina, South Carolina and Georgia.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Dr. Branigan's Death.

Boston, Mass., March 25.—*Editor Forest and Stream:* The Massachusetts Fish and Game Protective Association has sustained a great loss in the death of its librarian, Dr. Edward Walter Branigan, who died on March 23 at the Charlesgate Hospital, Cambridge, of heart failure. A devoted angler, the doctor had been identified with the association for upward of a score of years, was on its list of vice-presidents several years previous to assuming the librarianship, the position most congenial to him, and which he has held for eleven years. In the various offices which he has filled he has rendered most faithful and efficient service, and has endeared himself to all the members by his sturdy and upright character and his genial disposition. In his chosen profession of dentistry no one stood higher. Graduating from the Boston Dental School in 1882 he became an instructor in the school a few years later and remained when it was merged with the Tufts Dental School. For several months past he has been the aeting head of the school. He received the degree of A. M. from Tufts in 1905. Last year he was president of the National Association of Dental Faculties. He was a trustee of the Forsythe Dental Infirmary and was largely instrumental in securing from Mr. Forsythe the million and a half donation for its establishment. He is survived by a son, Edward B. Branigan, D.D.S., of Groton, Mass.

A gala lecture meeting of the association was held last evening at the Hotel Brunswick, when 225 members and friends gathered to hear A. Radclyffe Dugmore talk on "Photographing Africa's Live Game on the Roosevelt Hunting Trail."

From the income of the Ivers Whitney Adams fund, the officers of the State association have been able to seeure illustrated lectures from men whose names constitute a brilliant galaxy: Dr. Barton W. Evermann, Dr. William T. Hornaday, Frank M. Chapman, George O. Shields, James S. Whipple and A. Radclyffe Dugmore. President Salem D. Charles presided.

Among those present at this meeting were: Dr. Charles W. Eliot, President Emeritus of Harvard University; Prof. F. H. Rand, bursar of the Institute of Technology; E. M. Brewer, C. W. Parker, J. M. Codman, Dr. George W. Field, Dr. Garland, Jonathan Dorr, Dr. Myles Standish, George H. Richards, President of the North American Fish and Game Association; Ivers Whitney Adams and his son, Ivers S. Adams, Frank Hopewell, C. M. Bryant, George E. Bigham, Fred Seaver, Ex-president J. R. Reed, most of the active officers of the association, and last but not least, Mayor Fitzgerald.

Henry H. Kimball.

Trainmen Hunt Rabbits.

The railroad men say that in the Central Branch country the rabbits are unusually numerous this winter.

The train men get a chance to hunt occasionally on account of the poor condition of the engines. Whenever an engine goes wrong, the train men enter the fields and hunt rabbits.

When the engineer gets through with the work of repairing the engine, he pulls the whistle cord, and then the train men come back.—Kansas City Star.

Jerry Knox's Bear Fight.

Byron, Ill., March 15.—*Editor Forest and Stream:* I never read Mr. Fannin's account of his bear fight on Burrard Inlet, in British Columbia, in "Jack, the Young Canoeman," but what I think of the bear fight witnessed by Ed. Eaton on the Ino River, in Montana, in the old days.

We were hunting bear in the Nowater bad lands, partner and I, and when the evening meal had been disposed of, our bed made down in the old tarpaulin, and we had snugly cached ourselves within it, safe from the cold March winds which were drifting the snow across it, the warmth, comfort and security which stole over us rendered us talkative, and it was natural that we should speak of "old Moccasin Joe," the bear on whose trail we had camped. Ed. Eaton said:

"The most comical bear fight I ever saw was pulled off at the mouth of the Big Dry Fork of the Ino River.

"I was riding down the Big Dry, hunting some horses that had strayed from our outfit of buffalo hunters. About a mile from the river I noticed fresh bear tracks in an old buffalo trail, but did not pay much attention to them at the time, as bear sign was plenty.

"As I rode to the river I saw something moving in the willows to my right and pulled up and dismounted, thinking I had run across the bear. Caching my horse behind the high cut bank of the Big Dry Fork I took my old Sharps rifle from its scabbard and began to prospect around for the bear. Directly I saw a man standing on a log in the willows. Men were scarce then in that part of the country and I was surprised to see this one. Moving up a trifle I recognized him as Jerry Knox, who had been in our winter camp for a month. Jerry was riding a grub line, and of late had been entertaining us with some tough bear fights that he claimed to have had. I was within seventy-five yards of him and close to the bank of the river, which was swift and deep, but he had not seen me and did not know that I was near him. He was standing on the middle of an old cottonwood log, the butt of which projected three feet over the river bank some ten feet above the water. Finally Jerry moved backward along the log, watching something in front of him. I could see a black object through the willows, but could not get a clear view of it. Jerry kept backing away and presently I saw that a big silver tip bear was walking straight at him from the other end of the log.

"It was evident that Jerry was not going to stand fire, and as only about eight feet more of log remained for him to back up on, I moved my hand, attracted the bear's attention, and when he stopped, gave him a shot that broke his neck.

"The crash of the rifle had not died away before I heard a splash in the water and a cry for help. The bear was lying quiet, so I dropped my gun and got hold of a long pole, and running to the river bank reached it down to the spluttering, strangling bear hunter in the water below me, and landed him for all the world the same as we used to the overgrown catfish of the Big Muddy.

"After Jerry had got some of the water out of his system and recovered his nerve I asked him if that was the way he killed bear. He gave me a kind of sickly grin and said that he did not know that the log stuck out over the water. He got a good ducking all right and lost a .44-40 rifle in the water.

"He had made the camp tired with his bear yarns, so I told the boys of his bear fight on the Ino River. They did not give him much rest for a while, and we heard no more of his improbable bear fights, and directly he continued his ride on the chuck line."

A. J. Woodcock.

Tie Up the Dogs.

New Britain, Conn., March 16.—*Editor Forest and Stream:* The editorials in Forest and Stream, telling of the damage done to game birds by the ravages of wandering dogs, led me during the last year to devote some little time to trying to see for myself how much harm these dogs did.

My observations, together with what Forest and Stream has said, have thoroughly convinced me that you are right, and that the wandering dog, whether he be the farmer's watch dog, the animal that brings home the cows, the fox hunter's pet, or the bird shooter's favorite allowed to run at large, causes far more damage than I had imagined, until the injury was pointed out. I feel sure that I am not the only one that has been convinced of this. From different points in the State I learn that other sportsmen and bird lovers have given attention to this subject, and that there is some prospect that an effort will be made at this session of the Legislature to procure the enactment of a law forbidding that dogs be allowed to run at large.

Friends of mine living at a distance—in quite another part of the State, in fact—have complained to me at various times during the last two or three years that they know of cases where hounds spend much time—in the open and close season alike—in chasing deer. One man told me of an experience that he had which at least stopped deer chasing by one group of hounds. Almost every day when the weather was right he used to hear the hounds chasing a deer down from the north almost to the Sound, when it turned and ran north again. Whether it was always the same deer or not, he of course did not know. The deer always followed a certain course south and another course north—always the same.

One Sunday, hearing the usual racket of the dogs going south, he determined to try to put an end to this, and seizing his gun and thrusting three or four shells into his pocket, he ran as fast as he could toward the point where the deer might be expected to pass on its return. He had almost reached the place when he heard the dogs coming, and saw the deer coming, running slowly, its tongue hanging out of its mouth, and one of the dogs not very far behind it. The other dog was perhaps fifty yards further back. The man reached a fence corner, saw the deer pass within twenty-five or thirty yards of him, and when the first dog came by he gave it the right barrel, and as the second came up it received the left. These two dogs ran deer no more.

To many of us the important damage done by the dogs seems the breaking up of the nests of game birds, but the farmers must also feel the damage done by the destruction of insect-eating birds. Here, in New England, where the gipsy and the brown-tailed moths cause such frightful damage to vegetation, and where farmers at best have a hard enough time to get along, the destruction of every insect-eating bird is a public calamity, and I should suppose that the farmers and the grangers everywhere would be willing to tie up their own dogs and to insist that everyone else should tie up his.

I used to believe—chiefly perhaps because I have been told so by older men—that the domestic cat was one of the worst enemies of our game birds, but I believe now that the dog is far worse, and this for the very reason that you have given; that the cat hunts almost exclusively near home, while the dog may make long journeys and cover a great deal of ground.

I am hopeful that here in Connecticut we shall be able to arouse a public sentiment which will demand that this pest of the covers shall be abolished—by being confined during the breeding season of the birds.

No man loves his dog more than I, or is more anxious to have it enjoy life, but it is certainly criminal to permit dogs to be at large at a time when they destroy the nests of useful birds.

N. B.

New York Legislature.

On March 22 Senator Long's bill, to permit spring shooting of ducks on Long Island was defeated by the Assembly by a vote of 66 ayes to 73 noes. As in the Senate, most of the up-State members of the House opposed the measure. Later in the session an effort will be made to reconsider the adverse vote and to pass the bill.

Bills introduced:

By Senator Platt, providing that ducks, geese, brant and swan may be taken from Sept. 16 to March 31, both inclusive, on Keuka and Seneca lakes.

By Senator Rose, making it lawful to keep live skunks in captivity for purposes of propagation and sale. Providing that the open season for deer shall be from Oct. 1 to Nov. 15, both inclusive.

By Assemblyman Brooks, prohibiting the taking of wild birds for which a closed season is provided by the use of any automatic or repeating shotgun or pump gun holding more than two cartridges at one time or that may be fired more than twice without reloading.

Quail Killed by Accident.

Pinehurst, N. C., March 23.—*Editor Forest and Stream:* I was quite interested in an account you published of birds in Cambridge killed by flying against buildings.

To-day I started a large flock of quail, but they had doubtless been watching a flying machine nearby and taken a lesson in navigation, for with skill and safety they sailed among the trunks of pine trees.

But the Pinehurst quail are not always so skillful.

A flock of quail near the hotel were frightened and a man seated at a window by the piazza roof was astonished when the birds struck the building to find nine dead on the roof and three were picked up dead from the shrubs below. "Love is blind," and I suppose in their love for freedom they did not stop to see their way of escape from pedestrians clear.

F. W. Webber.

SEA AND RIVER FISHING

A Nomadic Angling Family.—II.

During the first night heavy thunder storms several times passed to the north of us, but the morning dawned without rain, hot and sultry, though all but the nearest objects were shut out by an impenetrable fog. After breakfast I repaired a broken tip, then set out down the creek. The trout were more in a mood for biting, but were easily frightened, as is always the case when the water is low. The creek was difficult to fish, so many rocks and logs and so much low-hanging brush. Once for fully ten rods I walked down stream without touching water, stepping from rock to rock and from log to log. By casting well ahead I was able to secure a few trout, some of which were fairly good ones. Success in a fight with a half-pound trout in such an environment was something of which one might well be proud. At one point the creek shot down an almost perpendicular ledge of rock, the whole volume of water being not much larger than a good sized kerosene barrel. From the shape of the fall or chute I was certain that a deep hole had been formed at its foot, and that a trout would be lurking there, so I cast my flies into the water at the head of the chute and they were instantly sucked down, the line being ripped from the reel by the force of the water. Of course the trout was waiting, and of course he took the flies, but I was unable to lift him out against the current. Below the falls the little stream plunged into a mass of volcanic rocks which filled the creek bed from bank to bank, and the only thing to do was to play and vanquish the trout in that moil of rushing water, an impossible feat with a light fly-rod. I had included a stiff steel bait-rod for just such an emergency, but somehow I could not bring myself to use it against the fish, and so, for all of me, that combative *fontinalis* still inhabits the deep basin in the red rock. During the days we remained at the place I visited the falls again and again, always I hooked the fish, and always the battle was short, ending in the fish's favor.

By 11 o'clock I had covered perhaps a mile of the creek, and by dint of great exertion had secured enough trout for our dinner. Had there been sufficient water I am sure that I would have filled my creel, for fish were present in numbers. During the afternoon I did not wander far from the tent owing to almost continuous thunder, indicating that the long threatened storm was imminent, though no rain fell. Just as night was shutting in we heard someone shouting near where we left the train, and as they continued to shout I thought it best to investigate. Though I approached near enough to make out a double rig and two men, I did not respond to their shouts, for as they did not call my name I concluded that they did not want me. Probably I should have made my whereabouts known had I not met a number of fishermen during the afternoon, so naturally concluded that the rig was in search of them. After a time the rig disappeared and I returned to camp. Upon our return home we learned that a relative had passed away, and that the rig was sent out from Mountain to notify us of the funeral. The lesson to be learned from the incident is, when going into the wilderness make arrangements for a possible call from the outside. Another thing, if in search of a man in the woods, shout his name.

That evening, thinking of the Sunday dinner and being desirous of making a change in the bill of fare, I shot a red squirrel to make seasoning for a stew. Then we sat by the glowing embers. With darkness came the long threatened rain, not a pitter patter, but a downpour, a veritable deluge. There was no poetic "scampering of the feet of the rain" upon the roof; rather a formidable roar. Nearly all night it rained and Sunday dawned co'd and disagreeable. Then we discovered that a hem'ock grove made anything but an ideal camp ground. Though the clouds cleared away before noon, not a ray of sunlight reached the reeking earth, and we shivered with cold whenever beyond the warmth of the camp-fire. Very satisfactory indeed we found the stew, for there is nothing that will so quickly and effectually change the complexion of a disagreeable day in camp as a good warm dinner. With us Sunday is always a day of rest and recuperation, so we sat about the fire, reading and talking, until nightfall; then we retired to the tent and spent a very uncomfortable night, actually suffering from the cold even though the time of the year was mid August.

While eating breakfast on Monday morning we debated whether to follow our original plan and take the first train to some point further up the line or linger in our present location for another day. As the sky threatened more rain we decided on the latter course, rightly concluding that even a damp camp made was a more certain proposition than one unmade. Between showers I whipped the stream, but with poor results. Some distance above our camp was an abandoned lumber camp. There I went and dug in the refuse from the stable, hoping to find a few earth worms, but was doomed to disappointment. The only flies that proved at all attractive were a little bucktail and a dusty miller. With those I caught all the fish we secured. Between showers, when the scalding sun came out from behind the clouds, we spread our bedding on the railway embankment to dry. It is astonishing what an amount of sunshine heavy blankets will absorb in a little while, and how much better they feel to the tired camper after such an exposure. Exhausted from lack of sleep and finding the dry blankets very inviting, we retired to rest before the evening birds had ceased their songs. Before 3 o'clock we were again aroused by the frigid atmosphere, but we had rested and were willing to get up.

Our tent was down by the time the sun peeped above the fringe of trees to the east, and after the inevitable mush and coffee, we packed up

EN ROUTE TO CAMP.

LANDING A GOOD ONE.

and made our way to the railway track. Half a mile or so up the track a signboard proclaimed the spot a station, and thitherward we made our toilsome way. Sitting down on the gravel we prayed that it might not rain, and that the way-freight might come soon. Now, a way-freight is about as uncertain of arrival as is a Second Adventist's Judgment Day, and like the Judgment Day, is sure not to be ahead of time. For three hours we waited before a whistle down the line denoted the approach of the train. When at last the locomotive came careening around a bend into view, swaying from side to side like a drunken man—for the road beds of those northern railroads are not smooth—I swung my hat in the air, to which the engineer responded with a single blast of his whistle. When the toiling engine rumbled past us, three grimy questioning faces grinned at us from the cab. The engineer knew his business, for he brought the caboose, trailing along at the end of a long line of freight cars, to a stop exactly opposite our dirt platform. That we were objects of curiosity and interest to the crew goes without saying, but they forebore to ask questions, for which we blessed them in our hearts. When the conductor asked me to what point we were going I awoke to the ludicrous fact that we had not decided on our next stop, so I answered vaguely, "Going trout fishing."

"So I should imagine," he answered good humoredly, glancing over our outfit, "but where do you want to get off?"

"Blessed if I know," I replied, honestly at a loss for an answer, for though wife and I had discussed the question at length while in our first camp we had come to no satisfactory conclusion. When the crew discovered our quandary they turned to help us, and the amount of information we secured relative to the fishing along their "run" proved them all believers in Izaak Walton's doctrine. They were unanimous in the opinion that we should stop at Townsend and fish a stream, the name of which has escaped me, which can be reached from that place; but we, wishing to go further, settled on a creek which the map gave as crossing the track about half a mile south of Leona. The men were sure that no fish were to be found in the latter stream and knew from experience that large fish were caught in the former. We of course had our way, but that we made a great mistake we afterward discovered, the only time we regretted a stop during the whole trip. When I paid our fare the conductor informed me that the train would stop wherever we wished to camp and thus save our packing back from the station. When I hesitated to accept his kind offer he promptly remarked that it would be "no trouble at all" and the matter was settled.

As there was plenty of room in the lookout of the caboose, I asked permission to ride up there; this was readily granted. That train was ours! Now, I have ridden on some of the famous trains of our country, but I never enjoyed a ride more than I did that one in the lookout of the little old red caboose. Girl laughed to see the long line of freight cars wriggling and squirming along ahead of us like some gigantic mythological monster. The track was very crooked in places, when the child would shout, "See, the head is going to turn around and bite its tail!" When we passed the stream which the crew had urged us to fish and saw its trouty looking water playing at hide and seek with the woods we were sorry that we had not followed their advice.

At about eleven o'clock the ever obliging conductor informed us that they stopped for dinner at Waubeno and wanted to know if they should order dinner for us also. I glanced at Wife's very short skirt, Girl's boy's suit, and then at my generally disreputable appearance and thought of the sensation we would be likely to cause in a well ordered hotel.

"Oh, I'll go if you will," exclaimed Wife, quick to read my wishes; "anyway, I am hungry enough to brave almost anything for the sake of a civilized dinner." So we ate dinner at the hotel, a dinner that was none the less welcome because we had fed on camp fare for four days; but the snow white napkins seemed out of place when spread on our dirty, brown laps. At three o'clock we reached the little creek near Leona, and the freight departed in a cloud of black smoke.

To find a possible camp-site, to say nothing of a convenient and pleasant one, was a problem. A few rods east of the track the Rat River, a sluggish and murky stream, meandered lazily along; the little creek which bored its way under the track was a wee bit more attractive, indeed I have taken trout from streams not more prepossessing in appearance, but only after a long and intimate acquaintance. In the immediate vicinity the ground was low and marshy, but some distance up the track we found a little mound and on the far side, out of sight of the track, we leveled off a little spot and pitched our tent. Always we were careful to keep as much out of sight of the track as possible, for questionable characters were constantly passing up and down. Owing to the circumscribed area of level ground, we did not get the tent set in a proper manner, but as our intention was to take the first train next day, we let it go, always an unwise procedure. We extinguished our fire as soon as the tea kettle had boiled and kept as quiet as possible, for we did not wish to attract attention.

We were astir betimes the next morning, for I wanted to investigate the possibilities of the little creek, pack up and catch the first north bound freight; but while we were eating breakfast it began to rain and rained without intermission till three o'clock in the afternoon, when Wife visited the village in quest of supplies. While we were eating supper two tatterdemalions poked their heads above the rim of the little hill which concealed our tent, and after observing us intently for a while, crept away without speaking. Ordinarily the strangers whom we met on our trips have been curious and questioning, but to have silent observers aroused my suspicions, and when I saw them enter the thick brush a short distance down the track and not appear again, I was more disturbed than I cared to confess even to myself. Perhaps those tramps had no ulterior motives, but we thought we were justified in seeking the protection of a hotel for the night, which we did just as darkness gathered, and those other hoboes followed us into town. I think we all slept more soundly in the hotel than we would have done had we remained in the lonesome woods down by Rat River. O. W. Smith.

[To be concluded.]

Uncle Isaiah's Fish Story.

Uncle Isaiah was one of the old-time Quakers; solemn of countenance, without any sense of humor, and had never had the time nor perhaps the inclination for fishing. Just the kind of man that the waggish one with no sense of reverence for old age could not refrain from teasing a little when opportunity offered.

One fine morning in April the village wag, "Bony," met Uncle Isaiah and said: "Uncle Isaiah, let's have a game of marbles." "I never played marbles in my life," replied Uncle Isaiah. "Well," said Bony, "did you ever go fishing?" "I never went but once," said Uncle Isaiah. "Tell us about it," said Bony.

"Well, it ain't much of a story," said Uncle Isaiah. "It was this way: Some of the men and boys in our neighborhood were going fishing somewhere way up in Michigan, and they got at me to go along. I told them I had never caught a fish in my life and wouldn't know how to ketch one, but they said that didn't make any difference, and they kept dingin' at me for three weeks, till I finally told 'em I would go, just to get rid of them. Well, the day come when we were to start an' we started. They took along a whole wagon load of tents an' groceries, an' the baggage man grumbled a heap about having his car all filled up with sich a lot of stuff.

The cars started in the morning and we rode till nearly noon the next day and then got off at a p'ace in the woods where there was a saw mill and a few rough board houses, and we went to a boarding house and got dinner, and then a man with a team came and loaded all our stuff in a wagon and we struck out through the woods. The teamster said we would have to waik, and we soon saw why, for the road, or what he called a road, I really think didn't have any one place of more than three rods that was not roots, stumps, logs or mud holes.

"We finally got to a lake in the woods and the wagon was unloaded and the men set out to fix up the camp, and when that was done, they said they must get some fish for supper. They put the boat in the water and told me to get in, but I told them I had never been in a boat and didn't want to get in, but they said there was no danger, and then they made me get in whether or no. When they got the boat out a good ways from the bank, they throwed out a big stone tied to the end of a rope and I asked what that was for, and they said it was to keep the wind from drifting the boat away, for they wanted to fish right there. Then they fixed up a pole and a line and put a bait on the hook and told me to sling it out as far from the boat as I could, so I slung it and then asked what was to be done next, and they said, just wait for a bite. I waited for a good while, but bimeby I could feel something pulling at the line and they told me that was a bite and for me to wait until the fish had time to swallow the bait and then jerk.

"When I jerked, it seemed like the hook must be fast to something solid and then the line began to cut all sorts of capers and pull hard on the pole. They said I had hold of a big one and he must be handled carefully or the line wou'd be broke. They said to just hold him steady and tire him out before I tried to get him close to the boat. It seemed like a long time before I got him broke to lead. It seemed like

he wanted to go most any way only toward the boat, and it seemed like maybe I was going to get tired out before the fish did. They said he must be a big fish, and when at last I got him close enough so we could see him, he sure was a monstrous big fish. They were afraid I would be awkward about getting the fish in the boat, so one of the men took hold of the line to lift the fish in, and just as the fish was lifted clear above the water, the line broke, and that fish sunk down out of sight—and I have never seen or heard a thing of that fish since."

O. H. Hampton.

Fishing in Florida.

Red Bank, N. J., March 25.—*Editor Forest and Stream:* It is unfortunate that the best fishing is not to be had in Florida in the tourist season, the months of January and February. March 1 usually marks the beginning of the rush for home and business. While many remain over the month of March, they constitute the minority. As a rule the fishing along either coast in January is poor. If the weather is particularly favorable it shows considerable improvement in February, as it did this year, but fishes have their runs, as wildfowl have their flight, which are not wholly controlled by local weather conditions. The fishing also seems to vary in places by seasons. Some fifteen or more years ago I used to regard New Smyrna as one of the best locations on the East Coast for winter fishing. Large channel bass, sheepshead, drum and sea trout were abundant. For the past two years I am informed that the winter fishing there has been practically nothing.

I went south earlier than usual the past winter, the 4th of January. At that time there was nothing doing at Sarasota where I wintered. About the 1st of February, or perhaps a little before, channel bass or red fish, sea trout, cavallia and sheepshead began to be caught in fair numbers. About the 15th of February the first Spanish mackerel came in the bay, almost immediately followed by a few bluefish, but up to the time of my leaving the West Coast, Washington's birthday, the fishing for neither mackerel nor blues was good. The kingfish were expected to arrive off the passes about March 1 to 15.

From one to five miles off the beach large red and black grouper and quantities of Cuban grunts can be caught at any time in quiet weather. The groupers live or feed about the patches or reefs of coral rock which have to be found to catch the fish. The fishing is in about thirty to forty feet of water and furnishes fair sport with rod and line for a change. The run out from the hotel is made easily in an hour, and about two hours' fishing often fills the barrel.

While I have never remained at Sarasota late enough to try for tarpon, I am satisfied it is one of the best and most conveniently located places for that kind of fish. The tarpon season is between May 15 and July 1. The fishing grounds are off and in the passes or inlets connecting Sarasota Bay and the Gulf of Mexico. The Big Pass and the New Pass are from two and a half to three miles west of the town, which is on the mainland and is about fifty miles south of Tampa. It is the present terminus of a branch of the Seaboard Air Line, although the road is being extended south to Venice, about twenty miles. There are two hotels and ample fishing facilities for the number going there for tarpon, though both were overtaxed during February.

It is a striking fact illustrative of the development of railroads in the South, that good tarpon fishing grounds may be reached one night and two days out from New York. In regard to the cost of a tarpon trip from here for a period of two or three weeks I estimate it at about $300, which would cover transportation, hotel bills, boat livery and incidentals. T. H. Grant.

Trout Fishing in North Carolina.

Linville Falls, N. C., March 24.—*Editor Forest and Stream:* The trout in this region have found new and stronger protection than they have hitherto enjoyed. The State Legislature, just adjourned, has passed a very strict fishing and hunting law for this county, Burke, that includes the best fishing of Linville River—all the cañon—and the trout filled Steele's Creek, Upper Creek and Cranberry Creek. The law

IN TROUT TIME.

makes it a misdemeanor punishable by a fine of not less than $25 or imprisonment or both to fish or hunt on the lands of another without written permission of the owner or lease holder. Wardens are given power to make arrests without warrants. This law covers all the fishing ground under the jurisdiction of the Ripshin Fishing Club of Morganton, which has leases on the creeks named, and the Linville River Fish Protective Association, which controls all of Linville River Cañon and much of the river above the falls where the gorge begins. Both these organizations have regular wardens and the regulations were well observed last year, especially on Linville River. This law will make it more binding and easier to enforce. It will stop hunting in season and out except with the permission of landowners. The law at the same time prohibits shooting quail, squirrels or rabbits between Feb. 1 and Nov. 15 of each year.

Inquiries are already coming from Northern anglers who want to come here to fish or hunt. To all such I would say that the season here is not so far ahead of New York as one might think, because of the elevation, nearly 3,500 feet. There is no hunting whatever here before Nov. 15 and no fishing before April 15, when the spawning season is about over. Late April and all of May are the best, unless it may be September and early October. Rainbow trout fishing is good, however, all summer and until November. Good strings have been taken with flies on Nov. 30 in Linville Cañon.

Frank W. Bicknell.

Kansas City Bait- and Fly-Casting Club.

Kansas City, Mo., March 25.—*Editor Forest and Stream:* At a recent meeting held in this city we decided to unite all of the casters in one club instead of having two clubs as we have had in the past.

With this end in view the Kansas City Bait- and Fly-Casting Club was recently organized with the following officers: President, E. M. Meier; Vice-President, N. F. Noland, Secretary and Treasurer, E. G. McLean; Captain, J. W. Bramhall; Directors, W. L. Rock, F. B. Robinson, C. H. Cheney.

This new club is composed mostly of members of the old Kansas City Casting Club and certain members of the Kansas City Anglers' Club who take an active interest in bait and fly-casting. We are hoping to make this a banner year in the casting game here in Kansas City, and this club hopes to be able to send a large squad to the National Association meet next fall.

The schedule of events for the coming season follows:

SCHEDULE OF EVENTS, KANSAS CITY BAIT AND FLY-CASTING CLUB—SEASON, 1911.

April 2—Practice at Rock's.

April 16—Regular, at Troost, half-ounce, distance fly and accuracy fly.

April 30—Regular, at Troost, half-ounce, distance fly and dry fly.

May 14—Regular, at Troost, quarter-ounce, half-ounce, distance fly and accuracy fly.

May 28—Regular, at Troost, quarter-ounce, half-ounce, distance fly and dry fly.

June 11—Regular, at Troost, quarter-ounce, half-ounce, distance fly and accuracy fly.

June 25—Regular, at Troost, quarter-ounce, half-ounce, distance fly and dry fly.

July 9—Regular, at Rock's, quarter-ounce, half-ounce, distance fly and accuracy fly.

July 23—Regular, at Rocks, quarter-ounce, half-ounce, distance fly and dry fly.

Aug. 6—Regular, at Rock's, quarter-ounce, half-ounce, distance fly and accuracy fly.

Aug. 27—Regular, at Rock's, quarter-ounce, half-ounce, distance fly, and dry fly.

Sept. 3—Regular, at Rock's, quarter-ounce, half-ounce, distance fly and accuracy fly.

Sept. 17—Regular, at Rock's, quarter-ounce, half-ounce, distance fly and dry fly.

Tournament squad practice, at Troost, will take place on July 16, 19, 26, 30 and Aug. 2, 9, 13.

Quarter-ounce and half-ounce events, ten casts each.

Accuracy fly, rods under 8½ ounces, fifteen casts.

Distance fly, rods under 8½ ounces, scratch.

Distance fly, rods and under 7 ounces 5 feet allowed.

Dry fly, rods under 7 ounces, five casts.

Members in order to be entitled to a club average must participate in at least six quarter-ounce events, eight half-ounce events, eight distance fly events, four accuracy fly events and four dry fly events. Medals and awards of merit will be given after the season's events are over.

E. G. McLean, Sec'y.

YACHTING

Some News and a Little Gossip.

THE famous old racing trophies offered many years ago for contests over the Cape May and Brenton's Reef Lightship courses, which have for some time reposed in the trophy case of the New York Y. C., are to be raced for again this year. Former Commodore Robert E. Todd, who is building the schooner Karima, has challenged, and former Commodore Wilson Marshall, owner of the Atlantic, owner of the cups, will defend the trophies this summer. These two racers will do much to revive interest in long distance racing by large vessels. Such races were very popular years ago, but lately owners of big yachts have not taken much interest in them. These cups were won in 1885 by Sir Richard Sutton's Genesta, and they were sailed for by yachts on the other side. Royal Phelps Carroll brought back the Cape May cup, having won in a race with Britannia, and Atlantic brought back the other. The first race for the Brenton's Reef cup was won by the schooner Rambler in 1872, then owned by J. M. Forbes. The schooner Dreadnaught, owned by A. B. Stockwell, won the Cape May cup the same year.

George P. Granbery was re-elected president of the Yacht Handicap Racing Class at the annual meeting held last week. H. L. Stone was chosen again to serve as treasurer and A. G. Hill was made secretary, to succeed Harry A. Jackson, Jr., who declined a renomination on account of his recent illness. Prior to the meeting the annual dinner was served, and those present were G. P. Granbery, H. A. Jackson, Jr., Charles S. King, U. D. Cutting, R. B. Budd, A. G. Hill, Charles W. Voltz, T. P. Granbery, H. L. Stone, L. H. Dyer and many other enthusiastic yachtsmen. This class has grown wonderfully in favor with yachtsmen in the five years of its existence and the outlook for the season according to President Granbery is for a very lively racing season. The annual regatta of the class will be sailed on Sept. 23.

The steam yacht Venetia, which was purchased last fall from George D. Elkins by John D. Spreckels, has arrived on the Pacific Coast. Mr. and Mrs. Spreckels and some friends joined the Venetia at New Orleans and left that port on Dec. 14 to go to San Diego. Venetia did some fine running as the following extracts from the log show: "Left New Orleans Dec. 14; Havana, Dec. 16; Kingston, Jamaica, Dec. 23; Ponce, P. R., Dec. 28; St. Thomas, Danish West Indies, Dec. 29; Fort de France and St. Pierre, Martinique, Dec. 31; Barbados, Jan. 1; Bahia, Brazil, Jan. 12; Rio Janeiro, Jan. 16; Montevideo and Buenos Ayres, Jan. 23; Punta Arenas, Strait of Magellan, Jan. 31; Valparaiso, Feb. 7. Between Valparaiso and San Diego only one stop was made. The party arrived at Panama Feb. 19, after an unbroken run of 2,600 miles, and remained at the Pacific port of the Canal Zone until Feb. 22, when the longest run of the cruise, 1,700 miles, was begun. Capt. Lake reports that he encountered a strong southerly current between Panama and this port which compelled him to run one knot faster to maintain his cruising speed of twelve knots, which the Venetia made every mile of the way from New Orleans to San Diego."

Commodore E. C. Benedict has chartered the steam yacht Virginia from the Isaac Stern estate. The charter was made through the agency of Seaman & Huntington. The yacht is now fitting out for a cruise to the Amazon River, which will extend over two months. Virginia will leave this port on April 6. Commodore Benedict made a long cruise up the Amazon in Virginia some years ago, going as far as Manaos. On the trip now contemplated Virginia will touch at several West Indian ports. Commodore Benedict owns the steamer Oneida, which he considers too small for such a trip. Virginia is 200 feet over all, 165 feet on the waterline. Capt. John Bond will be master and George Denny chief engineer.

The Chicago Y. C. has named July 22 as the date for the annual Mackinac Island cruising race. On July 1 it is intended to revive the race for the Herbst cup. The donor of that trophy stipulated in the deed of gift that either Chicago or Milwaukee must be the finish of the race, and it is planned to start from the Cream City and finish at Chicago. In order to comply with this provision all the yachts will cruise to Milwaukee on July 1. Then the start will be made at such a time as to have the finish on July 4.

Consideration of the measure for changing the Mackinac race cource was put off until the next meeting. The members seem to favor Mackinac, due to the sentiment attached to the old course. A change for this season cannot be made now, and it is doubtful if the owners will ever decide to change harbors.

Popular sentiment seems to favor an earlier schedule this season than in the past. Lack of interest in the Nutting cup races last year, when only a few of the eligible boats participated, is responsible for this suggestion. By promoting the earlier races it is thought that a greater number of boats will be attracted.

One of the first yacht races of the season of more than ordinary interest will be a race for the Childs challenge trophy. This trophy was presented some years ago by Commodore Childs to be raced for as often as possible each season and held subject to challenge. A challenger has to give thirty days' notice. The trophy was won last year by Grayjacket, representing the Atlantic Y. C., from the Crescent Athletic Club, which club had held the prize for two years. Commodore Childs, who is now senior flag officer of the Indian Harbor Y. C., is having a 31-rater built at Herreshoff's which is to represent the Indian Harbor Club in the race for the Manhasset challenge cup, and he has said that a challenge will be made as early as possible for a race for the Childs trophy, which he hopes to win and take to the Sound. This race will do much to get the new yacht in racing trim, but she will have to be at her best to beat Gravesend Bay fleet this year.

The Columbia Y. C., at its annual meeting, elected the following officers: Commodore, Charles A. Starbuck; Vice-Commodore, Dr. William Evelyn Porter; Rear-Commodore, Russel Dart; Secretary, George R. Branson; Treasurer, James Stewart; Trustees, W. M. K. Olcott, Charles G. Smith and John Orville Barnes.

The Manhasset Bay challenge cup race will be the big event on the Sound, and now it is rumored that not only will the Corinthian and Eastern clubs have representatives in that event, but the Boston and possibly the Portland clubs will send boats to the Sound. There will be the three new boats building for local yachtsmen or syndicates and possibly a fourth from the lower bay. The cup will be defended by Stuyvesant Wainwright's Cara Mia, and she is a boat that will be hard to beat.

Larchmont's race week will follow the cup races and the visiting 31-raters will probably remain in these waters for the six days of racing arranged by that club. Efforts are being made to make that week the most successful in the history of the Larchmont Y. C., and invitations are being sent by Chairman Boucher to many clubs whose members own one design classes to take them to Larchmont. Later in the season there will be the week of racing in the lower bay arranged by the Atlantic Y. C. and preparations are now being made for the racing there. Sound yachtsmen have already promised to visit the lower bay, and yachts from the Great South Bay will also compete in the races.

There will be two important cups raced for during that week. The Q boats will sail a series of races for the Thompson cup of the Atlantic Y. C. and the S boats will sail a series of races for the Lipton cup of the Crescent Athletic Club. This cup was first sailed for last season and was won by R. B. Moore's Blue Bill. The cup is held by the club until it has been won three times by the same yachtsman, but not necessarily with the same boat.

Auxiliary Ketch Autocrat.

THE auxiliary ketch Autocrat, which is being built at Green's yard, Chelsea, for C. H. W. Foster, will make an ideal boat for offshore cruising. The designs were drawn by Thomas F. McManus, who has had much experience with deep-sea cruisers. The boat is planked and the deck is now being laid. Mr. Foster intends to use Autocrat for offshore work, and the boat is being very strongly constructed. The timbers are as heavy as those used for a sixty-ton fishing schooner.

The yacht is planked with two-inch hard pine on timbers of extra large native white oak. All the planking is clear wood. The deck is also very heavy of narrow white pine. Autocrat is 83 feet 3 inches over all, 56 feet waterline, 16 feet 8 inches beam and 9 feet draft. She will be equipped with a 40-horsepower gasolene engine for auxiliary power.

The boat will be rigged without a bowsprit, double headsail and topsail. In the lower sails the yacht will spread 2,426 square feet of canvas, the mainsail will contain 1,254 square feet, the headsails 621 square feet, while in the after sail there will be 551 square feet. The mainmast from deck to hounds will be 52 feet and the topmast 18 feet 6 inches.

Although the vessel will be flush decked, it will not all be of the same level; forward of the jigger mast at the main companion way the deck will be raised about 6 inches. This level will be carried along until forward of the mainmast when the deck will drop again to the same level as the after deck. All the outside trimmings of the yacht will be in mahogany.

Below deck the arrangements are good and the finish will be in white enamel and mahogany. Going down the main companionway from the after deck there is a small passageway with large staterooms on both sides. Forward of the port stateroom on the same side is the toilet room. Then comes a large main cabin or saloon 18 feet 9 inches long. This will be fitted up as is usual in yachts of the size of the Autocrat. The pantry is on the port side forward of the saloon; then comes the galley and a good sized forecastle with crew quarters well forward. The sailing master will have a large stateroom on the starboard side.

The engine room will be completely shut off from the rest of the yacht by bulkheads and will be reached only from deck through a hatch. Beside furnishing the auxiliary power for the yacht, the engine will be conected up with the capstan. For outside ballast the yacht has a heavy long but shallow iron shoe which is 14 inches wide at the bottom. In addition to this the yacht will have inside ballast of boiler punchings set in cement.

Gravesend Bay Dates.

THE meeting of the delegates to the Yacht Racing Association of Gravesend Bay, held in the Crescent Athletic Club house last week, was well attended. The clubs represented were Atlantic, Brooklyn, Bensonhurst, New York Canoe and Crescent. It was the annual meeting and officers were elected. President George R. Le Sauvage, who has been elected Commodore of the Bensonhurst Y. C., retired, and Dr. J. E. De Mund, of the Atlantic Club, was chosen to succeed him. W. L. Inslee, of the Bensonhurst Club was chosen Secretary to succeed Louis J. Tiemann, of the Canoe Club. Henry J. Gielow was re-elected Measurer.

Some slight changes were made in the by-laws, and after transacting routine business, the report of John R. Brophy and W. L. Inslee, a special committee to arrange new courses, was discussed. This committee reported in favor of adopting the special courses of the Atlantic Y. C. and four new ones which made buoys well down the Lower Harbor turning marks. It also made Buoy 13 the turning mark of some courses instead of the Craven Shoals buoy, which has always been the cause of trouble. After considerable discussion it was decided to adopt the Atlantic courses and four new ones, but to keep Craven Shoals as the mark of one set of courses.

As usual the racing yachtsmen and their friends will dine together at the Crescent Athletic Club house. This dinner is for all the members of the clubs in the association, and it will be held on Thursday, April 20. Then the season's prospects will be talked of, and those who are to meet in races will become acquainted with one another.

The season will last from Saturday, May 27, until Saturday, Sept. 16. There will be twelve championship events and for the winner of the championship in each class the association offers a handsome plaque.

The schedule is as follows:

May 27—Atlantic Y. C.
May 30—Brooklyn Y. C.
June 3—Bensonhurst Y. C.
June 10—Atlantic Y. C.
June 17—New York C. C., first championship.
June 24—Crescent Athletic Club, second championship.
July 1—Atlantic Y. C., third championship.
July 4—Bensonhurst Y. C.
July 8—Brooklyn Y. C., fourth championship.
July 15—Crescent Athletic Club.
July 22—New York C. C.
July 29—Atlantic Y. C., fifth championship.
Aug. 5—Marine and Field Club, sixth championship.
Aug. 12—Brooklyn Y. C., seventh championship.
Aug. 19—Atlantic Y. C., eighth championship.
Aug. 26—Bensonhurst Y. C., ninth championship.
Sept. 2—Marine and Field Club, tenth championship.
Sept. 4—Atlantic Y. C.
Sept. 9—Bensonhurst Y. C., eleventh championship.
Sept. 16—Atlantic Y. C., twelfth championship.

White Bear Y. C.

THE annual executive meeting and banquet of the White Bear Y. C. was held recently with forty of the members in attendance. In the election of officers, George H. Wing was chosen as Commodore; Worrell Clarkson as Vice-Commodore; William Motter, secretary, and J. W. Daniels, Treasurer.

Donald Taylor, rated as being one of the best sloop handlers in this part of the country, and the man that won the championship of the Ilya Lake Yachting Association Class B more times than any other person, was elected captain.

Following the election of the principal officers of the club, four men were elected to act with the officers on the executive committee: These are H. S. Ottis, O. L. Taylor and F. W. Pinska. The new members of the regatta committee elected are F. L. Wann, Stewart Lemmon, E. M. Van Duzee, Jr., last year captain of the club, and Jack Ordway, he of curling fame. The principal business taken up was the reading of the treasurer's report, which report showed that the club was absolutely free from debt and had a surplus in the treasury. The season will start Decoration Day, and will close Labor Day. This shortens the season a few weeks, as the last races of last year were run on Oct. 1.

Long Race for Yale Club.

THE Corinthian Y. C. at Yale, which will celebrate its thirtieth anniversary this year, has added a long-distance race as one of the features of its spring program. The race will be from New Haven to Bridgeport, or to some other point along the Long Island shore. The club, as usual, will hold its annual cruise to New London at the time of the Harvard-Yale boat race, and will have a regatta for club members on Memorial Day. The club uses what is known as "Yale dories," a type of boat that is 21ft. over all, with 14ft. 7in. on the water line, and costing $100. They are large enough to accommodate four or five persons.

Edgewood Y. C. Plans.

THE annual meeting of the Edgewood Y. C. was held last week and plans for the season were announced. The regatta committee this year will be Ben. Flanklin, chairman, assisted by Messrs. Stone, Peiper, Brown and Streeter.

The Edgewood plans for the reason are nearly complete. Opening with a big regatta on Ladies' Day, June 3, there will be races for all classes for cash prizes and the race for the Markham trophy. Many special events of interest to the fair sex are being arranged, and it is thought the attendance in both spectators and racing boats will be the largest in the history of the club.

On July 4 and 8, and Aug. 19 there will be a special series of races. The 21-footer, Class Q and the big sloops in Class P will race together in one class with a limit of rating of from 21 to 31 feet for the handsome trophies given by Mr. John Stone, which are valued at $50, $35 and $15. In addition the club will give a bronze trophy for the first boat in each race. On the same dates the 18-footers will race for the W. D. Wood trophy, with second and third prizes given by the club. The catboats, Classes D and E, will race together as one class for the Edgewood trophies, and the small power boats for the Palmer engine cup for boats under 20 feet in length.

On the night of July 8 the boats of all classes will have a moonlight race around Prudence Island, measurement based on over all, less one-half overhang, and allowance of seven seconds per foot per mile. Henry Ford, the automobile man of Detroit, is giving the first prize for this race and there will be several other prizes.

The Interstate knockabout series between the Rhode Island and Massachusetts teams will be held below Conimicut on July 31, Aug. 1, 2 and 3. Vice-Commodore Markham has given three $50 cups for the winning teams and the Folsom-Thurston Company a very striking championship pennant for the boat with the highest score. One of the river steamers will be chartered for the entire series to convey the press representatives from Massachusetts and Rhode Island, and the club members who desire to see the series at moderate cost.

Edgewood will open the week of racing of the N. B. Y. R. A. on Aug. 5, off the club house. Cash prizes will be given in all classes. On Sept. 4 there will be a special race for Class Q and the 18-foot knockabouts for suitable trophies. In addition to the above Commodore Flint has given a $75 trophy for the club 18-footer making the highest season percentage, and another $75 trophy is offered for the championship in cat class D, the inter-bay boats. Altogether the Edgewood Y. C. has laid out a season of racing which will break all records both in point of number of races and value of trophies.

The officers of the Edgewood Y. C. are: President, James T. Thornton; Commodore, Dutee W. Flint; Vice-Commodore, Charles F. Markham; Rear-Commodore, John D. Peck; Secretary and Treasurer, Harry Fulford; Directors—Herman G. Possner, R. W. Jennings, Benjamin Peckham, Harvey J. Flint and Emil G. Peiper.

Ocean Going Steamer for W. A. Lydon.

WILLIAM A. LYDON, of Chicago, has contracted with the Pusey & Jones Company, of Wilmington, for an ocean-going steam yacht of more than 600 gross tonnage. The new steamer, which is to be named Lydonia, has been designed by William Gardner, and will be built under his supervision. She will be the largest yacht built in this country since 1902. Mr. Lydon had a steamer built two years ago from Mr. Gardner's designs which was 168 feet over all. This boat has been sold, as it was too small.

Lydonia II. will be 215 feet over all length, 171 feet on the waterline, 26 feet beam and 12 feet 3 inches draft. She will have single screw and be schooner rigged, with pole masts. The hull will be built of high tensile steel with six watertight bulkheads, dividing the vessel in five compartments. Amidships will contain the machinery. The compartments forward and aft of the machinery space are for the owner and his guests' accommodations, and the crew's quarters are all forward.

The after living quarters on the berth deck will consist of six single and one double stateroom and three bathrooms. Access to the quarters is from the upper deck house by a stairway which will lead to a center passageway finished in African mahogany. The two staterooms directly aft of the machinery space and the double after stateroom will be finished in white mahogany, with satinwood panels. Red mahogany furniture and white enamelled panel work rubbed to a dull smooth finish, will make up the interior of the other staterooms. Each stateroom will have a large bed, wardrobe, bureau, chiffonier, cheval glass, sofa and stationary wash basin.

Mr. Lydon's quarters will be forward of the machinery space, and will consist of three communicating staterooms, bathroom and lobby, and all, except the bathroom, will be finished in white mahogany. Special attention has been given to the ventilation of the living quarters between decks, including overhead skylights, in addition to the large air ports in the hull.

The main deck house will be continuous for 90 feet. At the forward end will be the dining saloon, and the library and music room will occupy the after section. A passageway inside of the deck house will connect the deck saloons and give access to the berth deck quarters and shade deck. Selected African mahogany, with figured panels and furniture to match, will form the decorative scheme for the passageway, library and music room, and the dining room will be finished in carved Java teak. The galley and pantry will be in the deck house with direct communication with the dining room.

The shade deck will extend to the side of the house and afford a 100-foot promenade. The chart house, with flying bridge above, will be on this deck. Two separate compartments for officers and sailors, each having a separate mess, will be set aside for a crew of thirty men. The complement of boats will include a 28-foot motor launch for owner's use, a 20-foot power boat for the ship's use, a cutter dinghy and two lifeboats.

The yacht will be driven by a 4-cylinder, triple expansion engine, which will give a normal speed of twelve knots. The cruising radius will be 3,500 knots without recoaling. The yacht will be lighted throughout by electricity and there will be a navy type 5,000 candle power searchlight, together with a wireless outfit.

Mr. Gardner says delivery will be made by Jan. 1, 1912. Mr. Lydon will place the vessel in commission immediately for a winter cruise to the West Indies and South America, and upon his return will take the yacht to Chicago, the home port.

Motor Boating.

Maple Leaf III. has Fast Trial.

E. MACKAY EDGAR'S new challenger for the British International trophy was tried last week over the measured mile course, and according to the cable reports, made 49.5 nautical miles an hour. Just how many trials she made over the measured course is not known, but the British system is usually six trials, three with the tide and three against the tide. This speed is phenomenal for a boat of her size. It is equal to 56.999, or practically 57 statute miles an hour, railroad speed. If she can hold this speed for the 30-mile course, nautical miles, she will make that distance in 36 minutes 27 seconds. Maple Leap III. must have made a nautical mile in 1 minute 12.9 seconds, and a statute mile in 1 minute 3 seconds. She has been shipped to Monaco to take part in the racing there. She will try for the international cup, which is over a long course, and in that race will meet the Ursula, owned by the Duke of Westminster, and some new French boats, and in the mile and kilometer dashes she will go against some fast hydroplanes.

When the Saunders and Wolseley people contracted that the new Brunhilde, which is 50 feet long and built for the Duke of Westminster, should make 5 nautical miles, there were some who were sceptical here. Mr. Edgar was then of the opinion that his new challenger would exceed that speed and he was willing to race his boat against the Ursula at Monaco. Unfortunately the Brunhilde is not ready.

Maple Leaf III. is 40 feet long. She was built by Dixon Bros. & Hutchinson from designs by Sir John Thorneycroft and is a hydroplane similar to Miranda IV. She is fitted with two 12-cylinder Astell motors, which develop 350 horsepower each. Mr. Edgar brought Maple Leaf II. to this country last summer after the cup, but unfortunately a few days before the race the hull of the boat was so badly strained that she could not start. Maple Leaf II. was taken back home. Mr. Edgar ordered a new hull and had a duplicate of the motor built, and these two motors are installed in the present boat.

Albany Race Conditions.

THE regatta committee of the New York Motor Boat Club has announced the conditions of the third annual race to Albany and baek, which will be started on July 1 at 6 P. M. The race is open to all motor boats except automobile boats under 40 feet over all length and having a waterline beam of not less than one-fifth of the waterline length and enrolled in a recognized yacht club. The conditions follow:

Course.—From the New York Motor Boat Club house, Hudson River at 147th street, to railroad bridge off the Albany Y. C. house, Albany, N. Y., and return, a distance of 235 nautical miles.

Start and Finish Line.—Will be directly in front of the club house and will be across an imaginary line drawn from the flagstaff and the committee boat flying two club flags and at night two red lights vertically placed.

Turning Mark.—West abutment of railroad bridge off the club house of the Albany Y. C. at Albany. Abutment of bridge to be left on port hand.

Time of Start.—Warning signal, one gun, 5:50 P. M.; preparatory, two guns, 5:55 P. M.; starting, one gun, 6 P. M.

Time of Finish.—All boats must finish before 6 P. M. on July 3, 1911, when race will be called off.

Entries.—Entries will close June 28 at 6 P. M. All boats entered must report to the regatta committee at the club house not later than 4 P. M. on July 1. The committee reserves the right to reject any entry. Application blanks and additional information may be obtained from the regatta committee.

Rating.—Boats will race in two classes, as follows, and be rated under the 1909 A. P. B. A. rules: Class A, cruisers; Class B, open boats. No unrated boats will be allowed to start. A cruiser is a boat built and used for cruising, with permanent cabin and general living, sleeping and cooking accommodations.

Measurements.—All boats will be measured by the official measurer of the New York Motor Boat Club, and application for measurements must be made on or before 6 P. M. June 28, and boats must be placed at disposal of measurer at place and date named by him.

Prizes—Class A, first prize, the New York Motor Boat Club cup will be presented to the boat making the best corrected time. Second and third prizes will be given also on corrected time, and a time prize will be given for the best actual time made. A shield appropriately engraved will be presented to all other boats finishing. Class B, first prize, a cup will be presented to the boat making the best corrected time. A shield appropriately engraved will be presented to all other boats finishing.

Propelling Power.—An explosive engine or engines operated by either gasolene, kerosene, alcohol or producer gas. Any ingredient to increase the power of the fuel will not be allowed. Arrangements will be made for supply of fuel to be kept at Albany.

Crew.—No professional will be allowed on boats during the race. Paid pilots or engineers or any person connected with the trade will be considered professionals. A list of the names and vocations of all the members of the crews must be given the committee before the start of the race.

Equipment.—All boats must be equipped to comply with the Federal regulations (carry one life preserver for each member of the crew).

Anchoring.—Racers may stop at any place for supplies or repairs, but any boat proceeding except under its own power will be disqualified.

Sail.—Boats carrying sails of any description must have them sealed by the committee before the start and seals must be intact at finish of the race.

Log.—Each captain must keep a log giving the time of passing prominent points, which must be handed to the committee within twelve hours after finishing.

Protests must be given in writing and delivered to the committee within forty-eight hours after the first boat finishes.

Winners.—1909, Martha, owned by Paul Kossek; 1910, Elmo II., owned by F. D. Giles, Jr.

Launchings at Philadelphia.

JOHN F. BETZ'S 82ft. cruiser Sybilla II. was launched from the yard of the Mathis Shipbuilding Company, at Camden, last week, practically completed. This boat is equipped with 150 horse-power Craig engine, and is expected to maintain a speed of 15 miles. A great deal of interest has been shown in this boat, both in New York and Camden on account of her type being a little different than the ordinary motor yacht of to-day. The two funnels are put on for good purposes, one necessary for exhaust of the engine and ventilating the engine room, and the other for galley smoke-pipe and for ventilating the galley. This boat is substantially built in every way and will stand most any condition of weather for outside cruising.

The Mathis Company has just been awarded a contract for the steam cutters, life and whale boats for the two Cuban cruisers now building at Cramps. There are twelve boats in all.

Robert F. Welsh, of Philadelphia, has had a small sloop built at the Mathis yard, from designs by J. Murray Watts, which is a handy craft for one man to handle.

One of the first boats to be launched this spring was Fred Nathan's 50-footer Margo, which shot down the ways at Kirk's yard, at Tom's River, last week. As soon as the hull struck the water the engine started, and the launch was one of the most successful ever held at the Kirk yards. The owner of the boat and four friends were the only ones present at the launch, and the christening was according to

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE
TRAVEL, NATURE STUDY, SHOOTING, FISHING, YACHTING.

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copies, $3.00 per year; $1.50 for six months. Rates for clubs of annual subscribers:

Three Copies, $7.50. Five Copies, $12.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Canadian subscriptions, $4.00 a year, $2.00 for six months.

Foreign Subscriptions and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's. Foreign terms: $4.50 per year; $2.25 for six months.

ADVERTISEMENTS.

Inside pages, 16 cents per agate line. Special rates for three, six and twelve months. Eight words to the line, fourteen lines to one inch. Advertisements should be received by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices, seventy-five cents per line. Only advertisements of an approved character inserted.

Display Classified Advertising.

Hotels, Summer and Winter Resorts, Instruction, Schools, Colleges, etc. Railroad and Steamship Time Tables. Real Estate For Sale and To Let. Seeds and Shrubs, Taxidermists. The Kennel. Dogs, etc. Wants and Exchanges. Per agate line, per insertion, 13 cents. Three months and over, 10 cents per line.

Solid Classified Advertising.

For Sale. Kennel. Property For Sale. Real Estate For Sale or To Let. Wants and Exchanges. Per agate line, 10 cents. Absolutely no display. No advertisement of less than three lines accepted. Cash must in every case accompany order.

FOREST AND STREAM PUB. CO.
127 Franklin St., New York.

the Japanese plan—two carrier pigeons of this city, bearing the name of the boat, fastened on to their legs, being released when the boat struck the water.

After the launch Mr. Nathan took his friends for a short spin in the new boat. On Easter Sunday, when all the appointments are in place, the owner will give the launching reception on board his boat. The Margo is equipped with a 50-horse-power Vulcan, and Mr. Nathan is ambitious to have his boat make at least 15 miles an hour. The Margo will be entered in the race from New York to Camden next August, and possibly one or two other big events. Mr. Nathan is now building a speed boat, as tender for the Margo.

Motor Driven Lifeboats.

There are now about forty lifeboats in different parts of this country, which are equipped with motors. These boats are used off the Atlantic and Pacific coasts, and on the Lakes, and have been so successful that it is now only a matter of time when the lifeboats manned by oarsmen will be a thing of the past. This motor lifeboat, says the Sun, not only relieves the life-saver of much hard work, but it has also enabled the designers to turn out craft practically unsinkable, and able by means of the engine to reach a vessel in distress quickly and sometimes when it would be impossible to get to her if oars had to be relied on.

About forty of these boats have been built and placed in the most important stations along the Atlantic, Pacific and Gulf coasts, and some are on the Lakes, where, on account of the severe storms, they are especially needed. One of these boats was on exhibition at the recent Motor Boat Show, and it attracted much attention there, not only on account of the sentiment connected with a lifeboat, but also because it was the most seaworthy and stanch looking craft in the show. There were some visitors who would have liked to purchase the craft in spite of its cost, $10,000.

The boats were built by the Electric Launch Company at Bayonne, and the motors by the Holmes Motor Company. The boats are 36ft. long over all and 8ft. beam. The planking is two thicknesses of mahogany, and being diagonal, is carried from gunwale to gunwale in one length. It is fastened by copper rivets to the frames, which are closely spaced. This construction gives strength and lightness.

There are hermetically-sealed compartments forward and aft, which make a powerful bow and stern to withstand head and the following seas. There are six water-tight compartments in each boat, and 112 copper cases are also fitted, in order to give the boat buoyancy even if it should fill with water. These compartments make the boats practically unsinkable.

Each boat is driven by a 40 horse-power motor, which is placed in the after air compartment. A water-tight bulkhead separates the engine compartment from the cockpit deck and hold of the boat, and access to the engine compartment is had through a water-tight door.

All the controls of the motor are placed outside on the engine room bulkhead, out of the way of ropes and rigging. When under way this engine compartment is sealed from the outside, and one man can steer the boat and handle the motor.

When the first of these boats was tried, a tackle was rigged and the boat was rolled stern up in the air. The tackle was cast off, and in just nine seconds the craft was on an even keel and had dumped all the water out of the cockpit. Should the boat turn over when running the motor stops automatically, and when it rights again the motor can be started in the usual way.

The boat can carry fuel sufficient for a run of 250 miles. This has enabled the United States Life-Saving Service to increase its efficiency. Formerly a station patrol covered six miles of coast. With the motor lifeboat this has been extended to 100 miles.

The lifeboat Persistence, stationed at Hatteras Inlet, not long ago took thirty-four persons off a steamer stranded on the much-dreaded Diamond Shoals, the boat making a trip of 11 miles to sea to effect the rescue.

The Indomitable, which is stationed at Lewes, Del., is one of the latest boats built. She can neither sink nor float upside down. A heavy bronze keel and centerboard prevent this, and the cockpit is kept free from water by eight bailing tubes. The scuppers of these tubes are placed in the deck 15in. above the water line and lead out through the bottom. The Indomitable left Bayonne at 3 o'clock one afternoon and reached Lewes, 123 nautical miles away, in 17 hours 30 minutes.

These boats are all well named. Along the Atlantic Coast are the Alert, Restless, Reliance, Persistence, Success, Invincible, Sincerity, Superior, Triumph, Victory, Indomitable, Ida Lewis, and Vigilant. On the Pacific are the Effort, Tenacious, Safeguard, Venturesome, and Conqueror, and among those on the Lakes are Fearless, Resolute, Dauntless, Onward, Protector, Victor, Endurance, Daring, Eager, Audacity, Confident, Resistless, Conquest, Ready, Dispatch, Persevere, Assurance, Willing, and Faithful.

Cruiser for Canadian.
